A Volume in the Epochs of Philosophy Series

"A lucid, compact, enjoyable account of the course of philosophical thought in the age that stretched from Locke through Berkeley, Hume, Leibnitz, and Rousseau to its natural climax in the reconciling and co-ordinating mind of Kant."—*London Post.* $1.50 *net; postpaid* $1.65.

A Defence of Prejudice and Other Essays

"He has yielded to the impulse to translate his vision into the language of everyday life and apply it to the solution of practical problems of the hour. The essays are pleasingly written in simple, straightforward, effective English. There is not a technical term in the book."—*Yale Review.*

"It is with delight—a calm and rational delight—that the reflective reader makes his way through this little book."—*The Dial.* $1.00 *net.*

By FRANK FROST ABBOTT

Professor of Classics in Princeton University.

The Common People of Ancient Rome

"As a vivid picture of daily life among the common people of Rome, with their language, their occupations, their sentiments, and their amusements, this volume can hardly be excelled. . . . An amazingly real insight into men and politics in the greatest city in the world nearly 2,000 years ago."—*Chicago Record-Herald.* $1.50 *net; postpaid,* $1.65.

Peoples and Politics of Ancient Rome

"Not only delightful reading, but brings the Romans within reach of our human sympathies. . . . The twentieth century American comes into every-day relations with the Romans in their streets and homes, and discovers that some disheartening aspects of society, which he has assumed to be modern, are of ancient date."—*The Outlook.* $1.25 *net.*

By A. AULARD

Professor of Letters at the University of Paris.

Translated from the French of the third edition, with a preface, notes, and historical summaries, by Bernard Miall.

The French Revolution

A Political History

"Readers who are familiar with their Thiers and Carlyle, their Tocqueville and Taine, have never heard the name of Aulard; and yet Aulard has done more to promote the scientific study of the French Revolution than all of the above-mentioned gentlemen taken together. . . . His work is that of a ripe scholar, who has lived with his sources, printed and manuscript, for a quarter of a century, and who sees his subject as a whole. He advances no statement without the support of valuable source material, and he always indicates what this source is that the reader may control his work. What a mass of evidence often lies behind a single sentence, what an amount of labor has preceded a single cautious generalization, only the initiated can know."—*The Dial.*

In four volumes. The set, $8.00 *net.*

PLAYS BY AUGUST STRINDBERG

Translated from the Swedish with an introduction by Edwin Björkman. With portrait. $1.50 *net; postpaid* $1.65.

Plays by August Strindberg

Strindberg, the foremost figure in Scandinavian literature to-day, and admittedly one of the greatest of living dramatists, is represented in this volume by three of his most characteristic plays—"The Dream Play"; "The Link," in one act; and "The Dance of Death," Part I. and II., a drama of tremendous power, generally considered his masterpiece.

$1.50 *net;* *postpaid* $1.65.

Recent Importations

The Story of Korea
By JOSEPH H. LONGFORD. 33 illustrations and 3 maps. $3.00 *net.*

A concise history from 1100 years before the Christian Era to the Japanese annexation, fully descriptive of every aspect of the country, and the life led by its inhabitants.

Countries and Peoples Series

Each Volume Illustrated $1.50 *net*

Japan of the Japanese
By JOSEPH H. LONGFORD

An able, graphic description of the Japanese people, their country and their life, which aims first of all to make the reader acquainted with the Japanese's personality.

Just Published
A REVISED EDITION OF
Montgomery's Leading Facts of English History
The history that has been for years the stand-by of American schools. No other textbook has ever surpassed it in clarity of treatment, completeness and reliability.
It presents in brief compass the most important points in the development of the English nation, and covers all the ground ordinarily covered by a high-school course.
The revision embodies an extensive rewriting of the previous edition. It includes new maps and twenty-five new illustrations, together with a new and superior letter-press throughout. Teachers who desire to make a special study of Constitutional History will be greatly aided by the revised Summary on that subject and by the important Constitutional Documents contained at the back of the book.
Price $1.20.

CHICAGO

For Sale

FOR SALE. AT POINT LOOKOUT, Isle au Haut, a cottage and a lot of about four acres. Cottage has large sitting room, writing room, and two bedrooms on the first floor, and five bedrooms on the second floor, four bathrooms, and all modern conveniences. It commands, from the windows, views of the Camden Hills, Deer Isle, and the mountains of Mt. Desert. The climate is the best on the coast—excessive heat is never known, and, being twenty miles from the mainland, the climate is exceptionally equable, the variation at times in twenty-four hours being even less than two degrees. The island is about 7 miles long by 2 miles wide, and the summit of the mountain is about 600 feet above tide. A fresh water lake, of more than a mile in length, is stocked with land-locked salmon. A road of thirteen miles around the island affords charming views, and gives access to cliffs rivalling those of Mt. Desert. For terms, apply to Ernest W. Bowditch, 60 Devonshire Street, Boston, Mass.

For Rent

FURNISHED HOUSE in Cambridge, Mass., next the Longfellow House, to rent for winter season 1912-13; 4 master's living rooms, kitchen, laundry, and drying-room; 6 master's bedrooms, 2 baths, 3 servants', and 1 trunk-room. Occupancy given after August 1, 1912. Apply to owner at 113 Brattle Street.

A NEW DANBY NOVEL

"JOSEPH IN JEOPARDY"

By FRANK DANBY (Mrs. Julia Frankau), Author of "The Heart of a Child," "Sebastian," etc.

A brilliant story of a young man who, exposed to subtle and intellectual temptations, resists them successfully in many dramatic and striking situations.

The clever and well-bred manipulation of delicate themes, the wit, humor, and epigram, with a "thread of gold" running through them, which distinguish this versatile author's previous successes are again manifest perhaps in a higher degree in this, her latest novel.

Reviewing her work, *The Academy* (London) describes the author as "the greatest woman writer now living in England."

Cloth, 12*mo*, $1.35 *net; postpaid*, $1.45.

THE WONDERFUL LITTLE BOOK. Special Easter Edition

MOTHER By Kathleen Norris

"Worth its weight in gold."—*Catholic Columbian.*

"Mrs. Roosevelt and I were profoundly impressed with 'Mother.' I am particularly glad to have it."—*Theodore Roosevelt.*

Decorated cloth, gilt top, 12*mo*, $1.25.

ZANGWILL'S LATEST WORK

THE WAR GOD. A Tragedy in Five Acts

By ISRAEL ZANGWILL, Author of "The Melting Pot," "The Children of the Ghetto," etc.

Voiced through strong characters and rival nations which will be recognized readily, this powerful story—a compelling plea for humanity, is described by the British press as "the most powerful dramatic work of the season."

Decorated cloth, 12*mo*, $1.25 *net; by mail*, $1.34.

A Fascinating Record of Travel, Adventure, and Antiquarian Discovery

RUINS OF DESERT CATHAY

Personal Narrative of Explorations in Central Asia and Westernmost China. By M. Aurel Stein

"A graphic description of the archæological and geographical expedition undertaken by Dr. Aurel Stein for the Government of India in 1906-08, and its rich and almost unparalleled harvest of priceless memorials, manuscript and other treasures."—*The Daily Chronicle* (London).

Two volumes. Profusely illustrated, color plates, panorama, original maps. $12.50 *net; expressage extra.*

PANAMA By Albert Edwards

A new and cheaper edition of the best book on Panama for the general reader.

Illustrated. Decorated cloth, 12*mo*, $1.50 *net; postpaid*, $1.62.

OTHER NOTABLE NEW MACMILLAN BOOKS

THE NEW DEMOCRACY. By Walter E. Weyl, Ph.D.

"A brilliant interpretation of the Industrial, Social and Moral Revolution now going on in the United States."—*Philadelphia Public Ledger.*

Cloth, 12*mo*, $2.00 *net; postpaid*, $2.12.

DEMOCRATIC ENGLAND. By Percy Alden, M.P.

A brilliant study of the humanistic movement and the important social problems which to-day have partly bridged the gulf between British political parties and classes to the advantage of the entire community.

Cloth, gilt top, 12*mo*, $1.50 *net; postpaid*, $1.62.

ELEMENTS OF SOCIALISM. By John Spargo and Dr. Geo. Louis Arner

The most comprehensive and sane presentation of the Socialist case yet made.

Cloth, 12*mo*, $1.50 *net*. (*Subject to change.*)

ESSENTIALS OF SOCIALISM. By Ira B. Cross

A clear, concise, impartial, and brief explanation of the arguments for and against Socialism. Just the book for the busy reader.

Cloth, 12*mo*, $1.00; *postpaid*, $1.08.

SOCIALISM AND THE ETHICS OF JESUS. By Henry C. Vedder

A notable comparison of the ethics of Christianity with modern Socialism. *Cloth*, 12*mo* $1.50 *net; postpaid*, $1.62.

THE MODERN WOMAN'S RIGHTS MOVEMENT. By K. Schirmacher

Translated from the German by Dr. Carl C. Eckhardt of Colorado.

A full and complete description of the world-wide movement for women's rights.

Cloth, 12*mo*, $1.50 *net; postpaid*, $1.60.

THE SOCIAL ASPECTS OF EDUCATION. By Professor Irving King, of the State University of Iowa.

A complete survey and discussion of the relations of the school to the community as an instrument for social progress.

Cloth, 12*mo*, $1.75 *net*. (*Subject to change.*)

ALL THE CHILDREN OF ALL THE PEOPLE. By William Hawley Smith, Author of "The Evolution of Dodd."

An inspiring study of the attempt of the United States to educate "all the children of all the people" and the present status of that complex problem.

Cloth, 12*mo*, $1.50 *net; postpaid*, $1.61.

FARM BOYS AND GIRLS. By William A. McKeever, Professor of Philosophy in Kansas State Agricultural College. An interesting study of the rural home, character, development, environment, and related topics.

Illustrated. Cloth, 12*mo*, $1.50 *net*. (*Subject to change*).

THE NEW HISTORY. By James Harvey Robinson, Ph.D., Professor of History in Columbia University.

A popular account of the great revolution overtaking historical study through the fundamental, social and intellectual changes of modern times.

Cloth, 12*mo*, $1.50 *net*. (*Subject to change.*)

Published by THE MACMILLAN COMPANY 64-66 Fifth Ave. New York

The Nation

NEW YORK, THURSDAY, MARCH 7, 1912.

The Week

The report that Vice-President Sherman has been chosen by the Taft leaders for running-mate to the President is emphatically, and apparently authoritatively, denied. Unless Mr. Taft is amazingly ill-advised, the denial will be adhered to and borne out by the facts. Such an attachment to Mr. Taft's candidacy would manifestly be a disastrous handicap in the electoral campaign, and there is good reason for believing that it would operate almost as disastrously in the nomination campaign. The danger to Taft lies in the question of the final attitude of those persons who are not unfriendly to him, but who have objected to certain features of his record, and who, though they may not be Progressives with a big P, are sincerely and soberly progressive. About the best way to alienate such men is to tie him up with Sherman, and especially to fasten upon him the responsibility for the selection. The choice of Sherman four years ago was not in pursuance of Mr. Taft's desire or judgment, but was the result of the efforts of men close to Roosevelt. Mr. Taft's preference was for the late Senator Dolliver, perhaps the ablest of the Western Progressives. If he and his advisers are sagacious, they will look for a man of somewhat that type as his associate in the candidacy.

Mr. Taft's attitude towards the Mexican revolt continues to be wholly admirable. Once we put aside the unfortunate manner in which last year's mobilization was initiated, the Administration's bearing in the face of a difficult situation has reflected credit on the entire American people, and served as the best possible rejoinder to the reflections frequently cast upon our motives with regard to the Latin Americans. When we speak of the situation as difficult, we have in mind not Mexico alone. The Administration has been under severe pressure to take aggressive action on the Mexican frontier. A man of different temperament from Mr. Taft's, and of a more complicated sense of right and wrong, might have found sufficient reason for intervention by this time. And especially in a Presidential year when parties pant after political capital as the hart after the water brooks, an Administration facing a dubious election might be tempted to inject the khaki element into the contest. But one finds it utterly impossible to think of Mr. Taft playing a game of this nature.

President Taft's re-statement of his tariff views, which he gave to Mr. Francis E. Leupp for publication in the *Outlook*, carries him over ground that he has already made familiar. He is for revision, schedule by schedule, based upon the findings of the Tariff Board. The latter he would continue as a permanent body, acting as a fountain of information for manufacturers and merchants as well as for Congress. In some of his expressions, Mr. Taft departs widely from the accepted notions of protectionists, declaring, for example, that protective duties are designed to help only those who are "economically worth helping, not to provide an ambulance for the helpless or the laggards." On the other hand, he now slips back to the plank of the 1908 platform which undertakes to guarantee a "reasonable profit" to the American manufacturer. This had been quietly dropped by the President in his speeches and messages, doubtless because he perceived that it made meaningless or deceptive the talk of basing duties upon the difference in cost of production at home and abroad. If it is really a question of the Government insuring a "reasonable profit," the helpless and the laggards are as much entitled to it as anybody else.

To ex-Senator Hansborough's grave charges that Mr. Roosevelt ordered the pigeonholing of the proposed prosecution of the Harvester Trust while he was President, there now come the familiar sweeping denials. It is all a "lie made out of whole cloth," not worthy of notice. But Mr. Hansborough is not thereby cast down. He returns to the attack in the New York *World*, declaring that his statements are based on knowledge, and then he asks these specific questions: "Does the Colonel deny that he told me that he would prosecute the Harvester Trust on the Townsend report [made to Attorney-General Bonaparte]? Does he deny that he wrote a letter to Attorney-General Bonaparte directing him not to prosecute the Harvester Trust?" Mr. Roosevelt may, of course, continue to ignore the charge. That is his privilege. Mr. Bonaparte, who is now out for Roosevelt, may also take the dignified attitude of refusing to answer these specific questions. But the facts in the case ought to be, and, we are inclined to think, will be, brought out soon. It is not denied that Attorney-General Wickersham is now proceeding against the Trust, and there is in existence, moreover, the Stanley Committee, which has the power to compel the Department of Justice to produce any letters in regard to the proposed Roosevelt prosecution of 1907 if there be such on file. We sincerely trust that the matter will be quickly probed to the bottom, so that this "peculiarly iniquitous falsehood" may be exposed.

A long and somewhat hysterical attack upon Gov. Harmon has been published by the so-called "Progressive Democrats" of Ohio. In it they make many railing accusations against the Governor, not all of which those unfamiliar with the intricacies of Ohio politics will be able to weigh intelligently. But in one point the supposed odium poured upon Gov. Harmon will appear to disinterested outsiders really to be praise. The charge is that he has not "cleaned house" in Ohio, and that, despite his having been Governor for more than three years, there are still as many as 1,500 Republicans holding office under him—nearly as many as the Democrats whom he has appointed to official positions. This may seem an awful crime to Democrats whose "progressiveness" means progress towards the swine-trough of spoils, but to those who believe in the ideas of civil service reform, and the continuance of efficient public servants in office despite their party preferences, it will seem that Gov. Harmon has had a feather stuck in his cap by his enemies.

It is not necessary to impute sordid

motives to the Baltimore hotel managers against whose action the Secretary of the Democratic National Committee protests. From time immemorial hotel rates have risen in convention cities with a regularity that could not have been brought about by mere agreement. The selection of the favored spot operates upon prices in and around it in much the same manner as a violent increase in the production of gold operates upon prices in general. To blame the individuals who reap the profit of the occurrence is human, but it is also useless.

"Whatever is right is Constitutional." To this epigram has the Governor of Michigan reduced the whole vexed question of the authority of a Legislature. The words occur in the message in which Gov. Osborn has summoned the Legislature in extraordinary session for the purpose of enacting a Presidential preference primary law. What leads to their utterance is an awkward provision in the Michigan Constitution empowering the Legislature to give immediate effect to acts which either make appropriations or are necessary for the preservation of the public peace, health, or safety. As it is not evident that a Presidential primary falls exactly under either of these classes, the Governor reminds the legislators that half of the bills to which they gave immediate effect in their last session were not appropriation bills in the ordinary meaning of the term, and that above a fourth of them carried no appropriation whatever. And the Constitution "was just as sacred last year as this year." Besides, such a law might contain a provision for paying the expenses of delegates. But he has little patience with this line of reasoning, which he regards as the kind of subterfuge that would be resorted to by those who desire to use the Constitution against the interest of the people. The great fact is that courts and lawyers of the better sort "now regard the Constitution as being broad and elastic enough to cover and warrant what is right, and especially when there is no dispute as to the right. Abraham Lincoln said: 'The life of this nation is greater than any Constitution.'" And, of course, an oath to uphold the Constitution is taken—in Michigan—in a purely Pickwickian sense.

The decision of the Supreme Court of Illinois that an appropriation of $60,000 for the Medical School of the State University is invalid because, not having been printed after it had been made part of a conference committee report, it "was not passed in the mode prescribed by the Constitution," is not likely to have the sweeping effect upon other and more important legislation of the last forty years that was at first feared. Every such law will have to be impugned separately, and will be defended upon its own particular set of circumstances, while a special session of the Legislature can be called to validate it if necessary. The teeth of the decision are in its implied warning against laws rushed through in the future in the same eleventh-hour confusion. Illinois is one of the States that impose no restriction upon the length of the legislative session, but, by one of the strange inconsistencies of our political theories, the closing hours of her Legislatures have long been marked by a pandemonium of law-making.

What an association of business men can do to promote the general welfare, as well as its own private affairs, is being shown by the Illinois Bankers' Association. This organization is endeavoring to bring the private banks of Illinois under control of the State Banking Department, to cause regulation and restriction of so-called investment stocks, and to introduce habits of thrift and cautious investment among the people. But the association does not confine its energies to these purely financial matters. Its wider activities include the promotion of modern methods as applied to farming, and a campaign for the construction of better roads. It has also a bill before Congress to create a system of field demonstrations of the most approved agricultural practice. This reaching out to economic reform on the part of bankers has been heartily approved by the citizens of Illinois. It is evidence of the growing and wholesome tendency among technical men and men of affairs to employ their special knowledge and exceptional facilities for the public good.

That college graduates are neither scholars nor practical men may now be regarded as established by frequent repetition of both parts of the assertion. It is apparently one of those melancholy truths to which we must yield in the end, and to this particular one we have become somewhat reconciled. But this only makes it harder to accept the further and more serious criticism that college men are not markedly superior to their unlettered companions in the ability to play professional baseball. One player-manager of renown is quoted as declaring that he could count on his ten fingers all the really good college baseball players in the country. It seems to be admitted that rowdyism has largely gone out of the game since the entrance of the man with a degree, but this merely moral improvement is no solace for the suggested failure of the graduate to excel in those feats that appeal to crowded and excited bleachers. We hope that some clever and, if necessary, not too scrupulous mathematician will without delay present a series of tables demonstrating that, despite appearances, the college man, when it comes to a test of throwing or catching a ball or sliding to a base, is as far ahead of his unschooled rivals as we once fondly believed him to be intellectually.

Attorney-General Wickersham has done a manly and a useful thing in protesting against the action of the executive committee of the American Bar Association which has voted to exclude from membership in the Association Assistant Attorney-General William H. Lewis, on the ground that Mr. Lewis is a negro. Mr. Wickersham speaks of the committee's "outrageous" action. It is difficult to say whether it is the outrageous injustice or the outrageous stupidity of such conduct that stands out most conspicuously. The committee should have foreseen that precisely such a protest as the Attorney-General has made would be forthcoming. Nothing in the Constitution of the American Bar Association sanctions such race discrimination, and if lawyers were not traditionally obtuse in the law when it comes home to them personally, the committee might have known that legal measures could be invoked against its arbitrary action.

Secretary Knox's speech at Panama may not have appealed strongly to Central American statesmen, but their poets must have been stirred by it. Not only

did the Secretary let himself go in praise of their beautiful scenery, but he showed that he had given so much attention to the poetry related to the region that he was able not only to quote it but correct it. He cited the line—which, we believe, has been heard before—"Silent, upon a peak in Darien," but did not make the mistake, with Keats, of saying that it was "stout Cortez" who first "stared at the Pacific." The Secretary accurately made it Balboa. This is not bad for "Pittsburgh diplomacy."

Upon a clear issue between labor and capital concerning a question of wages, there has probably never been, in any country, so grave a situation as that which now presents itself in Great Britain, since the mere continuance of the coal strike for a few weeks, even if unaccompanied by violence or disorder, would so paralyze all the productive activities of the country as to inflict lasting injury of the most serious nature. As the London *Economist* put it, in a quiet and sober discussion of the situation two weeks ago: "A prolonged coal strike would kill the present trade boom, and reduce the country from the heights of prosperity to the depths of depression. . . . In two or three weeks' time the losses on both sides would pile up, and if months or years of bad trade followed the price of coal would suffer a permanent fall." In other words, the possibilities presented by the coal strike in its direct economic aspect comprise—apart from its immediate hardships—a general depression of British industry for years, carrying with it as an incidental consequence most serious loss both of profits to the mine-owners and of wages to the mine workers.

That the Government has been at its wits' end in dealing with this impending national calamity is plain enough. So far as the question of disorder is concerned, the indications are plain that the Government is determined to deal firmly with that aspect of the matter, should it come to the front. As for a minimum-wage law for coal-miners, it would not be the first step Parliament has taken in this direction. The Trade Boards act, which was passed in 1909, and went into effect January 1, 1910, created a Central Trade Board, with District Trade Committees working under it, the Trade Board having the power to fix minimum wages in certain specified industries, in which the "sweating" system prevailed. The mode of operation of this act, as indicated in official explanations of its intended working, is far removed from an arbitrary fixing of the minimum according to a preconceived standard. It was held to be essential to its successful working that there should be "a great flexibility of procedure, a treatment which would vary with the complexities of the particular trade, a wide discretion accorded to persons whose whole fortunes and interests were embarked in the trade affected, and the guidance at every stage of expert, impartial, and devoted officials." From the beginning thus made in the case of a few minor—though not unimportant—trades in which the workers were supposed to be peculiarly helpless, it would be a momentous step to pass to the Governmental establishment of a minimum wage in the basic industry of the kingdom.

Riotous violence by a branch of the English suffragists seems the more inexcusable coming as it did so soon after the great meeting in Albert Hall, where Mr. Lloyd George set forth the attitude of the Government and the Parliamentary outlook. He asserted that three-fourths of the Liberal party favor extending the suffrage to women. Two-thirds of the members of the Cabinet will vote in the House for the suffrage amendment. Yet it could not be made a Government measure at present, except on pain of breaking up the Cabinet and wrecking the party. Lloyd George declared that no statesman and no party can now form a Ministry to carry woman suffrage.

At the Economic Club dinner in New York last Thursday night, Mr. Shuster presented the tragic case of Persia in a few strong and simple words that went to the heart of every lover of liberty and justice, and every hater of iniquity and cold-blooded oppression, within the sound of his voice. Among the many international crimes that have been committed in these latter days, the despoiling of Persia, the ruthless crushing out of her aspirations in the face of so much merit shown by her people under circumstances of almost hopeless difficulty, stands out preëminent in infamy. It must be a source of pride to us in America that, in the forlorn-hope struggle of the Persians for right against unscrupulous and overwhelming might, a part so honorable and so inspiring was borne by one of our countrymen. How his work and his words have impressed able and high-minded Englishmen may be judged from this passage in the leading editorial of the London *Economist* of February 3, which was devoted to the subject:

> Mr. Shuster's speech on Monday at the dinner given in his honor by the Persian Committee struck those who heard it as one of the most memorable pronouncements to which they had ever listened. A complete absence of rancour, a grave simplicity of utterance, a combination of modesty and conviction, a detailed repudiation of the random charges and gossip of Russian officials and journalists, a generous yet discriminating testimony to the capacity and character of the Mejliss, made a deep impression on his audience. The tragic folly of his dismissal was intensified as he narrated and explained the steps he had taken to reorganize the finances of the country whose service he had entered. No one who saw and heard Mr. Shuster could doubt that in him Persia had found a man capable of evolving order from chaos, in complete loyalty both to his employers and to the rights and interests of Great Britain and Russia as recorded in the treaty of 1907.

The disorders at Peking and Tien-tsin, though laden with serious consequences if allowed to go unchecked, do not necessarily constitute a deep-seated crisis. The soldiers have apparently grown tired of waiting for their pay. The same situation, in milder form, arose among the republican troops in the South only the other day, and it is to be presumed that if the financial stringency at Peking and elsewhere were relieved by a large foreign loan, there would be no great difficulty in bringing the mutiny to an end. Such explanations as that Yuan Shi-Kai instigated the mutiny in order to prepare the way for a dictatorship are fantastic. Should Yuan desert the republican cause he would have to reckon with the armies of the South, and the present situation certainly does not argue a condition of discipline among Yuan's soldiers that would enable him to make head against the well-led republican armies of that region. The present looting and assassination are to be regarded as part of the price that China must pay before her transition from the old to the new can be completed.

WHAT ROOSEVELTISM MEANS.

When Mr. Roosevelt threw his hat into the ring the other day, he gave the signal for a contest the like of which has not been seen before in this country. It is not like the struggle between the Bryan wing and the anti-Bryan wing of the Democratic party; it is not like any contest in which Mr. Roosevelt himself has hitherto figured. To attempt to sum up its character in a word or a phrase would be quite impossible; for both on his side and on the opposing side there is a highly complex array of forces working together without any true bond of connection. It is none the less clear that at the heart of the Roosevelt movement of 1912 there is something absolutely distinctive, and something that in American politics is wholly novel.

It has long been a commonplace of political comment among us that Roosevelt has stolen Bryan's thunder; and it is quite true that in a certain way he stands in the shoes of the man whose radicalism, not many years ago, he denounced with unmeasured vehemence. But there is one aspect of Roosevelt's present candidacy, and that the most vital of all, to which Bryan's furnished no parallel. Bryan always had a paramount issue, or a batch of paramount issues, on which the salvation of the people depended; but, in spite of the wild enthusiasm he evoked, and the extraordinary hold he obtained over a large part of the nation, he never for a moment regarded himself, nor did his followers regard him, as a personal savior of the American people. It was free silver that was to rescue them from the clutches of the Gold Power; it was destruction of the Trusts that was to free them from the oppressions of monopoly; it was the initiative and referendum that were to work the restoration of pure democracy; it was guarantee of bank deposits that was to make panics impossible. Bryan appealed for the suffrages of the people on the ground that he was the champion of these measures, and on the ground that these measures were desperately necessary for the people's welfare. Never was there any claim, express or implied, that he carried in his own person a singular power, a unique virtue, through which the country was to be saved and without which it was doomed to ruin. But the very pith of the Roosevelt campaign of 1912, the thing that gives it life, the thing that will make it win if it is to win at all, is that upon Roosevelt personally our salvation depends; whether shouted from the housetops or only intimated or implied, the master-thought of the true Rooseveltian to-day is that only through placing Roosevelt once more in the Presidential chair can we stem the tide that is making for revolution.

Just at this moment, indeed, Mr. Roosevelt is placing in the forefront of his agitation the proposal that the decisions of the highest State courts on questions of constitutionality should be made subject to reversal by popular vote. But for the purpose of judging of the character of the Roosevelt movement, it is quite needless to go into the merits of that proposal. It has had nothing to do with the rise of Roosevelteism; it may or may not have anything to do with its future development. If he is looked upon as the hero of the Progressive cause, it is not because of his specific position on this or on any other radical issue. Upon not a single one of the great features of the Progressive programme, except that of conservation of natural resources, has he played the part of a pioneer or even of a leader. His attitude towards the Trusts is wholly different from that of the radicals; on the tariff he has been not far from a standpatter; on the initiative and referendum as definite practical propositions, his position is extremely canny; even in the matter of campaign contributions—surely a case of the dollar against the man—he is on record, in the very last months of his Administration, as opposing bitterly the publication of contributions before the election. What, then, is it that makes him seem, in the eyes of thousands of enthusiastic admirers, the very embodiment of progress, the pillar of a people's hope, the centre of a world's desire?

The answer is not far to seek. It has been furnished by Mr. Roosevelt himself, in scores of speeches and interviews. It burst forth in the first speeches he made in the West after his return from Africa. "I will make the corporations come to time," he declared in his rear-platform harangues. In his Ossawatomie speech, he put the matter into more substantial shape, when he spoke of the Executive as "the steward of the public welfare," and laid out a vague but sweeping programme of paternalism to show what a vast area he meant should be covered by that stewardship. His happy appropriation of the phrase of the "square deal" has furnished his followers with a convenient pocket edition of their gospel. It is not this or that measure that must be passed; not this or that policy that is to be promoted or stimulated. All the blessings that we seek are to be attained, all the burdens under which we groan are to be lifted, by the magic of the square deal, with Roosevelt, its inventor and custodian, in charge of the process. There are doubtless thousands of Rooseveltians throughout the country who imagine that the movements for child-labor laws, and for employers' liability, and for juvenile courts, and improved sanitation, which have been steadily spreading over the country for many years as a result of the earnest endeavors of many devoted men and women, owe their existence, somehow or other, to the virtue of Roosevelt, and that progress will come to an end if he should disappear from the scene. But there is another thing far more serious. For the whole trend of the Roosevelt gospel is towards the belief that the deep-seated causes of unrest and discontent can be removed by the crude processes of a Rooseveltian square deal. To elect him would mean, to thousands of enthusiasts, the sending forth of a champion armed to the teeth, to destroy the dragons of injustice and inequality, and allay the clamors of the poor and discontented.

To find the nearest analogue to this phenomenon we have to go to the French Republic in its dark days. It is not a personal comparison we are making; we would not be understood to say that between Col. Roosevelt and Gen. Boulanger there is any resemblance whatever, either as to character or ability. But between Boulangism and Rooseveltism there is a very close resemblance indeed. The sentiment that rallies to Roosevelt as the necessary savior of the Republic is essentially of the same type as that which made "le brav' Général" for a time the idol of millions of Frenchmen. The test to which the American people are now about to be put is a test not of their judgment as to particular measures, nor even as to particular men; it is a

test of their sobriety as a nation. Has the country come to such a pass that it must turn for rescue to a savior of the Republic? Has this nation, of whose institutions, of whose prosperity, of whose history, it was the custom of Americans, only a few years ago, to be so proud—has it suddenly been discovered to be in such dire straits that its salvation hangs on the heroic virtues of a single champion? France found she did not need her Boulanger; are we to confess that we are in worse case now than she was a generation ago?

IMPROVING THE JUDICIARY.

To a "looker-on in Vienna" the most interesting thing about the agitation for the recall of judges in our country must be neither the crudeness of the proposal nor the fact that it has made some headway, but rather the fact that it has thus far shown so little sign of being regarded with approval by any considerable part of the American people. It has behind it a number of the forces that usually make for popularity. Among these not the least important, though perhaps the least spoken of, is the fact that now for a number of years the actual working of our judicial machinery has been the subject of emphatic, and indeed vehement, criticism at the hands of the weightiest representatives of sober and conservative opinion. President Taft himself, whom it is the fashion of the moment, in certain quarters, to regard as the most benighted of reactionaries, declared two or three years ago that American criminal procedure is so defective and so far behind that of other countries as to be a disgrace to the nation; and in some respects his criticism of matters connected with our civil procedure was only less harsh than this. He has several times since taken occasion to reiterate these strictures; and in doing so he was but giving the authority of his high office to judgments that have been pronounced by leading members of the bench and bar.

Again, the picture which ardent agitators have drawn of outrageous conditions existing in certain special cases —such as that of California, for example—was naturally calculated to make a very effective appeal to the imagination. The best friends of the judiciary, so the thought may be supposed to have run, admit that there is urgent need of reform; but they are only mincing matters—look here, and here, and here, if you wish to see the actual truth. So there was the grievance, big and spectacular enough to make a popular issue. And as for the remedy, it had just that naïve simplicity that is so calculated to win the favor of the populace. Let us get right down to the people, and we are sure to be all right. We know, to begin with, that the people are sound to the core. If courts and judges are not what they should be, it must be because we have not faithfully adhered to the democratic principle in the matter of the judiciary. Let us throw open the doors and windows and let in the fresh air of the popular will. That is the sovereign cure for all ills of the body politic; to doubt that it has virtue to effect the cure of this disease is to distrust democracy itself and be false to American ideals. We will make the judges created by the people subject to recall by the people. Then we shall have judges that are honest, efficient, expeditious, and methods of procedure that satisfy all the requirements of justice.

Nevertheless, it may be asserted without the slightest hesitation that an overwhelming majority of the American electorate has remained unmoved by the plea and is resolutely opposed to any such tampering with our judicial system. To say this is only to say that the American people are still, as they have been throughout their history, a sober people. They believe in democracy, but they do not believe that there resides in democracy a magic power to dissolve all the difficulties, to disentangle all the intricacies, of life. No specious juggling of phrases can suffice to convince them that the simple process of occasionally recalling a judge whom the people disapprove can be made a substitute for the patient, intelligent, and arduous work that is necessary for establishing a stronger judiciary and a better judicial procedure. And we cannot but think that there is enough left of our "ancient humor," of hard-headed Yankee shrewdness, to see the inherent absurdity of the recall of judges. The idea that we can procure for the bench a body of able, impartial, self-assertive, and independent judges by the childish expedient of once in a while thrusting out with ignominy one whom the people wish to get rid of is hardly calculated to appeal to the average American's business intelligence.

It happens, too, that in countries where the status of the judiciary is precisely the opposite of that which the advocates of the recall are seeking to bring about, no such complaints are heard as those which form the basis of this agitation. The English and the Canadian courts, with their judges appointed and holding for life, are accused neither of inefficiency nor of favoritism. Their work is done with effectiveness and dispatch. As for procedure, at the beginning of Queen Victoria's reign judicial methods in England were encumbered with technicalities and absurdities to a degree far greater than anything we know here; and these were got rid of within a few decades, not by the application of any cheap nostrum, but by determined and intelligent effort on the part of those who knew the business they were dealing with. What we need here we shall not get at any less price. Improvements in procedure will be attained, if attained at all, by the twofold process of carefully framed laws directed to that end and of judges chosen according to a higher popular standard and under conditions more calculated to attract the best type of men to the bench. Not by the threat of discharge, such as might be held over a department-shop clerk, but by the amplest recognition of the dignity and independence of the post, can we hope to cause the kind of man whom we ought to seek for every place on the bench to be willing or anxious to accept its responsibilities. Democracy has great virtues, but there is nothing in its charter which repeals the laws of human nature; and until those laws have been repealed we can never hope to elevate the quality of the judiciary by lowering its status and authority.

FREE SUGAR AND AN INCOME TAX.

The bills approved by the caucus of House Democrats for making sugar free and taxing incomes above $5,000, came as a genuine surprise. The secret of their preparing had been well kept. They have been hailed as a great party stroke. Already the political advantages to be gained by the Democrats are confidently reckoned up. But it is a general rule in politics that surprises and great strokes lead to disap-

pointment. The surprise is as apt to prove disagreeable as of the other sort; and the stroke may easily wound the party which thinks to inflict it upon the other. Any proposal for a radical change of policy, particularly in the matter of taxation, has to be considered not only as a matter of immediate impressions, but of ultimate judgment; not merely the tactics but the consequences must be taken into the reckoning. Viewed in this larger way, there seems reason to doubt the wisdom of these latest fiscal bills of the House Democrats.

So far as boldness goes in attacking a protective duty which has come to have the air of a vested right, the plan to put sugar, both raw and refined, upon the free list deserves praise. The proposal was adopted over the vehement protests of Democratic Representatives from Louisiana and Colorado, speaking for cane-growers and the producers of sugar beets. But their local interest was disregarded, as every local interest should be when it conflicts with a broad and sound national policy. For this display of the true spirit that should animate tariff framers, Mr. Underwood and those who stood with him merit commendation. We cannot get a justifiable system of tariff taxes until they are made to fit national conditions and general demands, with parochial and even private back-yard appeals ruled out.

But if tariff duties are to be levied for revenue only, we must be very careful about laying a rude hand upon a schedule which is confessedly a great revenue-producer. The sugar taxes bring in more than $50,000,000 a year. That fact is one which must bulk large with any man responsible for making up the national budget. He may not like the incidental protection that goes with the tax, and may resent the insolent and threatening attitude of those who benefit by it, but still there stands the large contribution to the Treasury. He may rightly think of sugar as now a universal necessary of life and desire to reduce its cost to millions; but if he is a statesman more than a politician he will not run off with the taking cry of a "free breakfast table" until he has discovered some way in which the deficiency in revenue may be made good.

It is only fair to Mr. Underwood to say that he has consistently maintained the correct attitude in this matter. Both last year and this, in the drafting and presentation of tariff bills, he has kept steadily in mind the need of supplying the government with funds for carrying it on. And it is in keeping with this position that he now admits the necessity of making good the $50,000,000 of revenue which would be cut off by abolishing the duty on sugar. Hence the proposal of an income tax. That would seem a natural alternative, if the enactment of such a tax were clearly legal, but suppose it turns out that you are only enacting a lawsuit? Lawsuits yield no public revenue, as was unhappily discovered in 1895 when the income-tax measure of the Wilson tariff was taken into the courts. And the present plan would inevitably be so taken. About it there is an air of attempting something irregular, or at least unforeseen. The excise tax on the doing of business which the Supreme Court has held legal in the case of corporations, is somehow to be extended to partnerships and to individuals. But the whole thing is confessedly uncertain, and has the appearance of fumbling at a big problem. It is virtually certain that we shall some day have an income tax in this country. The Constitutional amendment making it unquestionably legal is in a fair way to be ratified. And if we are to have the tax at all we ought to have it in a definite form, with the law drawn broadly and carefully, instead of by means of a device that looks very like a quibble, and in a halting measure which might be oppressive and unjust to some and which would surely leave many of the large incomes untaxed. Even convinced advocates of a straight-out income tax will not like this "excise," which is neither flesh nor fowl nor good red herring.

Over and above such considerations there rises another. It is that the Democrats in Congress are not, in these measures, impressing the country as steady or entirely sincere. They seem to be feeling about for a fetching political issue, rather than laying their real political programme before the people. It is scarcely pretended now that the bills for making sugar free and for levying a disguised income tax can pass both houses and get the President's signature. There is too much the impression of something having been advanced for political effect, not for serious legislation. This was not the case with the other tariff bills which the Democrats have favored and put through the House. They may not have expected them to become law, but at least they were ready to make them law, and if the Democrats were to be put in complete power next year, there can be no reasonable doubt that such reductions of duty as their party has committed itself to in the items of wool and steel and cotton and chemicals would, in fact, become law. With these latest proposals the look of things is different. They do not have the appearance of mature consideration. They seem to be more like political experiments than deliberate legislation. And in our opinion they will not do the party any good, since they will make it appear not sure of its ground and disposed to be flighty. And if there is anything the Democrats need to do, in order to regain the confidence of the country, it is to show themselves calm and cautious and sure-footed.

REPORT OF THE FACTORY COMMISSION.

The dreadful loss of life in the Triangle Waist Company fire of a year ago brought home to the people of New York, as nothing else could have done, the lack of proper exercise of the police power of the State in safeguarding the lives of industrial workers. The most superficial examination revealed the fact that the loss of life could have been prevented, in fact that the fire itself would probably never have taken place, if the simplest precautions had been in force in this factory. If smoking had been prevented, the cigarette which started this fire would not have been lighted and thrown into the pile of waste. If the waste had been properly disposed of in fireproof receptacles, the fire could not have spread with such tremendous velocity. If an automatic sprinkler system had been installed, the fire would have been put out before it got any headway. If the workers had not been so crowded together and the aisles so clogged by their chairs and machines, the panic would not have started and the exits would not have been clogged. If the exits had been properly marked, open, and brought to the attention of the workers by signs and fire-drills, the workers would have

been able to escape from the fire in greater numbers and the loss of life would have been much reduced, even if the other precautions had been omitted. These facts were brought out at the time of the fire. It was also recognized at that time that the conditions in this factory were typical of the conditions throughout the city and State in numerous other factories. Not only this, but the community awoke to a consideration of its neglect of other matters besides the fire hazard which are the proper subject of police protection.

It was a recognition of these conditions that led the Legislature of 1911 to appoint a commission to investigate the factories in this State. The report of the Commission has just been made to the Legislature. It is a valuable piece of work. It takes its place in the same class with the report of the Employers' Liability Commission to the New York State Legislature and the report on railway securities to the President. It is a matter of congratulation that such work as this can be obtained by the State as a matter of patriotic duty instead of for gain. The commissioners included two Senators, three Assemblymen, and four private citizens, all of whom served without pay. Their counsel, who, of course, bore the great burden of the work, was Mr. A. I. Elkus, and he also served without compensation; and many of the experts upon whom the Commission had to depend for help, such as Dr. George M. Price and Dr. H. F. Porter and others, gave their services virtually free.

This preliminary report of the Commission covers only three months' work and is remarkable for the great range of subjects which it treats, for the clearness and simplicity with which it presents the problems, and for the definiteness with which it makes recommendations for new legislation. The subjects treated are fire hazard, factory inspection, sanitation, occupational diseases, bakeries, manufacturing in tenements, employment of women and children, and foundries. At first sight, one might suppose it was a mistake to turn over to one commission an investigation covering such a multiplicity of problems. What possible relationship has fire hazard to the employment of women and children, or to foundries? The answer is that legislation on each and every one of these different subjects depends for its validity upon the exercise by the State of its police powers. Acts have been passed from time to time in New York dealing with one or another of the problems considered by this Commission. For instance, tenement manufacturing has been the subject of legislation, there has been an effort to regulate the hours of women by legislation, and manufacturing in bakeries has also been the subject of legislative enactment. In each case, the legislation has met with Constitutional objections, which have led the Court of Appeals to declare the acts in part or in whole void. To overcome these Constitutional objections, it is essential that the act should be a valid exercise of the police power. In other words, the purpose of the act must be to promote the health, safety, and welfare of the people of the State, and the means provided in the act must be clearly adapted to this end. The Commission believes that in each of these cases legislation can be devised which will meet the Constitutional requirements, but that much more time and study must be given to the problems. It therefore does not now make definite recommendations on these lines, but asks to have its time extended.

The report does, however, make definite recommendations for new legislation in regard to many of the subjects investigated. In connection with the fire hazard, it recommends legislation to concentrate the responsibility for State inspection, to compel factories to put in fireproof receptacles, enclose and protect gas lights and prevent smoking, to enable the Fire Department to compel fire drills in factories, to require the installation of automatic sprinklers in factories where more than two hundred people are employed and the factories are above seven stories in height, to increase the protection afforded by exits and fire escapes, and to regulate the number of workers that may be employed in one of these factories. The specific legislation proposed in relation to this last point is perhaps the most important of the Commission's recommendations.

In this branch of its investigation, as well as in other branches, the Commission has but marked out the field and ploughed the ground. Attention is called to the necessity of a building code and there is valuable comment on the subject of occupational diseases. The evils of tenement manufacturing are thoroughly considered, and the question of the employment of women and children is discussed with care and ability. But on these subjects the Commission refrains from making definite recommendations. The problem of the legislation to be recommended is, of course, the most serious task of the Commission. Our statute books are full of laws on these subjects to-day which are not adequately enforced, or which are actually incapable of enforcement, and in addition to the difficulty of meeting Constitutional limitations, the Commission must meet the greater difficulty of imparting enforceability to the legislation recommended by it. A striking illustration of this is found in the fact that up to now there has been no provision for registering factories in New York, and hundreds of factories are started whose existence is unknown to the Department whose duty it is to inspect them under our present laws. The Commission makes recommendations looking towards the remedy of this evil by providing that all factories shall be registered, and by concentrating the responsibility of inspections, which is now divided among many departments; but even more than this is needed.

It is a satisfaction to learn that both branches of the Legislature have passed a bill continuing the Commission for another year and making the necessary appropriation.

THE COMPLETE SUBURBANITE.

The commuter and his problems have been greatly misunderstood and misrepresented. The mass of literature on the subject may be divided into two types. One treats of the commuter as essentially a comic individual who brings paper parcels into town in the morning and carries lawn-mowers into the country at night. The other type depicts the commuter as a man who, setting out with fifty eggs and an incubator, violates every law of economic science by the prodigious speed with which he grows wealthy. It would be hard to say which type of literature has done the cause of the commuter more harm, the satiric article which describes him as a man with parcels clinging to the rear platform of an outgoing train, or the bouncing optimistic article which tells how a boy may be sent

through college on twenty hens a year. Such stuff is obviously written for urban consumption; it is intended for that large body of straphangers which at regular intervals hears the call of the soil and is allured by independence in a truck-garden, but then shrinks from the prospect of carrying paper parcels into town.

The commuter may be sufficiently defined as a citizen who digs in a garden and detests railway presidents. This sentiment may vary from instinctive dislike to consuming hatred, but in some form it is always present. The attitude, one is bound to admit, is in one important respect unjustified; and paradoxical as it may seem, the slower the trains on the commuter's road, the less reason is there for resentment. For it is largely because he travels on a road which might carry him faster than it actually does that the commuter is made valuable to himself, the State, and the nation. Those two prolonged journeys every day give him the necessary leisure for contemplation that the man in the city, clinging to a strap and wedged in between two men bigger than himself, is entirely deprived of.

The results are obvious. As for the city man, the only way in which he can forget the misery of his situation is to plunge into a furious reading of one newspaper after another, with the primary object of obtaining, not information, but oblivion. The opportunity to read slowly, to pause, to reflect, and to digest what one has read, is to be had only in a comfortable seat on a comparatively slow train; and every disarrangement of the schedule only contributes to this educational process. There are commuters—those who have just moved out to the country—who do indulge in fair dreams of wealth in connection with their poultry-yards, as we have described, but such flights of fancy are invariably reserved for the quiet hour on the train. Once at home, there is no nonsense in the business. The daily trip is the commuter's opportunity for a *Katharsis* that makes men sensible.

This regular adventure in the realm of fancy followed by a regular return to the world of fact, makes the commuter an ideal citizen. On the train he dreams and ponders. In the garden he works. He thus combines in himself an intelligent progressivism and an intelligent conservatism. The man who has by patient labor brought forth the flower from the seed and the tree from the sapling, will not be carried off his feet by the quack economist and the dealer in political nostrums. He knows that peach trees cannot be made to grow by coming out loudly for the recall of the San José scale or the leaf-blight. He knows that vegetable gardens do not flourish when we solemnly reassert the superiority of human rights over the rights of the potato-bug. He knows that the earth will not yield its increase by the mere declaration of undying enmity against rust and brown-rot. Patient digging and delving, ceaseless labor with the watering-can and the hose, patient and remorseless warfare with the arsenic spray, the knife, and the shears—these are the methods by which garden-patches and orchards are kept in condition and the increasing demands of the family are provided for. When somebody sends the commuter a catalogue with miracles in it, he takes it with him on the train and thinks it over.

He has thus retained the antique virtues, this suburban citizen of ours, and added to them conquests of the modern spirit. In his hesitating, plodding way, he beats down the resistance of an ungrateful soil and surmounts the difficulties of ferry travel in winter. Railway presidents are afraid of him. They may mock at him, revile him, tell him he is unprofitable traffic and is not wanted; but they end by making excuses about terminal facilities and delays incident to regrading and electrification. He has his dreams of wealth, of the time when he may give up his desk in the city and put in ten hours a day on his land. But it is doubtful whether at heart he desires to grow rich. For in his present situation he realizes the ideal of the Sabine farm, that alternation of life close to nature and life close to Broadway which only millionaires with a prodigious income and poets without any income at all are able to realize.

GEORG BRANDES AT SEVENTY.

BERGEN, Norway, February 14.

The eminent Danish literary critic, Georg Brandes, celebrated his seventieth birthday on February 4, and was greeted as the great master and leader of the intellectual world in articles and speeches all over the Scandinavian countries. It makes a strange impression to see papers which forty years ago indulged in the vilest abuse, now joining in the praise of his life work, and to hear individuals who formerly compared him to the devil now adore him as a demi-god. It reminds one of the impressions of Edmund Gosse expressed in his "Two Visits to Denmark, 1872-1874." Giving an account of his relations with Brandes during his visit to Denmark in the latter year, the English critic writes:

> It was difficult to account for the repulsion and even terror of Georg Brandes which I heard expressed around me whenever his name came up in the course of general conversation. At the present day we have grown to be so lax and so indulgent to opinions that it is not easy for us to reconstruct, even in imagination, the indignant zealotry of earlier times. That universal suspicion, that scurrilous abuse, of Shelley, which prevailed about 1819, which culminated in the poet's being knocked down by an English bully in the post office of Pisa, and which were reflected in the loathsome insinuations of the *Quarterly Review*—these are the nearest parallel which I can think of to the way in which Brandes was shunned and maligned in Copenhagen in 1874.

But things have changed in the course of these forty years, and the mind and heart of the Scandinavian peoples have been widely liberalized. It is Brandes's enduring merit to have brought about this change and to have "set thoughts free" in religion, morals, patriotism, and literature.

On the occasion of the festival the well-known Gyldendalske Forlag (Gyldendal's publishing firm) put out a new and splendidly illustrated edition (Jubilee Edition) of one of Brandes's most famous works, the study of Shakespeare. At the same time was initiated at the Royal Library of Copenhagen a so-called Brandes Archive (Georg Brandes Arkivet), containing books by and on Brandes, letters, manuscripts, and so forth. On this occasion the chairman of the Danish Authors' Society, Otto Benzon, paid a high tribute to the genius of Brandes, concluding as follows:

> So we transfer to the Royal Library the Georg Brandes Archive, not as a valuable gift only, but as a monument of a man, a significant man, who, by knowledge and clearsightedness, threw new light on many things, a courageous man, who disinterestedly fought for what he thought just and against what he thought unjust, a good Danish man, who did honor to his country. . . . Seventy years old, this knight-errant now stands in the arena, dauntless as ever. We wish that for a long time he may stand so.

A Danish periodical, *Tilskueren* (The Spectator), to which Brandes for many years has been a frequent contributor, put out a special Brandes number, containing many valuable and interesting

studies on the critic. Brandes also received a more official recognition of his work in the shape of the so-called "medal of merit in gold," bestowed upon him by the Danish King on the recommendation of the Ecclesiastical Department.

In Norway appeared a handsomely printed book of greetings from prominent Norwegian men and women, "Georg Brandes, 1842-1912, from Norway on the Septuagesimal Day." The greetings vary in length from a single line to several pages, and are chiefly concerned with the immense influence Brandes exerted on individual development as well as on national life. The work opens with a characteristic note by the author, Knut Hamsun, in which he praises Brandes as the ever young and courageous champion; and is followed by contributions from such men as Gunnar Heiberg, Christian Krohg, J. Lövland, Christian Sinding, and Gerhard Gran. A few of the utterances may be worth quoting. The poet Gunnar Heiberg says: "As a young man, I chose two teachers, Johan Sverdrup and Georg Brandes. The former maintained Norway for the Norwegians. Georg Brandes taught me Europe for Norway. I never repented my choice." The author Johan Bojer finishes a two-page article with the following words: "And now he is seventy years old. In the Germanic and Slavic world his name started like a banner, then it became a culture—now it has formed a generation." The late Minister of Foreign Affairs, J. Lövland, says in part: "For the disposition, the fidelity, the farsightedness, the courage, and the rich influence he has shown in his many fights for liberty, he deserves the thanks and homage of all nations."

The Swedish periodicals and newspapers paid an equally high tribute to his genius. From England he received an address expressing admiration of his work and good wishes for the coming years, signed by fifty representatives of the world of English literature and art. From the Danish colonies in London, Manchester, Newcastle, and Edinburgh were sent telegrams to their illustrious countryman.

In strict accordance with his nature, Brandes fled from the country to avoid all the festivals and personal homage which he knew to be in store for him if he stayed at home. He went to Paris, where he spent his birthday in simplicity and tranquillity, refusing an invitation from the Scandinavian Society of that city to attend a banquet in his honor. A couple of days later he delivered a lecture in Paris for the benefit of a poor old newspaperwoman, whom he had come across on a street-corner near his hotel.

ARNE KILDAL.

NEWS FOR BIBLIOPHILES.

Henry de Quincey, writing to his brother Thomas in 1808, says: "I send this by Mr. Harden, and should have come myself if it had not rained so. I folded it well in paper, that he might not see the redness of the cover through it and thereby judge what it was." On this letter Thomas inscribes this grim "mem.—The book was 'The Simpliciad' by Mr. Mant, a poor Oxford Fool."

The author thus emphatically condemned was Richard Mant, born in 1776, who matriculated at Oxford in 1793, became a fellow of Oriel in 1798, M.A. in 1800, and D.D. in 1815. After holding several benefices he was appointed Bishop of Killaloe in 1820, Bishop of Down and Connor in 1823, of Dromore in 1842, and died November 2, 1848. Probably if de Quincey had been favored with a prophetic glimpse of the career of the man so unfavorably characterized he would have framed his judgment in a milder phrase. And if he had said that Mant was the writer of a foolish work—it is really only a pamphlet of 51 pages—it would not be easy to say very much to the purpose against such a verdict. But in 1808 Mant did but give expression to the poor foolishness of a large proportion of the British reading public. The booklet is now rare, and its authorship is little known. Even in the British Museum Catalogue it is shrouded in anonymity. The title page reads:

THE
SIMPLICIAD;
a satirico-didactic
Poem.
Containing
hints for the scholars of the
new school,
suggested by Horace's Art of Poetry,
and improved by a contemplation of the
works
of
the first masters.
Simplex munditiis.—Horace.
Undecked save with herself.—Milton.
London: Printed for John Joseph Stockdale, No. 41 Pall Mall. 1808. 12mo.

The dedication, with its flimsy pretext of concealment by the omission of vowels, is "To Messrs. W-ll - - m W-rdsw-rth, R-b-rt S--th-y and S. T. C-l-r-dg-." Precise references, with extracts, are given to the writings of the three poetic revolutionaries. The critic acknowledges that it was his intention to ridicule the "new and anti-classical school," but protests that he has used no exaggeration and that, indeed, the school is "incapable of caricature." He disclaims all malignity, and closes a dedication of a very unusual kind in these words:

With the friends of humanity and virtue I venerate your humane feelings and your virtuous principles: with the generality of our countrymen, I acknowledge and admire your talents: but at the same time, with most men of discernment and cultivated minds, I lament the degradation of your genius, and deprecate the propagation of your perverted taste.

Such was the attitude of a man of classical culture and of some poetic impulse ten years after the appearance of the "Lyrical Ballads." To him the three are only

Poets who fix their visionary sight
On sparrow's eggs in prospect of delight,
With fervent welcome greet the glowworm's flame,
Put it to bed and bless it by its name;
Hunt waterfalls, that gallop down the hills;
And dance with dancing, laughing daffodills;
Or measure muddy ponds from side to side,
And find them three feet long and two feet wide;
Poets with brother lark or brother robin fly,
And flutter with half-brother butterfly;
To woodland shades with liberty repair,
And scorn with pious sneer the House of Pray'r:
Of apostolic daisies learn to think,
Draughts from their urns of true devotion drink:
Woo with fond languishment their chymic maids,
Pray for their spaniels; consecrate their spades;
Whine over tattered cloaks or ragged breeches
And moralize with gatherers of leeches.

Wordsworth's small celandine is very harshly handled, and of course no mercy is shown to Coleridge's young ass. But the critic praises a "feeling" poem in which Southey "invoked revenge for bleeding Afric's wrong," and warmly commends Wordsworth's "festal strain to good Lord Clifford's praise." However, he cannot endure to hear of

Goodies who toil their pottage one and one
By the same fire; and some who live aloue;
Beggars on lies and impudence who thrive
And cottage girls who don't know seven from five.
. . . . . .
Such subjects are original, 'tis true;
But then they're very poor and paltry too.
And thro' the frame so swiftly venom speeds,
So hard it is to purge a field from weeds.
'Tis chance but themes like these infect your style,
Debase your thoughts, and make your language vile.

He is deeply pained that the three revolutionaries are not content with the metres of Milton, Thomson, Cowper, Pope, Gray, and Dryden, but must

. . . rummage Percy's Reliques:
In sapphics limp, or amble in dactylics,
Trip it in Ambrose Philips trochaics;
In dithyrambics vault; or hobble in prosaics.

Wordsworth's Goody Blake, Betty Foy, and Alice Fell, and Southey's "blear-eyed collier Moll" are singled out for especial blame.

"The Simpliciad" is included in the list of the Bishop's writings in the *Gentlemen's Magazine* (January, 1849), and is also mentioned in the biography by Archdeacon Edward Berens. It is interesting to note that in one of his latest publications, Bishop Mant quotes Wordsworth's sonnet on the "Decay of Piety." His objection to "the anti-classical school," whom he had satirized in his earlier days, was perhaps not inveterate. So far as the Bishop is remembered at all by this generation, it is as a hymn-writer. "When all Bishop Mant's translations, original hymns, and versions of the Psalms in common use are taken into account, it is found that he is somewhat strongly represented in modern hymnology," says Dr. John Julian, in his "Dictionary of Hymnology."

From this bibliographical excursion we may conclude that Richard Mant at thirty-two and Thomas de Quincey at twenty-two were both somewhat rash in their judgments. No great stress can be laid upon a private memorandum written on a private letter, but Mant's anonymous diatribe was more serious. Mant's tract is worth the attention of the growing tribe of Coleridge collectors, for while he names one piece by Southey and one by Wordsworth of which he approves, he has no word of praise for S. T. C. In the year 1808, when "The Simpliciad" was published, Coleridge had been known for ten years as the author of the "Rhyme of the Ancient Mariner"! As to this poem, one of the greatest in the English language, Mant is absolutely silent. Such are the perils of the conventional when confronted by genius.

WILLIAM E. A. AXON.

LIBRARY CONDITIONS IN NEW YORK STATE.

The annual report on libraries, just submitted by the education department to the State Legislature, continues unbroken the remarkable record of growth which these reports have shown for the last nineteen years, ever since the present library law was enacted. The report is based on returns from 1,390 different libraries, which have a total stock of 9,718,899 volumes in their collections, and a circulation of 21,483,996. These figures show a gain over the preceding year of forty-five in the number of libraries reporting, and of 940,625 in the annual issue of books, but a decrease of 375,347 in the stock of books, the decrease being due entirely to the destruction by fire of the State Library last March. Since 1893 the number of libraries in the State has more than doubled, the number of books has increased threefold, and the circulation has increased sevenfold. Even since 1906, when many thought that library expansion had for a time at least about reached its limit, there has been a gain of 124 in the number of libraries, 1,000,000 in the stock of books, and above 6,000,000 in the circulation. For the whole population of the State there is now an annual average issue of 2.2 books for each person, or about ten books for each household.

The following table gives summaries of annual reports for the past nineteen years:

Year.	No. of libraries.	Volumes—Added.	Volumes—Total.	Circulation.
1893 ...	600	225,195	3,851,943	3,136,602
1894 ...	704	246,751	4,133,378	3,619,178
1895 ...	723	258,741	4,392,999	4,156,744
1896 ...	806	296,498	4,647,661	5,008,402
1897 ...	869	324,687	4,934,889	5,814,470
1898 ...	938	373,615	5,393,106	7,248,249
1899 ...	985	441,964	5,846,519	8,372,888
1900 ...	1,035	483,551	6,217,980	8,760,678
1901 ...	1,137	616,941	6,796,241	10,227,735
1902 ...	1,137	464,751	6,975,540	10,984,625
1903 ...	1,160	435,898	7,415,376	11,839,828
1904 ...	1,140	456,904	7,700,367	12,219,458
1905 ...	1,243	488,996	8,164,686	13,266,779
1906 ...	1,266	552,292	8,890,485	14,992,354
1907 ...	1,282	558,331	9,355,121	16,575,161
1908 ...	1,301	608,044	9,963,235	17,630,413
1909 ...	1,306	720,954	9,957,225	19,916,346
1910 ...	1,345	.....	10,094,246	20,542,355
1911 ...	1,390	683,656	9,718,899	21,482,990

Of the 1,390 libraries reporting, 845 belong to high schools and academies, and offer only a limited service to the general public, 53 belong to other institutions and are used mainly for institutional purposes, 51 are subscription or circulating libraries independent of the education department, and 440 are free public libraries belonging to the State library system, and entitled to the various forms of State aid provided for that purpose. Of the total circulation from free libraries, amounting to more than 20,000,000 a year, all but 939,000 or more than 95 per cent. are credited to the 440 libraries registered by the regents and under their general supervision.

The amount of State money distributed directly to public libraries last year was $31,628, divided among 362 libraries which qualified and applied for the grant, an average of $87 to each library so benefited. This direct grant by the State of $31,628 compares with a total of $1,590,000 raised during the year for free libraries by local taxation, the State contributing less than 2 per cent. of the annual cost of the public library system.

The number of public libraries now supported or aided by local taxation is 299, an increase of 18 above the preceding year; and the total amount of taxation for libraries shows an increase for the year of $86,337. Notwithstanding the large and steady increase in the number of places providing tax support for their libraries, the increase in the number of libraries is proceeding at a still more rapid rate, and there are now 190 free libraries chartered by the State depending entirely for their local support on voluntary contributions and endowments, as compared with 165 such libraries two years ago.

Charters were granted during the past year to 13 new libraries, and 10 libraries or branches were brought into relations with the education department by official registry, making an increase of 23 in the number of free libraries in the State system. Of the new enterprises reported, by far the most important is the public library provided for by act of Legislature for the city of Rochester. Ten thousand dollars was appropriated by the city for initial expeuses in organizing the system, aud plans have been adopted for a large and comprehensive development.

Naturally, library support and library extension have reached their fullest development in the cities. All of the cities of the State, with the exception of two which are in a seuse parts of other cities, are now in possession of free library facilities, and all but eight appropriate public money for library support. While the cities have 74 per cent. of the population of the State, they are credited with 85 per cent. of the library circulatiou and 96 per ceut. of the library tax. But, in view of all the conditions making for the growth of the cities at the expense of the country, library progress outside the cities is, perhaps, even more encouraging and remarkable than that within the cities. Thus, for the population of the State living in villages or the open couutry, numbering 2,386,599, there are 306 registered free libraries, having 1,483,429 volumes, and an annual circulation of 3,090,915. These figures applying to but 26 per cent. of the State's population, and that widely scattered, equal or exceed the figures reported for the whole State, including the cities, in 1895, and the average per capita supply and issue of books to people outside the cities is now three times as great as for the whole State at that date. That but 4 per cent. of the amount raised for libraries by tax is credited to villages and hamlets, means both that these libraries are managed with extreme economy, and that their support is supplied largely from gifts, endowments, and voluntary service. But, as noted above, the principle of public taxation for library support is making rapid progress in the towns and villages, and there are now 85 more such places voting an annual library tax than six years ago.

The annual appropriation for libraries by cities varies from more than a million dollars to three hundred. Twelve cities in the State appropriate each $10,000 or more for this purpose, as follows: New York, $1,192,790; Buffalo, $99,950; Syracuse, $40,500; Utica, $24,000; Albany, $12,600; Youkers, $12,500; New Rochelle, $11,000; Poughkeepsie, $10,740; Binghamton and Mt. Vernon, each $10,200; Rochester and Schenectady, each $10,000.

Estimating total city appropriations in terms of circulation, New York city pays 9 cents for each volume issued, Buffalo 10, Syracuse 14, Utica 13, Albany 4, Yonkers 6, New Rochelle 8, Poughkeepsie 9, Binghamton 7, Mount Vernon 7, Schenectady 7. It must be remembered, however, that the average cost per volume of issue is no final test of relative efficiency, as libraries differ so widely in the emphasis on reference work.

Forty-five libraries of the State were benefited during the year by gifts or bequests, each valued at $100 or more, the more important being: One hundred thousand dollars left to Rochester by will of M. W. Rundell for a library and fine arts building; $95,000 to New Rochelle from Andrew Carnegie for a library building; $50,000 to Washingtonville by will of David A. Moffat; $29,000 to the Library Association of Friendship by will of Mrs. Mary Pitt; $26,000 to Ossining from Andrew Carnegie for library building; $25,000 to Corning from Andrew Carnegie; $18,000 to Nunda from Mrs. G. H. Lewis; $10,000 to New York City from Mrs. Russell Sage for fire-house libraries; $10,000 to the library of the New York Bar Association, by will of Samuel Riker; $10,000 to Rockville Centre by Andrew Carnegie.

The following libraries have completed and occupied new buildings during the year: New York Public, Library of the American Geographical Society, New York City, Hornell Public, Bolivar Free, Frankfort Free, Richfield Springs Public, Sherburne Public, Theresa Free, Union Springs Free, and West Hebron Free. Three of these were provided by gift of Mr. Carnegie, three by local subscriptions, two by gifts from interested patrons, one by city bonds, and one by accumulated funds of the corporation. In addition to the branch libraries in Greater New York, there are now in the State 34 library buildings contributed by Mr. Carnegie, and 120 provided by other individual donors. There are 288 buildings in the State erected and devoted entirely to library purposes, which, together with their sites, represent a valuation of about $47,300,000.

Correspondence

ST. BERNARD AND NATURE.

To the Editor of The Nation:

Sir: As the object of the kindly admonitions of "J. H." in your issue of February 1, may I say that I suppose no persou of intelligence would be likely to differ with him when he remarks: "One should not take a single sentence out of its allegorical context, and accept it literally because the literal meaning happens to suit more modern sentiments, which had no place in Bernard's ascetic mind"—provided always that they *had* no place in his mind, which is precisely the point at issue. "Moreover," says our mentor, "it is easy to show that St. Beruard had no eye for nature, or, indeed, for anything delightful to the senses." And his proof is that the old Latin life of St. Bernard ascribes to him the statement that in the woods aud fields he had no masters except the oaks and beeches!

Among the works printed by Dr. Eales in his translation as St. Bernard's is one concerning the site of the abbey of Clairvaux ("Life and Works of Saint Bernard," II, 460-467). The reader shall judge from a few extracts whether St. Bernard had "no

eye for nature, or, indeed, for anything delightful to the senses." Here we are told of—

the sturdy oak which salutes the heavens with its lofty top, the graceful lime-tree which spreads its arms, the ash-tree, whose wood is so elastic and easily split, or the leafy beech.

Later he speaks of—

the verdant bank of a pool filled with pure and running water, where they can watch the sports of the little fish in water clear as crystal, which swim to and fro in shoals like marching armies;

which seems like an anticipation of Tennyson's

> . . . like a shoal
> Of darting fish, that on a summer morn
> Adown the crystal dykes at Camelot
> Come slipping o'er their shadows on the sand.

Not less beautiful is the author's description of the fountain at Clairvaux:

This fountain, then—which is said to be an indication of a good fountain—has its source opposite to the rising sun, so that at the time of the spring solstice it salutes the ruddy face of the scintillating Aurora.

Of the trees in the orchard adjoining the infirmary, in their relation to the sick monks, he observes:

Under their leafy screen the sun's rays are softened, and their sufferings are soothed as they breathe the air fragrant with the scent of hay. The pleasant green of the trees and of the turf rests their eyes, and the fruit which hangs before them promises them delight when ripened. Their ears are agreeably occupied by the sweet and harmonious concerts of birds of varied plumage. See how, in order to cure one sickness, the goodness of God multiplies remedies, causes the clear air to shine in serenity, the earth to breathe forth fruitfulness, and the sick man himself to inhale through eyes, and ears, and nostrils the delights of colors, of songs, and of odors.

It is true that he looks through nature up to nature's God, as the following passage shows; but is he therefore to be censured for indifference to nature?

The smiling countenance of the earth is painted with varying colors, the blooming verdure of spring satisfies the eyes, and its sweet odor salutes the nostrils. When I delight my eyes with the bright colors of the flowers, I am reminded that this beauty is far above that of the purple robe of Solomon, who in all his glory could not equal the beauty of the lilies of the field, although to him there was wanting neither richness of material, nor wisdom and taste in arrangement. In this way, while I am charmed without by the sweet influence of the beauty of the country, I have not less delight within in reflecting on the mysteries which are hidden beneath it.

Such are the very sentiments which Storrs ("Bernard of Clairvaux," p. 157) attributes to Bernard:

His supreme lessons were always from the Scriptures, which he studied, in the form in which he possessed them, with an assiduous zeal which we may well emulate; but he found great lessons and inspiring suggestions in the lovely and lofty works of God, and kept for these an open sense.

Nor are they inconsistent with the practice of his followers, as described by Neale (Commentary on Ps. 50:11):

S. Bernard, forbidding, as he did, the slightest ornamentation in his churches, forbidding towers, nevertheless taught his Cistercians to choose the loveliest situations for their houses. I wonder whether it were the romantic situation of his father's castle—Fontaines-lèz-Dijon—that taught him the instinctive love of natural beauty which found their places for Clairvaux itself, for Rievaulx in our own Yorkshire, for Batalha in Portugal, and for hundreds of other situations.

If Bernard was indifferent to nature, it is singular that the most authoritative book that we have on the mediæval feeling for nature (Biese, "Die Entwickelung des Naturgefühls im Mittelalter") should not only quote Letter 106 in the same sense as I did, but should ascribe to him as a principle "to learn from earth and trees, from grain, from flowers, and from grass" (p. 197); and that in both respects Biese should be confirmed by Zöckler ("Geschichte der Beziehungen zwischen Theologie und Naturwissenschaft," I, 318), who adds: "His mysticism bears, . . . in not a few of its developments, a character of peculiar natural freshness, savoring of the spicy fragrance of the forest."

Bernard stood by no means alone among monks in his love of natural beauty. More than three hundred years before his time, Alcuin (735-804) thus bursts forth in a poem (the condensed rendering from Montalembert, "Monks of the West," I, 69):

O my cell! sweet and well-beloved home, adieu for ever! I shall see no more the woods which surround thee with their interlacing branches and flowery verdure, nor thy fields full of wholesome and aromatic herbs, nor thy streams of fish, nor thy orchards, nor thy gardens where the lily mingles with the rose. I shall hear no more these birds who, like ourselves, sing matins and celebrate the Creator in their fashion.

If one were to begin to quote Dante as illustrating the love of natural beauty by a theologian of the Middle Ages, one would never end, and indeed it is sufficient to refer to the pages of Dean Church's delightful essay; but one can at least quote two or three sentences from St. Francis' (1182-1226) ever-new Canticle of the Sun:

Praised be thou, my Lord, with all thy creatures, especially milord Brother Sun that dawns and lightens us; and he, beautiful and radiant with great splendor, signifies thee, Most High.

Be praised, my Lord, for Sister Moon and the stars that thou hast made bright and precious and beautiful. . . .

Be praised, my Lord, for Brother Fire, through whom thou dost illumine the night, and comely is he and glad and bold and strong.

Be praised, my Lord, for Sister, Our Mother Earth, that doth cherish and keep us, and produces various fruits with colored flowers and the grass.

ALBERT S. COOK.

Yale University, February 23.

THE ADJUTANT-GENERAL'S OFFICE.

To the Editor of The Nation:

Sir: The extract given below, taken from the preface to the Index volume of the "Records of the War of the Rebellion," may be of interest for other reasons besides showing what the resources of the Government are in the item of war material of the manuscript sort:

Voluminous as is the completed publication, comprising 128 books and a copious atlas, it nevertheless fails to convey an adequate conception of the labor involved in its compilation and preparation. The majority of the papers printed exist in duplicate, if not in triplicate—originals sent and copies retained—all of which it was necessary to examine with great care in order to guard against omission and to ascertain the authenticity of documents selected for publication. The published papers form but a small fraction of the myriads that were rejected as immaterial, of no historical interest, or otherwise not within the scope of the work, but all of which required careful consideration to determine their ineligibility. The papers examined were well-nigh beyond computation, being counted, not by documents or boxes, but by tons, roomfuls, or the contents of buildings. The volunteer records of discontinued commands (being the books and papers turned in by volunteer officers when mustered out) filled a large four-story warehouse; the Confederate records alone crowded an entire three-story building; the papers to be examined in the Adjutant-General's Office occupied a third of the old War Department building [written in 1901]; military telegrams were almost countless, a single collection of Union dispatches alone containing over 2,000,000; all these, as well as the files of the Secretary's office and the various bureaus of the War Department, had to be carefully read and considered, paper by paper, and, if deemed proper for publication, copied and compared. In addition, thousands of individual contributions of original documents of the war period were received from time to time from officers and others throughout the country, either as loans or as donations to the Government; in many instances the collections thus donated or loaned were of formidable dimensions. In all such cases thorough examination and consideration were required to prevent duplication of matter and to establish not only the accuracy of copies, but the authenticity of original documents. Missing links had to be traced by exhaustive correspondence and other research to secure completeness of the work as each volume appeared.

Obviously, this was a work of magnitude, the cost in 1901 having been $2,858,514.67. The importunities of what serious historian, vacation investigator, or young person writing a dissertation were to be allowed to interfere in the smallest degree with this work? It is not surprising there was a Cabinet order forbidding courtesies: anything like a general interest in such matters is of very recent growth—there will be plenty of time to clear up many small points in the history of our Civil War; as a preliminary measure, get the war as it was, between covers. Whoever has done this work deserves a lot of credit, and very few historians can expect to have a more enduring name.

At an expense of another $3,000,000 (certainly half of which applied to salaries of experts) it is quite possible the Government may be able to house properly, and classify, its astounding collection of war manuscript material, to which the public (under many restrictions) might be admitted.

ALFRED J. MORRISON.

Hampden Sidney, Virginia, February 27.

THE CAUSE OF HIGH PRICES.

To the Editor of The Nation:

Sir: The cause of high prices is simple and at our doors. The present high prices and the consequent high cost of living are mainly caused by verbal agreements, entered into between retail traders, to keep up prices in the cities and towns in which they are doing business. The prices are pushed up to the top notch, and all the retail traders in the town agree (verbally) to charge the same. They call this method of fleecing the public, "standing together."

One way of dealing with these combinations of retail traders (which I do not recommend) was recently successfully tried in various towns in France, where desperate mobs of respectable women stormed the markets and shops, and compelled the retail dealers to reduce the prices of all the necessary kinds of food to a reasonable level.

BERTRAND SHADWELL.

Galveston, Tex., February 26.

A POSSIBLE MOTIVE.

To the Editor of The Nation:

Sir: The following explanation of Mr. Roosevelt's motives by one of his admirers—not the present writer—is too ingenious and ingenuous to be lost to the public.

According to this "man in the street," Mr. Roosevelt is still the same devoted friend of Mr. Taft that he was formerly. Perceiving, however, how slender is the President's chance of reelection, he, Mr. Roosevelt, has *pretended* to want and to be ready to accept the nomination only with the intention of finally withdrawing and lending all his influence to the support of his friend. In this way, the Republican party is to be reunited and President Taft swept on to victory both in the convention and in the November election.

Possibly, if this should meet Mr. Roosevelt's eye, it may furnish him with a means of escape from the embarrassment of his statements of 1904, 1907, and 1912.

Boston, Mass., March 2.

"ANTI-SLAVERY."

To the Editor of The Nation:

Sir: Your notice (*Nation*, February 15) of the latest section of the Oxford Dictionary reminds the present writer that he apparently neglected to send to Sir James Murray examples of that rhetorical use of the words *slave* and *slavery* so frequently employed by the American patriots for a decade or so before the outbreak of the Revolution. If they declared once, they declared ten thousand times, that they should be "slaves" did they not resist the arbitrary measures of the British Government, and that if they acquiesced in those measures they should be reduced to a state of "slavery."

The notice also naturally recalls *anti-slavery* and the fact that in the *Nation* of March 20, 1902, a writer spoke of "the remarkable omission of" that term from the Oxford Dictionary. This rash statement drew from Sir (then Dr.) James Murray an interesting letter (printed in the issue of April 24, 1902), in which he said in part:

> On account of the interest of *Anti-slavery*, special trouble was taken by me to trace the epithet to its source, and I succeeded in getting a quotation from the manuscript minute-book of the British and Foreign Anti-Slavery Society of the 9th of April, 1823, which is probably the earliest written use of the word on this side the Atlantic. In addition to this, the Dictionary quotes of the same year the New York *Observer* of 17th of May, the *Anti-Slavery Reporter* of 1825, and a speech of Wendell Phillips of 1863 which, I think, sufficiently epitomize the history of the epithet.

How long had the term been employed here before it found its way to England? Shortly after the above letter was printed, I stumbled on a passage in *Niles' Register* of October 28, 1820, which makes it possible to give the approximate date of the earliest appearance of the term in print in this country. That passage is in part as follows:

> *The next President.* An attempt is making in Philadelphia to get up, what its projectors call, an "anti-slavery" ticket, for electors of president and vice-president of the United States. A large meeting was held on Saturday last, at which an opposition ticket was agreed upon, and a committee of correspondence, &c., appointed to promote its success (XIX., 127).

It only remained to examine Philadelphia newspapers, the result being that the following notice was found in *Relf's Philadelphia Gazette* of October 19 and 20, 1820; in *Poulson's American Daily Advertiser* of October 20 and 21, and in the *Aurora* of October 20 and 21:

> ANTI-SLAVERY.
>
> *Electors of President and Vice-President.*
>
> The Citizens of the city and County of Philadelphia and of the adjacent counties, who are opposed to the extension of slavery and in favor of a public declaration of the sentiments of Pennsylvania, upon this momentous question, are invited to assemble at the Mayor's Court Room, on SATURDAY AFTERNOON the 21st inst. at 4 o'clock, for the purpose of agreeing upon an Electoral Ticket to be supported at the approaching Election, against the Ticket agreed upon at Lewiston.

A notice, but shorter than the above, was also inserted in the *Democratic Press* of October 20 and 21, and during the next week there was much in the newspapers about the meeting, about *anti-slavery*, and about the *Anti-Slavery Electoral Ticket*.

Literature

THE YOUNGER PITT.

William Pitt and the Great War. By J. Holland Rose, Litt.D. New York: The Macmillan Co. $6 net.

In the first volume of his admirable life of the Younger Pitt Mr. Rose described, as was indicated in an earlier number of the *Nation* (September 7, 1911), the "national revival" which took place in England under Pitt's directing genius in the decade from 1781 to 1791. He made Pitt's personality stand forth prominently from the history of the times by his accounts of Pitt's wonderful rise to the Premiership, of his energetic attempts to repair the evils arising out of the old order of things in England, of his tactful handling of the royal lunatic, and of his personal relations with Wilberforce, Dundas, Dudley Ryder, and the other intimate friends. In 1791, at midsummer, the flight of Louis XVI and Marie Antoinette to the eastern frontier, and their ignominious capture and return to Paris, sharpened antagonisms already aroused and gave greater momentum to the mighty forces already set in motion. Democrats and royalists were stirred to a fury, not only in France, but throughout Europe, a fury which foredoomed to failure all attempts at compromise between the old order and the new. War soon broke out between Revolutionary France and the old monarchies of Austria and Prussia. Pitt endeavored to localize the war, but his efforts were fruitless; thenceforth his chief task was to bring to an honorable close a conflict which he had not sought. In the Great War which ensued between England and France, Pitt and Napoleon were indeed the leading actors; but even they were partially dwarfed by the mighty drama in which they played. In this second volume, therefore, we do not find the figure of Pitt drawn out so distinctly from the events of his age as in Mr. Rose's previous volume; there is something more of history and less of biography. Exceptions to this statement are the exceedingly interesting chapters on Pitt's resignation from the post of Prime Minister and his refusal to embarrass his incompetent successor, Addington; also the pages in which the author discusses Pitt's private financial difficulties and his love for Eleanor Eden. He and Miss Eden were fond of each other; the marriage would have given Pitt's nature what it needed—wider sympathies, relaxation, and a freer enjoyment of the amenities of life; but as both were poor and as he felt he could not support her adequately without resort to political jobbery, his scrupulous sense of honor made him renounce the idea of marriage.

In his chapters on the Jacobinism in England, which ran parallel with that in France from the flight to Varennes to the rise of Napoleon, Mr. Rose has drawn richly from the interesting and little-used archives of the Home Office. The harvests of 1792 had been spoiled by wet weather; food prices were rising; discontent was rife; bread riots broke out in Manchester, Liverpool, Sheffield, and elsewhere. Nowadays, high prices, heavy taxes, and conservative landlordism lead people in a country like Germany to vote the Social Democratic ticket. In those days, in England, it led them to devour Tom Paine's "Rights of Man," join "corresponding societies," and send fraternal addresses to the Jacobins across the Channel in France. A typical address of this kind, read at the bar of the French Convention on November 7, 1792, declared that five thousand signatories in England stepped forth to rescue their country from the opprobrium thrown upon it by the base conduct of Pitt's Government. They looked on Frenchmen as "citizens of the world, children of the common Father," not as enemies to be assassinated "at the command of weak or ambitious kings, or of corrupt ministers." They deplored the fact that George III, as Elector of Hanover, had joined his Hanoverian troops to those of traitors and robbers; "but the King of England will do well to remember that England is not Hanover; should he forget this, we will not forget it. We ardently wish a Triple Alliance, not of crowned heads, but of the people of America, France, and Great Britain, will give liberty to Europe and peace to the world." After the example given by France, revolutions would become easy. "Reason is about to make rapid progress; and it would not be extraordinary if in a much less space of time than can

be imagined, the French should send addresses of congratulation to a National Convention of England." Addresses of this kind were delivered at meetings all over England and published in newspapers devoted to the democratic cause. To counteract their influence Pitt helped to start two new papers, the *Sun* and the *True Briton*. They were of a popular type and expressed a rather cheap and sensational royalism; and their advent was much resented, as may be imagined, by Mr. Walter of the *Times*, after his support of the Government. Pitt had reasons to fear that deeds might follow words. British Jacobins were reported to have secretly ordered in Birmingham 20,000 daggers, twelve inches in the blade and five in the handle. Apparently, it was a sample specimen of this weapon which Burke melodramatically cast upon the floor of the House of Commons during a speech shortly before the execution of Louis XVI. At the news of Dumouriez's victory over royalism at Jemappes, Radicals in Sheffield evidenced their joy by roasting and devouring an ox, and marching in a great procession carrying the French tricolor and a burlesque banner representing Pitt's Minister, Dundas, stabbing Liberty, and Burke treading down "the swinish multitude" (a phrase which Burke in his "Recollections" had applied to the French revolutionists). The growing boldness of the Radicals finally drew Pitt into a series of repressive measures. Writers have contrasted his earlier advocacy of liberal reforms with his coercive so-called "reign of terror" later; and have charged him with inconsistency. But the charge loses force when one considers how the times changed after 1791, with the rising tide of English Radicalism. The whirl of events in France also seemed to show the need of taking timely measures against lawlessness and over-hasty reform. Years afterwards, when the events of the Revolutionary era could be seen in perspective, it was easy to ask: Why did not Pitt, in view of the unswerving loyalty of the great majority of Britons, rely on the good sense and weight of that mass to overbear the Jacobinical minority? It is to be regretted that he did not take that more intelligent and more courageous course. But to have expected him to do so, in view of the actual events about him, is to expect of him more than human prescience.

Mr. Rose traces in careful detail the events which, in spite of Pitt's efforts towards peace, drew England and France into war. It was not the execution of Louis XVI, as so often stated, which was the prime cause of the war; it was the victorious advance of Dumouriez towards the mouth of the Rhine and the danger from the subversive decrees with which the French enthusiasts threatened England's Dutch ally.

In the chapters on the conduct of the war, that on Toulon is noteworthy. It shows the first clash between the two great national leaders. It illustrates many of the difficulties and disadvantages under which Pitt labored in comparison with Napoleon. Whereas Napoleon could communicate with his Government at Paris in a few hours, it took Pitt at least eleven days to get dispatches from Toulon. Napoleon had the loyal support and absolute disposition of the entire French forces; the English commander at Toulon had many bickerings with his jealous Spanish allies who feared that the English were planning permanently to retain Toulon and make of it a second Gibraltar. This idea has often been repeated, even in such recent scholarly works as those of Cottin. But Mr. Rose shows that Pitt had no such plan. He intended merely to hold Toulon until the conclusion of peace, when it would be restored to the French, though used as a handle for exacting an indemnity in Corsica or the French West Indies. Pitt was also at a disadvantage owing to Austria's culpable failure to fulfil her promises. Thugut had promised to send 5,000 Austrian soldiers from Milan to Toulon, but not a man was sent. It was a vitiating flaw in Pitt's strategic combinations all through his conduct of the war that he too optimistically believed that the cabinets of Austria, Prussia, and Russia would live up to his own high standard of duty and magnanimous endeavor. Counting the Austrian and other promised troops, Pitt had estimated that there were 34,200 men defending Toulon. Mr. Rose calculates that there were actually only 16,912, of whom not more than 12,000 were fit for active service. If Pitt had been in closer touch with the situation, as would have been possible with the modern telegraph, he might have dispatched troops then lying idle at Cork and elsewhere which might have saved Toulon. When at last he realized the situation he instantly gave orders for reinforcements to proceed from England; one day before these orders were given Toulon had already surrendered.

Of all Pitt's problems perhaps the most complex and difficult were those connected with Ireland—the corrupt rule of a Protestant minority in the Irish Parliament at Dublin, the Rebellion of 1798, the constant danger of a French invasion, and the perennial disorders in that unhappy country. Pitt felt that the safety of the British Empire demanded the legislative union of England and Ireland under one central authority, just as Robespierre had seen the need of centralization of authority in France, and he obtained it—by bribery. He used bribery because only by corrupt means could he carry through that corrupt Irish legislature a measure entailing pecuniary loss on most of its members. He hoped to complete the Union by Catholic emancipation. But George III's threatened fit of lunacy at the mere prospect of allowing Catholics to sit in Parliament led Pitt to resign from office and delayed Catholic emancipation for a generation. While Pitt thought only of the safety of England, the King's thoughts continued to gyrate angrily and madly around the Test Act, his Coronation Oath, and the iniquities of Fox.

In his handling of the Irish question, which at the present moment is again arousing such interest and feeling, as well as in dealing with the foreign war and domestic legislation, Mr. Rose has again shown himself to be an historian of unusual ability. He combines great industry, impartiality, and insight with a twentieth century perspective and a distinctly pleasing style. His two volumes on Pitt may be regarded not only as the standard biography of that great statesman but as one of the best accounts of English history between 1781 and 1806.

CURRENT FICTION.

Paradise Farm. By Katharine Tynan. New York: Duffield & Co.

Miss Tynan here forsakes Irish character and Irish scene, yet informs her Wealdshire with the Irish geniality that marks all her tales. With an abducted ward in chancery, a falsely accused husband-poisoner, an Auld Robin Gray effect in returning sailors, a trusty, crusty old servant, a revengeful nurse, a disobeyed but wholly reconcilable father, and a nice baby, there are riches of material for a comfortably uncomfortable little story. Paradise Farm, buried in English lanes, is a charming background for the varied acts of hidden couple and devoted landlady. The romantic devotion, indeed, of Nancy Cripps to her mysterious lodgers, and theirs to her, brought about some of the difficulties, but also cleared them away. Since this cheerful novelist's troubles are seldom more than skin deep, one may trudge on through long lanes of predicament unperturbed and sufficiently beguiled, quite confident of happy turnings.

The Gods and Mr. Perrin. By Hugh Walpole. New York: The Century Co.

You think you will escape, but already the place has its fingers about you. You will be a different man at the end of the term. You will be allowed no friends here, only enemies. You think the rest of us like you. Well, for a moment, perhaps, but only for a moment. . . . You must not be friends with the Head, because then we shall think that you are spying on us. You must not be friends with us, because then the Head will think that you are conspiring against him. You must not be friends with the boys, because then we shall all hate you

and they will despise you. You will be quite alone.

This, and more of it, is the gloomy picture drawn by the cleverest master in a school faculty in Cornwall, England, for the benefit of young Archie Traill, just through the university, and entering upon his first year of teaching. Traill himself, a normal, full-hearted youth, is brought into the story, as is Isabel Desart, a visitor, to set off by contrast the warped and cramped spirit of this little society. Mr. Perrin is its arch embodiment. A bachelor, at forty-five, and apparently with every good intention, he sees his soul ground down by the system to pedantry and pettiness. Still, he will fight for the better side of himself. He is in love with Isabel, and through her he will be saved. Little wonder, then, that pique is replaced by hatred when Traill, by sheer youth and ingenuousness, pushes him one side. Under the circumstances, Perrin's neurotic introspections and final outburst seem hardly overdrawn. This school is not Eton or Harrow, but, according to the author, it is typical of conditions in a hundred schools throughout England.

The Fool in Christ. By Gerhart Hauptmann. Translated by Thomas Seltzer. New York: B. W. Huebsch.

The Indian Lily, and Other Stories. By Hermann Sudermann. Translated by L. Lewisohn. The same.

These translations are likely to satisfy the demands of their readers, though neither permits us long to forget that the original is German. Mr. Seltzer had the easier task, and performed it, on the whole, with sober fidelity. His expressions do not always have the right connotation, nor always fit into their context. A more thorough revision of the version as a new unit in English would have made it more homogeneous. But, at any rate, it does not pretend to be more than it is. Mr. Lewisohn's work, on the contrary, is a little marred by a pretentiousness which appears to be not altogether an involuntary reflection of the salient quality of Sudermann's own style. The translator is not lacking in a sense of rhythm, nor in the capacity for handling periods; but he shows himself sometimes unaware of the meaning of words; and what was in the original a novel, perhaps incongruous, but at least intelligible designation or epithet, becomes in his translation frequently grotesque. Thus: "A certain fogless freedom of thought seemed to me until today the highest point of human development." "She thought out a plan—the first of many by which she meant to rivet her beloved for life." "With abstracted caresses she touched his weary fingers." "She herself saw the world through a blue veil, heard the voices of life across an immeasurable distance, and felt hot, alien shivers run through her enervated limbs." Such sentences as these are not the equivalent of the German. Neither is it creditable to be unable to distinguish between *shall* and *will*.

Vane of the Timberlands. By Harold Bindloss. New York: Frederick A. Stokes Co.

The British Columbian Pacific Coast, land of the log-driver, the miner, the prospector, supplies again the substance for Mr. Bindloss's story. For background there are men and women, love and rivalries, and mutual service, but they are second in importance to the great romance of forest, river, and sea. No smooth-flowing idyl is this one of nature. Winds blow, floods destroy, snows smother, drifting logs betray; and whether on land or sea, men may face hunger and cold. The author's pleasure is to show the wildness and the beauty and the cruelty of such scenes and their effect on the men who brave them; who from seeking their living along these ways of hardship grow into a fury of affection for them—ready equally to "achieve success or face annihilation." One such, Wallace Vane, is pictured in this story, with his more cautious and considering friend, Carroll. Their journeys, sometimes for their own behoof, and as often in almost quixotic behalf of sundry under-dogs, make impressive reading. That all this is more impressive than exciting is no fault of the experiences, but is rather because of a level of calm common sense in the recital which never gives a chance to lose the breath in reading, and perhaps misses thereby a legitimate sensationalism. But the book worthily escapes the greater fault of hysteria over nature, man, or woman, and is in every way a sane, strong story, tonic and refreshingly well worded.

SENTIMENTAL PLATONISM.

The Vitality of Platonism, and Other Essays. By James Adam. Edited by his Wife, Adela Marion Adam. Cambridge University Press. New York: G. P. Putnam's Sons. $2.50 net.

In our notice (July 16, 1908) of the late Professor Adam's admirable treatise on "The Religious Teachers of Greece," we observed that, "if any part of the book has disappointed us a little, it is these concluding chapters on Plato." Something of that disappointment we have felt, have felt even more keenly, while reading these essays on Platonism and kindred subjects now edited and published by his wife. The book is made up of lectures on various occasions, and makes no pretence to strict unity of design. There does, however, run through all the essays, more or less explicitly, a single theme which results in a certain unity of impression; and, unfortunately, the unsoundness of that thesis throws a vitiating atmosphere about much that is otherwise nobly thought and expressed. The fault first shows itself clearly in a comparison of the ideas underlying Wordsworth's "Ode on Intimations" with Plato's doctrine of *anamnêsis*, or recollection. Only deep confusion of ideas can follow the failure, as Professor Adam here fails, to see a radical distinction between Wordsworth's notion of a spiritual inheritance of infancy which is gradually overlaid by experience and Plato's doctrine of a vague reminiscence from a former life which must be brought to clearness and efficiency by labor and learning. How quickly such a confusion of ideas passes into dangerous error of precept may be seen in Professor Adam's praise of "Plato's view of education as the free and unconstrained development of the individual soul." The definition applies well enough to Rousseau's "Emile," but we are at a loss to understand how such a picture of education can be drawn from the austere discipline of Plato's communistic "Republic."

At bottom Professor Adam's error springs from a fine but misguided enthusiasm. In his laudable desire to link the religion of the past with that of the present in one glorious, unbroken tradition, in his longing to hold up the vitality of Platonism as a force still moulding the better thoughts of men, he has simply lost the sense of philosophical distinctions. The *logos* is to him the binding thread, the idea at the heart of religion wherever found. Now, in the separate dicussions of this word and its synonyms as they are used by various ancient and modern writers, he no doubt says many things that are right and in their way precious, but when by its means he would merge the philosophies of Plato, Heraclitus, the Stoics, and Wordsworth together in one indiscriminate welter of patheism, he is, we are bound to think, doing but an ill service to the cause he has so much at heart.

> Now I will ask you to believe [he writes] that this half-poetical, half-religious idea of a World-Soul, which, according to Plato, is as it were the incarnation of the Divine Reason, less perfect than God himself, but still wholly rational and far from anger or desire—I will ask you to believe that this World-Soul or World-Reason is in reality Plato's conception of Nature. . . . It follows that Nature, as Dante somewhere says, is the child of God, that she is a spiritual and not a material creature, good and not evil; for God, according to Plato, is the author only of good, and evil cometh not from him. In Plato's way of thinking God and Nature are not two mutually opposing forces, but an omnipotent Father and a loyal son, working harmoniously together toward
>
> that far-off divine event
> To which the whole Creation moves.

That this sentimental view of nature may be educed from certain passages of Plato's Dialogues, especially the "Timæus," we do not gainsay; but that it is honestly representative of Plato's whole view of life, we do most vigorously deny. It is true of Stoicism; it comes into modern English literature chiefly through Shaftesbury's revival of Stoicism and the ensuing romantic school which reaches its culmination in Wordsworth; but between Platonism and Stoicism there is a great gulf fixed. "The Stoic conception of the Logos" Professor Adam defines "as the unity in which all opposites are harmonized." Now Plato in his dialectic, that is when driven by the commands of pure reason, does, no doubt, attempt, though unsuccessfully, to find a rational nexus between the many and the one. Even more clearly his practical doctrine, his ethics, is a discipline by which the soul, through self-discipline and abnegation, is taught to raise itself to contemplation of the divine unity and to a state of justice which is the reflection of that unity in the government of its own faculties. But essentially his philosophy, both dialectic and practical, his *Platonism*, so to speak, is a dualistic conception of the one and the many, being and becoming, ideas and phenomena, God and nature. To slur over this dualism, as Professor Adam does, in order to assimilate Platonism with certain nineteenth-century notions of religion and education and poetry, or to represent Plato as attempting to explain away the existence of evil by a kind of optimistic emotionalism, is to wander far, we must say, from beholding the face of truth. There are, it need scarcely be said again, many admirable and true observations in Professor Adam's lectures, and his language will have a certain charm for those readers at least who have not come, even in spite of themselves, to distrust the allurements of this *préciosité* which threatens to emasculate all writing of the English universities not of a purely pedantic or commonplace sort. After due reservations have been made, the book as a whole must be reckoned a sad divergence from the author's other work, in which he stuck more closely to his Greek and was not betrayed into false comparisons and syncretisms. Virtue is not served by obliterating distinctions; and in particular this æsthetic and sentimental treatment of Plato and the greater Greeks, which was introduced by Pater and has been continued by Professor Mackail in Oxford and Professor Adam in Cambridge, falls under the harsh judgment pronounced by Plato himself upon those who dishonor the soul by setting the pursuit of beauty above that of truth.

BIOGRAPHIES OF TOLSTOY.

The Life of Tolstoy. By Paul Birukoff. Translated from the Russian. New York: Cassell & Co. Pp. 168. $1.50 net.

The Life of Count Lyof N. Tolstoï. By Nathan Haskell Dole. New York: Thomas Y. Crowell & Co. Pp. 467. $2 net.

Tolstoy. By Romain Rolland, Author of "Jean Christophe." Translated by Bernard Miall. New York: E. P. Dutton & Co. Pp. 321. $1.50 net.

Paul Birukoff, a disciple and intimate friend of Tolstoy, has written two volumes (Moscow, 1906 and 1908) on the life of his master from 1828 to 1884, of which only the first has been translated into English (New York, 1906); they are unfortunately rather a collection of valuable materials than a real biography. Before completing his main task, he has published a short sketch of the entire life of Tolstoy, which now appears in an English dress. He presents facts simply and clearly, but lays most stress on the development of Tolstoy's moral ideas. Of the novels he says little, and that little by no means well; "Anna Karenin" and "War and Peace" he apparently regards as merely incidents in the life of Tolstoy, from which some conclusions may be drawn as to his spiritual development. Himself without marked literary talent, he gives us no conception of the artistic genius of his friend; but, writing with affection and reverence, he conveys a first-hand, though somewhat shadowy, impression of Tolstoy's powerful personality.

The longer work of Birukoff was the chief authority for the first half of Aylmer Maude's large "Life of Tolstoy" (New York, 1910; reviewed in the *Nation* January 26, 1911), which brought the story to within a few months of Tolstoy's death. Mr. Dole in his turn has written a book based mainly on Birukoff and Maude, though he has not neglected minor sources. The result of his labors it is impossible to praise highly. The two earlier biographers compensate for their lack of skill by a certain glow of enthusiasm for their subject, thanks to which their books become human documents that cannot be neglected. Mr. Dole has merely garnered facts and anecdotes from his authorities, has arranged them in chronological order, has added, by the way, a few commonplace remarks on Tolstoy's novels and on his religious and social opinions, has given an account of the death scene at Astapovo and of the funeral—and has sent forth a book into the world. Though he frequently states that Tolstoy was a genius, and quotes many others to that effect, his own handling of his theme is so bald and tame that the weary reader can scarcely believe that the volume treats of a prince among artists, thinkers, and religious leaders. Yet let us not be unjust. The book is comparatively brief and is moderate in price, so that it will probably reach and spread useful information among a wider circle of readers than will Mr. Maude's bulky volumes. Furthermore, it is honestly written—Mr. Dole frankly acknowledges his debts to his predecessors—it is dignified in tone, and it utters nothing base.

Men and women who are not interested in the petty details of Tolstoy's life, but who wish an appreciation of his true significance as a man of letters and as a moral force, will do well to pass by Birukoff, Maude, and Dole, and take up the fine study of Tolstoy by Romain Rolland, a professional student of the history of art, who is himself a novelist of distinction. This volume is a tribute of admiration from a man of ripe culture and wonderful literary skill; the tribute not of an unreasoning disciple, but of a scholar and artist who has been profoundly affected by the genius of the man of whom he writes. As might have been anticipted, M. Rolland pays due attention to the novels that won Tolstoy his fame as the "great writer of the Russian land." His praise of Tolstoy's art, without ceasing to be carefully considered and discriminating, becomes at times almost lyric in its fervor. Novelists, who study men and women rather than literary critics, who study books, have best appreciated Tolstoy's supremacy as a writer of fiction. Among English and American essayists Mr. Howells has shown an understanding of Tolstoy comparable to that of M. Rolland, but even his sympathetic enthusiasm has produced no criticism quite like the following paragraph on "War and Peace":

> To be truly sensible of the power of this work, we must take into account its hidden unity. Too many readers, unable to see it in perspective, perceive in it nothing but thousands of details, whose profusion amazes and distracts them. They are lost in this forest of life. The reader must stand aloof, upon a height; he must attain the view of the unobstructed horizon, the vast circle of forest and meadow; then he will catch the Homeric spirit of the work, the calm of eternal laws, the awful rhythm of the breathing of Destiny, the sense of the whole of which every detail makes a part; and the genius of the artist, supreme over the whole, like the God of Genesis who broods upon the face of the waters.

Of Tolstoy's religious and social theories, M. Rolland gives no mere paraphrase, but penetrates into the spirit of the man who found in the commandment, "Love thy neighbor as thyself," a taint of egoism, and dared to emend it into, "Love thy neighbor as *Himself* (as God)." Even in treating Tolstoy's criticism of art, he can rise above the superficial injustice and perversity of Tolstoy's single verdicts, and understand their essence when he writes:

What is the artistic significance of the religious ideal which he proposes? This ideal is magnificent. The term "religious art" is apt to mislead one as to the breadth of the conception. Far from narrowing the province of art, Tolstoy enlarges it. Art, he says, is everywhere. "Art creeps into our whole life; what we term art, namely, theatres, concerts, books, exhibitions, is only an infinitesimal portion of art. Our life is full of artistic manifestations of every kind, from the games of children to the offices of religion. Art and speech are the two organs of human progress. One affords the communion of hearts, the other the communion of thoughts. If either of the two is perverted, then society is sick. The art of to-day is perverted."

Restricting biographical details to the merest outline, M. Rolland, nevertheless, gives a clear conception of Tolstoy's personality and of his position in society, with his prejudices and peculiarities, as well as his ideal aspirations; with his youthful "pride of the great noble and the officer who condescendingly mingles with liberal and middle-class scribblers," contrasting with the "ineffable candor" (query, "simple-heartedness," *candeur*) of the aged man, who on his death-bed "wept, not for himself, but for the unhappy," saying, "in the midst of his sobs: 'There are millions of human beings on earth who are suffering: why do you think only of me?'" And so M. Rolland proceeds to his final verdict:

Tolstoy does not speak to the privileged, the enfranchized of the world of thought; he speaks to ordinary men—*hominibus bonæ voluntatis*. He is our conscience. He says what we all think, we average people, and what we all fear to read in ourselves. He is not a master full of pride: one of those haughty geniuses who are throned above humanity upon their art and their intelligence. He is—as he loved to style himself in his letters, by that most beautiful of titles, the most pleasant of all—"our brother."

Students of Tolstoy will not be disturbed by some insignificant slips of detail in M. Rolland's volume. Though we cannot refer to the original, the translator has apparently done his work competently, despite an occasional too literal fidelity to the words and idioms of the French text.

The Works of Henrik Ibsen. Edited with Introductions by William Archer. Viking Edition. New York: Charles Scribner's Sons. 13 volumes. $2 the volume.

The Viking Edition of Ibsen's works varies in comparatively little, save in the externals of bookmaking, from the Copyright Edition which the Scribners issued in 1908, "complete in eleven volumes," but to which they have since added, as volumes twelve and thirteen, "From Ibsen's Workshop," a collection of notes, scenarios, and drafts for certain of Ibsen's later plays, translated by A. G. Chater, and the well-known "Life" of the dramatist by Edmund Gosse. The reprint has evidently been made without very close supervision, since, though the circular announces that the set is to consist of thirteen volumes, the first words of the General Preface reappear exactly as Mr. Archer wrote them in 1908: "The *eleven volumes* of this edition," etc.

The only significant changes in the text before us are to be found in the introductions to the various plays, where attention is happily paid to a large body of important material made accessible in 1909 through the printing of the author's "Efterladte Skrifter" ("Literary Remains") in three volumes. Nearly one-half of this material is reproduced in "From Ibsen's Workshop"; but no part of what concerns works earlier than "Pillars of Society" is communicated, except in such short discussions as the revised prefaces of the present publication afford.

Without doubt the Viking Edition provides, as the circular states, "the standard edition in English of the greatest dramatist of the nineteenth century." But it is not beyond reproach either in contents or in style. Mr. Archer omitted, we think, without sufficient reason, Ibsen's first play, "Catilina," which contains in germ many of the author's characteristic ideas. Ibsen insisted on the importance of reading his plays throughout in chronological order, and placed "Catilina" first in the definitive edition he himself prepared. Mr. Archer is right in saying that it "would seem a deliberate disregard of the poet's wishes" to perpetuate the original rather than the revised version of this first fruit of his invention. But, surely, it seems a more culpable disregard of the poet's wishes to omit the play altogether. That "Catilina," not to mention four other complete plays by the author printed in Norwegian, should be passed by in a "standard edition" of the poet's "collected works," and a whole volume be devoted to scraps "From Ibsen's Workshop," is a rare exhibition of inconsistency. Not that we deprecate the publication of this concluding volume, which unquestionably throws valuable light on the dramatist's technique. On the contrary, we wish that the "Literary Remains" might have been translated entire, for they contain other matter of as great interest as anything in the parts selected. Particularly is this true of the so-called "Epic Brand," the recovery of which, after its mysterious loss for some thirty-five years, is one of the most curious incidents of modern book-history. One cannot help wondering if the fact that Ibsen's early work is chiefly in verse did not occasion its neglect.

Mr. Archer had a hard experience in translating "Peer Gynt." Recognizing the fact that he had not the poetic capacity to reproduce that great work adequately, because of its lavish variety of metre, he requested the author's permission to put it into prose. But Ibsen absolutely refused to allow that to be done with his sanction, and only reluctantly agreed to the compromise line-for-line "crib" which was finally evolved. Mr. Archer, at first apologetic for the result, has since grown proud of it; but probably no one else regards his version as satisfactory. We regret that Professor Herford had not a larger share in the English edition of Ibsen's collected works. His translations of "Brand" and "Love's Comedy" are excellent. He shows us in his preface to "Brand" what he might have done with the epic fragment had he undertaken to render it all in English. Had he been general editor, we should pretty certainly have had a volume of Ibsen's shorter poems in our own tongue. As it is, English readers are bound to emphasize Ibsen the problem-play writer unduly at the expense of Ibsen the poet.

The Copyright Edition, being convenient and inexpensive, is likely to remain in most general use, but the Viking Edition, to be sold in sets "by subscription only," should be preferred by all to whom two dollars a volume (four dollars in half-levant) is not a prohibitive price. The paper is of superior quality; the printing and binding are handsome. On the other hand, though some of the illustrations are exceptionally good, the majority, especially photographs of actors and scenes on the stage, might have been omitted without loss.

A Personal Record. By Joseph Conrad. New York: Harper & Co. $1.25 net.

It is hard to guess in advance who is likely to succeed with the familiar vein. One might have thought that Joseph Conrad, with his varied experience and his uncommon powers of description and narrative, would have made an easy business of the present informal autobiographical record. But it is evidently hard for him to hit the right tone—a matter of calculation rather than instinct. In the "Familiar Preface" he is self-conscious and ill at ease. Towards the end of it his discomfort expresses itself in the frank utterance of a doubt as to the probable result of his "trying to be conversational."—"I have never been very well acquainted with conversation," he confesses. ". . . My young days, the days when one's habits and character are formed, have been rather familiar with long silences. Such voices as broke into them were anything but conversational." In the attempt to buttonhole his reader, he assumes a jaunty air which is rather distressing. But this vanishes for the most part with the beginning of the

reminiscences proper. These reminiscences are of casual and fragmentary sort, at first glance, but when one has finished reading them one must feel that the writer's hope has been realized: "that from these pages there may emerge at last the vision of a personality; the mind behind the books so fundamentally dissimilar as, for instance, 'Almayer's Folly' and 'The Secret Agent,' and yet a coherent, justifiable personality both in its origin and in its action."

The writer who has chosen to be known as Joseph Conrad, and to make English his medium, is of Polish birth. A grand-uncle had been a Chevalier de la Légion d'Honneur under Napoleon, had gone with him upon the Russian campaign, and had literally eaten dog on the way back. His father was active in the ill-fated uprising of '63, and exiled thereafter. The boy himself had a longing for the sea from his earliest years—an unaccountable instinct. "Why should I, the son of a land which such men as these have turned up with their ploughshares and bedewed with their blood, undertake the pursuit of fantastic meals of salt junk and hardtack upon the wide seas?" The question remains unanswered; but greedy for the sea this son of a land-bound nation was, and he finally, against the protests of all his relatives, had his way.

Fortunately, the uncle who was his guardian, though he disapproved of his nephew's project, did not forbid it. The boy had determined to be not only a seaman but a British seaman; and the reader may piece together from different portions of the fragmentary narrative the stages of Conrad's ascent from common seaman to full master. Not until he was some thirty-five years old, and near the top of the ladder in the British mercantile marine, did the idea of his first story begin to take shape in his brain. The result, "Almayer's Folly," was the intermittent labor of years, and made an author of him. For this reason, no doubt, because it marked the transition from seaman to bookman, the genesis of "Almayer" is traced fully in these pages, from that first meeting with the real Almayer far up a Bornean river to the completion of the story many years later. To account for himself as a man and as a writer, are the two purposes of the record. "In the purposely mingled resonance of this double strain," concludes the Preface, "a friend here and there will perhaps detect a subtle accord." And, indeed, the book has a curious completeness. This effect, one perceives, is gained by the method of the fiction-writer—a careful choice of telling detail—rather than in the cumulative manner of the autobiographer. Its discursiveness and fragmentariness, for which the writer apologizes, are apparent, not real. So much the better: the book would have been a little masterpiece in a rare kind if there had been no attempt "to be conversational."

Notes

Henry Holt & Co. have in hand Ralph Straus's "The Prison without a Wall," the story of a sensitive scholar cloistered in the University of Cambridge.

Karin Michaelis's "Elsie Lindtner," a sequel to "The Dangerous Age," will be issued by John Lane Company this spring.

The Century Company promises for this month a book by Rupert Hughes, giving the picture of a mother's longing for her scattered brood; "The Burgundian," a tale of the court of the mad King, Charles VI of France, by Marion Polk Angelotti, and "The Yosemite," by John Muir.

Fiction in Duffield & Co.'s spring list includes: "The Adjustment," by Marguerite Bryant; "The Gate of Horn," by Beulah Marie Dix; "Paradise Farm," by Katherine Tynan; "The High Adventure," by John Oxenham; "Country Neighbors: A Long Island Pastoral," by Susan Taber; "Mene Tekel," by Augusta Groner; "The House of Robershaye," by Emma Brooke; "The Woollen Dress," a translation of Henry Bordeaux's "La Robe de laine"; "The Garden of Indra," by Michael White, and "Putting Marshville on the Map," the second volume in William Ganson Rose's Ginger Series.

The same house will publish shortly: "The Thread of Life," an authorized translation of the Infanta Eulalia's book; "The Complete Nonsense Book," by Edward Lear; "Byways of Paris," by Georges Cain"; "Success in Gardening," by Jessie P. Frothingham; "Everblooming Roses," by Georgie Torrey Drennan, and "The Book of Love," a volume of verse by Elsa Barker.

"The Abolition Crusade and Its Consequences," by Hilary A. Herbert, who was Secretary of the Navy under President Cleveland, and "The Religions of Modern Syria and Palestine," by Dr. Frederick Jones Bliss, are among the books which Scribners are bringing out this month.

Included in Doubleday, Page & Co.'s spring announcements are: "The Real Mrs. Holyer," by Francis Channon; "Pleasures and Palaces," by Juliet Wilbor Tompkins; "William the Silent," by J. C. Squire; "One Look Back," reminiscences of fifty years of public life in London, by George William Erskine Russell; "The Life of David C. Broderick," by Jeremiah Lynch; "The Life of Woodrow Wilson," by William Bayard Hale, and "Plantation Ballads," by John A. Lomax.

In "Bahaism, the Religion of Brotherhood," announced by Messrs. Longmans, Francis H. Skrine seeks to trace the evolution of organized creeds from magic, through spirit and ancestor worship, totemism, native worship, dualism, pantheism, and monotheism, culminating in the idealism of Baha 'Ullah and his successor, Abdul Baha.

To book-lovers we may properly recommend a work named for them, "The Book-Lovers' Anthology," compiled by R. M. Leonard and published by Henry Frowde. A sufficient number of notes at the end of the volume explain allusions and answer various questions.

Katherine D. Osbourne's "Robert Louis Stevenson in California" (McClurg) is a book for Stevensonians of the inner shrine. That is to say, it assumes a circle of readers whose curiosity concerning their hero's short but pretty desperate sojourn in California has not been satisfied by his vivid letters to Colvin and Mr. Gosse, by his own narrative of his trip across the plains and the camp at Silverado, or by the industry of his various biographers. To what we already know of this period from these sources, the text adds very little of importance. The illustrations, however, of which there are sixty-nine, including a picture of Stevenson never before published, furnish an illuminating commentary on the descriptive powers of the "amateur emigrant." There are views of twisted cypress trees, bits of rocky coast and angry surf at Monterey; likenesses of landlords and landladies patronized by the invalid author, together with their children; sea-fog in Napa valley, the woody way to Silverado, the tunnel of the mine used by Stevenson for a wine-cellar, and many other relevant glimpses of California scenery.

The only criticism to be passed upon Florence Coombe's "Islands of Enchantment: Many-Sided Melanesia" (Macmillan) is that the author underrates the interest in her person which her travels inspire. The reader would welcome some information regarding her activity, the duration of her stay, and her mode of life in the remote islands she so graphically describes. She is, presumably, in some way connected with the British Melanesian Mission, but she withholds any mention of her share in the great work, scientific as well as philanthropic, that has so long distinguished the labors of the missionaries in and about Norfolk Island. Her knowledge of Melanesian dialects is remarkable, and by her translations of native legends, as well as by her sharpsighted observation of customs and physical characteristics, she is able to supplement, in some particulars, even the standard linguistic and anthropological works of Dr. Codrington. She is full of sympathy for the natives, and seeks for some good even in still unregenerate cannibals and head-hunters. According to her, the Melanesian is, on the whole, "the most sociable creature on the earth's surface" and endowed with "the priceless gift of a sense of humor." She has visited, in the steam-yacht of the Melanesian Mission, the Northern New Hebrides, the Banks, and Torres Islands, Santa Cruz and the Reef Islands, and the Eastern Solomons. The fullest account is that of Mala, the wildest and most populous of the Solomons. An idea of the tact required in dealing with its inhabitants may be obtained from her remark that "the year before I made acquaintance with it, in the immediate neighborhood of our first landing, the white priest had sadly counted fourteen murders within a period of six weeks." In describing Guadalcanar, of the same group, she departs from her purpose not to give an account of missionary work, and sketches the perilous struggle that the men of faith have had to encounter there. Nothing can be freer from cant and religious fervor than her plain tale. The

book throughout is marked by good sense, rare modesty, and, not least of all, by considerable literary skill. Externally as well as internally, the volume is unusually attractive

"There are good things in this volume," said Martial of his Epigrams, "there are parts that are mediocre, and much that is poor. That is the only way to make a book." Thomas Carson, in his "Ranching, Sport, and Travel" (Scribner), is almost as frank at times as Martial. After a particularly rambling paragraph, in which the alleged *Fœtor Judaicus*, the *bouquet d'Afrique*, the immunity of Jamaica negroes to yellow fever, and the alleged fifty-three to sixty-four ratio of women to men in comparative sensitiveness, are mingled, he adds: "I only hope that this and other departures, necessary for stuffing purposes, may be excused, especially as they are probably the most entertaining part of the book." Nor is lack of continuity in thought the only flaw discoverable. One stumbles here and there upon such a sentence as this: "To spend one whole month, as I did once, without not only not conversing with, but absolutely not seeing a human being, is an experience that has probably come to very few men, indeed." Yet, Mr. Carson tells, on the whole, an interesting and informing story. Leaving his English home at twenty-two, he spent a few years on tea plantations in India, after which he transferred his activities to cattle ranching, first in Arizona and later in New Mexico and Texas. A fairly successful career in this business was followed by five extensive tours in various foreign lands. About one-fourth of the volume is given to a seriatim account of these tours. Brief as it is, this account includes an occasional self-revelation, which most writers would have omitted, as when a chance meeting with two old friends in Vancouver ends in such a degree of conviviality as to send him to his room in a condition of unconsciousness, from which he is wakened by his stockinged toes coming into contact with a lighted candle jestingly left at his feet by those who had carried him in. Scientific fact and nomenclature mark the narrative with a frequency becoming a F.R.G.S., but one notes an occasional statement which will scarcely bear scientific scrutiny, as for instance, that if a cow gets but the tip of her tail or one hoof into the dangerous quicksand among some of the streams in the ranching regions, a team of horses would not be able to pull her out. Right here it occurs to us to state that Mr. Carson adds his weight to those who hold that a snipe will apply splints and ligatures to a broken limb, though we must disclaim any intention of opening anew the controversy between the naturalists and the nature-writers. But all these temptations to flaw-picking aside, Mr. Carson has gone with keen eyes through a very active and varied life, and tells a story which can hold a firm grip on the reader's interest, especially in the chapters devoted to ranching and tea-growing.

"The Immigration Problem" (Funk & Wagnalls), by Jeremiah W. Jenks and W. Jett Lauck, is, in fact, what its authors claim for it in the preface, rather than what its title would suggest. The purpose of the writers, to put into convenient and satisfactory shape for the public the gist of the information collected in the forty-two volume report of the Immigration Commission, has been well fulfilled; but the book is not, in any sense, a careful and critical survey of the immigration problem in the United States. There is no bibliography, and scarcely a reference to other writers on the subject, with the exception of Professor Steiner. Perspective and symmetry are lacking, and there are no climaxes to relieve the monotony and fix the attention on salient points. At times the authors themselves seem to have failed to grasp the real nature and seriousness of the immigration problem in this country. Phases of the question not covered by the Commission's report are almost untouched. There is evidence that the material was either carelessly or hastily thrown together. Not only are there frequent repetitions, almost verbatim, but the English is often faulty, and at times execrable. Occasionally the careless use of terms leads to actual ambiguity. A limited degree of simplified spelling is adopted, which seems to follow no special rule. As a compilation of data, mostly statistical, the book is of great value. The report of the Immigration Commission is very voluminous, difficult to obtain, and not of a character to be useful to the average citizen. It is well worth while to have available a careful digest of this material, such as this book furnishes. Care must be used, however, to distinguish between facts and opinions in the statements made. As an example, the observation that "the weakest and less ambitious will not have the energy or the means of freeing themselves from their old conditions and securing the means to go to America" stands as a statement of fact, and yet would be seriously questioned by observers who have seen almost the entire male population of villages, except those who were absolutely inadmissible under the United States law, removed to America, through the combined efforts of the transportation agent and the friends in America. But one who uses due judgment will find in this book a large amount of conveniently arranged information. The abundant statistical tables in the appendix, with the copious index, add to its value as a source book.

Lindley D. Clark, who has contributed numerous studies of labor legislation to the recent publications of the United States Bureau of Labor, has now, in a compact volume, entitled "The Law of the Employment of Labor" (Macmillan), endeavored to summarize the more important enactments and judicial opinions which bear upon the employment of labor in this country. The scope of the work, well revealed in the topical table of contents, is indeed comprehensive, embracing not merely such fundamentals as the legal nature of the labor contract and the law governing the payment of wages, but also the regulation of conditions of employment, the attitude of the courts towards labor organizations and labor disputes, doctrines concerning employers' liability, and legislation for the compensation of injured workmen. Over all this field the author has worked with painstaking attention to detail. Obviously, the compressing of so much into small compass necessitates terse and concentrated treatment; but copious citations of authority offer opportunity of further study to those who may wish to verify or to elaborate the brief statements of the text. The list of cases thus cited comprises some thirteen hundred titles. Yet, despite the condensed and documented style in which the book is written, it is not unreadable. As a reference book, to which one may readily turn for information on the present status and trend of labor laws, it promises to be of real service.

A group of special investigations in a local field—"Labor Laws and Their Enforcement With Special Reference to Massachusetts" (Longmans)—is issued as Volume II of the series of Studies in Economic Relations of Women established under the direction of the Women's Educational and Industrial Union of Boston. Several authors have here contributed the results of independent research. The opening chapter is a substantial monograph by Charles E. Persons on The Early History of Factory Legislation in Massachusetts, to 1874. The brief description of Unregulated Conditions in Women's Work, by Miss Mabel Parton and Miss Caroline Manning, owes much of its interest to the fact that the authors were actual employees in the factories, workshops, and restaurants in which they found such disregard of sanitary requirements. Miss Grace F. Ward, Miss Edith Reeves, and Miss Mabelle Moses discuss in succeeding chapters the defects in the provisions and enforcement of the Massachusetts child labor laws, the administration of Massachusetts labor legislation in general, the character of the legislation most recently added to the statute books of the Commonwealth, and, finally, the Regulation of Private Employment Agencies in the United States. However unlike in plan and unequal in execution these several essays may be, collectively they render not a little assistance towards the achievement of their common purpose, "to give a clearer understanding of the development and present position of labor legislation in Massachusetts as a preliminary to further improvement of the law and its administration."

"Banques d'Emission et Trésors publics" (Paris: Hachette, 652 pages, 8vo), by Raphael Georges Lévy, is perhaps the most noteworthy, and is sure to be among the most useful, of the year's books on finance. Professor Lévy's lectures at the Ecole des Sciences Politiques have long been well known for their ready and apparently inexhaustible fund of clear information about all financial questions debated in the modern world; and the thirty and more books published by him during the last quarter of a century (one in 1898 on "Finance in the United States") have accustomed the financial world everywhere to look for his judgments. They are always based on the facts in the case. This new book gathers into one portable volume much that is found scattered through the half-hundred publications (some of them of the highest interest) of the National Monetary Commission at Washington.

The part of financial science which treats of banks of issue comprises, to a certain extent, the whole question of banks: for no bank is entirely independent or remains forever isolated from the creative organ of currency bills. In this field there is one particularly interesting point for study—the relations between issue institutions and public treasuries and the influence, direct and indirect, of such relations on the credit of nations. This study is bound up with that of national finances—for issue banks receive their commission from the sovereign power.

In a masterly introduction of 24 pages Professor Lévy indicates the evolution of the issue bank in the various nations—and, without being a poet, he ventures to look forward to its term in the financial federation of the world. He has no illusions for the present, and this gives the chief value to his book. He sees clearly that the monetary system of the modern state is not a matter of pure finance:

> One of the reasons which will long delay the "unification of systems" is the desire of governments to keep at all times the upper hand of issue banks. With the thought, more or less avowed, that in times of crisis the banknote will be war money, the state will not agree that paper shall be created only by economic rules and to serve solely commercial uses. How is this idea made manifest nowadays in the organization of issue institutions? In what measure and under what limits does public action rule their business behavior?

These relations of public treasuries with issue banks are treated in order. Nearly three-quarters of the book is devoted to the study of banknotes—in countries which, like France, Belgium, Holland, Austria-Hungary, Spain, Portugal, Switzerland, Turkey, Greece, Servia, Rumania, Norway, Denmark, Japan, and others more dependent, have granted an issue monopoly to one particular bank; in countries like England, Germany, Italy, Mexico, and others (including the privileged banks of Canada), in which the privilege of note issue is given to a limited number of establishments; and the single country of the United States, in which the right to issue notes is granted to an unlimited number of national banks, which are bound to observe prescriptions of uniform legislation. To this latter country 43 pages are given, to which 30 more pages have to be added further on to explain fully the American situation. This is in the second part of the book; it deals with state currency bills—in countries which have a state bank, like Russia, Bulgaria, Sweden, Uruguay; and in countries like the United States, Canada (for the Dominion Treasury), Argentina, Chili, Brazil, and others.

Our work will have its full reward if, by an impartial exposition of the facts, we succeed in convincing the reader of the dangers of state intervention and in determining what relations ought to exist between issue institutions and public treasuries. The services which the former render to the latter are so much the greater as their existence is more independent and their management more sharply separated from that of the finances of the state. The less the public authorities occupy themselves with banking, the safer is the guard kept over the credit and the riches of the nation.

Dr. George N. Olcott, professor of Latin at Columbia University, died of pneumonia in Rome on Saturday. In the last fifteen years Dr. Olcott had employed much of his time in archæological studies in Italy. He was an editorial contributor on numismatics to the *American Journal of Archæology*, and the author of several works on Latin inscriptions. He was born in Brooklyn in 1869, and in 1893 graduated from Columbia. In 1897 he became a fellow of the American School of Classical Studies at Rome.

The obvious charge to bring against Edith Wharton's long poem, "Pomegranate Seed," in *Scribner's*, is that she has taken Demeter and Persephone and Hecate and put modern introspective pessimism into their ancient naïve Greek heads. But we confess to an occasional fit of weariness at the solemn differentiations between the classic and the modern soul. The similarities we dare say have always been more than the differences. At any rate, Mrs. Wharton has taken the ancient story and given it a new turn. Persephone, recalled to earth, insists on going back to Pluto and his shades; she has learned to look sadly upon life as only the preparation for death. There are beautiful lines:

> Persephone—
> I fear the light. I fear the sound of life
> That thunders in mine unaccustomed ears.
> Demeter—
> Here is no sound but the soft-falling rain.
> Persephone—
> Dost thou not hear the noise of birth and being,
> The roar of sap in boughs impregnated,
> And all the deafening rumour of the grass?
> Demeter—
> Love hear I, at his endless task of life.
> Persephone—
> The awful immortality of life!
> The white path winding deathlessly to death!
> Why didst thou call the rain from out her caves
> To draw a dying earth back to the day?
> Why fatten flocks for our dark feast, who sit
> Beside the gate, and know where the path ends?
> . . . . . .
> Execrable offices are theirs and thine!
> Mine only nurslings are the waxen-pale
> Dead babes, so small that they are hard to tell
> From the little images their mothers lay
> Beside them, that they may not sleep alone.

"The Inside of a Business Man," by Joseph Fels in the *World's Work*, is an excellent example of the growing literature of self-exposure. The earlier type of philanthropist was always a little inclined to mingle self-praise with his benefactions. His charities were a form of expressing gratitude towards a Providence that had deigned to coöperate with his own exceptional abilities. But there is a type of modern philanthropist who frankly describes his charities as the restitution of stolen goods. Mr. Fels begins by calling himself a robber, and explaining his methods.

Arthur Christopher Benson writes about Charles Dickens in the *North American Review* with a little more than usual of that certain condescension in Dickens critics which the centenary has brought out in rather startling relief. The accepted process in forming an estimate of Charles Dickens is to begin by wondering why so many people for so many years should have liked a writer with so many faults as Dickens, and to end with the discovery that Dickens was really a very great man, don't you know. The faults in him are vulgarity, exaggeration, and mawkish sentimentalism. He is great in his fundamental human sympathies, his vast hilarity, his fine optimism, etc. The implication is that we, the critics, love him because of the best in him, which is an easy way of complimenting ourselves that might have appealed to Dickens's vast humor. Sometimes the doubt occurs whether we do not love Dickens for those faults which our critical faculties feel impelled to frown upon—his vulgarity, his exaggeration, and his mawkish sentimentalism. For the rest Mr. Benson points out with considerable truth how Dickens's genius and his methods were essentially of the theatre. His books are all dramas, "with long descriptive stage directions, the scenes described, instead of being painted." His characters are typical figures; "they make their exits and entrances, they know what every one else in the scene is thinking about, they play into one another's hands."

Under the heading, "The Mania for Hyperbolism," in the current number of the *Bookman*, Max Nordau has some very true, sharp, and amusing things to say about the literary manner of the new generation. Critics vie with creative writers in worshipping at the altar of the superlative. They ejaculate, they stammer, they stutter. Frequently the mere word proves inadequate, and exclamation points, dashes, and dots—"the punctuation used by excessive excitement"—come into play. The new critic writes of a picture: "It is irrigated by all the torrents of thought of this age . . . and the feelings . . . thrills . . ." Of a book of verse: "This narrow volume is a new voice . . ." And here Mr. Nordau has an excellent parenthesis:

> (By the way: the book is no narrower than any other; it is precisely the same width as every volume of the usual octavo form, but the employment of familiar terms in an entirely wrong sense is also one of the characteristics of this fashionable style: "narrow" is used here for "thin.")

The third paper in Clayton Sedgwick Cooper's series, "The American Undergraduate," in the *Century*, deals with the spirit of the college campus. Like its predecessors, the present article is chiefly productive, in one reader's mind, at least, of a sense of disappointment and irritation. Mr. Cooper's text wanders here and wanders there, and succeeds only in reiterating at regular intervals the truth that all is for the best in this world. Anecdote and instance are here in profusion, but they give the impression of existing largely for their own sake. It is an easy-going method that apparently allows for a sharp contradiction of fact within the same paragraph:

> The student who has been brought up always to dine in a dinner-coat will have for his table companions men who have never owned a dress coat, and who see no immediate prospect of needing one. Furthermore, the student world has been subdivided until it is a wholly different thing from what it was fifty, or even twenty-five, years ago. While in the seventies the college student knew every man in his class, in the large institution to-day an undergraduate will meet in the college yard scores of classmates who are perfect strangers, and to whom he has no more idea of speaking than to persons whom he has never seen before.

It is certainly a peculiar sequence in logic that the "furthermore" at the beginning of the second sentence introduces.

In the same number of the *Century*, there is a short chapter of reminiscences of Joseph Jefferson, by Mary Shaw, who describes a man both kindly and canny, and an artist who had worked out the theory of his art. Joseph Jefferson's little lecture to Miss Shaw on the difference between ethics on the stage and in life, is an illuminative bit of criticism which young playwrights might well take to heart, provided young playwrights nowadays take anything to heart.

There are nine autobiographical novels and an autobiographical dramatic trilogy in the list of August Strindberg's works compiled by Edwin Björkman in the *Forum*. This would argue a preoccupation with one's self which we do not usually associate with the purposes of modern objective

art. For that matter, Strindberg can hardly be called modern. He has swung throughout the entire compass from naïve idyllicism to the most pitiless naturalism. He is revolutionary and old-fashioned. Nor can his artistic evolutions and reactions be explained by corresponding processes in the development of his own soul. He seems to have been very easily influenced by the models of the hour. He has copied Ibsen, Zola, and Maeterlinck; but whatever he did, he did with fluency—and temper. A writer, on the whole, who has found many things to write about and many ways in which to write, but who never quite has found himself.

"The Young Turk" is the title of the principal article in the *National Geographic Magazine* for January, in which Rear-Admiral C. M. Chester gives a brief account of Turkish history during the last three and a half years. He calls especial attention to the stupendous obstacles which the reforming party have had to overcome in their efforts to help the country to a new national life. Referring to the noble work of the American missionaries, he quotes the statement of Mr. Gladstone that "they have done more good to the inhabitants of that country than has all Europe combined." T. E. Johnson describes the Greek bronzes found a few years ago in the remains of a Greek galley on the Tunisian coast. Both articles are profusely illustrated, as is one upon the results of recent researches in Crete, particularly those of Dr. A. J. Evans. Prof. R. De C. Ward of Harvard discusses the question as to how far our present immigration laws enable us to exclude those aliens who are physically, mentally, and morally undesirable for parenthood. There is also given a useful map of the countries bordering the Mediterranean.

Science

CANCER.

Fourth Annual Report of the Imperial Cancer Research Fund. By Dr. E. F. Bashford, Director of the Laboratory. London: Taylor & Francis. 7s. 6d.

In view of the dread which a subtle malady like cancer impresses on the majority of people, some of the general conclusions contained in this report are important and reassuring. Others tend to cover, as with a wet blanket, the optimism arising from the too-serious reading of so-called cancer cures in the daily press. The popular conception that cancer is a novel disease brought about by the intensity and strain of life under the conditions of modern civilization, is again refuted by reference to the fact that all animals down to the marine fishes are also subject to cancer. It is stated, however, although in a guarded way, that workers in some fields of labor are more susceptible to certain types of cancer than are other people; also that certain types of cancer are on the increase, especially those of face, lip, mouth, bladder, urethra, and breast—facts which offset somewhat the caution on page xiii: "For the first time it is fully demonstrated that it is erroneous to make statements of a disquieting nature about the increase of cancer in general." The foundation for such a caution is to be found in the new tabulation of statistical data in the decennial Report of the Registrar-General for the years 1901-1909, in the preparation of which the Census Bureau had the coöperation of the Imperial Cancer Research Fund. It may be remarked here, parenthetically, that a similar and a closer coöperation than now exists between our Director of the Census, or heads of State and municipal statistical bureaus, and such organizations as the American Medical Association or the American Association for Cancer Research, might result in more thorough and more enlightening information concerning the incidence of cancer in this country.

Some important conclusions by Dr. Bashford relating to the inheritance of cancer are based largely on a special paper in the report by Dr. J. A. Murray, in which data are brought together covering many years of breeding experiments on mice. From these data it appears that cancers are more likely to develop in the mammary glands of mice with cancerous ancestry than in mice whose ancestors were free from the disease. Such cancers are more frequent for all age-periods in the former than in the latter group, the maxima occurring at the same age-period in both, viz., sixteen to eighteen months, being 21.6 per cent. and 32.1 per cent., respectively, for mice of non-cancerous and cancerous immediate ancestry. To guard against undue apprehension from conclusions drawn from these results, Dr. Bashford points out that it is only by careful inbreeding of mice that this condition of greater liability to cancer of the mamma can be developed, while even with such procedure no great predisposition can be engendered.

> Such a concentration as can be attained in experimental animals can only occur in the human subject by hazard, as a coincidence of considerable rarity, and it is probable that the influence of heredity in the general population is manifested as an average predisposition of low general intensity (page xvi).

To students of cancer the more important conclusions of Dr. Bashford are those that concern the problem of the genesis of malignant tumors. He demonstrates that the beginnings of cancer and the growth of cancer are distinct phenomena, since the conditions necessary to induce the normal tissue cells to divide are different from those which tend to maintain the division energy after the habit of division is acquired. Previous reports from the London laboratory have been devoted largely to the results obtained by the propagation of cancer strains in mice. In this Report, emphasis is laid on the conditions under which cancers develop, and a much larger field of biological inquiry is involved than heretofore. It is clearly stated that tumors, however they may be of the same type, are not equivalent, but each is individual and distinct from all others. This is proved by the fact that it is impossible to make a primary tumor grow in another animal having a similar primary tumor, although it will grow if transplanted to another part of the same animal from which it was derived. In other words, the tumor and the animal in which it develops have a certain symbiotic relation which is characteristic and different from all other analogous relations. Cancer represents, therefore, not only an abnormal growth, but also an abnormal condition in the host. The factors which go to make up this abnormal condition are those which have to do with the genesis of cancer. Bashford and his collaborators, in searching for the origin of such conditions, lay considerable stress upon the effects of chronic irritation as the cause of certain types of tumors. Attention is called to the fact that cancer of specific regions of the body is prevalent in connection with certain clearly defined habits, such as chewing the betel-nut in India, eating hot rice in China, and the habit of carrying small charcoal stoves on the abdomen in Kashmir, etc. In these cases it is assumed that a prolonged proliferation of normal cells under the the influence of chronic irritation may result in the cancers characteristic of the people subject to these habits.

The authors, agreeing with the majority of pathologists and students of the subject, are convinced that cancer is not due to any common causal parasite. They give some evidence to show, nevertheless, that chronic inflammatory changes due to the presence of parasites may be responsible for the later-developing tumors. In M. Haaland's paper on the "Spontaneous Tumors in Mice" printed in the Report, it is stated that nematode, or round, worms were usually found in the interstitial tissues of old mammæ, and that these were capable of causing a considerable inflammatory reaction. From these and other similar facts, he reaches the following significant conclusion:

> The importance of local factors for other forms of cancer has long been recognized. . . . Whether they be animate or inanimate, bilharzia, nematodes, growth of other cancer cells, . . . or mechanical, chemical, and actinic influences, the ultimate result of their action may be the same: the creation of new cell-strains with continuous power of growth. . . . The part played by the chronic irritant is obviously a mediate one, either in that it produces the altered conditions under which the first departure of the cell from the normal may take place, or that it gives spontaneously occurring sports of cells opportunity of multiplying and by degrees adapting themselves to a new mode of life,

similar to what is observed in propagated tumors. This hypothesis rests on the assumption that the malignant transformation of the tissues may take place by stages, for which there now seems to be ample evidence both from the facts obtained from observations of spontaneous cancers and from those obtained from propagated tumors (pp. 87-88).

From the prominence given by Bashford and his colleagues to chronic irritation as a possible explanation of the genesis of cancer, it is evident that new lines of experimental investigation will be developed. The hypothesis that cancer is an abnormal deviation from normal reparative processes, brought about through their continued activity, is biologically acceptable, but the difficulty comes when we attempt to account for the unlimited division energy of cancer cells. As Bashford points out, there is a distinct difference between the genesis of cancer and the growth of cancer, and the processes responsible for the initiation of cancer may be quite different from those responsible for its continued growth. It is on this point that the advocates of the parasite hypothesis had an advantage, for the continued presence of the hypothetical parasite would be sufficient to account for the continued stimulus to division. Another conception, however, is possible: if a parasite is capable of stimulating the cell to divide, it must be for the reason that the normal physiological balance of the cell is upset. It is conceivable that such an upset on the part of cells stimulated to an unwonted activity by chronic irritation might be brought about by deranged vital activities, or by the accumulation of waste matters produced by incomplete nutrition and degeneration. Here is a field of investigation which has not been sufficiently worked.

Drama

Percy MacKaye has written a volume of one-act plays dealing with New England life; it is announced by Duffield & Co.

Henry Frowde (Oxford University Press) issues the first volume of an edition of Shakespeare in the Oxford Standard Authors series. Two other volumes will be published later, and each of the three will be procurable separately. The chief features of the edition are those which are embodied in an edition of nine smaller volumes, issued by the same house They are—a general introduction by Swinburne, introducing studies of the several plays by Professor Dowden, and a text prepared by W. J. Craig. This first volume contains Shakespeare's comedies.

The essential weakness in Sir A. W. Pinero's comedy, "Preserving Mr. Panmure," which has just been produced in the Lyceum Theatre, is its lack of any motive appealing to general human interest. All the personages are either insignificant or despicable. No doubt it reflects with sufficient accuracy the manners and morals of certain typical characters plentiful enough in the heterogeneous social mass vaguely described as "middle class" in England, but the story is so devoid of vital point and so entirely dependent upon theatrical mechanism for its main effects, that it has small claim to consideration as serious drama. The outline of the plot must be pretty generally known by this time. A shallow, pompous county magnate, a rake reformed by force of circumstances, is married to a religious devotee, who makes him deliver "sermonettes" at the family prayer meetings. Incidentally it may be remarked that the treatment of this topic is not always in the best taste. The pretty governess, Josepha—adored by all the men in a large house party—shows him how to gain credit for theological learning by cribbing his addresses from an edition of the early fathers, and in his gratitude he gives her a kiss. Her indignation exacts from him an abject apology, and she agrees to keep silence for the sake of his wife. Unintentionally she betrays the offence, but not the name of the offender. Consequently all the women suspect all the men, except the guilty Panmure, whom Josepha has exonerated, and the household is distracted by jealousy. Up to this point the piece is written on the lines of light comedy, but thereafter it degenerates into farce, sometimes both conventional and extravagant, until the final solution. The whole tale, in its triviality and indefiniteness, is unworthy of the reputation of Pinero, but the handiwork of the expert dramatist is discernible in the neatness of the mechanism, the crisp, appropriate, and satirical dialogue, and the true and facile characterization, much of which was destroyed in the performance. So slight and whimsical a fabric, of course, ought to have been handled delicately by the players, but most of these added exaggeration to exaggeration, so that light comedy was converted into farce, and farce into buffoonery.

In each new character that she assumes, the eminent French actress, Madame Simone, furnishes fresh evidence of her intelligence, skill, and versatility. Her latest impersonation here is that of Melissinda, the heroine of "The Lady of Dreams," an English adaptation and expansion of Rostand's "La Princesse Lointaine." It is a performance full of grace, beauty, and passion, but somewhat lacking in the glamor of romance and imagination. For several reasons it would be unjust to measure it by the standards of precise criticism. In the first place, she was clearly embarrassed by the foreign tongue; in the second, the verse of Mr. Parker, adroit and pretty as it often is, is not the poetry of Rostand, and, in the third, the actors who supported her were, for the most part, inexperienced in the ways of romantic drama. Only A. E. Anson, who played the dying troubadour with fine fervor and picturesque simplicity, knew how to give to verse its appropriate emphasis and rhythm. Julian L'Estrange was a gallant figure as the Knight Bertram, whose love proved stronger than his loyalty, and displayed both power and perception in his acting, but neither in speech nor gesture had he the finish of the old Bensonian. Most of the minor players tried to make up in vigor for their deficiency in cunning. As for Madame Simone she scarcely realized—except in the matter of physical beauty—the mystical poetic charm of the idealistic visionary princess. She was, in the earlier scenes at all events, distinctly modern, although her Melissinda had nothing in common with the heroines of "The Thief" or "The Return to Jerusalem." In the final act, however, in her gradual surrender to the higher, spiritual love by the litter of the dying Prince Rudel, she entered more completely into the spirit of the idyl and played with an ecstatic tenderness and self-devotion which were exceedingly effective. She won a personal success, but the representation, as a whole, suggested the difficulties with which any present attempt to revive the romantic drama must be attended.

Edward Terry and Fred Terry, both of whom have long been incapacitated by illness, are said now to be on the road to recovery, and preparing to resume professional work.

Oswald Stoll has begun a season at the Loudon Savoy, with Ellen Terry and Albert Chevalier as his principal attractions. The first talks about Shakespeare's heroines, while Mr. Chevalier appears in George Gloriel's two-act play, "The House," and J. M. Barrie's "Pantaloon."

Arthur Hardy has a new play which he will produce soon at a London West End theatre. The company has been engaged, and rehearsals are in progress. It is said to be a drama of a stirring character, dealing with a subject prominently before the public. "The Chalk Line" is the title selected by its authors, Norman MacOwan—not to be confounded with Norman McKeown, who wrote "Travellers"—and Fabian Ware. The action is laid in "the wilds of the Highlands." The only hint of its drift is given in the following lines: "Cadmus having slain the dragon, the goddess appeared and told him to take the dragon's teeth and sow them in the ground. From this seed, men, fully armed, sprang out of the earth and fell upon one another in deadly combat until only five survived." The cast will include Kenneth Douglas, C. V. France, Alfred Brydone, and Lady Tree.

Louis Meyer of the London Apollo Theatre has procured the English rights in "Les Petits," a comedy by Lucien Népoty, which, produced at the Théâtre Antoine, in Paris, has been attracting large audiences. The piece has been likened by a Paris critic to the work of Dickens and of Daudet. The plot is based upon the union of a widow and widower, both of whom have two children. Richard, Jeanne Burdon's grown-up son, is so deeply attached to his father's memory that, rather than countenance his mother's second marriage, he determines to seek his fortunes in China. After seven years he returns, to discover that a girl has been born. Out of this situation spring family misunderstandings and recriminations of the most striking nature. Richard's younger brother, Georges, a lad of sixteen, is played by Eve Lavallière, with great success.

Annie Yeamans, who died in New York on Sunday night, had been a public performer for nearly seventy years. In her own sphere she was for half a century a favorite of the public. Born in the Isle of Man, in 1835, she was taken by her parents, whose name was Griffiths, to Sydney,

New South Wales. In Melbourne she played for two seasons in a circus, under the management of G. H. Rowe. In 1853 she married Edward Yeamans, an American clown attached to the circus. Her first appearance in New York was as a page in "Cendrillon," at the old New York Theatre. She next was seen in "The Ticket of Leave Man," in which, as she expressed it a few years ago, she "played about every part, from Sam Willoughby to the old grandmother." Augustin Daly engaged her for "Round the Clock" at the Grand Opera House, which she left to enter upon her long connection with Harrigan and Hart at the Theatre Comique. Hart was a genius in his way, and Harrigan played one type of Irishman supremely well. Mrs. Yeamans, too, had a rare supply of inextinguishable spirits, a roguish eye, and a delicious brogue, as well as an abundant experience. Her racy humor was preeminent in such pieces as "Cordelia's Aspirations" and "Reilly and the Four Hundred." The Harrigan dramas came to an end at last, and Mrs. Yeamans appeared thereafter under many managements, and in all sorts of plays, from "The Lights o' London" to "Uncle Tom's Cabin" and "A Chinese Honeymoon."

George Grossmith, sr., the well-known English actor and public entertainer, died at Folkestone, England, on March 1, aged sixty-four. He appeared in the leading parts of most of the Gilbert and Sullivan comic operas. By degrees he left the stage to resume his earlier occupation as an entertainer, in which he won success on both sides of the Atlantic. As a mimic he had rare powers, and his imitation of amateur performers, whether vocalists, instrumentalists, reciters, after-dinner speakers, or selected eccentrics, were notable. Mr. Grossmith was the author of various musical sketches, among which may be mentioned "Cups and Saucers," "Mr. Guffin's Elopement," "The Great Toykin," and "Haste to the Wedding." He also published an autobiography.

Music

Post-Victorian Music. By Charles L. Graves. New York: The Macmillan Co. $2 net.

This volume consists of forty-four papers which originally appeared in the London *Spectator*, and they were decidedly worth reprinting. Mr. Graves is a remarkably sane and liberal critic, apparently quite free from all objectionable bias. He has had wide and varied experience, and he is master of a simple, lucid style. The first section of his book, which is devoted to Richard Strauss's "Domestic Symphony," "Elektra," and "Salome," indicates at once that the title "Post-Victorian" does not imply that the book is concerned with England only. While London is the background of most of the articles, the author takes his readers on literary excursions to Germany, Austria, and Russia; nay, there is even a paper on American Musical Criticism, in which he notes that, while in the domain of music America has hitherto been assimilative rather than creative, she has begun to stamp the impress of her individuality on the alien composers and artists, and on journalists of foreign descent, including one who has gone to the length of extolling Chopin at the expense of Beethoven, of depreciating Brahms, and of claiming for MacDowell a place alongside Schubert and Schumann as a song-writer.

Times change and opinions change with them. Of this truth Mr. Graves gives some interesting illustrations. For several generations Handel was worshipped in England so exclusively that excommunication, if not the gallows, would have been the lot of a critic daring to write, as Arthur Johnstone has done in our day, that "no greater praise can be bestowed on Handel than to say that in his very best moments he is almost worthy of Bach." Mendelssohn alone was allowed for a generation to share the honors with Bach. His worshippers "regarded it as an act of duty to disparage the music of any newcomer—notably Schumann—who ventured to imperil the supremacy of their idol." Mendelssohn himself did not share this narrowness; at a rehearsal of the London Philharmonic, for example, when the orchestral players became mutinous and laughed at the triplet figure in the last movement of Schubert's C major symphony, he told them that if they refused to treat Schubert with proper respect he would withdraw his own new overture.

Among the most interesting of Mr. Graves's pages are those in which he describes the gradual conquest of England by the German *Lied*. Sir George Grove took every opportunity to call attention to the beauties of the songs of Schubert and Schumann, but it was not until Stockhausen visited England that British audiences began to appreciate these lyrics. Subsequently, Henschel, Bispham, Plunket Greene, and others entered the field, and at present London has its daily song recital. What is hard to understand is why the leading English singers for the most part ignored this movement. Sims Reeves confined himself almost exclusively to oratorio, Italian opera, and English ballads. Santley had two Schubert songs on his list, and Lloyd had one. Of all of them the author might have asserted what he says of Santley: "While keeping abreast of sound popular taste, he did little pioneer work in enlarging the horizon of the average concert-goer." Patti, who for so many years was the idol of the English, confined her excursions into the realm of the *Lied* to Schubert's serenade and a few other simple melodies. Most amazing was the attitude of Antoinette Sterling. For the last two decades of her career she devoted herself almost entirely to English ballads, by Sullivan, Cowen, Molloy, and others. Her attitude towards the accompaniments of songs explains why she had no use for the German *Lieder*, in which the piano often plays as important a part as the voice. She would never allow more than a bar or two of accompaniment between the verses. After the voice had ceased, a couple of bars, sounded very quickly, were the utmost she would permit. Musicians sighed at the liberties she took with their works, but as these helped to turn them into popular successes, they had at least the larger royalties to console them. English audiences of to-day have become not only tolerant of the haunting melodies on the piano; they even applaud songs by Strauss and Wolf and Debussy, in which the voice is entirely subordinated to the piano part.

Some kinds of music are at a disadvantage in London (as they are in New York) because of the lack of suitable homes for them. In a chapter on London's concert halls Mr. Graves notes the fact that, whereas there seems to be no difficulty in procuring capital for the erection of new theatres or new hotels, no one comes to the rescue of the concert-givers. "Whenever in Central London old buildings are demolished, it is generally to make room for some new temple dedicated to the pleasures of the table." He is optimistic enough to hope that when the present craze for restaurant life has abated, one of the superfluous monster hotels may be converted from the service of appetite to that of art. His concluding remarks are, however, less cheering. He half agrees with a distinguished foreigner who maintains that musical England is deteriorating, the interest in the art being diminished by the multiplying of competing distractions.

There are indications that the Wagner centenary will be celebrated all over the world next year, with a fervor exceeding even that of the Liszt festivities this season. Oil is being poured on the flames by Breitkopf & Härtel and others who own the copyrights of Wagner's productions. As these expire next year, the publishers are anticipating the demand for cheaper editions, both of the operas and the literary works, by issuing them at fabulously low rates—the operas at two or three marks each, and the twelve volumes of operatic texts and prose works for only twelve marks!

An association has been formed in Paris for the purpose of collecting funds for a monument to the late Alexandre Guilmant.

Humperdinck's "Königskinder" is gradually passing into various European languages. A few weeks ago it was produced in a Dutch version at Amsterdam, with brilliant success. Humperdinck, according to the latest news from Berlin, is slowly recovering the power of speech, which he completely lost during his recent illness. His mind, however, is not yet clear, as he still believes himself to be in London.

No city has had such a great musical past as Vienna. Unfortunately the gay capital of Austria is outside the usual track of international tourists, wherefore no attempt is usually made during the summer to round them up (as in Munich, Bayreuth, and other towns) for a summer festival. During the fourth week of next June, however, Vienna will offer a musical feast that will doubtless attract thousands of foreigners. In a series of performances at the Imperial Opera and in the concert halls there will be presented a number of masterworks far surpassing in variety the offerings at the festivals in other cities. Vienna was the place where Mozart, Gluck, Beethoven, Schubert, Bruckner, Brahms, and Mahler wrote their masterworks; where the Bohemians, Smetana and Dvorák, helped to provide variety; where Hugo Wolf added his songs to the treasures of Schubert and Brahms; where Lanner and Strauss created new styles of dances and operettas; where folk-music flourished as in few other places. All these phases of Vienna's musical life will be vividly illustrated during the festival week, and at the same time the Court Theatre will present the best works of Austria's playwrights.

Art

Etchings. With 44 illustrations. By Frederick Wedmore. (The Connoisseur's Library.) New York: G. P. Putnam's Sons. $7.50.

"The world that cares for art at all," says the author in the preface, "has become strangely and creditably occupied with original prints." One sign of this interest in prints is to be found in the comparative frequency of additions to the literature of the subject, making interleaving already necessary in Bourcard's bibliography ("Gravures et Graveurs," Paris, 1910).

Mr. Wedmore's book in a measure serves both the connoisseur and the less advanced student. While not a systematic history of etching, it has continuity of purpose, and the division into chapters on individual artists or on groups of related etchers helps to emphasize the ever-present importance of the personality behind the print. In etching this factor is particularly potent, for it, more than any other graphic reproductive process, has served as a painter art. It has been preëminently the vehicle for the conveyance of artistic impressions set down directly, without the aid of an intermediate agent, a professional engraver. This reproduction of an artist's work in facsimile constitutes each proper impression from an etched plate to all intents an original work by the artist. In the present book—the product of experience and taste—the limitless possibilities offered by copper-plate, etching needle, and acid to the free expression of ideals and moods are emphasized by an inclusiveness, a catholicity in appreciation which is not, perhaps, always to be expected from the land of the author's birth. It is refreshing to find Rembrandt, Steinlen, Van Dyck, Jacquemart, Veyrassat, Bracquemond, Hollar, Bauer, Goya, Helleu, and others equally diverse in individuality, set before us with discriminating comment. The statement of general principles by the author is sane and fair-minded. In the sentence, "T. F. Simon has employed hues dainty but telling—never obliterating the expression by line which is of the very essence of etching" (p. 101), he not only characterizes tersely and clearly the art of which he writes, but defines his opinion as to the reticence necessary (see also p. 95) when color is used. And his reminder that the desirable state is not necessarily the first but the best, "whether it be the first, the second, or, peradventure, the fifth," is not so much a truism as a basic fact that will bear repetition.

There are limitations to be noted, presumably due to temperament. Various reasons may be sought for the entire ignoring of Germany, and for the strange omission of Charles A. Platt and Miss Cassatt from the somewhat unbalanced chapter of seven pages on America. Certain individual comments, also, such as the easy acceptance of Zorn's characterization in all his male portraits, may not be generally accepted as "well considered." As to the possibly not quite relevant remarks anent catalogues in the chapter on Whistler, it is well to remember that a catalogue is a catalogue and not a selective list, and also that an able critic may be an indifferent cataloguer and a cataloguer incidentally a discriminating connoisseur. The bibliography is negligible, and in the index the author has apparently attempted to summarize his comments on each individual artist, a futile effort with an amateurish result.

The collector will place the book on his shelves next to Hamerton, Hind, Koehler, Beraldi, and the others. The beginner, who has entered into the delights that the print offers, through one of the two or three really introductory books (not histories) that have been written on prints, will do well to read the present more detailed work. He will find imagination and recollection well aided by the illustrations, which are happily reproduced by a process that breaks the line very much less perceptibly than the screen of the half-tone. And that is of prime importance. Indeed, in etching the line, quite apart from its collective use to render masses of shade or tone or texture, often is employed in suggestive indication, with synthetic elimination, and stands out with noteworthy clearness as the symbol that it is.

Lester G. Hornby has done the "Edinburgh" volume of A. & C. Black's Artists' Sketch-book series; it is announced for publication shortly.

The first number of a new architectural journal, entitled the *Architectural Quarterly of Harvard University*, will be published this month. The purpose of the periodical is to present in easily accessible form important work by students, special lectures delivered in the school, and contributions by members of the teaching staff and graduates. The principal article in the first number will be an illustrated paper on "Architectural Acoustics," by Prof. W. C. Sabine, with a practical discussion of a number of recent theatres, lecture halls, and churches. The number will also contain several drawings of important examples of European architecture, and an essay on "The Mediæval Town Halls of Italy," by H. E. Warren. The annual subscription to the *Quarterly* will be two dollars a year, single number sixty cents. The journal will be published by Harvard University.

Besides the title essay, A. E. Gallatin's "Whistler's Pastels and Other Modern Profiles" (John Lane) contains brief notices of the International Society of London, of the work of Ernest Haskell and Everett Shinn, and also papers on "An Etching" by Zorn, and on "The Winslow Homer Memorial Exhibition." The little book is charmingly made at the Merrymount Press, contains some unedited sketches by Whistler, and the edition is limited.

We have received from Philip Lee Warner, publisher for the Medici Society, London, "A Catalogue of an Exhibition of Old Masters in Aid of the National Art-Collections Fund, Grafton Galleries, 1911." This exhibition has already been reviewed by our London correspondent in the number for October 26, 1911, and we need only add that this light and beautifully printed quarto is under the very competent editorship of Roger E. Fry and Maurice W. Brockwell, and contains eighty collotypes of old masters of every school. According to the comity governing loan exhibitions, the attributions are those of the owners. The percentage of error is unusually small, and by citation of Claude Phillips's press notice of this exhibition the warning signal is raised where needed. The scholarly character of this work, and its fine reproductions, will commend it to serious students of the history of art.

Professor Garstang has been continuing his excavations at Meroë, the ancient capital of Ethiopia, and his exertions have now resulted in remarkable discoveries. He has unearthed a prostyle Roman temple, luxurious baths, and other proofs of a Roman occupation of Meroë. The baths were fed by water which first passed through a series of aqueducts and finally flowed down cascades between numerous sculptured lions and other animals. The walls are ornamented with rows of colored tiles, decorated in relief, all still in their original positions; and around the tank are placed a number of statues. The importance of this discovery lies in the fact that it definitely proves that the boundaries of the Roman empire embraced a wider area than has hitherto been believed. The presence of the bronze head of the Emperor Augustus discovered in 1911 and now in the British Museum is thus explained

Finance

BAD NEWS AND THE FINANCIAL MARKETS.

During several weeks, it has been a matter of remark that prices on the Stock Exchange were not responding, in what would have seemed the logical way, to distinctly unfavorable news. A succession of discouraging announcements, a series of reports that business, the country over, had disappointed the hopes with which the year began, and a deepening of the political confusion, at home and abroad, were received on the stock market merely with apathy and indifference. The casual observer would not have guessed, from a glance at the movement of prices for the day, that anything at all had happened.

Following that period of inertia came a still more singular turn in events. A week ago, the stock market which would not go down began to rise, and a few days of greatly increased activity of trading left the leading speculative stocks at prices 3 to 5 points above last week's figures. This occurred in the face of such interesting items in the news as the passing of its dividend by one of the largest steel-producing companies, the further fall in prices on the steel market, the announcement of the Roosevelt candidacy on a radical platform, a series of extremely bad January railway reports, the strike of a million English coal miners, the victory of New England's textile laborers over their employers, the hint at a possible coming coal strike here, the preparation for the Money Trust inquisition by the House of Representatives, and the publication of a very hostile report on the Steel Corporation by an expert appointed by the Congressional committee to investigate its books.

There are various explanations of so seemingly anomalous a response of the Stock Exchange to the news. The phenomenon is not altogether new; the 15-point advance in prices, immediately after the Steel prosecution was announced at the end of last October, is a leading precedent. It is not wholly clear, even now, whether that "November rise" reflected chiefly indifference to the suit, or "buying on bad news" in an oversold speculative market, or knowledge of the surprising volume of railway orders which were presently to be placed in the steel trade. Probably most people would say now that Wall Street had talked so long of the coming Steel suit that the thing had been "discounted" in prices weeks before, that the state of the money and credit market was too sound to admit of any further undermining, and that therefore stocks went up in anticipation of something really encouraging—which came, as such events usually come after a season of uninterrupted gloom. It is yet to be determined whether the past week's rise in prices is a mere flash in the pan, due to the restless activity of professional speculators, or is a sign that a turn for the better in the general situation is at hand.

Not the least singular aspect of the Stock Exchange's attitude is its indifference to the English coal strike, which began a week ago, and whose larger possibilities are admittedly of the most formidable sort. Preparations for a partial embargo on English manufacturing and transportation industries, for lack of fuel; rumors of possible similar demonstrations in the coal fields of Germany, France, and the United States, and indications that the British Government had lost control of the situation, were factors which might easily have shaken financial confidence on every side. On the London Stock Exchange, it is true, consols declined ¾ point, and shares of English railways fell off 1 to 5 points; yet even at London there was no sign of demoralization, prices recovered sharply this week, and the chief comment in financial quarters was that the Stock Exchange was unreasonably disregarding the panicky warnings and predictions which had been finding voice in the London press.

It may have done so; yet the stock market sometimes measures such a situation more wisely than the paragraphers. The possibilities involved in a general embargo on the British coal fields are undoubtedly large enough to excite the imagination. Almost anything in the way of industrial disaster may be reasoned out from the conceivable sequel to an indefinitely prolonged industrial deadlock of the sort. But when the London editorial writers tell us, as they did last Saturday, that no such catastrophe has threatened England since the Spanish Armada set sail in 1588 from Coruña for the Channel, and the Stock Exchange hears the verdict without emotion, one is tempted to suspect that Capel Court may have kept its head while Fleet Street and the Conservative Clubs have not. It might be superfluous to suggest that such a view of the case forgets the Dutch fleet in the Thames in 1667, the Mutiny of the Nore in 1797, Napoleon at Boulogne in 1804, and the Chartist meetings in Trafalgar Square in 1848, not to mention Great Britain's complete international isolation in the stormy days of 1779 and 1895. But the more obvious conclusion is, that the coal trade crisis itself is not looked upon with a very philosophic eye.

Threats of a general tie-up of all industry have not been uncommon in the recent history of nations. France was confronted with such a possibility through its railway employees in 1910; we ourselves had a taste of it in 1894; and on both occasions the problem which inspired such extreme dismay was quickly solved, with the help of Government, simply because its conceivable possibilities were so grave. It may, indeed, be said of the English strike that the prospect of a similar early settlement is very much better because of the formidable condition of things which would follow its indefinite prolongation. That, beyond doubt, is what the Stock Exchange has had in mind.

When the every-day comforts, necessities, and activities of society at large are menaced with interruption by an obstinate labor demonstration in a single industry, society as a whole ranges itself on the side of restoration of normal conditions. The laborer himself, and the quiet middle-class citizen whose action is frequently decisive in emergencies of the sort, took their stand with Cleveland in 1895 and with Briand in 1910. They knew very well that their own personal rights had been invaded, and their attitude rendered a settlement imperative. What remains to be determined is whether the English difficulty can be solved, under present circumstances, without undue political commotion and popular disorder.

Charles B. Davenport's HEREDITY IN RELATION TO EUGENICS

By the Director, Department of Experimental Evolution, Carnegie Institution of Washington. With diagrams. 298 pp. 8vo. $2.00 net.*

"One of the foremost authorities . . . tells just what scientific investigation has established and how far it is possible to control what the ancients accepted as inevitable. . . . The scientific student of heredity will find in it the latest developments and achievements in his particular province. . . . Nevertheless, it is meant more for the intelligent general reader, who will be able to read it with entire comprehension. . . . Many interesting instances that illustrate how good or bad tendencies, physical, mental, or moral, radiate from the focal point of a single individual or family"—*The Times Review.*

CHARLES DICKENS AS EDITOR

NEARLY 400 HITHERTO UNPUBLISHED LETTERS OF DICKENS.
Edited by
R. C. LEHMANN of "Punch"

This most important of the Dickens Centenary publications contains some 400 letters of the great novelist, only a handful of which have ever before been published, and all of them written at the most interesting period of his life. They voice Dickens's intimate opinions on his literary contemporaries and things in general. One group of them tells of his second American tour.

Some Notable Textbooks

NEW EDITIONS OF TWO IMPORTANT TEXTS

Outlines of Economics

DEVELOPED IN A SERIES OF PROBLEMS

By Members of the Department of Political Economy in the University of Chicago.

New and Enlarged Edition

The problem of improving the current methods of teaching elementary economics is now attracting widespread interest. This book is planned to answer the demand for improved courses. The ideals which have most fundamentally determined the character and content of the book are: (1) A belief that the elementary course in economics offers exceptional opportunities for training in thinking and reasoning; (2) A desire to connect the theoretical principles of economics with the actual facts and with current problems of the business world.

The result is a careful analytical syllabus of the subjects usually covered in the introductory course, accompanied by some 1,200 questions and problems. It is expected that the *Outlines* will be used in connection with some textbook. Wherever adopted, the book has improved conditions in a marked degree. It has stimulated interest, vitalized the subject, and aroused independent thought.

160 pages, interleaved, 12mo, cloth; net $1.00, postpaid $1.13.

A Laboratory Guide in Bacteriology

By PAUL G. HEINEMANN

Second Edition, Enlarged and Revised.

The field in bacteriology is rapidly enlarging, and the knowledge gained is being put to vitally practical use, not only in medicine, but in several of the commercial industries. With the exception of the Laboratory Guide, there is no practical handbook for students preparing for work in the various branches of the science in the fermentation industries, in agriculture, in medicine, in the municipal control of milk and of water-works, etc.

The new edition of the Laboratory Guide is designed to cover the outlines for work in elementary courses in the various branches of bacteriology. It is intended to serve as a guide not only to the instructor, but especially to those practically engaged in applying the fundamental principles of the science. In technique and method it has been carefully revised and brought down to date, and itself represents the progress made in the science since the first edition appeared in 1905.

216 pages, 12mo, cloth; net $1.50, postpaid $1.59.

TWO STANDARD SERIES

FIRST-YEAR MATHEMATICS FOR SECONDARY SCHOOLS. 378 pages, 12mo, cloth; net $1.00, postpaid $1.15.

SECOND-YEAR MATHEMATICS FOR SECONDARY SCHOOLS. 296 pages, 12mo, cloth; net $1.50, postpaid $1.63.

TEACHER'S MANUAL FOR FIRST-YEAR MATHEMATICS. 176 pages, 12mo, cloth; net 80 cents, postpaid 89 cents.

By GEORGE W. MYERS,

Professor of the Teaching of Mathematics and Astronomy, College of Education, University of Chicago, and the Instructors in Mathematics in the University High School.

The most striking departure from the old way of teaching consists in the fusing of arithmetic, algebra, and geometry into a single study. To confine the student to the handling of symbols for one year and to the study of forms for another is to shut out all possibility of natural development. Instead he is now led to express geometrical facts by algebra and to illustrate algebraic ones by geometry, and thus to grasp the *essential* facts that underlie both.

ENGLISH POEMS

Selected and Edited with Illustrative and Explanatory Notes and Bibliographies

By WALTER C. BRONSON

Professor of English Literature, Brown University

OLD ENGLISH AND MIDDLE ENGLISH PERIODS. 436 pages, 12mo, cloth; net $1.00, postpaid $1.15.

THE ELIZABETHAN AGE AND THE PURITAN PERIOD. 550 pages, 12mo, cloth; net $1.00, postpaid $1.15.

THE RESTORATION AND THE EIGHTEENTH CENTURY. 541 pages, 12mo, cloth; net $1.00, postpaid $1.15.

THE NINETEENTH CENTURY. 635 pages, 12mo, cloth; net $1.00, postpaid $1.15.

This series of four volumes is intended primarily to afford college classes in English literature a convenient, inexpensive, and scholarly collection of the most important English poetry. The selection and arrangement are such as to show clearly the development and decline of the successive schools as well as the individual work of each significant poet. The selections, so far as possible, are complete poems. The notes, though concisely expressed, occupy nearly a hundred pages in each volume. The books are in use in 100 leading American colleges.

THE NEW BOOKS

EUCKEN

Life's Basis and Life's Ideal

By RUDOLF EUCKEN, Professor of Philosophy in the University of Jena; Winner of the Nobel Prize for Literature in 1908; Author of "The Meaning and Value of Life," etc. Translated with Introductory Note by ALBAN G. WIDGERY, Formerly Scholar of St. Catharine's College, and Burney Student, Cambridge, and Member of the University of Jena.

In this, his latest and most important work, Professor Eucken discusses the leading principles of his philosophy and its application to the different spheres of life. By careful analysis of extant conceptions of life he shows their inadequacy, the necessity for a new conception, and the direction in which this must be sought. The author has a message for the present time, and relates the problems of philosophy so closely to history as to make them vital and intensely human.

Cloth, 8vo, $2.50 net; postpaid $2.65.

MILHAM

Meteorology

By W. I. MILHAM, Professor of Astronomy in Williams College; Author of "How to Identify the Stars," etc.

This volume will have a strong appeal to the general reader as complete in itself, and assuming no previous knowledge of the subject. It explains in clear, untechnical language the entire mechanism controlling our ever-changing weather, and is of especial value for use as a text-book in meteorological courses, on account of its arrangement and its pedagogical apparatus.

(Ready this week.)

BERGSON

Laughter

By HENRI BERGSON, Professor at the Collége de France; Author of "Time and Free Will"; "Matter and Memory," etc.

This work has been highly successful in France, where it is in its seventh edition. It has been translated into Russian, Polish, and Swedish. German and Hungarian translations are under preparation. Its success is due to the novelty of the explanation offered of the comic, and also to the fact that the author incidentally discusses questions of still greater interest and importance. To quote only a few, one may mention those based on contrast, exaggeration, and degradation.

Cloth, 12mo, $1.25 net; postpaid $1.36.

ROBINSON

The New History

And Other Essays in Modern Historical Criticism

By JOHN HARVEY ROBINSON, Ph.D., Professor of History in Columbia University.

A popular account of the great revolution overtaking historical study owing to the fundamental social and intellectual changes of the last half-century. Due to traditional misapprehensions of its value, the author believes that the significance of history has hitherto been obscured, and he illustrates some of the ways in which the study of man's past can be made a potent element in solving many of the numerous progressive problems of modern times.

Cloth, 12mo, $1.50 net; postpaid $1.62.

HOBBS

Earth Features and Their Meaning

By WILLIAM HERBERT HOBBS, Professor of Geology in the University of Michigan; Author of "Characteristics of Existing Glaciers," etc.

In placing before the general reader and student the geological meaning of landscapes, this work, embellished with an unusual number of appropriate illustrations, broadens the foundations of general culture and develops the powers of observation. The book is based upon a course of thirty-six lectures which for a number of years Professor Hobbs has given twice annually to large classes of students at the University of Michigan.

Cloth, 8vo, $3.00 net; postpaid $3.24.

WEYL

The New Democracy

An Essay on Certain Political and Economic Tendencies in the United States. By WALTER E. WEYL, Ph.D.

"A chief issue in the Presidential campaign is "Socialized Democracy." Dr. Weyl's new work gives a clear summary of its causes and aims. Should be read by every thoughtful person in America."

"A masterly, scathing, and absolutely fearless arraignment of things that ought not to be in a republic, and of tendencies that no democracy ought to tolerate."—Boston *Herald*.

Cloth, gilt top, crown 8vo, $2.00 net; postpaid $2.12.

STEIN

Ruins of Desert Cathay

Personal Narrative of Explorations in Central Asia and Westernmost China. By M. AUREL STEIN

"A Fascinating Record of Travel, Adventure, and Antiquarian Discovery.

"A graphic description of the archæological and geographical expedition undertaken by Dr. Aurel Stein for the Government of India in 1906-08, and its rich and almost unparalleled harvest of priceless memorials, manuscript and other treasures."—*The Daily Chronicle* (London).

Two volumes. Profusely illustrated, color plates, panoramas, original maps. **$12.50 net; expressage extra.**

Published by **THE MACMILLAN COMPANY** 64-66 Fifth Ave. N. Y.

Just Published
A REVISED EDITION OF
Montgomery's Leading Facts of English History

The history that has been for years the stand-by of American schools. No other textbook has ever surpassed it in clarity of treatment, completeness and reliability.

It presents in brief compass the most important points in the development of the English nation, and covers all the ground ordinarily covered by a high-school course.

The revision embodies an extensive rewriting of the previous edition. It includes new maps and twenty-five new illustrations, together with a new and superior letter-press throughout. Teachers who desire to make a special study of Constitutional History will be greatly aided by the revised Summary on that subject and by the important Constitutional Documents contained at the back of the book.

For Sale

FOR SALE, AT POINT LOOKOUT, Isle au Haut, a cottage and a lot of about four acres. Cottage has large sitting room, writing room, and two bedrooms on the first floor, and five bedrooms on the second floor, four bathrooms, and all modern conveniences. It commands, from the windows, views of the Camden Hills, Deer Isle, and the mountains of Mt. Desert. The climate is the best on the coast—excessive heat is never known, and, being twenty miles from the mainland, the climate is exceptionally equable, the variation at times in twenty-four hours being even less than two degrees. The island is about 7 miles long by 2 miles wide, and the summit of the mountain is about 600 feet above tide. A fresh water lake, of more than a mile in length, is stocked with land-locked salmon. A road of thirteen miles around the island affords charming views, and gives access to cliffs rivalling those of Mt. Desert. For terms, apply to Ernest W. Bowditch, 60 Devonshire Street, Boston, Mass. Walter C. Harris, 750 Bullitt Building, Philadelphia.

For Rent

FURNISHED HOUSE in Cambridge, Mass., next the Longfellow House, to rent for winter season 1912-13; 4 master's living rooms, kitchen, laundry, and drying-room; 6 master's bedrooms, 2 baths, 3 servants', and 1 trunk-room. Occupancy given after August 1, 1912. Apply to owner at 113 Brattle Street.

"Though a book of only seventy pages, it raises more problems in the psychology and ethics of sex than will suffice the moralists and eugenists of the world for a year's discussion."

A SELECTION OF NEW SPRING BOOKS

From Page's List

Three Wonderlands of the American West
By THOMAS D. MURPHY

"The author has presented in simple but graphic style the attractions which are now drawing people from all over the world to feast on marvels of scenic beauty."—*Boston Globe.*

With 16 color plates from paintings by Thomas Moran and many duogravure plates, boxed. *Net* $3.00 (*postpaid* $3.30).

Chile and Her People of Today
By NEVIN O. WINTER

An entertaining, vivid, and exhaustive account of the Chileans and their country, profusely illustrated and handsomely bound. *Cloth decorative. In a box,* $3.00.

The Art of the Berlin Galleries
By DAVID C. PREYER

A new volume in the excellent Art Galleries of Europe Series; describing the famous art treasures of the Kaiser Friedrich Museum and the Royal National Gallery. *With 48 full-page plates. Net* $2.00 (*postpaid* $2.20).

New Fiction

The Dominant Chord
By EDWARD KIMBALL

An absorbingly original story, with a forceful theory cleverly developed.

Naomi of the Island
By LUCY THURSTON ABBOTT

A singularly appealing love story. It strikes the human interest note in a most effective way.

Each, with color frontispiece, net $1.25 (*carriage* 15c. *extra*).

New Revised editions, brought up to date, of

FORBES LINDSAY'S
Panama and the Canal Today

NEVIN O. WINTER'S
Mexico and Her People of Today

Each, in the series of the Latin-American Republics, fully illustrated, in a box, $3.00.

Special editions of Grant Allen's five popular works on the principal cities of the Old World

PARIS **FLORENCE** **CITIES OF**
VENICE **BELGIUM: ITS CITIES** **NORTHERN ITALY**

Previously published in two volume sets. Now issued each one volume, with sixty-five illustrations, in a box. Net $1.75. (*Carriage* 20c. *extra*).

Published by **L. C. PAGE & COMPANY** *53 Beacon St. Boston, Mass.*

GEORGE THE THIRD AND CHARLES FOX: The Concluding Part of "The American Revolution."

By the Right Hon. SIR GEORGE OTTO TREVELYAN, Bart., O.M. Author of "The Life and Letters of Lord Macaulay," and "The Early History of Charles James Fox." In Two Volumes. Vol. I. With Map. Crown 8vo. $2.00 *net; by mail,* $2.18.

"Its two volumes—of which the first is here, and the second is already more than half written—will carry Fox up to the moment which, so far as personal success was concerned, proved to be the culminating point of his whole career. They will likewise include, and complete, the history of the American Revolution—my tranquil and pleasant occupation during the later years of a life much of which was passed in stormier waters."—*From the Preface.*

THE PERIPLUS OF THE ERYTHRAEAN SEA: Travel and Trade in the Indian Ocean by a Merchant of the First Century.

Translated from the Greek and annotated by WILFRED H. SCHOFF, A.M., Secretary of the Commercial Museum, Philadelphia. Illustrated. 8vo. Pp. vi+328. $2.00 *net; by mail,* $2.17.

"Valuable and very useful, and deserves particular notice. . . . The value of the Periplus lies not in its literary merits, but in the importance of this very early account of the trade of the Indian Ocean, and of the settlements around its shores, concerning which until this time we possess almost nothing of an intelligent and comprehensive nature."—*Philadelphia Public Ledger.*

PRESENT PHILOSOPHICAL TENDENCIES.

By RALPH BARTON PERRY, Assistant Professor of Philosophy in Harvard University. 8vo. $2.60 *net; by mail,* $2.76.

A critical survey of Naturalism, Idealism, Pragmatism, and Realism, together with a synopsis of the philosophy of William James.

The Architects' Library

A HISTORY OF ARCHITECTURAL DEVELOPMENT.

In Three Volumes.

Vol. III. THE RENAISSANCE IN ITALY, FRANCE, AND ENGLAND.

By F. M. SIMPSON, Architect, Professor of Architecture in the University of London; Fellow of the Royal Institute of British Architects. With 268 Illustrations. Medium 8vo. Pp. xvi+359. $6.00 *net.*

The new volume treats of the Architecture of the Renaissance in Italy, France, and England, and concludes with a chapter dealing with the "revivals" of the last century, and the confusion in ideals which then prevailed. The different periods are treated distinctly, and the main characteristics of each period explained.

ALREADY PUBLISHED:

Vol. I. Ancient, Early Christian, and Byzantine Architecture.

With 180 Illustrations. $4.00 *net.*

Vol. II. Mediaeval Architecture.

With 257 Illustrations. $6.00 *net.*

*** *A Prospectus will be Sent upon Request.*

The Nation

NEW YORK, THURSDAY, MARCH 14, 1912.

The Week

Chairman McKinley's reply to Senator Dixon's "challenge" for a test of the Roosevelt and the Taft sentiment through preferential primaries is directly to the point. The question is not one of principle, since there is no difference between them here, but solely of practical arrangement. What the President's managers contend for is real primaries, "fairly conducted and surrounded by the restrictions of the law." Straw votes are well enough for advertising purposes, but they are hardly up to the requirements of a serious endeavor to ascertain the popular will. Where Mr. McKinley is particularly effective, however, is in reminding the preferential primary shouters that forty-one of the forty-eight States have already provided for choosing their delegates by primaries, in some form, and that not even the Big Stick can set aside these arrangements. "I do not favor changes in the rules of the game while the game is in progress," says the Taft manager, as if to show that others than self-denominated saviors of the people can be like Lincoln when they wish. In a word, the friends of Mr. Taft desire to see the campaign conducted decently and in order, without eleventh-hour alterations of procedure that would inevitably be difficult if not impossible to safeguard.

A bill was favorably reported to the House last week, authorizing the President to take steps to procure the appointment of an international commission to study the questions connected with the rise in prices—commonly referred to as the high cost of living. As our readers are aware, this is a project set on foot by Prof. Irving Fisher of Yale University, who obtained the hearty endorsement of many economists and public men in Europe as well as in this country. Mr. Taft was so impressed by the showing that he urged Congress to enact the necessary legislation. It is, indeed, a measure upon which there seems to be no serious difference of opinion among those competent to speak on it. In the *Frankfurter Zeitung* of February 25, Herr Bernhard Dernburg, formerly Colonial Secretary, and a man of high reputation in business and financial affairs, has a long article on the increased cost of living. In it he takes up the various causes which have been assigned—tariffs, heavy taxation, gold production, and so on—only to give his opinion that no one of them can be deemed adequate. But Herr Dernburg comes out strongly for an international inquiry, referring specifically to Professor Fisher's plan, which he says meets with universal acceptance among experts.

The most hardened must be stirred by the plight of the 120 first-term members of the House of Representatives. These "freshmen" have found themselves cruelly handicapped in the accomplishment of their great task of saving the country. The older members persist in saving the country in their own way, without either help or interference from upstarts. The latter have endured this enforced inactivity long enough, and a projected banquet for the airing of their grievances is the result. What the first-termers really want, if we read between the lines correctly, is not more consideration for pet legislative schemes, but opportunity to make speeches. It is the refusal of their requests for "time" that first grieves and then angers them. Surely the rules can be amended so as to provide for so simple a matter. "Calendar Wednesday" may not be the great success that its promoters hoped, but "Oratory Monday Morning" or "Declaiming Saturday Afternoon" ought to satisfy the aspiring first-termer without costing either the country or the House a moment of valuable time.

The fight in the Ohio Constitutional Convention over the question of licensing saloons has resulted in a compromise clause which will be submitted to the voters as a separate proposition. The State has not had a license system for sixty years, the present arrangement being one of local option. The new proposal maintains the possibility of prohibition in counties and smaller divisions, but provides for the granting of licenses on such terms as the Legislature may make, with the restriction that not more than one license shall be authorized for each township or municipality of less than five hundred population, or for each five hundred in larger places. There are other and minor regulations, including prohibition of ownership of saloons by breweries. The compromise is so extensive that one wonders why either side should have much interest in it.

By a narrow margin of perhaps only 500 votes, Seattle has defeated "Hi" Gill, the Mayor it recalled last year because he ran so "open" a town, or rather turned Seattle over not merely to its own underworld, but to gamblers and prostitutes from all over the country. What a blow his reëlection last week would have been to the advocates of the recall, it is easy to conjecture. As it is, the single-tax, Prohibition candidate has been elected, although the single-tax amendment for which he stood has been overwhelmingly defeated. Never, surely, were issues more confused in any municipal election in this country. In the primary on February 20, Gill had a plurality of more than 10,000 over Cotterill, who has now been elected. Indeed, it is beyond doubt that the latter would have been defeated but for the efforts of the women of the city, the Socialists abstaining from voting for either candidate. No less than forty-five propositions—referenda enough to suit the most enthusiastic advocate of government by the people—were submitted to Seattle's voters.

In 1905 the Philadelphia Director of Public Safety wiped nearly 60,000 names of "phantom" voters from the lists. Ghosts have a troublesome way of returning, however, and an investigation now under way indicates that about half of them have crept back to their old quarters. Indeed, there is a strong suspicion that certain wards are not making the showing in this respect that their reputation warrants, and they will probably be honored with a second investigation. In Philadelphia, owing to the obligation upon the voter to exhibit his tax receipt when registering, the foundation of the registration lists is the assessors' records. Ex-

amination of the assessors' records, accordingly, discloses any inflation of the voting lists. In the residential wards, where such crudeness as merely adding false names would be dangerous, because of the certainty of discovery, it has been the custom to keep on the lists the names of voters who have removed or died since the last preceding assessment, these names being voted by repeaters with comparative immunity. Both methods are threatened by the present investigation.

The action of the Mississippi Legislature in demanding the resignation of Senator Le Roy Percy is not to be taken as a reflection upon him, but as a fresh outcropping of Vardamanism. In a speech last December Senator Percy, in reply to some Hearst libels, laid before the Senate the whole story of the bitter contest in his State which finally resulted in his defeat and in the triumph of Vardamanism. One of Mr. Percy's bitterest enemies is the Lieutenant-Governor of the State, Thomas G. Bilbo, who was elected to that position although the previous Senate voted by 28 to 1 that he "was unfit to sit with honest, upright men in a respectable legislative body, and he is hereby asked to resign." It was Bilbo who made the false charge of bribery against one of Percy's partisans in the effort to void the Senator's election, and it is doubtless due to his or similar leadership that the Mississippi Legislature is now seeking another point of attack upon the Senator.

The opportunity arose from the fact that, after his defeat by Vardaman, in his natural disgust that the State should prefer that low buffoon to himself, Mr. Percy indicated his purpose of resigning at the January, 1912, session of the Legislature because of his belief that his "retiring from public life would tend to lessen factional strife." The appearance of the slanderous article in the *Cosmopolitan Magazine* and Vardaman's endorsement thereof made Senator Percy decide not to resign. In his own words, in asking of the United States Senate a complete investigation of both Mississippi Senatorial elections, Mr. Percy said: "If I resigned in the face of an article which holds up to the scorn of good people not only myself but the Legislature which elected me and the State which honored me, I should be untrue to that Legislature, to the friends who supported me, and to myself. If I am as corrupt a thing as I am painted to be in this article, I should not be permitted to resign. I should be branded with infamy and driven in shame out of public life to a prison cell."

The speech of Senator Kenyon of Iowa on the Stephenson case was a pretty thorough sifting of both the law and the evidence. He uncovered a mass of crawling and creeping vermin such as one sees when overturning a rotten log in a forest in the summer time. The only redeeming feature of the whole showing on Stephenson's side was the simplicity of the aged Senator who did not see anything wrong in drawing checks and handing them over to his friends to carry the primaries, together with his touching confidence in their integrity and good judgment, leading him to forego any accounting. With like ingenuousness, they destroyed all their memoranda immediately after the election.

Among the important bills waiting to be considered by the House of Representatives is the Esch White Phosphorus bill. We know of no single instance in which failure to do an obvious legislative duty has been more disgraceful. This matter presents no complexities, apart from the Constitutional question which some people profess to regard as involved in it, but which, if they are sincere, they should bring out in the open instead of smothering the bill in committee. It is a matter upon which the simplest considerations of humanity urge immediate action, and upon which other civilized nations have long ago taken action. Finally, it is a matter in which the only real difficulty was promptly removed by the Diamond Match Company as soon as President Taft suggested to that corporation that relinquishment of its patent rights in the premises would make the needed legislation possible.

History may have her doubts about the Mecklenburg Declaration of Independence, but there can be no doubt at all as to the reality of its celebration by the descendants of the men who ought, at least, to have drawn up and signed it. The immortal twentieth of May is to be filled this year with a judicious mixture of what the fathers did and what the sons are doing. "There is to be," says the Charlotte *Observer*, "a great exposition of what we make and sell in Charlotte, things the Signers never dreamed of, things they had to do without but which the Descendants can have if they have the price, and things that are making our manufacturers and merchants and jobbers more comfortable every day." An outsider, it thus appears, might be somewhat confused as to whether the celebration was in honor of the Signers or the Descendants, more particularly the Descendants who have things to sell. But in this respect, it must be confessed, the Mecklenburg celebrators are not sinners above all who dwell in the land.

Chief of Police Kohler of Cleveland has sent to the Constitutional Convention an appeal for consideration of the plan which he began to urge a year or two ago for a radical change in the treatment of criminals. He proposes that, for the existing system of definite fines and terms of imprisonment, there be substituted the single sentence of "banishment," to last until a second judge and jury, after due consideration, decide that the penalty originally imposed may be safely terminated, and the man restored to association with the law-abiding. This second tribunal, constituting the Court of Rehabilitation, should be as strict in determining its verdict as the first was. The prisoner would thus be encouraged to a real reform of himself; and his release, instead of meaning merely that his time had expired, would be the best testimony to his trustworthiness. As a consequence, the stigma that now rests upon the ex-convict would be transformed into something like a certificate of character. Chief Kohler, with the enthusiasm of the discoverer, sees revolutionary results from this plan. Impartial observers, while doubting the efficacy of any one remedy for criminality, will be interested in seeing the experiment tried in Ohio or elsewhere.

It may very well be that the man who succeeds Dr. Harvey T. Wiley as Chief of the Bureau of Chemistry at Washington will bring to his work the same devotion to the public service which has

made Dr. Wiley one of the most prominent figures in the campaign against the excesses of commercial greed and in behalf of a higher national standard of health. It is not so sure that the new Chief Chemist, whoever he may be, will rival his predecessor's amazing gift for marshalling public opinion in his support. The friends of Dr. Wiley are the last to deny his exceptional talents for utilizing publicity. But, in the first place, it was publicity exercised in a good cause, and in the second place it was not the product of mechanical press-agent methods, but the emanation largely of a picturesque personality.

In appointing Dr. Talcott Williams of the Philadelphia *Press* as head of the Pulitzer School of Journalism, Columbia has selected a journalist of long years of experience, unusual gifts, and extraordinary range of knowledge. As a speaker and lecturer he is in constant demand, particularly because of his minute information in regard to conditions in the Far East. He is precisely the right man to emphasize the need of thoroughly trained newspaper writers in place of men who have the merest smattering of knowledge. Again, Mr. Williams has been a practical journalist from the beginning of his career. There is no position on a daily newspaper that he has not filled with complete competency; and he has been in close touch with the leaders of public opinion and of our political life. His associate, Prof. John W. Cunliffe, who comes from the University of Wisconsin, besides having experience as a journalist and having seen a good deal of the world, is an English scholar of wide learning and good taste. Two better men could not have been chosen for guiding an institution which offers many opportunities and presents not a few difficult problems.

The Christian Science Church has its progressive and its stand-pat movement. Mrs. Augusta Stetson of New York, who has before this come into conflict with the directors of the mother church in Boston, now announces herself as a teacher of "radical Christian Science," and charges the authorities of the Boston church with being faithless to the teachings of Mrs. Eddy. She accuses them flatly of attempting to compromise with the devil when they declare that Christian Science healers do not assume responsibility for the results of the treatment they administer. Mrs. Stetson asserts that the healer's responsibility is a fundamental part of the Eddy creed. Thus, oddly enough, Mrs. Stetson, who calls herself a radical, is in reality a standpatter, whereas the official successors of Mrs. Eddy seem to be ready to square their doctrine with the needs of the time. During Mrs. Eddy's lifetime Mrs. Stetson, though a rebel, professed submission to the founder of the Church.

Mr. John Barrett, director-general of the Pan-American Union, makes the positive charge that there is a well-organized movement under way "to bring about trouble" between Mexico and the United States. With intervention as its object, the propaganda gains strength. The problem is serious enough without this; it is doubtful whether any question before the President calls for such wisdom and statesmanship. The owners of the $800,000,000 of American money in Mexico and the other foreign capitalists are certain to bring enormous pressure to bear upon Washington to safeguard their investments. It is so easy to say that American troops should restore order, as in Cuba, that the unthinking will be repeating it day in and day out. Mr. Barrett states well what any such intervention would mean:

> The temporary protection it might give to Americans and American investments would sink into insignificance compared, first, to the possible loss of life and property and expenditure of money which might result from war; second, to the restrictions upon United States trade and capital which would undoubtedly result in all Latin-America, and, third, to the loss of confidence in the United States Government and people among the Governments and peoples of its sister republics.

Concerning wages and profits as a whole, in the British collieries, some remarkable figures are given in an article in the *Westminster Gazette*. The question asked at the opening of the article is whether the present profits of the coal-owners "can bear a substantial reduction in the payment of increased wages, and yet leave a margin sufficient to attract capital to coal-mining." The data which follow may to many persons seem to furnish almost a complete answer to the question. But this is not so, owing to the fact that the figures deal with averages, whereas, in case of increased cost of mining (without an increased price obtained for the coal) there would be no uniform discouragement of capital everywhere, but simply the stoppage of the worst-paying mines. Nevertheless, the figures of the average are extremely interesting. From them it appears that the average price obtained at the collieries of the United Kingdom in the year 1910 was $1.90 per ton in England, $2.72 in Wales, and $1.65 in Scotland. By comparison of these figures with the average output of each person (man, woman, or boy) employed in the mines, it appears that the total amount received by the mine-owners—without deduction for operating expenses of any kind other than wages, or for any return on capital or provision for its maintenance—averaged $1.71 per worker per day in England, $2.35 in Wales, $1.81 in Scotland. On examining the details of cost-sheets in certain mines, the writer comes to the conclusion that "an increase [in wages] of a shilling a day would absorb the whole of the profits and half as much again." This result cannot, of course, be accepted as conclusive; but the writer has evidently reached it in good faith, as may be inferred from his conclusion that there would be no difficulty in making the advance of wages by means of an advance in the price of coal, which, of course, would have to be borne by the consumers.

An uninterrupted flight from London to Paris at a speed of seventy-five miles an hour, is not really so simple a performance as the hero of the occasion would make it out. M. Salvey's statement is that, having a little affair of business to look after in the French capital, and finding the train schedules from Charing Cross unsatisfactory, he stepped into his monoplane and dropped over to Paris. The thing has been done before, and will be done again with increasing frequency. But for all that the man in the street hardly visualizes himself as making in person the trip from London to Paris through the air in the immediate future. The triumph of the aeroplane has been in very large part the triumph of its navigator. There has grown up a class of airmen who, in the popular mind, can do almost anything. If Vedrines or Beaumont should fly from Paris to London without any machine at all, it would not be such a dreadful shock.

THE DEFEAT OF THE TREATIES.

The general disappointment over the killing of the arbitration treaties in the Senate will be sharpened by the belief that the action was prompted by partisan motives. The trail of politics is over it all. On the main issues put to vote, the division in the Senate was along party lines. The Democrats were almost solidly for the emasculation and ruin of the treaties. Only three Democratic Senators—two of them, Messrs. Williams and Rayner, among the ablest and most independent members of the Senate—stood for the treaties in their integrity. Not all the insurgent Republicans went with the Democrats, but enough of them did so to make it possible, by a majority of two votes, to strike out vital clauses and to add amendments intended to do the treaties to death.

That the Democrats in the Senate made a sorry exhibition of themselves in this important matter will be generally agreed. It is not by such displays that they can regain confidence for their party. Without denying that certain Democratic Senators may have been actuated by firm convictions on the question of the Senate's powers under the Constitution, there is violent suspicion of other motives when substantially the whole of the party representation in the Senate arrays itself on one side. Can it be plausibly said that the rank and file of the Democratic Senators—many of whom did not debate the question at all, but simply voted in a mass—were more sensitive to their Constitutional obligations, more jealous of encroachment upon the prerogatives of the Senate, than men like Root and Burton, or Senators like Rayner and Williams? The supposition is absurd. Moreover, it must be remembered that the leading Democratic candidates for the Presidency have heartily approved the treaties. Gov. Wilson came out for them emphatically. They were warmly endorsed by Gov. Harmon. What sinister influences, what unexplained motives, led the Democrats in the Senate to repudiate such leadership and to set themselves athwart the enlightened sentiment of the country so emphatically expressed? We know what the Clanna-Gael will say. It will rejoice at the defeat of the treaties as due to threats of political vengeance by Irish-Americans. These may, indeed, have been of avail in some instances, but more powerful than any such attempted pressure must have been a partisan spirit, willing to impede a great and international movement for peace just to gain an apparent advantage over President Taft. For our part, we are strongly of the mind that this advantage is illusory, and that the Democratic Senators, by their attitude in this high business, will have given their party hopes a distinct check. What inducement will the people have to give full power to men who show themselves so selfish and so mulishly wrong?

It has been said that the Senate is "the graveyard of treaties." This is an exaggeration, though in the matter of arbitration treaties it might be held to be very near the truth. No one has forgotten the fate of the earlier arbitration treaty with England, which President Cleveland and President McKinley vainly urged upon the Senate. Not even President Roosevelt was able to induce the Senate to ratify the arbitration treaties of 1905, except in a form which caused the documents to be pigeon-holed in the State Department. Certainly, in all this class of treaties the Senate has shown itself either unyielding or evasive. When it dares not reject them outright, it tries the plan of evisceration. It is the latter method which has been successful in the present case.

The Senate knew, because everybody in Washington knew, that the ratification of the treaties with all kinds of exceptions stipulated in the act would not only frustrate their main intent, but would lead to their being laid on the shelf. Neither our Government nor that of Great Britain or France would care for them in their present mutilated shape. And Senators must have known also that, in blocking these particular measures, they were doing what they could to check a world movement for peace guaranteed by arbitration treaties. It is no secret that both England and France hoped to make these treaties a model for other agreements of the kind with other Powers. That is the reason why objection was made to the enumeration of subjects which could never be submitted to arbitration. Such a course would destroy the broad example which it was desired to set. And the Senate, furthermore, has at one stroke put an end to the negotiations which the President was planning at once to take up with Germany and Japan, and possibly other nations, in the hope of procuring similar arbitration agreements. Thus the net result is depressing and disastrous in far-reaching ways. It puts the United States in the attitude of refusing to accept the offered leadership in binding the world together in indissoluble peace.

That this disappointing course of the Senate is in absolute misrepresentation of the wishes of the great majority of the people of this country, we have no manner of doubt. If it was intended as a blow at the President, the reaction is, in our opinion, certain to be in his favor. Meanwhile, Mr. Taft himself takes the slaughter of his arbitration treaties in a fine spirit. He admits that he is grievously disappointed, but affirms that he is not cast down, and, with a firm courage like that of D'Azeglio after the disastrous battle of Novara, declares simply: "We must begin all over again."

TAFT ON THE JUDICIARY.

The President's speech at Toledo last Friday night was not a great speech. There are many men in the country who could have presented with more telling force the case against those "radical methods of changing the judiciary system," the proposal of which formed the occasion of his address. Mr. Taft himself has, on a number of occasions, made more striking utterances on the same general subject. But there are two objects that he evidently set before himself in making the speech, both of which he was entirely successful in achieving. One was to embody in a few brief passages of the speech the gist of the argument against the proposed innovations; the other was to avoid not merely outright personalities, but that kind of offensiveness of language which, though ostensibly addressed to the subject matter of discussion, is essentially of the nature of a personal attack. And we suspect that to the restraint he put upon himself in this regard must in large measure be ascribed a certain want of fire in the speech as a whole. His state of mind appears to be clearly indicated when he says, speaking of the proposed recall of constitutional decisions, "This is a remarkable suggestion, and one which is so contrary to anything in government hitherto proposed

that it is hard to give it the serious consideration which it deserves because of its advocates and of the conditions under which it is advanced."

We have said that the speech is not a great speech. But there are several things in it that could hardly be improved upon. In the first place, there is the opening paragraph, a backward glance at the story of the Union under the system established by the Constitution—a story upon which it has been the habit of Americans to dwell with patriotic pride. The attacks now made on the judicial system of the country are largely a matter of psychology, we feel tempted to say of morbid psychology. The state of mind underlying them is not by any means unlike that which prevailed before and during the campaign of 1896 among the hysterical silverites; they saw in everything the malign results of the gold standard, everywhere the blight of low prices, on all sides the devilish machinations of the "creditor class." It was the part then of sober men to try and counteract this pathological mental condition by calling attention to certain simple facts; and what was true in 1896 of the silver craze is true to-day of the anti-judiciary craze. As a matter of fact, there was no creditor class crucifying mankind on a cross of gold; as a matter of fact, there is no desperate condition of judicial oppression under which the people of these United States are laboring. To read the opening sentences of Mr. Taft's speech, quiet, dignified, patriotic, free from extravagance, after listening to the queer rantings of the "Progressives," is like turning from a confused and nebulous dream to a solid reality.

One more passage may be singled out for special notice. It is that in which the President, with the utmost simplicity and directness, disposes of the fantastic notion that when a disputed question of Constitutionality is placed before the people, as a final court of appeal, it will be decided as the result of prolonged deliberation on the true interpretation of the Constitution. He says:

> What the court decides is that the enacted law violates the fundamental law and is beyond the power of the Legislature to enact. But when this issue is presented to the electorate, what will be the question uppermost in the minds of most of them and forced upon them by the advocates of the law? Will it not necessarily be whether the law is on its merits a good law rather than whether it conflicts with the Constitution? . . . What this recall of decisions will amount to if applied to constitutional questions is that there will be a suspension of the Constitution to enable a temporary majority of the electorate to enforce a popular but invalid act.

Can any man in his sober senses doubt the correctness of this statement? Were it not that the name of Lincoln has been so cheapened by constant and indiscriminate use in the hands of a man typifying the diametrical opposite of Lincoln's temperament and methods, we should feel tempted to say that Mr. Taft has exposed the false pretence of this precious scheme of judicial interpretation by popular vote just as Lincoln would have done it—by applying to it the touchstone of simple truth, and common sense, and common honesty.

To the sanity and simplicity of Mr. Taft's speech, a greater contrast could hardly be imagined than that presented by Mr. Roosevelt's *Outlook* article. How he has lashed himself into a state of blind frenzy on this subject of the recall of judicial decisions is illustrated by the almost incredible blunder which he not only commits, but which forms the very backbone of the article. "I preach no new doctrine," he says; "the proposal that I make for the several States was in actual practice acted upon by the people of this whole nation but a very short time after the Constitution was adopted." And he proceeds to tell at length of the adoption of the Eleventh Amendment to the Constitution of the United States, which had the effect of reversing the result of a previous Supreme Court decision. "All I ask," he then goes on to say, "is that what the people of the nation have actually done the people of each State shall actually be allowed to do." It is almost inconceivable that a man who has been President of the United States could be guilty of such ludicrous confusion. The Eleventh Amendment was adopted by the regular process laid down by the Constitution of the United States; and nothing is more familiar to everybody than that State Constitutions are infinitely easier to amend than is that of the United States. Thus the Colonel is clamoring for something that, according to his own statement, the people already have. How account for this queer state of mind? A remark he makes in this same article furnishes the key. "I am not," he says, "primarily concerned with methods." Evidently not; and he feels absolved from the ordinary responsibility of rational men in talking about methods. He tells us that his method is the same as one that is already in existence—regardless alike of the fact that the method is wholly different, and of the fact that if it were the same there would be no need of agitating for it. But to deal thus with great questions of government is to plunge into the confusion of Bedlam.

"*SOCIAL JUSTICE.*"

Phrases show which way the wind blows, and the growing frequency with which writers and speakers use the expression "social justice" puts us on the track of a good deal of current political thinking. It is a form of words into which it seems to be increasingly easy to drop. Mr. Roosevelt, for example, wrote to his Boston supporters the other day, that their movement was one in behalf of "the cause of social justice." Behind this phrase it is not necessary to deny that there exist fine sentiments. Many use it to whom it means earnest and worthy striving. But it cries aloud for definition. Undefined, it may mean anything you please. We can readily imagine what would be said of a political leader who announced that he stood for the confiscation of property and the exploitation and intensifying of class hatred, yet it might be found that he intended the precise thing which others describe as social justice. Vices of reasoning lurk in all such generalities.

It was a saying of Huxley's that we cannot think rightly in politics until we clear the mind of delusions, and no delusion is cruder or more harmful than the assumption that vast and intricate public questions, bulging with important details and big with weighty consequences, can be disposed of by a neat classification or a general profession of good intentions. In each case the real task of the statesman is to buckle down to the concrete realities. In the tremendous economic, social, and political problem just now forced upon the English Government, for example, of what avail is it to either side to the controversy to say that a solution must be found squaring with "social justice"? That does not get us forward an inch.

One hearing the words "social justice" come trippingly from the tongue of so many orators who use them as if

they were the solvent of all our ills, cannot help wishing that some of these glib gentlemen could be put through such a dialogue as Socrates applied to the confident Athenian in "The Republic." This reasoner, too, thought it sufficient to say that he stood for justice. It had never occurred to him to go behind that smooth-sounding word and ask what were its actual implications in definite instances. But Socrates continually pressed the question upon him, "What is justice?" and deftly led him from admission to admission until it appeared that the just man could not be told from the thief. Such an exercise of the wits would do a world of good to those in our own day who are so glibly assuring us that all we need is a generous application of social justice—twice a day, after meals, one is tempted to add, so much like a quack medicine is the remedy made to appear.

As prescribed, it is made to cover a wide range of questions now agitated. The shibboleth is a great favorite with the Western Progressives. You will hear them speak of one political novelty after another, announce one aim of theirs after another, and then sum the whole up as being merely social justice. It may be that or it may not be. What to one man appears just will in another rankle as the extreme of injustice. Each man must be heard, and every case debated on its merits. The obfuscation of question-begging phrases must be avoided as well as the unfairness of question-begging epithets. The whole matter of child labor, for instance, with the due safeguarding of the health and lives of women workers, has to be threshed out specifically, with facts and arguments clearly brought out and carefully sifted, with sound public policy determined in that way, and not by a magnificent gesture pointing to the words social justice as if that were the conclusion of the whole matter.

We are obviously in for a period of ardent discussion of many social and industrial questions of which we have thus far but touched the fringe. This debate cannot be avoided, but what we ought to insist upon endeavoring to avoid is the darkening of counsel by words without wisdom. People cannot be stopped from inquiring into old customs, challenging established institutions, proposing innovations; but they can be and should be met at the threshold with the demand that they make their grievances plain and their remedies specific. For it is not a mere matter of talk. The thing looks to action, first of all to legislation. But you cannot set up social justice by act of Congress. You can only make a definite law. And each statute has to be precise and detailed. In French parliamentary practice there is the first stage of accepting the "principle" of a measure, which is easy, and then tackling the work of the "drafting" (*rédaction*). It is on this last rock that most novel legislation is wrecked. It is found impossible to reduce the swelling words of a grandiloquent utterance to the limited language of a statute. And it should not be forgotten in this country that it can never become a question of voting a law to do social justice, but only of doing particular justice, or injustice, to Bill Jones and Sarah Ferguson.

CONQUEST OF THE SOUTH POLE.

To Capt. Amundsen at last belong the South Polar honors. In this case the misunderstanding which first attributed the discovery to Capt. Scott was plainly an accident. Amundsen is no tyro of doubtful reputation, financed by equally dubious backers, but a navigator and scientist of high standing, the discoverer of the Northern magnetic pole. His extraordinary Arctic drift through the long-sought Northwest Passage must always remain one of the most remarkable achievements of North Polar exploration. His is the race that has furnished not only some of the hardiest, but also the most modest, of explorers, of the type of Nansen. Hence, while the disappointment in England over the false hopes aroused by a premature announcement must be great, there will be most generous recognition of Amundsen as a true Viking, daring and successful in penetrating into the unknown. It is still not impossible that Capt. Scott, too, may have reached the goal of his ambition.

In the current *Scribner's Magazine*, Nansen points out that Capt. Amundsen had one great advantage over his English rival in that he established his winter quarters on the ice-barrier itself, which placed him sixty geographical miles nearer to the Pole—a saving of 120 miles going and coming. In addition, he took with him more than one hundred exceptionally trained Eskimo dogs, in charge of two men of rare experience in dog-driving. Capt. Scott, on the other hand, commanded probably the best equipped expedition of its kind that ever set sail for Arctic or Antarctic. Its roster of members is impressive indeed, and their numbers, together with their motor-sledges, ponies, and other unusual tools, and with the record of its captain, make it plain that if the Pole was not reached, scientific results of the greatest value will be achieved. And that, as Nansen points out, is far more important in the long run than merely being the first to the Pole. The real object has been to explore unknown regions; in that Capt. Amundsen has had a trifle the advantage over Capt. Scott, in that his route was through entirely unknown country, while the English expedition was to follow the trail of Sir Ernest Shackleton. This took the latter to within 111 miles of the goal, along a line of mountains, providing excellent landmarks. Apparently, those 120 miles and the use of the old-fashioned Arctic methods told tremendously in Amundsen's favor. As Lieut. Shackleton discovered, a motor-car is useful on the ice, but not on the soft snow of the mountains.

It is this aspect of South Polar exploration which so radically differentiates it from that of the Arctic. Peary's problem was to go straight out over the frozen sea; his chief danger was the opening up of the ice in great "leads" which would head off his advance, or his return after he reached his destination. Shackleton's chief difficulty was the combination of frightful severity of temperature with the necessity of climbing mountains and travelling over a broken mountain plateau more than 7,000 feet in height. This is clearly enough illustrated by a single day's entry in his journal:

> Altitude to-night is 7,400 feet above sea-level. This has been one of our hardest days, but worth it, for we are just on the plateau at last. Started at 7:30, relaying the sledges, and did 6 miles 600 yards, which means nearly 19 miles for the day of actual travelling. All the morning worked up loose, slippery ice, hauling the sledges up one at a time by means of the Alpine rope. Camped for lunch at 12:45 on the crest of a rise close to the fissure, and in the midst of crevasses, into one of which I managed to fall, also Adams. . . . All afternoon relayed up a long snow-slope, and were hungry and tired when we reached the camp.

When he turned back Lieut. Shackleton could see no signs of land. He could only "assume that the geographical South Pole was situated on this immense plateau, between 10,000 and 11,000 feet above sea-level, and certainly the coldest and one of the most stormy parts of the world."

If, with Amundsen's achievement, the search for the Pole now ends, there is no likelihood that this will cause any cessation of further study of the Antarctic. On the contrary, it should stimulate it. There is much practical knowledge to be obtained for the scientific world. Already the meteorologists see the profit that will come to them from a study of climatic conditions and the flow of ocean currents, and Shackleton's report of coal beds has merely whetted the appetite of the geologists for the further discoveries Capt. Scott's scientific staff is certain to report. The German, Japanese, and Australian expeditions now in the Antarctic should together add enormously to the world's knowledge of the zone they are subdividing among themselves.

While granting that the new methods of equipping polar expeditions account for much of their greater success of late years, Nansen points out that, after all, it largely comes back to the leader. Peary's iron will, his resolute refusal to be balked by any number of disappointments, his determined shoving aside of any obstacle in his path, his regarding the Eskimo as mere tools created for his own particular purposes, are now thoroughly understood. Amundsen has proved again a leader of men, wise and far-sighted, and as quietly determined as when he found the Northwest Passage. He himself, it is clear, does not think that the finding of the South Pole destroys all the mystery of the unknown. He is even now planning a five years' drift from northwest of Alaska across the North Polar Basin to a point between Greenland and Spitzbergen. But the fact is undeniable that his achievement will, in the popular mind, signify that the ends of the earth have been reached, thereby terminating a great epoch in man's knowledge of the globe he inhabits.

SWITZERLAND'S RAILWAY SUCCESS.

The *Quarterly Journal of Economics* contains an article on the "First Decade of the Swiss Federal Railways" which gives a highly favorable, and apparently careful and judicial, account of the workings of the Swiss railway system under Government ownership. The writer, Dr. A. N. Holcombe of Harvard University, sets out with the disputed question of the fiscal success of the Government administration. The writers of two recent books on European railway problems, of whom Dr. Holcombe says that "both are trained investigators, and both are conscious of their responsibility to the public for the reliability of their facts and the reasonableness of their conclusions," are quoted as having arrived at opposite conclusions on this question. The Harvard writer agrees with the favorable judgment on this financial question, his final statement being that the Swiss Federal Railways have "reduced rates, improved the service, raised wages, and made a profit." It is pretty safe, therefore, to conclude that, on any fair view of the matter, the Federal management will be pronounced either to have made a profit or at least to have come very near making the two ends meet; and even if, in point of fact, there is a deficit, its existence, if of very small magnitude, cannot be regarded as of serious significance.

It is not, therefore, to this aspect of the subject that the chief interest of a survey of the history of the Swiss Federal Railways attaches. As depicted in this article—and its author states that, except in regard to the financial question already mentioned, there has been no dispute about the facts—the story of the Swiss Government's administration of the railways presents a most pleasing picture. Such has been its ability and energy, and such have been the advantages of a unified management, that there has been a marked improvement in the condition of the employees, while at the same time there has been a material reduction of rates. Nor has there been a particle of friction between the wage-earners and the management. "The workers have never struck, nor even threatened to strike. The Government, on the other hand, has always maintained its authority, and, while treating its employees with liberality, has never given them more than could be publicly shown to be their due." And as to the question of rates, after describing the careful and elaborate official mechanism by which they are determined, the writer says: "Neither fiscal exploitation on the part of the Federal Government, nor personal or local discrimination in favor of privileged interests, can well occur under such a system of management." In short, so far as we can make out, the whole operation of the Swiss railway system appears to have been a close approach to the ideal.

And we believe that it actually has been so. We subscribe to no such dogma as the "impossibility" or "absurdity" of Government ownership or management of public utilities. It is all a question of expediency—a question, to be sure, turning often on extremely broad and deep considerations, and not merely on the immediate facts of a given case, but still a question of expediency. It is fair to acknowledge, and to take for what it is worth, such an experience as that of Switzerland, especially as Switzerland is a democratic republic. But before we jump to conclusions regarding our own country, we must look certain large and vital facts in the face. Of these, the most obvious relates to the mere geography and history of the country. The United States is a vast new country, whose area—we speak of the contiguous territory, not counting Alaska or the insular possessions—is 3,000,000 square miles; Switzerland is an ancient and fully settled country, with an area of 16,000 square miles. Texas alone could swallow up sixteen Switzerlands, and the population of Texas is but barely more than that of Switzerland. It would take nine Switzerlands to make a Montana, but the people of Montana are only one-tenth as many as those of Switzerland. Evidently, the problem of reconciling the demands of the present, and of weighing the needs of the future, for this vast Continental area, filled with a restless, energetic, and rapidly growing population, and big with mighty changes almost from year to year, is not to be compared with that presented by the transportation problems of the compact and ancient little mountain republic of Europe.

Hardly less important than this, if less important at all, is the consideration of the nature, the temper, and the

traditions of the people. Now anything more unlike the American temperament than that of the Swiss people it would be difficult to find. And it is hard to say whether this difference is more pronounced if we consider as American that which was the recognized American type of the earlier generations of our republic, or that wonderful cosmopolitan mixture which now plays so large a part in the development of our social and economic problems. Take it as you will, and you have here a tense, nervous, high-strung people, keenly ambitious and eager for quick "results," as against a nation which, whether in the country or the city, is essentially a nation of sturdy yeomen. It is needless to expatiate on this idea; anybody can supply a score of particulars to reinforce the contrast. Rather let us take, as a slight illustration, the plain tale told by the writer of the *Quarterly Journal* article, narrating the history of the addition made to the standard wage scale on account of the rise in the cost of living:

> The highest rates of wages in effect upon the private railways (which were the basis of the governmental rates) had been established in 1896 and the rise in the cost of living since then amounted to over 27 per cent. The men began to complain respectfully, but during 1906 with increasing vigor. The Government, when confronted by the men with family budgets and other pertinent evidence of the fall in real wages, recognized the justice of their claims, but wished to postpone the revision of their wages until a general act could be prepared that would apply to all Federal employees. . . . The Federal Council ultimately recommended that each married employee and each unmarried employee with persons dependent upon him for support, earning less than 4,000 francs a year, should receive a supplement to his annual earnings of 100 francs [$20]; and that all other employees earning less than 4,000 francs should receive 50 francs [$10]. The Federal Council took pains in its message to the Assembly to remark on the courteous tone of the employees' petitions and the reasonableness of their request.

Can any one imagine such a story told of a like situation in the United States? And is it not equally impossible—going back to the other phase of the matter—to imagine any mechanism of official management which would eliminate here, as seems to have been done in Switzerland, the pressure of personal and local interests, in the face of the overwhelming importance of transportation questions in this country?

GOOD TASTE.

A German specialist has written a book which may be made the basis of a very interesting parlor game. The book is called "Good Taste and Bad in the Applied Arts" (*Guter und Schlechter Geschmack im Kunstgewerbe*), and the author is Professor Pazaurek of Stuttgart, director of the Royal Industrial Museum in that town. The book has just come to us from Germany, and presumably there is no English translation as yet. But even if there were, such a translation would not be adapted for our purposes. The parlor game we have in mind would consist in going through the two hundred and eighty pictures imbedded in the alien German text and guessing whether they illustrate examples of good taste or of bad taste. Unlike American magazine editors who usually have a little introductory note at the head of every article, telling whether the article is a very good one or not, our author has maliciously refrained from labelling his pictures. Somewhere in the text of the volume, the writer's opinion will be found tucked away. That is why we recommend that the game be played with the original German, so that no Anglo-Saxon eye, however quick, may run down the answer. The fun to be got out of the game is of a rare kind. After one has puzzled over the picture of a sixteenth-century interior and decided that it is ugly, it is stimulating to hunt through the text and find that the room presents a ravishing example of the Renaissance decorative style in its best estate.

But the book can be put to serious uses as well. Only in that case the process must be reversed. The student should first devote himself to the text, which, we may remark in passing, he will find very agreeable reading. Having mastered the author's principles, he may begin to pass judgment on the pictures. These principles are simple, few, familiar, and easily assimilated. The reader will be surprised to find that in deciding between what is good taste and bad taste, he is not consciously applying a standard, but pronouncing judgment almost as intuitively as the child who says he likes this and doesn't like that. At the risk of spoiling the ingenious game, which we are proud of having devised, we will say at once that the great majority of illustrations in the book are specimens of bad taste. At regular intervals in the parade of ugliness, which is all the more ugly because it is so insinuating, the writer has cleverly inserted the picture of some beautiful object to serve as a guide-post in the wilds. And, once the student has read the text, he will realize with a thrill of pride and satisfaction how impossible it has become for him to meet with an ugly object in art and mistake it for anything else.

And yet those few, simple, familiar principles which our German writer expounds are so dreadfully familiar, in all theoretical discussion on the arts, that it seems almost an insult to the ordinary intelligence to enumerate them here. The Stuttgart professor deals with such elementary conditions of the beautiful as sincerity, simplicity, genuineness, appropriateness, utility, proportion, restraint; and the greatest of these is restraint. With characteristic German thoroughness, he has catalogued and subdivided. He speaks of good material put to bad uses, and bad material put to good uses. His illustrated chamber of horrors shows heraldic wall decorations made out of human bones, leather card-cases stitched with human hair, royal thrones made out of narwhal tusks, New Year's cards on egg-shells, silhouettes of Napoleon on oak-leaves, and portraits made out of cancelled postage-stamps. He takes account of tables on which it is difficult to dine, chairs on which it is impossible to sit down, and silver spoons so elaborately chased that it is impossible to keep them clean. He takes account of the exaggerations of the *art nouveau*, as of the rococo. In other words, he enunciates principles which are the commonplace of æsthetic chatter at every five-o'clock tea table in the land.

But it is open to doubt whether in practice we are as faithful to-day to the principles of good taste as we are conscious of them in theory. Our pride in having escaped from the Victorian ugliness in architecture, in furniture, and in decoration is undoubtedly justified. In search for the beautiful we have gone back to the antique, the Middle Ages, and the eighteenth century in England. The things with which our great middle classes surround themselves are in line, in proportion, in color, more beautiful than they were forty years ago. But when it comes to the

moro abstract elements of sincerity and appropriateness, we have less cause for self-congratulation. Victorian houses were gloomy and Victorian furniture was uncomfortable. But there is exaggeration in the intensity with which we have gone in for comfort. Contemners of the Victorian taste are in the habit of saying that the houses and the furniture of the period were as narrow and drab as the life of the time. But what a dangerous admission to make, that the surroundings and the thoughts of people of that time were harmonious!

Are our own lives in harmony with our surroundings? We have built houses in imitation of old English manor houses and furnished them in imitation of the eighteenth century. Or we have surrounded ourselves with the simple lines and cool colors that Munich has borrowed from the ancient world and from the Orient. But what business have our restless twentieth-century lives in this austere setting? Presumably, it is the æsthetic sense that draws the present generation to long, dim rooms, with low-beamed ceilings and large red fireplaces. But what of the higher æstheticism which arises when the soul is in agreement with its environment? As examples of formal beauty, these modernized Tudor houses that are filling up the suburbs will do very well. But to create the spiritual atmosphere that goes with such a house requires an effort.

THE WESTERN ECONOMIC SOCIETY.

CHICAGO, March 4.

The third conference of the Society, in Chicago, March 1 and 2, was devoted to a discussion of the regulation of industrial combinations. Speakers from various sections of the country, representing various professions, and with various points of view, gave their attention to this many-sided problem. The result was a series of addresses marked by unusual good-sense and revealing, despite all their diversity of detail, an interesting unanimity of judgment on several of the important issues involved.

The Sherman act occupied of necessity a central place in the discussion. Nearly every one who spoke, so far as appeared, agreed with Prof. Ernst Freund of the University of Chicago in his contention that as a criminal statute, creating the crime of monopoly which it yet left undefined, the law was defective, if not vicious. Such proceedings under the act as have been successful, Professor Freund pointed out, owe their success to the flexibility of equity procedure, which in the recent phases of the Standard Oil and American Tobacco cases has been stretched to give actually constructive results. For the sake of legislative stability and continuity several speakers preferred not to abandon the Sherman law. Thus Assistant Attorney-General W. T. Denison proposed to retain it, with the Interstate Commerce law, as the nucleus of future statutory regulations; and Robert L. Raymond of Boston, who submitted a thoughtful and systematic draft of proposed legislation, supplemented a series of interesting stipulations by an express declaration of their relation to the existing law. The sentiment of the conference, nevertheless, clearly favored regulation rather than abolition of the Trusts.

Of the specific measures of legislation advocated two were conspicuous for the number of their adherents: provision for the Federal incorporation of companies engaged in interstate business and the creation of a Federal interstate trade commission. The first of these proposals had a special spokesman in Edgar A. Bancroft, counsel for the International Harvester Company. The second was particularly urged by C. C. Batchelder of the Boston Lumber Company and by the Hon. William Dudley Foulke. Both were included in the programmes put forward by Mr. Denison and Mr. Raymond. The warmer supporters of the commission plan desired the granting of powers corresponding to those now exercised by the Interstate Commerce Commission; but others showed themselves more conservative, and notably evinced unwillingness to concede to any governmental board thus constituted the authority to fix prices of commodities.

Linked closely with the project of such a trade commission is the question of the judicial review of administrative decisions in Trust control. On this topic Prof. H. S. Smalley of the University of Michigan read one of the most spirited papers of the meeting. Judicial problems and administrative problems he held to be essentially distinct. To pass upon points of business administration the judiciary is unqualified by special training and disqualified by the mental attitude which strictly judicial cases require. Consequently, if only to preserve unendangered the popular respect for our courts, they should not be permitted to decide issues outside their proper field. Milo R. Maltbie of the New York Public Service Commission spoke less insistently, but out of experience of judicial review, on the same theme. George W. Simmons of the Simmons Hardware Company, St. Louis, protested in general against the domination of business by lawyers and the technicalities of law, and urged the appropriateness of giving executive offices in government to men concerned more with the business of administration than with legal forms.

The practicability of the legislation proposed was taken up from two sides. Prof. J. P. Hall, dean of the University of Chicago Law School, surveyed the constitutional aspects of the situation, and found a variety of grounds upon which Congress might proceed in enacting further regulatory laws. Political obstacles to reform were analyzed in a paper submitted by Prof. H. Parker Willis of George Washington University, who attributes the palpable lack of progress towards adequate dealing with the Trusts to three chief causes. In part it has been due to the inconsequent character of administrative policy at Washington in the period since the Sherman law was enacted. Partly it results from the pressure exerted by organized manufacturers outside the great Trusts, who desire no tinkering with a statute which gives more power of control over both the Trusts and the organizations of labor than they might hope again to procure. In this connection interest attached to the remarks made at the same session by James A. Emery, counsel for the American Manufacturing Association, who emphasized the importance of enforcing the present law when it is violated by combinations of workmen. The third cause assigned by Professor Willis is the inability of Congress to appreciate the multiplicity of separate factors which underlie the Trust peril. Could attacks be directed at tariff abuses, the abuses of our patent laws, and the illicit influence wielded by campaign contributions, the core of evil remaining in the Trusts would be found surprisingly reduced. Reform, therefore, is to be sought not in generalities—not even through a commission with general powers—but in detailed assaults upon Trust-fostering conditions in detail.

From the more strictly economic point of view, much the same diagnosis had been made in the first address of the conference by Prof. C. W. Wright of the University of Chicago. The benefit or harm of great industrial combinations is not, he maintains, to be estimated by undiscriminating attempts to appraise the total result. Of the motives to Trust formation some imply social advantage, some social detriment; and it is clumsy procedure to annihilate good and bad together, if instead the menacing elements might be traced to their roots and eradicated, leaving whatever makes for real efficiency. The question of the efficiency of Trusts was taken up by other speakers, of whom Prof. J. W. Jenks of Cornell University and G. H. Montague of New York inclined to emphasize the industrial advantages of large or monopolistic combinations. Prof. Edwin S. Meade of the University of Pennsylvania was more skeptical. In his estimation (which

provoked much debate) prices of Trust made articles have been steadied, and perhaps in some degree lowered, as compared with the prices of commodities in strictly competitive industries; but clear evidence of cheapened production is not forthcoming. Between competition in general and combination in general, the economists are thus not yet prepared to decide; indeed, a sweeping conclusion is hardly to be expected, and legislators may well follow Mr. Denison's advice and leave that question to the economic experience of the future. But on points of greater significance for practical purposes of remedial action the economists do seem to make gratifying progress towards a consensus of expert opinion. Almost any one who attended the sessions here under review must have carried away this impression.

JAMES A. FIELD.

NEW LIGHT ON THE EARLIEST CHRONOLOGY OF BABYLONIA.

PHILADELPHIA, March 9.

An important historical discovery has been made by Prof. Vincent Scheil of Paris, the eminent Assyriologist, who was the first to publish and interpret the famous Code of Hammurabi, or rather Hammurapi, as the name is now deciphered. A paper read by Professor Scheil before the French Academy has just been published, giving an account of a cuneiform tablet which appears at present to be in private possession.

Hitherto the first *definite* date for Babylonian history was marked by the rulers of the dynasty of Ur, beginning with Ur-Engur *c.* 2300 B. C. The history of the Euphrates Valley could, of course, be carried back for many centuries before that period, but considerable divergence of opinion existed among scholars as to the age to be assigned to some of these earlier rulers, while in many cases their very order was uncertain. This earliest history of the Euphrates Valley is marked by a struggle between the two classes of inhabitants, the non-Semitic population known as Sumerians, whose greatest strength was developed in the southern part of the valley, and the Semites, who were known as Akkadians and who appear to have been pushed to the north through the steady advance of the Sumerians at a very early period.

The new tablet found by Professor Scheil enables us to establish definitely the order and the names of the rulers of five dynasties, earlier than that of Ur. The cities that form the political centres are Opis, Kish, Uruk, Agade, then Uruk once more, after which a people from the extreme north known as the Guti conquer the Euphrates Valley. Of these cities, Opis, Kish, and Agade are in Akkad (*i. e.*, in the northern part of the Euphrates Valley); and Uruk in Sumer (*i. e.*, to the south), but since the rulers of Opis and Kish are Sumerians, it follows that the Sumerians had extended their sway into Akkad. The dynasty of Agade (which gave the name to Akkad for the northern portion of the Euphrates Valley) is, however, Semitic. The first member of this dynasty was well known to scholars before the discovery of the Scheil tablet. He became famous in Babylonian-Assyrian history as Sargon. A great conqueror, he not only ruled over Sumer and Akkad, but extended his conquests to the east, obtaining control of the land known as Elam, as well as to the north (afterwards known as Assyria), and to the west, which is embraced under the general designation of Amurru, the land of the Amorites.

The earliest dynasty of all, according to the newly discovered document, is that which had its centre at Opis—probably to be identified with Seleucia, not far from the modern Bagdad. The tablet furnishes the name of six kings, all of them representing entirely new names and reigning 30, 12, 6, 20 or 24, and 7 years, respectively. The summary reads:

> Six kings who reigned 99 years,
> when the dynasty of Opis was
> overthrown and the sovereignty passed over
> to Kish.

The dynasty of Kish, after furnishing eight rulers, was overthrown by Uruk, which, after twenty-five years of the reign of a single ruler Lugalzaggisi, was in turn replaced by Agade under the leadership of the famous Sargon. The number of years that Sargon ruled is unfortunately broken off, and of the twelve rulers of this Agade dynasty covering a period of 197 years, the names of only the last six have been preserved.

In confirmation of what through other sources we know of Sargon's humble origin, it is expressly stated in the new tablet that he rose from the rank of gardener to that of King of Agade. We know that Sargon was succeeded by his son Naram-Sin, who was quite as energetic and successful a conqueror as his father, and we also know of another ruler of Agade, Bingani-sharru, who was probably Naram-Sin's son, so that only three names of the entire twelve are missing. The Agade dynasty, we are told, was replaced by Uruk, which thus once more comes to the front, but again for a short time only. The times appear to have been troublous ones, for five rulers are entered with a total reign of only twenty-six years. Of these only the first Ur-Nigin is succeeded by his son. The remaining three are evidently usurpers who succeeded in turn in holding the reins for a while amid constant internal turmoils.

It is at this time that the northern invaders, the Guti, enter the valley, and as the scribe tells us,

> The dynasty of Uruk was overthrown by
> Guti which gained control.

Here the scribe ends his enumeration, merely adding the date "30th day of Siwan (*i. e.*, 3rd month), though he does not give us the further indication which would enable us to specify the year of the reigning king. The characters point to the Hammurapi period, *i. e.*, about 2000 B. C., though the tablet may itself be a copy of an earlier original.

Thanks to this remarkable tablet, we now have a successive enumeration of the following dynasties: Opis, 99 years; Kish, 126 (?) years; Uruk, 25 years; Agade, 197 years; Uruk, 26 years. This brings us to the invasion of the Guti. Counting an interruption of fifty years for this foreign invasion, we then reach the dynasty of Ur. After 117 years this dynasty is overthrown, but for about 100 years more the Sumerian control, now centring in a city named Isin, still continues. About 2100 B. C. the Semitic dynasty of Babylon comes to the front and the sixth member of this dynasty is the famous Hammurapi who marks the permanent supremacy of the Semite and with whom the Babylonian empire in the full sense may be said to begin.

The reigns of Sargon and Hammurapi represent turning points in Euphratean history, and it is a great gain to have determined, through the new tablet, that the interval between the two is not much more than 400 years, so that 2500 B. C. represents in all probability the oldest possible date at which Sargon can be placed.

Whether Opis was the first of all dynasties in Sumer and Akkad cannot, of course, be decided. Probably not, but it is quite within the range of probability that the dynasty of Opis is the first centre to claim sovereignty over *both* Sumer and Akkad and that for this reason the ancient scribe, whose record a fortunate chance has preserved for us, began with the rulers of this Opis dynasty. The first of these rulers, Unzi by name, who ruled thirty years, may therefore be registered as the first sovereign in control of the entire Euphrates Valley.

Lastly, a point of unusual interest that is brought out by Professor Scheil's tablet is the discovery of the oldest female ruler in the world. The name that heads the list of the Kish dynasty is that of a woman, Azag-Bau (or perhaps to be read Ku-Bau), whose hold on the throne was so strong that she was able to hand the succession to her son Basha-Enzu, who after twenty-five years, in turn was succeeded by his son Ur-Zamama. The short reign of the latter—only six years—followed by Zimudar, who is not a son, points to inter-

nal disturbances and to the rise of a usurper. MORRIS JASTROW, JR.

NEWS FOR BIBLIOPHILES.

The library of William W. Allis of Milwaukee, which is to be sold by the Anderson Auction Company in four sessions, afternoons and evenings of March 25 and 26, is, with the exception of the Hoe library, the most important collection of rare books offered at auction this season. Among the older English books are Shakespeare's "Poems" (1640), with portrait by Marshall, the second folio (1632), the third folio (1664), and the fourth folio (1685); Spenser's "Faerie Queene," first edition (1590-1596), in two volumes old calf, the fifth edition of the "Shepheard's Calendar" (1597) being bound in; Milton's "Poems," first edition (1645), with portrait by Marshall; "Paradise Lost" (1667), the issue generally reckoned the second, with Milton's name in small letters, and "Paradise Regained," first edition (1671); a series of editions of Walton's "Compleat Angler," among them the first (1653), the fourth (1668), and the fifth (1676); the first edition of Burton's "Anatomy of Melancholy" (1621); the first edition of "Don Quixote" in English, translated by Thomas Shelton (1612-1620); Montaigne's "Essaies" (1603), the first edition in English, translated by John Florio; Herrick's "Hesperides" (1648); Coryat's "Crudities" (1611); Ben Jonson's "Works" (1616-1640); and the first collected edition of Beaumont and Fletcher's "Pl ys" (1647).

Among books by English authors of the eighteenth century we may note the Kilmarnock Burns (1786), in contemporary half-binding, and an uncut copy of the first Edinburgh edition (1787), with interesting A.L.S. of Burns inserted; Goldsmith's "Vicar of Wakefield" (1766), "The Traveller" (1765), "Memoirs of a Protestant" (1758), "Retaliation" (1774), with the half-title, and others; the first edition of "Gulliver's Travels" (1726); Pope's "Windsor Forest" (1713); Sheridan's "Love Epistles of Aristenætus" (1771), his first published work, and "The Rivals" (1775): and a set in binding of the Works of Smollet.

But the books of the great nineteenth century English authors will attract a larger number of collectors, especially as so many of them are presentation copies. The series of first editions of Dickens includes no less than eight volumes, with presentation inscriptions in Dickens's autograph, among them "American Notes," given by the author to Thomas Carlyle; "Nicholas Nickleby," given to Mrs. George Cattermole; "The Chimes," given to Charles Dickens, jr., and "Sketches by Boz," first series, "Barnaby Rudge," "A Christmas Carol," "The Haunted Man," and "Bleak House," given to others with names less well known.

The first editions of Thackeray include "The Paris Sketch Book" (1840), "The Book of Snobs" (1848), and the very rare "Second Funeral of Napoleon" (1841), in its original gray paper cover.

Charles Lamb's books are favorites with many collectors. The Allis library includes first editions of "Blank Verse" (1798), "John Woodvil" (1802), uncut, "Tales from Shakespeare (1807), "Adventures of Ulysses" (1808), uncut, and "Elia" (1823-1833), —the first series of the "Elia" being a presentation copy to Mrs. William Ayrton, with inscription by Lamb: "Mrs. Ayrton, with C. Lamb's kind regards. N. B. Don't show this to Mr. A. Men are so jealous. At all events, it is well to be prudent." There is also William Ayrton's copy of Lamb's "Works" (1818), accompanied by a manuscript poem (thirty-eight lines) in Lamb's autograph, and two A. L. S. of his; also, an impression of Brooke Pulham's full-length etching of Lamb, with autograph inscription.

Among notable items of Americana are: Linschoten's "Voyages," first edition in English (1598); Peter Martyr's "De Novo Orbe, or Historie of the West Indies" (1612), first complete edition in English; Champlain's "Voyages" (1619); Harcourt's "Voyage to Guiana" (1626), in the original vellum covers; Nathaniel Morton's "New Englands Memoriall" (Cambridge, Mass., 1669), the first historical work to issue from the Massachusetts press; Hennepin's "New Discovery of a Vast Country" (1699); Burk's "History of Virginia," with the continuation by Jones and Girardin (1804-1816), four volumes, the first three uncut, the Menzies copy; Sanders's "Indian Wars" (1812), and Hayward's "Tennessee," both volumes (1823).

A long series of the issues of the Kelmscott Press, and bindings by Roger Payne, Cobden Sanderson, and Miss Prideaux, are other features of the library.

Correspondence

INTERNATIONALISM.

TO THE EDITOR OF THE NATION:

SIR: It is a splendid dream—or rather prophetic vision, for there is nothing in the least impracticable about it—that is held out to us by the proposed work of the Foundation for the Promotion of Internationalism. (See the account of it by Professor Winslow in *Science* for February 23, 1912.) This foundation has for its immediate purpose the furthering of those movements for intellectual and social progress which are international in their scope; incidentally, it will surely play a great rôle in promoting the growth of the spirit of world peace. The model upon which it may proceed has already been set for it by that epoch-making organization which has been in existence since 1901, the International Association of Academies. This association embraces the academies of the leading scientific nations of the world, and it occupies, naturally, an authoritative position in science and in letters. It has already undertaken a series of practical tasks of the first magnitude, tasks which only a world organization could successfully undertake. Among them may be mentioned the publication of a complete edition of the works of Leibnitz, an encyclopædia of Islam, a critical edition of the Mahābhārata, an annual publication of physical and chemical constants, the measurement of an arc of the thirtieth meridian, the organization of a central committee for the study of the brain, and the development of the work of the Institut Marey and the laboratories on Mont Rose.

The Foundation for the Promotion of Internationalism has already been an active agent in the establishment of three international bureaus for the interests of special subjects, the last being that of the Institut International de Statistique. Its headquarters are at the Hague, and its director, Dr. Eijkman, is now in this country for the purpose of arousing interest in three other such bureaus which the time seems to be ripe for forming. The bureaus so far created are financed by the Government of the Netherlands. Among the distinguished men who are already interested in this movement are Arrhenius, Bertillon, Ehrlich, Metchnikoff, Ostwald, Waldeyer, and, in this country, Cattell, Osborn, Pickering, Remsen, Welch, and others.

The most difficult question which will come before this body—and it is one which it announces the intention of taking up at once—is the question of language. The international congresses which are constantly being held lose half their value on account of the fact that the papers read before them cannot be fully understood by half their members. This is what happened lately at Brussels, at the meeting of the congress on radioactivity: papers which were read first in French were immediately given over again in German, those which were read first in German were immediately repeated in French, and those which were given in English were repeated in either French or German, but not in both. In spite of this actual doubling of the time necessary to be given to the congress, it will be seen that always one-third of the audience was still sitting in darkness, as far as comprehending is concerned—for those who really know a foreign language well enough to understand the very difficult subject matter which is presented, still more to take part in the discussion that follows, form a negligible number. (Americans who have got their learning at a German university are the only exception to this rule.) And we have not yet taken account of the Italians, who are extremely productive in science, and who deserve to hear and to be heard, nor of the Russians, whose deserts are less, perhaps, because they ought never to have had such a barbarous language. The situation is a plain *reductio ad absurdum*.

There is an "international auxiliary language" in existence which has made a good deal of headway—Esperanto. But it is defective in the extreme. It is an impertinence to ask the French, the English, and the Italians to put terminations upon adjectives to make them agree in number and case with nouns, when they know (whatever the Germans may think) that such terminations are a wholly unnecessary, and a most inartistic complication. Again, the large number of Slavic roots (in sch, sz, etc.) in Esperanto are unpleasant in the extreme. But to use the letter j as a mark of the plural is a still worse feature—a printed page sprinkled over with terminal j's looks most unattractive, and in speech this termination is not sufficiently distinctive.

But Esperanto has met with a transformation; the language which has been adopted by the international delegation appointed at the time of the scientific meetings of the Paris Exposition is a very different thing. This language is called, at present, Ido—and the only objectionable thing about it is its name. Its elements of superiority over Esperanto are (1) the dropping of case-endings for adjectives, (2) the substitution of Anglo-Saxon and La-

tin roots for uncouth Slavic ones in many words, and (3) the use of *s* (already indigenous in English and French) instead of *j* as sign of the plural. With these and many other minor improvements, the language has become ideal. Whatever any one may think of the wisdom of pushing the introduction of this auxiliary language, no one can study it, and note the skill with which all difficulties have been overcome, without a feeling of the keenest intellectual pleasure. The number of accuracies, refinements, distinctions of meaning that it has been able to introduce by giving thought to the matter, makes it superior, in fact, to any of the accidentally-grown-up languages upon which it is based. For proof of this statement, consult the new philosophical dictionary, which is being brought out in the *Bulletin de la Société française de Philosophie*. The best efforts of the philologists, logicians, and literary artists of the International Association of Academies ought to be devoted to making it more perfect still.

But whether Ido or some one of its possible betters yet to be invented is destined to become the medium of inter-communication, it is evident that, for the rapid and enthusiastic spread of internationalism, something in the way of a common language is immediately indispensable.

CHRISTINE LADD FRANKLIN.

New York, March 6.

TEACHERS OF ENGLISH.

TO THE EDITOR OF THE NATION:

SIR: The animadversions on the English of English teachers which have from time to time appeared in your correspondence columns have made me so very dreadfully nervous that I cannot with assurance address an envelope, and am staggered at the solecistic possibilities of a letter to the *Nation*. None the less, I am moved to say a word in behalf of my erring brethren.

Of the particular charges brought against them there is, I fear, no adequate rehuttal. The pilloried sentences, for the most part, deserve their fate. The "period" of two hundred and fifty-six words quoted by your correspondent of May 4, 1911, is unquestionably bad. The "open letter . . . by the executive committee of the New York Association of Teachers of English," to which President Warren takes exception in the *Nation* of January 4, gives little promise of becoming a classic. We have all read sorry stuff from English pens, and written things of which we were not proud.

We admit that the public has a right, within reasonable limits, to expect us to practice what we preach. The bacterlologist who draws his water from a riotous well need hardly look for a respectful hearing from his more careful neighhor. The writer of feehle and faulty sentences will not he expected to teach the young idea to express itself with accuracy and force. But we are willing, unlike the proud Moor, to plead extenuating circumstances. We desire not merely that our critics shall set down naught in mallce; we would have them view our shortcomings with understanding and sympathy.

Some of us, lt may he admltted, have no right to teach contemporary Englisb at all. We became interested in the scientific aspects of Germanic philology, drifted into the English branch of it, wroto our dissertation on Old Saxon syntax, and then proceeded to instruct college freshmen in the graces of modern English speech. We would gladly mend our ways, but the unwieldy German sentence of the *Forschungen* and *Beiträge* seems to have got into our blood and we cannot get it out. Others of us, who once boasted a genulne *Sprachgefühl*, discover to our chagrin that the cherished "style," insubstantial adumbration of Burke and Newman, has been almost wholly dissipated by the white glare of endless reams of awkward and flabby Americanese. We have heen beaten down by the hrute force of numhers; we have gone unwillingly to school to our pupils; and we have come to feel a sad uncertainty as to our fitness for the morrow. And others, not of us, alas, who might have made for righteousness, find other jobs more pleasing. They are editors of magazines and papers, authors of novels and plays, writers of books, professors of Greek and psychology, perhaps even presidents of colleges. We may not hope that they will hlear their eyes and cripple their style at our ungrateful task.

The teaching of English, even of English composition, is a worthy work and should be worthily done. The average English teacher is doubtless the equal, in training and ability, of other average teachers; the best need yield to none in fulness of knowledge and distinction of style. Yet the point at issue cannot be settled by averages. If the teaching of English is an unusually difficult art, it demands an unusually gifted teacher, one who brings to adequate scholarship a generous knowledge of life and human nature, a true literary sense, and an effective literary style. Such a teacher must he sought for in an exceptional man under exceptional conditions. He may, perhaps, he difficult to find, hut he is far more difficult to keep. And if he is to be found and kept, his position must be made many times more attractive than is that of the overworked and underpaid creature* at whom the random paragrapher delights to have his fling.

R. D. MILLER.

Columbia, Mo., March 5.

THE DEATH OF LYDGATE.

TO THE EDITOR OF THE NATION:

SIR: The evidence furnished hy John Metham in regard to the date of Lydgate's death is less conclusive than would appear from Dr. MacCracken's letter of February 29. Metham's romance, at the conclusion of which he refers to Lydgate as dead, was written, as Dr. MacCracken states, in 27 Henry VI (1 Sept., 1448 - 31 Aug., 1449). But the last recorded payment of Lydgate's pension was made, not at Easter, 1449, hut at Michaelmas, 1449 (Steele, "Secrees of Old Philosoffres," E. E. T. S., p. xxx). It is obvious, therefore, that Lydgate's death did not occur between Easter, 1449, and September 1, 1449. It must have occurred after September 29, 1449, and Metham must have written the concluding stanzas of his romance at a somewhat later date than that at which he wrote the work to which they form an epilogue. Since we have no record of the payment of Lydgate's pension at Easter, 1450, it might seem fair to infer that Lydgate died hetween Michaelmas, 1449, and Easter, 1450. Even here, however, we must proceed with caution, for, as an examination of the documents printed by Mr. Steele will show, the Pipe Rolls do not contain records of all the payments that were made on Lydgate's pension. No payments are recorded in the Pipe Rolls between Easter, 1444, and Michaelmas, 1447, inclusive. Yet we have other documentary evidence, independent of the Pipe Rolls, that at least one payment was made on the pension within this period, namely, at Michaelmas, 1446. We cannot, therefore, infer with certainty that Lydgate was not still alive at Easter, 1450. But since Metham's statement is the only thing we have in the way of direct evidence, we ought certainly to abandon the old conjectural date (for which there is no evidence of any weight at all) in favor of a date nearer Michaelmas, 1449.

SAMUEL MOORE.

Bryn Mawr, Pa., March 8.

*See the "Preliminary Report on English Composition Teaching," by a Committee of the English Section of the Central Division of the Modern Language Association, E. M. Hopkins, University of Kansas, Chairman.

Literature

THE NEW EROTIC ETHICS.

Love and Marriage. By Ellen Key. Translated by Arthur G. Chater. With a critical and biographical Introduction by Havelock Ellis. New York: G. P. Putnam's Sons. $1.50.

Love and Ethics. By Ellen Key. New York: B. W. Huebsch. 50 cents net.

The Morality of Women and Other Essays. By Ellen Key. Translated by Namah Bouton Bothwick. Chicago: The Ralph Fletcher Seymour Co.

The translation within a year of three works of this Swedish disciple of Nietzsche (of which the two later and slighter volumes hardly more than repeat what was said in the first) is an indication of the interest aroused by "the new erotic ethics," as it is styled by the author, and of the confusion it is likely to work just as soon as the illumined, whose imagination has been stimulated by the stories of elective affinities in the yellow and the yellowish press, the sex novel, and the more insidious moralizing novel, have discovered in it a congenial philosophy of life. Yet only stupidity could deny that the personality of the author is impressive and that she is entitled to respect. Under slightly dubious titles, her treatment of the subject is as spotlessly clean as it is relentlessly frank; her theories of marriage are at least evidence of a fine feeling for the sacredness of the sex-relation; and her work abounds in passages of almost

Nietzschean incisiveness tempered by a more than Nietzschean humanity.

With all this, the total result is vagueness and confusion. Though her views are described as "startling" (by one of the translators), it is a little difficult to say just what they are. The main theses are clear enough. Love is a unity of the sensuous and the spiritual; love without marriage is moral; marriage without love is immoral. Hence, the marriage relation must be adjusted to conform absolutely to the possibly changing demands of love. In a word, divorce must be absolutely free. The problem of providing for the children is to be solved beforehand by an unconditional state-subsidy to mothers (evidently the Malthusian law is a dead letter); and as for the moral effect upon the children, the author holds that a merely formal family unity is worse than none. In fact, her programme is set forth as the coördinate outcome of two motives, love and eugenics; and these are united finally by the "intuition" (why not "superstition?") that only the children of love will be sound and wholesome.

The text, then, is startling enough, and so far clear; but the explanations render its import for conduct highly uncertain and at first glance almost innocuous. Standing for the rights of the sensuous, she is disgusted by the merely sensuous. Preaching the "freedom of love," she is bitterly opposed to "free love"; rather does she urge a high temperance and self-restraint, for the sake, as she says, of love itself. Again, claiming freedom to change, she none the less deprecates change as at least unfortunate, and dwells rather forcibly upon the evil of ill-considered unions. Moreover, the traditional conception of the ideals and the social functions appropriate to the two sexes is most emphatically affirmed; the place of the woman, she holds, is not in the office or factory, but in the home with her children (though not necessarily with their father). The legal inequality of the sexes, which forms much of the burden of her criticism, she admits to be largely neutralized by enlightened opinion, even in Sweden, and to be rapidly disappearing. As for the right of women to a frank enjoyment of the sensuous side of the sex-relation—really, she must know that no sensible person now disputes that right, but only, as in the case of men, the right to make it a subject of common conversation. And when it comes to freedom of divorce, we in America may boast that, with us at least, the ideal is virtually realized. What, then, does she demand which society now fails to offer? One point, it seems, remains. Legal freedom to mate and unmate at will is not quite enough; what she still asks is social approval of such freedom and institutions which shall embody such approval. In other words, it is not enough that divorce be made easy; it must also be made honorable. Her quarrel is less with the law than with Mrs. Grundy.

This brings us to the heart of the matter, and, strange to say, to the point which Ellen Key's philosophy of love seems least to have considered. The unpleasantness attached to a suit for divorce is not, as she vainly supposes, a matter of "convention." Let divorce be as free as you please, it would still not be free from reproach—just because, by the very logic of the situation, the dissolution of the marriage-bond implies a certain levity of judgment and character on the part of one or both of the parties concerned and a certain dishonor to the ideals which, on the author's own showing, are implied in the relation of sex. Her individualism of love demands that love shall be free. Hence, she conceives it necessary to show that fidelity is a virtue much overrated. Shall we say, however, that fidelity to a personal relation has no part in the conception of personality? Let us note her illustration—unfortunately, it is one of her weakest passages:

> A poet or an artist, for example [Why always the poet or artist?], has a wife, as to whose insufficiency for him all are agreed—so long as he still has her. Suddenly he finds the space, that was empty and waste, filled by a new creation; the air becomes alive with songs and visions. He not only feels his slumbering powers awake, he knows that great love has called up in him powers that he had never suspected; he sees that now he will be able to accomplish what he could never have done before. He follows the life-will of his love, and he does right.

Such is the delirious individualism of Nietzsche as applied to love. True to the type, it surrounds its subject with so dense a cloud of egoism (not "rational egoism"), that it could not be conceived to work in a world of more than one person. The first attempt to make it intelligent compels us to inquire about the individuality of the wife. She is "insufficient," indeed, but presumably loyal, and possibly for a score of years. Now, it is a fundamental principle of Ellen Key's individualism of love that the giving of the body where the soul refuses to follow is a prostitution and a crime; and she is never weary of telling us that marriage is legalized "violation." But what of her who for years has given both body and soul and is now discarded as "insufficient"? And what of the noble masculine soul whose participation in this most self-committing of personal relations has left him spiritually free? Or, once more, what of those who, in the new order of things, are to request the congratulations of their friends upon the polite announcement that by mutual consent the partnership is dissolved? Surely, if we are to acquiesce in this, it is sentimental rubbish to talk about "violation," or to pretend that the bodily relation has any personal significance whatever. Yet if the union itself is spiritually significant, its dissolution must be no less so. A given case of divorce may then be excusable, it can never be quite irreproachable.

That the author fails to perceive this aspect of the problem is due perhaps to the fact that in her philosophy, judgment and character, reason and intelligence, have nothing to do with love. She tells us, indeed, that love is the unity of the spiritual and the sensuous; but, then, having endowed her love with spiritual qualities, she proceeds to render the spiritual wholly inoperative by placing all the forces which determine one to love or not to love far below the daylight in the depths of the "sub-conscious ego." Like all those who would reverse the order of civilization under the illusion of introducing a more advanced type, her appeal for authority is from the modern institutions of marriage to the customs of primitive men and the instincts of the lower animals—in general, from cultivated intelligence to sub-conscious "nature"; which, being interpreted, means the unconscious depths of our animality. On this ground she can argue quite rightly for the absurdity of faithfulness; for if love "bloweth where it listeth, and thou hearest the voice thereof, but knowest not whence it cometh, and whither it goeth," then surely a man could no more promise to be faithful than he could promise a married life of fifty years. But, then, why talk about the spiritual? If the spiritual does nothing, it is nothing. On the other hand, if love is indeed spiritual, it is capable, so far, of self-direction. And this is the meaning of our worn-out "conventions." What these conventions stand for is the ethical superiority of human intelligence. Where the sexual relations of the lower animals are determined for the most part by transient passions, those of men and women ought, at least, to rest upon a perception of personal fitness and worth, and ought, therefore, to be stable; and where the stability of animal marriage is at the mercy of mysterious "compatibilities," intelligent men and women ought to be able to adjust their compatibilities in sympathy and in freedom. No doubt this is more easily said than done, but to leave it out of the problem is to turn one's back upon what is most distinctively human.

Of the practical consequences of this philosophy of love we have said nothing. But it should be obvious to the author that the "free love" of which she has so sincere an abhorrence, the practice of mating and unmating according to chance inclination, will be

its inevitable consequence. At the close of "Love and Ethics" she protests with some indignation against the false accusation that she wishes to deprive society of all forms; those who have read "Love and Marriage" through to the end will see that she wishes only new and better forms. But, having read it through to the end, we have been unable to find any new forms except those relating to the care of children. So far as the marriage-bond is concerned, she will not even insist upon its publication. In matters of love all rights are to lie with the lovers; to other persons is denied even the right of criticism. Under these conditions it is inevitable that over the majority of people passing inclination will hold full sway. Strangely enough, the author admits this without reserve. She is even candid enough to tell us that the programme as a whole will be impossible for an indefinite number of generations; in other words, that what sounds like a call for immediate and radical change is really only an academic essay. But the sex-interest is never academic. "The great unrest," of which we hear so much, means that large numbers of persons are craving new forms of excitement and would be only too ready to welcome a justification of amorous adventure. It is vain for Ellen Key to warn them that love is a serious matter. In the vagueness of "love's freedom" they may claim their justification.

CURRENT FICTION.

Tante. By Anne Douglas Sedgwick. New York: The Century Co.

This is a study of the artistic temperament from the point of view of one who has neither worship nor contempt for it. "Tante" is Mercedes, Baroness von Marwitz, a world-famed pianist. We are introduced to her not in her stormy youth, but as one who has advanced well beyond the border of middle age. She is still beautiful in her full-blown way, and still has the world at the feet of her piano. For the rest, she is an almost totally selfish and irresponsible person, with a more than shady past. Her private path is strewn with the wrecks of happiness. She has driven one husband to desertion and another to suicide. With it all she preserves the air of a goddess, speaks with the tongue of a benevolent oracle, and idealizes herself with unfailing cheerfulness. But the fraud is patent: and this is the loose screw in the whole machine. For at the beginning of the story only one person in the world is supposed to see through her, and at the end only a few more. She is worshipped by her fellow-musicians, and greatly admired by many persons of high social rank. Her ward and adopted niece, Karen Woodruff, an intimate companion for years, takes her at her face value and more. It is in Karen's adoration of Tante that the mainspring of the story is found. She has grown up to be content with her post of satellite, or rather acolyte, and though by no means a feeble-spirited girl, lives only to the glory of her guardian and patron. Tante, for her part, is careful to keep Karen in her place, and when she is in the way dispatches her to a country house in far Cornwall, where her only companion is an old American woman, Mrs. Talcott.

Enter upon this group Gregory Jardine, London attorney, and gentleman-Briton of the conventional type—a man of university training, but of no wide cultivation; very well satisfied with his own little circle of dull and well-bred people. He knows nothing of art, and has a good-humored contempt for artists. Nevertheless he is destined, against all his prejudices, to marry Karen Woodruff, to whom art is a major fact of life, and to whom artists are the dominant race among men. Jardine and Tante fall out from the first, and after the marriage of her ward, which, for some not very clearly explained reason, she does not prevent, it is the sport of the great musician to do all she can to make the pair miserable—always under the guise of care for Karen. She succeeds in separating them, and things look in a bad way, when a new and unsuspected champion takes the field, and holds it thereafter to the end. "Mrs. Talcott" might well be the title of part ii of the narrative. Karen, brought to an abrupt choice between her husband and her guardian, leaves him and posts off to Tante (and Mrs. Talcott), in Cornwall. That divinity, it chances, is in retreat with a young literary man (married) for whom she has conceived an autumnal passion. He is already weary of her, and turns to Karen for amusement. A wild scene of jealousy ensues, during which Tante strips off every shred of the glamour with which Karen's fancy has invested her, and the girl finds herself flung into the world without either husband or guardian. Chance then throws her into a technically compromising situation, of which Tante makes the most; and if it were not for the grim and indomitable Mrs. Talcott, all hope of reconciliation between the Jardines would be at an end. But Mrs. Talcott is equal to the emergency, and everything comes out as pleasantly and plausibly as it can in the end. Mrs. Talcott is the remarkable figure of the group—a new and amazing and credible creation: without her the tale would not leave its impression. Tante represents, no doubt, a real type, but it is a type which has been made much of by recent novelists, and as a person this alleged great artist is a bit grotesque. We are given to understand that she is a remarkable talker, but the speech actually recorded in these pages never rises above bombastic twaddle. And was she really in the habit of expressing approbation of her niece with cries of "Bravo"?

The Wrong Woman. By Charles D. Stewart. Boston: Houghton Mifflin Co.

The author of "The Fugitive Blacksmith" offers here a story of the Texas sheep-country which has some touches of that ingenuous freshness which his first book seemed to give us the right to demand of him. They are incidental, however, mere touches: the freshest thing about the tale is the manner in which the central situation is treated. This would be, in the hands of an English or Continental novelist, a situation altogether harrowing, and probably fatal to the happiness of the chief actors. In brief, a young Ohio girl in pursuit of a teacher's desk sets out for a Texan county-seat, where her fate is to be determined by the gross method of examination. In the midst of a boundless prairie her horse throws her, and makes off. Tramping wearily, she comes upon the shack of a lonely shepherd—or, rather, upon the lonely shack of a shepherd. She is starving, and cannot resist the lure of his cook-stove and provender: and is presently surprised by the shepherd himself (who is, in fact, not a shepherd) in the act of preparing supper. She thereupon is induced, by a series of perfectly simple considerations, to occupy the shack for the night, while he, noble man, puts himself up in a buffalo wallow. A still simpler and equally blameless consideration leads her to repeat the experiment for a series of nights. A wanderer discovers that the quasi-shepherd is not alone in his solitude, and a little mild gossip passes about the nearest town. Chance, indeed, seems to identify the maiden with a certain lady of doubtful repute, well-known in those parts. But when the gentleman-shepherd presently announces her as his forthcoming bride, the gossip dies a sudden and painless death. Instead of working the "piquancy" of the situation well on towards the point of tragedy (which, from the popular point of view, is nothing more or less than piquancy on a large scale), Mr. Stewart actually treats it, and permits his minor characters to treat it, from a plain angle of common sense—surely a preposterous thing for an artist to do!

From the Car Behind. By Eleanor M. Ingram. Philadelphia: J. B. Lippincott Co.

There is nothing remarkable about this combination of young love with the hazards of the modern chariot race, as conducted on Long Island tracks, except the prevalence of pink in the early scenes. Pink was the ninety-five-room marble villa in which the Rose family

dwelt in a fragrant atmosphere of affectionate concord; pink were the racing togs, rose-colored the racing car in which eighteen-year-old Corwin B. dared derision as a rose-bud amateur among drivers, and attracted the friendly eye of the great Gerard, handsomest and most expert of professionals; and it was beside a pink marble fountain in a pink-columned arcade that the illustrious automobilist wooed the gentle Flavia, and would presumably have won her with all speed had it not been for the mischief-making propensities of Cousin Isabel, the flirtatious little tomboy beloved by Corwin B. But at this point a disastrous shadow falls on the roseate scene. Gerard, in a practice run, is wrecked and crippled. There is more than a suspicion of foul play, and Corwin B., who was driving close behind Gerard at the time of the accident, accepts the blame. Nobody but the author knows who really did kill Cock Robin, and she doesn't tell—not yet. The elder Rose turns his thorny side towards his son and heir, and withdraws oversea with the heart-torn Flavia. Not until the magnanimous Gerard has made a real professional cup-winner out of the supposedly erring stripling, and the little deeds of kindness performed by Flavia and her father during their sojourn in rural Spain get into the New York Sunday papers, is the cloud upon the quixotic Corrie's fair fame dispelled, and the sun permitted to shine again upon the pink villa, the reunited Roses, and the successfully resumed wooing of the triumphantly convalescent Gerard.

ESSAYS OF CHARLES FRANCIS ADAMS.

Studies Military and Diplomatic, 1775-1865. By Charles Francis Adams. New York: The Macmillan Co. $2.50.

The appearance of a new volume of historical studies from the pen of Mr. Adams is an event of historical and literary importance. That Mr. Adams has not found time, in the midst of a busy life, to carry through some large piece of historical writing, is certainly matter of regret; but in his chosen field of brief or specific studies no American historian to-day, not even excepting Mr. Rhodes, unites so successfully the qualities of painstaking investigation, detached judgment, clear conviction, and attractive literary form as does the distinguished president of the Massachusetts Historical Society. Nothing, on a first reading, could be less suggestive of "scientific research" than these entertaining and stimulating pages; yet the most thoroughgoing of monograph makers cannot but praise the skill and completeness with which, for example, the late Abram S. Hewitt's interesting story of Queen Victoria's display of friendship for this country during the Civil War is dissected, and its credibility destroyed. On the other hand, the most pronounced advocate of the "large view," whatever that may mean, cannot fail to admire the breadth and penetration with which Mr. Rhodes's fifth volume is appraised, and, one must admit, proved somewhat wanting. And when to these qualities, painfully lacking in most historical writing of the day, there are added entire independence of judgment in the treatment of accepted opinions and verdicts, a critical attitude towards great names and traditional enthusiasms, and a downright frankness in saying precisely what the writer thinks, the conditions of interesting, suggestive, and convincing historical composition have been pretty well met. John Wesley is said to have told his young preachers that a sermon which neither converted anybody nor made anybody angry was a failure; and Mr. Adams, who almost always has an excellent text and a pointed moral, is pretty sure to comply every time with one or the other of Wesley's conditions.

Of the ten papers in the volume before us, eight are military studies. Since the lamented death of John C. Ropes, Mr. Adams has been almost the only historical writer among us who could evaluate military operations with adequate technical knowledge, and at the same time in a way to show their general historical significance and make them intelligible to the ordinary mind. Space forbids any extended discussion here of either methods or results, for the reason that military details, more than any other class of historical incident, cannot be summarized and remain significant; but the four papers on the battles of Bunker Hill and Long Island, Washington's use of cavalry, and the campaign of 1777, must be specially commended as contributions of first-rate importance to a neglected aspect of the Revolutionary War. The traditional praise of the patriot forces for their success in face of heavy odds, together with the wholesale and indiscriminate laudation of Washington as a military genius of the first rank, receive at Mr. Adams's hands a severe rebuff. The utter incompetency of the Americans at Bunker Hill, in choosing their location, was only exceeded by the incompetency of the British in attacking as they did; while the disposition of the American forces at Long Island not only reflected little credit upon Washington's military wisdom, but made his escape chiefly the result of the enemy's superior blundering. The much acclaimed admiration of Frederick the Great for Washington's performance in New Jersey is, as we now know, a myth; but the persistence with which historians, in an especially iconoclastic age, have represented the military work of Washington as almost unqualifiedly able and farsighted is not easy to understand. Mr. Adams is severe, but warrantably so, in his strictures on some of the "standard" historians for their uncritical upholding of this patriotic view of the Revolution, when they had not as yet possessed themselves of the real facts of the case; and the criticism might, with propriety, have been carried further.

In the two papers entitled "The Ethics of Secession" and "Lee's Centennial," originally addresses delivered at Charleston and at Washington and Lee University, respectively, Mr. Adams, among other things, examines afresh the vexed question of the nature of the Union, with particular reference, of course, to the theory of State rights and the constitutional or political justification of secession. Himself of the opinion that the compact theory, in any such extreme form as would justify disunion, was at no time generally or even widely regarded as the true theory of the Constitution, Mr. Adams shows how, under pressure of social, political, and economic conditions, the North and the South grew apart, until a constitutional theory, which was felt to be necessary to justify an existing status, was naturally made to explain the supposed circumstances of origin also. The point is not wholly novel, but it is obviously one which must be carefully kept in mind if the attitude of the South during the Civil War is to be understood. Mr. Adams, who always has the courage of his convictions in such matters, feels bound to say that, under similar circumstances, he would have done what Lee did; although not a few of his readers will incline to the belief that there are some weighty moral and political considerations to which, in this question, he does not particularly attend. The paper on "Queen Victoria and the Civil War" seems conclusively to disprove the claim of special interest in or friendship for the United States on the part of the Queen. That entitled "An Historical Residuum" is a revised form of a paper printed in the Proceedings of the Massachusetts Historical Society (Second Series, XIII, 177-197), under the title "The Laird Rams." It is interesting to note the publication of an important paper on the same subject by Brooks Adams, in the December Proceedings of the same society.

The Kashf Al-Mahjúb, the Oldest Persian Treatise on Súfiism. Translated by R. A. Nicholson. Gibb Memorial Series. London: Luzac & Co.

Les Cent et une Nuits. Traduites de l'Arabe par Gaudefroy-Demombynes. Paris: E. Guilmoto.

Contes Persans. Traduits par Aug. Bricteux. Paris: Honoré Champion.

The inter-penetration of East and West will be worked out most abiding-

ly by the patient labors of translators. On that path controversy is avoided, respect is secured, and knowledge is slowly but surely widened. It is hard, for example, to quarrel with a translation of a treatise on Yogiism when it is plainly an appeal to an Eastern audience only; whereas the rampant Yogi himself, hurling his ideas against Western thought, can not fail to excite suspicion and reaction. Likewise, renderings of our most representative books will be infinitely more useful to the East than any number of laboriously directed efforts at opening its benighted eyes.

Of course, too, there is much translation that, whether wittingly or not, is simply *pour rire*. But of the true translation Dr. Nicholson's book is an admirable example. No one could possibly read it—and all should who are interested in the development of theological thought—without having his knowledge of the universality of religious emotion and the fixity of its forms greatly extended. Even those who have already a good knowledge of Súfiism will have their advantage here, for the writer of this treatise stood at that most interesting point where the orthodox and monotheistic mysticism of Islam was beginning to pass, on the road of philosophic speculation, into the distinctively Persian theosophy and pantheism. It is, however, a great pity that Dr. Nicholson felt himself constrained to cut his introduction and notes virtually to the vanishing point. This book needs both very badly, and the more so because the subject is one haunted by amateurs and charlatans. It is to be hoped, then, that the "other occasion" to which the editor refers in his preface may speedily arise and bring with it his history of mysticism in Islam. To such a history this treatise must be one of the foundations.

Similar theological and philosophical importance cannot be claimed for the translations of M. Gaudefroy-Demombynes and M. Bricteux. They are, rather, contributions to folk-lore, and make a wide sweep from Morocco, the home, apparently, of "The Hundred and One Nights," to Persia. The first collection is far from having anything of the artistic value of "The Thousand and One Nights." Its tales are of simpler elements and nearer the lips of the people—an amateur compilation, it may be, as opposed to the magnificent débris of a great book which lies in our "Arabian Nights." Yet, being thus more primitive, it has its value, and its translator finds in it closer parallels than exist elsewhere to the "Libro de los Enganos" and to a hypothetical Indian original of the framework story of the Nights. Some of his notes and excursus in the history of fiction are exceedingly suggestive. To the Persian tales there is a folk-lorist introduction by Victor Chauvin, on that subject easily master of us all. They are from a Berlin MS, and among them is the story of Codadad—its only known Oriental form—which, with Zeyn-alasnam, was translated by Pétis de la Croix, and introduced into Galland's eighth volume without his knowledge. But there are here much more interesting tales than that of Codadad, notably some which rehabilitate the memory of the Count de Caylus as a faithful translator. There is a good version especially of the widespread tale of Saif al-Muluk, and of others the roots of which run back to Hatim Tai. The collection is altogether of more literary and artistic value than "The Hundred and One Nights."

Edinburgh Revisited. By James Bone. With 75 drawings by Hanslip Fletcher. Philadelphia: J. B. Lippincott Co. $5 net.

This is in every way a book of insight and originality. The remarks of a Glasgow man about Edinburgh are not always printable, but Mr. Bone has apparently passed years enough "outwith the kingdom" to be mostly depolarized. Yet even he cannot help bringing in Glasgow Cathedral and its crypt as the unique remnant in Scotland of great mediæval architecture, and there is throughout his book a suggestion that Edinburgh should be reserved for good Glasgow people to go to when they die. Of his enthusiasm, a cultured, discreet, thoroughly Edinburgh enthusiasm, there can be no question. The charm of the windy town, with its men of knit brows—knit with the effort of keeping on a tall hat in an easterly quarter-gale—caught him, and he, in his turn and in a way fitting the hard gray stone fronts with their rocky monotony, has caught it. Even his chapter headings are far more than the usual graspings at picturesqueness and have that touch of reticent romance which brought Stevenson predestined dreams at the Hawes Inn. His "face of Edinburgh" most truly envisages the confrontings of the old town and the new, the high-piled "lands" rising to the castle with their burrowing closes and the classical squares and façades of Adam's planning. And in it all is a puzzling combination of the trained architect and the cultured, fanciful amateur. Mr. Bone seems too free of the fetters of technique for the one and too well schooled for the other.

Beside this chapter of form, that on "Edinburgh windows" is sheer romance. The lights of the old town shine out in golden spots, and mystery hangs about its windows. The cliff front of old Edinburgh, and, on the other side, the lights of the Fife shore, answer each other, and the glimmering Canongate to the night-walker is full of ghostly memories. Still nearer to the heart of Edinburgh we move in the chapter on Interiors with Figures and Grace o' Life, both the old aristocratic, high-living Edinburgh that made and loved these beautiful things, and younger, humbler Edinburgh that has its being among them now, moving in a world of broken tarnished loveliness, an army of poverty, the last heirs of the old gentry. And here exactly lie Mr. Bone's best descriptions and most sympathetic interpretations. The coved ceilings, the wainscoted walls, the elaborate chimney-pieces, with here and there a picture on a panel, still do their work in that submerged world. The dwellers in the shadows behind the thick, rough stone walls can feel beauty and sometimes also can express it with almost lyric fervor.

More fanciful, perhaps, but still more intimate—and full of truth, too, for any one who knows the dark, supernatural imaginings which lie at the bottom of the Scottish mind—is the chapter on ghosts. Old Edinburgh was full of legends of unholy horror; the unclean tale of Major Weir is but one of many, as Sinclar's "Satan's Invisible World Discovered" can show. And modern Edinburgh, too, has its ghosts. If the "lands" and their present inhabitants are not so steeped in the Old Testament, the Solemn League and Covenant, and the secrets of great families, they have still the tragedy of human life, which expresses itself in tales of haunting apparitions. The dim recesses in corners of winding stairs and the dark atmosphere of lofty panelled rooms have not ceased to touch the automatic nerve of imagination. The mind of Edinburgh, both Teutonic and Celtic, is sensitized to the spirit world, and the very mist in its streets, the *haar* that drifts up from the North Sea, is shaped easily into phantoms.

In succeeding chapters we are taken down the steep of Leith Walk to that sea and are shown the Newhaven fishwives and, quite secondarily, fishermen. In these there is the same mingling of æsthetic apprehension and historical sense, but only here and there is all fused into the same unique interpretation. Leith Walk itself stands out in extraordinary vividness, and the fishwives, too, are very real. The chapter on A Saturday Afternoon, with its long description of coal miners and their whippets and of whippet racing, is a marked falling off, but in the last chapter, on The Modern Athenian, we have again delicious bits of portraiture, with Glasgow a little assertive. Its strongest part is the linking up of the Edinburgh type with the direct-eyed women of Raeburn's portraits—women with knowledge of life from intimacy with all classes, with humor and humanity. Here and throughout we have conspicuously the *mot juste*, not one too many and each where it will tell. But the

heart of the book lies in the chapters on the relics of old Edinburgh's grandeur and on the life, face to face therewith, of the poor.

The illustrations, the smaller ones especially, are in every way worthy and are a most refreshing change from the processed photographs and paintings which we now have so abundantly.

The Quakers in the American Colonies. By Rufus M. Jones, M.A., D.Litt., Professor of Philosophy in Haverford College, assisted by Isaac Sharpless and Amelia M. Gummere. New York: The Macmillan Co. $3.50 net.

One important problem in Quaker history, says Professor Jones in the Introduction to this careful and sympathetic work, "is the strange fact that a movement so full of vitality and power at its origin ceased to expand with the expanding life of America. So long as the 'tragic collisions' lasted, the Quakers flourished and seemed sure of a significant future in the unfolding spiritual life of America; as soon as they were free and unopposed there occurred a slowing-down and a loss of dynamic impact on the world." The thing which above all else explains this "strange fact," Professor Jones takes to be "the early adoption of the ideal that Quakers were to form a 'peculiar people.'" In the beginning, "profoundly conscious that they had discovered a universal truth which was to permeate humanity," the pioneer missionaries went forth to convert the world. But gradually, in the face of an unexpected and stubborn opposition, the "aim slowly narrowed down to the formation of a 'spiritual remnant,' set apart to guard and preserve 'the truth' in the midst of a crooked and perverse generation that would not see and believe."

The problem is worth noting, but it will perhaps gain in interest by being stated more generally: why is it, one may ask, that the Roman Church is most important for the historian during the period when its principles were unquestioned, whereas Protestant churches cease to be historically important from the moment their right to exist unmolested is conceded? One method of reaching an answer to this question is by way of comparing the basic theories of the two types of religion with respect to merit or salvation. The theory that a man is justified by what he *does*, which was roughly the theory of the Catholic Church as formulated at the close of the Middle Ages, tends, in so far as it is realized in practice, to bring the individual into relation with the community, places the test or standard in the social will, and ends either by subordinating politics to ethics, as in the Middle Ages, or by subordinating ethics to politics, which seems to be the goal towards which we are now moving; religions based upon such a principle may readily play a part, more or less vital, in social history. The theory that a man is justified by what he *is*, has the effect, on the other hand, of isolating the individual; it tends, in its complete realization, to erect for each man a separate moral law, at the very least to create a "peculiar people," a people differentiated from the "world"; a people whose standards transcend those of the world, individuals whose path in life is illumined for them by some inner light rather than charted from the experience of society. Such a theory always demands an answer to the question, "Why should God go in search of Moses to speak to Jean-Jacques Rousseau?" In the end such a theory separates religion and politics; and religious speculation and practice founded upon such a theory, if left alone, are likely to flow apart from the main current of the world's work, to form the back-washes and stagnant pools of social and intellectual history.

In the main, such has been the fate of Protestant religions. Luther's exposition of the Liberty of the Christian man implied the separation of Church and State. It is true, the Protestants of the sixteenth century found it necessary to take refuge in the state church—after all, as Luther said, it was not for *Herr Omnes* to determine what changes should be made in belief and in form of worship. But this was to deny the principle upon which Luther justified his own revolt from the Roman Church. The state church was only a masked Catholicism, so far as the theory of salvation was concerned; and wherever state churches were set up there were not wanting men who refused to conform, justifying their non-conformity by defending Luther's own thesis that "the Christian man is the most free of all men, and subject to none." The necessary result of Protestant principles, as Bossuet so brilliantly demonstrated, was *variation;* and in the end the "dissidence of dissent and the Protestantism of the Protestant religion" won for all Protestant sects, in England and America at least, the right to believe and to worship as they pleased. But the right to believe and to worship as they pleased was won only at a price: the price was that they should continue to believe what society had ceased to be interested in, and worship through forms that had lost their social significance. The separation of religion and politics in the history of Europe is something more than a definition, a legal precept; it is a fact of which the law is only the announcement; and the essential meaning of the fact is that religion has lost, as Professor Jones says, its "dynamic impact on the world."

The Quakers were one of the many sects—and in America the most interesting, and perhaps the most important one as well—which, in the name of the Protestant principle of liberty, protested against the intolerance of Protestant churches. The Quakers were to the Puritans of New England what the Münster Anabaptists were to the Lutheran states of Germany; and the Puritans of Massachusetts Bay regarded them indeed as an offshoot of the Münster community. For the Protestants of the sixteenth century, Anabaptism was synonymous with blasphemy, immorality, and anarchy, while for Catholics it represented only the inevitable outcome of the teachings of Luther. Anabaptism was, in fact, readily deducible from the premises of Luther; and Quakerism, if in many respects far removed from Anabaptism of the Münster type, was feared in Massachusetts Bay, not because it was so different from the dominant type of Protestantism there, but precisely because it was only a more courageous application of basic principles: a humane Puritan with a turn for logic might find himself a Quaker before he was aware. It is one of the contributions of the present volume to bring this out. "There existed in the colonies before the arrival of the Quaker missionaries," says Professor Jones, "a large number of persons, in some instances more or less defined groups of persons, who were seeking after a freer and more inward type of religion than that which prevailed in any of the established churches." These were ready for the Quaker "truth." Catholic or Mohammedan missionaries would not have been dangerous in a Puritan colony: it was the missionary that was more puritan than the Puritans, more protestant than the Protestants, that had to be suppressed.

It is thus true of Quakerism, as it is of Protestantism itself (and the work of Professor Jones bears this out), that its history is most worth telling in respect to those colonies where it was most dangerous, and, because most dangerous, most persecuted. Where the persecution was mild, as in Virginia, or where it ceased almost before it began, as in New Amsterdam, the story sinks to a chronicle of facts, of interest certainly to the student of religion, but needing another method than that of the historian to bring out their significance. There is, of course, one considerable exception to this rule, and that is the story of the Quakers in Pennsylvania. But here the story derives its interest not so much from Quakerism as from the Quakers: tho Quakers were a social force in Pennsylvania less because of their religion than in spite of it; less because they were a peculiar people, than because they were a majority: and it is indeed noticeable that the responsibility and social activity involved in political control steadily tended to soften down the sharp edges of their religious beliefs; occupation with

the world's affairs alienated at least the "Political Quakers" from the exaggerated anti-worldliness of Quaker doctrines.

One lesson of Quakerism, as of most Protestant sects, is that the latter end of toleration is indifference. Society is not likely to be indifferent to its essential interests, or wholly careless of the faith by which it lives. There is much to be said for the claim that men should be allowed to believe what they like; but, after all, the essential thing is not to believe in peace, but to believe something worth while; and if a belief encounters no resistance it is either because nearly every one accepts it or almost no one thinks it important. If Dr. Martin Luther were alive to-day, one would scarcely expect to find him preaching justification by faith, or any other doctrine to which the world has grown indifferent. He would be, most probably, a belligerent prophet of some dangerous new religion—perhaps a communistic anarchist, or leader of the assembling hosts of Socialism.

Notes

A cheap edition of Sir Walter Besant's four books, "London," "Westminster," "East London," and "South London," is announced by Chatto & Windus. It will contain all the original illustrations.

Within the next few weeks Putnams will issue: "Through the Postern Gate," by Florence L. Barclay; "Beyond the Law," by Miriam Alexander, and "Woodrow Wilson and New Jersey Made Over," By Hester E. Hosford.

As American representatives of the Cambridge University Press, Putnams have in hand "The Early English Dissenters in the Light of Recent Research (1550-1641)," by Champlin Burrage, and "An English-Greek Lexicon," by G. M. Edwards.

Percy Fitzgerald is issuing, through Gay & Hancock of London, a collection of the oversights, slips, and contradictions found in "Pickwick."

"The Historicity of Jesus," by Shirley Jackson Case, shortly to be published by the University of Chicago Press, attempts to answer fairly the question, Did Jesus ever live, or is he a mythical personage, like the deities of Greece and Rome?

Houghton Mifflin Company make announcement of the following books, which will be ready March 23: "Lost Farm Camp," by Harry Herbert Knibbs; "Lee, the American," by Gamaliel Bradford, jr.; "Miss John Bull," by Yoskio Markino; "Freight Classification," by J. F. Strombeck, and "Le Morte Arthur," in the Riverside Literature series.

The last of this month the same house will publish "A Child's Journey With Dickens," by Kate Douglas Wiggin.

The announcements of Longmans, Green & Co. include: "The Night of Fires and Other Breton Studies," by Anatole Le Braz, translated by Frances M. Gostling; "The Sacrament of Repentance," by James H. F. Peile; "Edward King, Sixtieth Bishop of Lincoln, a Memoir," by George W. E. Russell; "The Parting of the Roads, Studies in the Development of Judaism and Early Christianity," by members of Jesus College, Cambridge; "The Old Testament," by the Rev. H. C. O. Lanchester; "An Introduction to the Synoptic Problem," by the Rev. Eric Rede Buckley; "Saint Francis of Assisi, a Biography," by Johannes Jörgensen, authorized translation from the Danish by T. O'Conor Sloane; "The Friendship of Christ," by Monsignor R. H. Benson, and "Civilization at the Cross Roads," being the Noble lectures delivered at Harvard, 1911, by John Neville Figgis.

Prof. E. C. Wesselhoeft has in the press of D. C. Heath, for immediate publication, "An Elementary German Grammar."

The fourteenth volume of the Catholic Encyclopædia will be ready in June; the entire set of fifteen volumes will be finished before the end of the year.

Included in Moffat, Yard & Co.'s spring announcements are: "The School in the Home," by Dr. Adolf A. Berle; "Big Business and Government," by Charles Norman Fay; "Smuggling in the American Colonies," by William S. Anderson; "How to Get and Keep a Job," by Nathaniel C. Fowler, jr; "Flag Day" and "Independence Day," both edited by Robert Haven Schauffler; "American Mediterranean," an account of the Caribbean and the West Indies, by Stephen Bonsal; "The Candle and the Flame," verse by George Sylvester Viereck, and the following volumes of fiction: "The Sentence of Silence," by Reginald Wright Kauffman; "The Prineipal Girl," by J. C. Snaith; "The Blind Road," by Hugh Gordon; "My Lady Peggy Leaves Town," by Frances Aymar Mathews, and "On the Trail to Sunset," by T. W. and A. A. Wilby.

The spring publications of the Yale University Press include: "The Origin of the English Constitution," by Prof. George Burton Adams; "The President's Cabinet, Studies in the Origin, Formation, and Structure of an American Institution," by Henry Barrett Learned; "The Commercial Policy of Colbert Toward the French West Indies," by Stewart L. Mims; "Alexander Hamilton," by W. S. Culbertson; "The Doctrine of Irritability," by Prof. Max Verworn; "The Meaning of God in Human Experience," by Prof. W. E. Hocking; "The Christian View of the World," by Prof. George J. Blewett; "The Yale Collection of American Verse," by Prof. Thomas R. Lounsbury; "English Lyrical Poetry, from Its Origins to the Present Time," by Edward Bliss Reed, and "Studies in the Lyric Poems of Friedrich Hebbel," by Albert E. Gubelman.

C. R. L. Fletcher continues the popular vein which marked his "Introductory History of England" in "The Making of Western Europe." The first volume he calls "An Attempt to Trace the Fortunes of the Children of the Roman Empire." The book is announced by Dutton.

The same house will publish A. E. U. Valentine's new novel, "The Labyrinth of Life"; "Neighborhood," a picture of rural life in England, by Ticknor Edwards; "Two Visits to Denmark," by Edmund Gosse, and "The Creed of Half Japan," by Arthur Lloyd.

The following books are in preparation for early publication by B. W. Huebsch: "Woman in Modern Society," by Earl Barnes; "The Burden of Poverty," by Charles F. Dole; "The Vaunt of Men, and Other Poems," by William Ellery Leonard; "The Mission of Victoria Wilhelmina," the diary of a country girl who comes to New York, by Jeanne Bartholow Magoun; "The Super Race," by Scott Nearing; "Folk Festivals," by Mary Master Needham; "Replanning Small Cities," by John Nolen; "Our Judicial Oligarchy," by Gilbert E. Roe, with introduction by Robert M. La Follette.

A new and enlarged edition of "In the Guiana Forest," by James Rodway, is in the press of A. C. McClurg & Co.

Under the editorship of Guido Manacorda, Gius. Laterza & Figli of Bari, Italy, are putting forth in a handsome series translations into Italian of foreign works. The following are already in preparation: Cervantes, "Don Chisciotte," traduzione di Eugenio Mele; Thackeray, "The Book of Snobs e scritti minori," traduzione di Giovanni Rabizzani; "Novellieri Islandesi," traduzione di Paolo Vinassa de Regny; Paparrigopulos, "Opere," traduzione di Camillo Cessi; Cervantes, "Novelle," traduzione di Giovanni Gianini; Schlegel, Fed., "Lucinde e scritti minori," traduzione di Giuseppe Manacorda; Wackenroder, "Opere," traduzione di Gina Martegiani; Herder, "Scritti vari," traduzione di Vittorio Graziadei; "Cid," con appendice di romanze, traduzione di Giulio Bertoni; Poe, "Opere poetiche complete," traduzione di Federico Olivero; "Drammi elisabettiani," traduzione di Raffaello Piccoli; Hans Sachs, "Opere scelte," traduzione di Guido Manacorda; Goethe, "Meister, Lehr- und Wanderjahre," traduzione di Alberto Spaini; Eckermann, "Conversazioni con Goethe," traduzione di Eugenio Donadoni, and Vicente, "Opere," traduzione di Achille Pellizzari.

We have received from Houghton Mifflin Co. the fortieth annual edition of the "Satchel Guide for the Vacation Tourist in Europe," revised for 1912. The death of Dr. W. J. Rolfe places the editing of this little volume in new hands, but the publishers give assurance that it will be kept up to its former standard of accuracy.

In his *Bibelot* for March Mr. Mosher gives a reprint of Ernest Dowson's curious psychological tale, "The Dying of Francis Donne." We wish he would offer more of Dowson's fascinating prose. Dowson was, indeed, a decadent, but his decadence took the form of tremulous beauty rather than of uncleanness, and the volume of his verse, edited by Arthur Symons, is in its own small way one of the precious things of modern English literature. His prose is not so easy to come by.

Alfred H. Miles has compiled, and Thomas Whittaker of London has published, a "New Anecdote Book," which offers good reading and serves well for reference. The latter purpose would, however, have been much better carried out if the table of contents had been supplemented by a good index.

A nineteenth volume, containing an Index, brings the new edition of the Encyclopædia Britannica to a worthy conclusion. There are considerably more than 500,000 headings in this Index referring to names and topics which are not treated separately. By skilful abbreviating and printing, these

are brought into suitable compass. The publishers (The Cambridge University Press) have wisely issued this Index volume only on thick paper; a thin-paper volume may be convenient by reason of the little space it occupies on a shelf, but the pages cannot be turned for quick reference.

It is always a pleasure to receive one of the Filson Club publications, with their fine paper and wide margins. Number XXVI, which has just appeared, is "The Kentucky Mountains, Transportation, and Commerce, 1750 to 1911," by Mary Verhoeff. This is a study of the economic history of a coal field. As is stated in the "Foreword" by the vice-president of the Filson Club, the subject has never been presented "in a manner so nearly commensurate with its merits." There is a complete and interesting description of the region, in regard to its topography, geology, and climate. This forms an introduction of about forty pages, and is followed by a discussion of about 160 pages on transportation, beginning with the earliest period and coming down to most modern times. Here are described the early trails, the first great turnpikes, and county and State roads. Although marks of the untrained historian are not lacking in the work, it must be regarded as one of the most scientific and satisfactory of the Filson Club publications.

Any one in need of Scotch stories, old and new, good and bad, will find them in W. Harvey's "Scottish Life and Character" (Lippincott Co.). The collector has taken up Dean Ramsay's mantle but hardly his style. The colored illustrations are negligible.

The opposite is the case with the illustrations in Stewart Dick's "Pageants of the Forth" (McClurg). It has twenty-four reproductions in color from pictures, several being very effective. The text is historical and local gossip all round the firth, from Dunbar to St. Andrew's, pleasantly and neatly done. It is full of suggestive memories and will appeal most to those who know as their own the lands of Lothians and Fife.

Josephine Helena Short's "Chosen Days in Scotland" (Crowell), on the other hand, appeals to the American, whether the stay-at-home reader about romantic things and places or the diligent tourist. Both will find abundance of quotations—Scott and Burns alone could claim many pages as their own—much small talk of history, and an easeful apparatus of appropriate reflections and emotions in which "quaint" is rather overworked. There are thirty-four illustrations from photographs, some quite suggestive, and the book, of its kind, is well written and useful.

More serious, but not so picturesque, and more exact but not so well written, is Robert S. Rait's "Scotland" in the new Making of the Nations series (Macmillan). The object of the series is to give only such facts and periods in the history of each people as are necessary to show its growth and development. In accordance with this, Mr. Rait has dealt in detail with the reigns of Malcolm Canmore and his successors, when Celtic Scotland was remade under Anglo-Norman influences, though it may be doubted if Mr. Rait would approve of the word "remade"; with the war of independence; with the dragging war of religions which began with the Reformation and ended with the Revolution Settlement and Scotland virtually modern. On two periods Mr. Rait declines the hopeless task of giving any detail; the Picts and their contemporaries he agnostically leaves where Jonathan Oldbuck found them, and he abandons the impossible and perilous attempt to put into anything but a few sentences the last century and a half. As to his fundamental positions, he holds that mediæval Scotland racially and consciously was a unity except as regards some English blood in the Lothians and Scandinavian on the north and west coasts. In this he departs from the "English" position of Freeman and Green, whose extreme Saxonism could see no possibilities in the Celts. On the over-lordship of England he is a sound Scot, as indeed an historian must be. On the long Covenanting conflict and the agony of the Killing Time he is sane and clear. For it he has relied much on the cautious Principal Baillie as an exponent of the drifting national feeling between 1638 and 1660. Significant, too, is the comparison of William of Orange in the strength and meanness of his character to the Regent Murray. And it is interesting and curious to observe how closely the judgments of this book, except as to the division of Lowlands and Highlands, coincide with those of Scott. Very little is left of the covenanting Protestant romance of the school-books of our childhood. There are many excellent illustrations—portraits, maps, and views—and a reproduction of the bird's-eye view of Edinburgh in 1647 by Gordon of Rothiemay.

Returning in "Nuts and Chestnuts" (Longmans, Green) to the manner of his "Old and Odd Memories," Lionel A. Tollemache brings together a considerable amount of engaging anecdote, gossip, and informal opinions with which a long acquaintance among commanding figures in English life has filled his mind. Most of it is presented as first-hand testimony, but one bit, less direct, is worthy of notice. An elderly acquaintance of his had known an aged lady who had met Dr. Johnson at dinner. She could recall no famous sayings, but remembered that he took up a sauce tureen of melted butter and poured its contents down his throat. Of Tennyson it is related that at a club dinner he insisted on putting his feet upon the table before the guests had risen. All efforts to make him "behave" failed until Brookfield ("Old Brook" of the sonnet) whispered: "Do take your legs down, Alfred. They're saying you're Longfellow!" Down went the legs. Cardinal Newman's respect for ecclesiastical rank, concerning which an anecdote is given, is contrasted with the American who was presented to Leo XIII: "Sir," he exclaimed, seizing the Pope's hand and shaking it heartily, "I am glad to meet you. I knew your father, the late Pope." Much that is both amusing and extremely illuminating is told of Goldwin Smith, who, as the writer puts it, was "too good a hater to be a really great historian." His hatreds, however, save for his deep-seated animosity towards Disraeli, generally worked themselves out in the sort of epigrammatic outbursts to which strong personalities are apt to yield. In the early nineties he told the writer that the "economy most acceptable to the average American was abstaining from the purchase of serious books." Other pictures of the professor show him at dinner with the Prince of Wales, the late King Edward, whose instructor he was, combating the Prince's preference for "Adam Bede" rather than for "The Mill on the Floss," the only two of George Eliot's novels which had then appeared; disposing, in a public lecture at Oxford, by pointed epigrams, of the scientific innovations with which philosophy was then so much confronted, while the wiseacres in the audience agreed that "the man is not a philosopher"; or at one of Gladstone's breakfasts expressing admiration for Bright's wide range of allusion in his speeches, but adding, with evident pique: "The odd thing is that one so seldom recognizes his quotations. I suppose them to be extracts from poetry peculiar to his sect." That it was he who is satirized as the Professor in one of Disraeli's novels, he gave good reason to believe by exclaiming, "Stingless insults of a coward."

Dr. Ellis P. Oberholtzer's well-known and authoritative book on "The Referendum in America" (Scribner), originally published in 1900, appears in a new and enlarged edition, with four supplementary chapters, bringing the record and discussion down to the present time. The additional chapters treat of the initiative and referendum in the States, the local referendum, home rule and commission government for cities, the recall, and the referendum *versus* the representative system. A decade of rapid and momentous change in all of these directions has failed to convince Dr. Oberholtzer of any high intrinsic value in the reforms whose spectacular course he carefully chronicles. In his opinion, no especially desirable gains for popular government or popular welfare can yet be pointed to as the fruit of the initiative or the referendum; nor can the frequent balloting, the multiplication of issues on which the voters must pass judgment, the interference with administration or established public service, or the growth of parties or organizations formed primarily for agitation, be regarded as other than grave menaces to social peace. The "home rule" municipal charter not only does not gain in favor, but seems actually to have lost esteem during the past ten years, partly, perhaps, because of its effect in bringing the public law of the States into confusion. The much-acclaimed commission form of municipal government—"another device for making men perfect in large cities"—has in most cases the fatal weakness of being linked with the popular veto, and, in Dr. Oberholtzer's opinion, is only another panacea from which "valuable results will be impossible." As for the recall, its application to executive officials subjects all administration, good as well as bad, to popular caprice, while its application to the courts jeopardizes the foundations of personal, as well as public, rights. The final chapter is a thoughtful and vigorous plea for the maintenance, on the basis of an educated and honest electorate, of true representative government, the battle on behalf of which has perhaps again to be fought in this country if the present levelling tendencies continue.

After an historical survey of the development of the proletariat class in Germany, Otto Rühle, the author of "Das proletarische Kind" (Munich: Albert Langen) takes up the life of the child, and we learn that it is born and bred under the same sordid

conditions as the children of the corresponding class in America. The book is a treasury of facts for the student of sociology. It contains reports of school committees, pastors, physicians, life insurance companies, pension funds, etc. It gives authoritative data about labor hours, wages, woman and child labor, sickness, accident pensions, and old-age pensions. It proves incontrovertibly that the labor laws in the German Empire are violated exactly as they are in the American republic. Rühle proves by official statistics that in 1900, of all Berlin homes 60 per cent. were overcrowded, 65 per cent. in Hanover, 70.9 per cent. in Breslau, 85 per cent. in Magdeburg. He quotes the findings of a "Krankenkasse" in Berlin, which establishes the fact that in 1909 an astonishingly large proportion of its middle-class members lived in closer quarters than was conducive to health. Infant mortality in Berlin in August, 1905, in parts of the city not inhabited by the proletariat, was 15 per cent., in the workingmen's quarters, 62.52 per cent. Bremen, Halle, and other cities showed corresponding figures. Since the investigations of Axel Key, the Swedish physiologist, stimulated inquiry into the physical endowment of workingmen's children in various countries of Europe, Berlin has become a sort of experimental station. The data collected by Dr. Rietz have disclosed the fact that workingmen's children in Berlin are under-developed to the extent of 6 centimeters in size and 5 kilograms in weight. Malnutrition has been found to be alarmingly frequent. In a certain district in Berlin the school physician found 57.3 per cent. of under-fed boys and 60.9 per cent. of under-fed girls. The reports of tuberculosis dwell upon the overcrowded sleeping accommodations as one of the main sources of the scourge in Berlin as in New York; those on mental deficiency show an alarming proportion of alcoholists among the fathers and sometimes among both parents. The moral effects of these conditions are treated very fully in the chapter which is headed Roads to Vice. A glimpse of the reformatories for youthful delinquents of both sexes reveals inhuman practices that equal anything recorded in the chronicles of the dark ages. In the final chapters on reformatories and child criminals Professor Mendel, Professor Liszt, and Dr. Erich Wulffen are quoted in support of the urgent demand for a thorough-going reform of the legal prosecution of minors. The book is a sad comment upon modern life in Germany, and, even if it were found to exaggerate, which is improbable, it tends to correct erroneous impressions.

The January number of the *American Journal of International Law*, just issued, opens with a learned and instructive paper on the Development and Formation of International Law, by Ernest Nys, with whose scholarly and thorough work readers of the *Journal* should now feel familiar. M. Nys is a professor in the University of Brussels, is a judge of the Belgian Court of Appeals, a member of the Permanent Court at The Hague, and now one of the five honorary members of the American Society of International Law; and the committee of this Society, in proposing him, expressed the opinion that he had made more distinct contributions to the history and science of that branch of the law than anyone else living. M. Nys expresses a high appreciation of man's effort after the attainment of justice and of the establishment so widely of courts. He declares that the judicial institutions of nations constitute, among all the attributes of civilization, the highest symbols of modern progress. The author places, by the side of an observation of the Marquis of Salisbury that to apply the term *law* to international rules was "misleading," the fact that twelve years after the words were spoken the first Hague Conference was held, which united the representatives of twenty-six nations, and announced, among other things, the wish of the Powers to organize a permanent court of arbitration, accessible at any time. Custom, M. Nys finds, was at the bottom of maritime institutions and rules, in connection with which international law had its first practical application. He cites, illustratively, many historic instances.

The next paper is related to this; its subject is, International Law Since the Peace of Westphalia, as the two treaties, that of Munster and that of Osnabruck, ratified the same day, are called. In this paper Prof. Amos S. Hershey of the University of Indiana discusses the growth of the science, and sets forth the main factors forcibly. It is replete with useful references, bibliographical data, and evidences of the civilizing and humanizing of international sentiment. Our own courts had early followed the English in recognizing the right to capture enemy goods in neutral vessels, but had always maintained that the goods of the neutral, found in the vessel of an enemy, should go free. The paper well characterizes the armed neutrality of 1780, the French Revolutionary period, the Napoleonic era, the Congress of Vienna (1814-5), the period of reaction under the influence of Metternich, the Holy Alliance, the Concert of Europe, the Monroe Doctrine, the 1856 declaration of Paris (in which the United States prominently figured), and the period since.

Programmes have now been issued for four international congresses, which, while covering a large range of subjects, are in a measure cognate one to another. The first of these is the Sixteenth International Congress of Orientalists, which begins its sessions on the 6th of April, and continues until the 14th. In connection with this Congress the University of Athens celebrates the seventy-fifth anniversary of its foundation, the ceremonies incident to which occupy the first two days. Eleven sections have been organized to cover the range of Oriental philology, literature, history, and archæology, and it is perhaps appropriate that the archæological section has this time been further subdivided into three groups, so as to embrace also the Byzantine and later Greek periods. Among the social features will be an excursion to Eleusis and Megara, the illumination of the Acropolis, the performance of "Œdipus Rex" in modern Greek, and the Pan-Hellenic games in the Stadium, besides a gala performance of a national character in the municipal theatre. At the close of the Congress there is to be an archæological excursion lasting two weeks, which will include visits to virtually all of the important archæological centres in Greece, and in the Grecian Islands, under the guidance of Professor Lambros, rector of the University, and Georges Karo, secretary of the German Archæological Institute in Athens.—From the 27th of May to the last of June, the eighteenth International Congress of Americanists will be held in London under the presidency of Sir Clements Markham, the eminent anthropologist. The subjects embraced by this Congress will be the aboriginal races of America, monuments and archæological study of America, and the history, discovery, and occupation of the New World.—In September the fourth International Congress for the History of Religions will convene in Leyden, under the honorary presidency of Prince Henry. This Congress, meeting from the 9th to the 13th, will embrace ten sections, beginning with the religions of primitive peoples and ending with Christianity. It is particularly appropriate that a congress of this nature should meet in Leyden, which was the home of the late Prof. C. P. Tiele, who was one of the pioneers in the historical study of religions.—From the 9th to the 16th of October the Third International Congress of Archæologists will meet in Rome. The Congress will be divided into twelve sections, covering prehistoric, Oriental, pre-Hellenic, Italian, Etruscan, Greek, Roman, and Christian archæology, with special sections for the art of the classical period, for numismatics, ancient topography, mythology, the history of religions, and lastly, a section to discuss methods of archæological work. The president of the Congress will be Count Ricci.—The secretaries of these Congresses to whom application for membership and other communications should be addressed are, respectively, as follows: Prof. S. P. Lambros, director of the University of Athens, for the Congress of Orientalists; T. C. A. Sarg of the Royal Anthropological Institute, No. 50 Great Russel St., London; Prof. Benno Eerdmanns, No. 71 Plantsoen, Leyden, and Prof. Lucio Mariani, the director-general of antiquities and fine arts, Piazza Venezia 11, Rome.

Science

Principles and Practice of Poultry Culture. By John H. Robinson. Boston: Ginn & Co. $2.50.

This is by far the most complete presentation of poultry husbandry which we have seen. While its primary purpose is to serve as a textbook for agricultural college students, it meets all the requirements of a general treatise. Mr. Robinson has for many years been the editor of a poultry journal, and his editorial instinct has stood him in good stead in the preparation of this volume, which is as worthy of commendation for the things excluded as for the facts included. The novice will find by experience that indiscriminate reading of poultry literature is a hindrance oftener than a help. For the fictions of poultry culture are mostly plausible, and generally more alluring than the facts, and the usual result of much reading in advance of a thorough grounding in principles is an accumulation of obsolete and impracticable ideas.

The Department of Agriculture estimates the total value of poultry products at $700,000,000 annually, and this is probably largely underestimated. Such figures are very comforting to the ambitious beginner in poultry culture, but his comfort will receive a shock when he reads Mr. Robinson's statements that "large undertakings with poultry rarely succeed," that "continuous poultry culture by intensive methods is practically impossible," and that "of all intensive plants started with large capital, not on has lasted so long [ten years]." Mr. Robinson, perhaps because of his New England environment, is an ardent advocate of the extensive system of poultry keeping, and in its support brings many weighty arguments to bear, but the reviewer is inclined to believe that the best results from an economic aspect can be obtained from a combination of the two systems, the intensive system for the egg and meat producers, the extensive system for the breeders and growing stock.

The author is emphatic in his insistence on the necessity of getting good foundation stock in the beginning, whether for purposes of exhibition or utility. Some day a writer on poultry topics will rightly define the word "utility," now used by unscrupulous breeders as a cloak to cover the most shameless impositions, and to enfold with charity the worst mongrels that wear feathers, fowls that are the very acme of inutility.

Mr. Robinson takes a broad-minded view of the problems of poultry-house construction, and his chapters on Nutrition, Foods, and his tables expressing nutritive values, though they may alarm the novice, will be of interest and value to professional poultrymen. The latter, however, will be far from unanimous in endorsing his strictures upon the use of dry mashes. His chapter on Prevention and Treatment of Disease is the shortest we remember ever to have seen in so comprehensive a treatise as this, and at the same time one of the best. In fact, although the book extends to 611 pages, there is scarcely an unnecessary paragraph. It contains no new theories, but by the painstaking and exhaustive process of comparing and sifting the diverse views of the theorist, the faddist, the farmer, and the professional poultryman, the author has placed the whole subject on a basis of simple common sense:

> Problems are simplified by keeping as close to natural conditions as is consistent with the object sought. This precept applies to stock—that is, to the type of bird; the "business type" of bird for any purpose is a plain type—the original type improved and modified with reference to use only. . . . It applies to breeding; in nature the fittest to live survive to reproduce their kind. . . . It applies to incubation and brooding; although artificial methods are necessary in some lines, as a rule it is very much easier to grow poultry by natural methods in the natural season. It applies to hygiene; under natural conditions little attention need be given to sanitary condition of houses or soil, while under intensive, unnatural conditions these things need constant attention. . . . In no way can the poultry keeper so effectively simplify his problems and make his work easier from the start as by keeping as close as practicable to natural conditions.

And, lastly, Mr. Robinson is to be thanked for withholding those counsels of perfection which are the despair of the novice. We have seen it stated in a recent work that no fowl should be compelled to drink water we wouldn't drink ourselves, or out of a vessel we wouldn't drink from ourselves—which would seem to ordain the necessity of individual drinking cups for the barnyard. Such advice as this is worse than the utter lack of system of the most indifferent farmer whose fowls spend their days on the dung-heap and their nights in the trees.

The book is well printed, and carries nearly 600 illustrations, some of which are very useful adjuncts to the text. An exhaustive bibliography and a carefully prepared index are features that add to the value of the work. In the former, the author has starred those titles which he regards as really worth while—about one in fifty, a proportion none too small.

Svante August Arrhenius, director of the Nobel Institute, Stockholm, will publish through the Yale University Press his book, "Theories of Solutions."

André Tridon has translated from the French "The Theories of Evolution," by Yves Delage and Marie Goldsmith; it is announced by Huebsch.

"Harper's Guide to Wild Flowers" is almost ready.

Longmans, Green, & Co. are bringing out "A Dictionary of Applied Chemistry," in five volumes. The work, which is by Sir Edward Thorpe and others, will be completed in two years. Vol. I has undergone revision, and Vol. II will be published early in the summer.

"The First Book of Photography," by C. H. Claudy, is promised for this month by McBride, Nash & Co.

In April Paul Elder & Co., San Francisco, will bring out "A Yosemite Flora," by Harvey Monroe Hall and Carlotta Case Hall. The work gives a descriptive account of the ferns and flowering plants, including the trees, of the Yosemite National Park, with keys for their identification.

Among the books on the list of McBride, Nast & Co., New York, are: "Making a Lawn," "Making a Garden Bloom to This Year," "Making a Tennis Court," "Making the Grounds Attractive with Shrubbery," and "Making a Rock Garden"—in the House and Garden-Making series, and Hanna Rion's "Let's Make a Flower Garden."

In his sixty-sixth annual report, Prof. E. C. Pickering, director of Harvard College Observatory, notes the continued excess of expenses of the Institution over its income, leading among other retrenchments to reduction of photographic work at the Arequipa station in Peru. The Observatory's irreparable loss in the death of Mrs. Fleming will not be permitted to stay the progress of publication of its Annals, about seventy volumes of which are either completed or in press. Plans are making for revision of the Henry Draper Catalogue of stellar spectra, covering every part of the sky and including about fifty thousand stars of the eighth magnitude and brighter. Prof. Lawrence Rotch continues to direct and support the Blue Hill Meteorological Observatory. A large and important part of its work is exploration of the upper air by kites and balloons, 27,400 feet being the maximum altitude attained. Observations of variable stars continue to pour in, Professor Todd and Mr. Hudson of Amherst furnishing above a thousand, and Mr. Olcott of Norwich more than 500. The Rev. J. H. Metcalf's photographic telescopes, his individual handiwork, have been kept busy, one investigation of especial significance being the ascertainment of lunar positions among the stars photographically; and Professor Russell of Princeton shows by critical discussion of the plates that the accuracy of this new method somewhat surpasses that of the best meridian circles.

Drama

Charles Rann Kennedy's play, "The Terrible Meek," will be brought out shortly by Harpers.

A. W. Pollard has recently done much to rehabilitate the publishers of the Shakespeare Quartos and First Folio in respect to fair dealing and the choice of correct texts. In his "Shakespearian Punctuation" (Frowde) Percy Simpson extends the process to matters of punctuation, especially as regards the First Folio, but, as it seems to us, with only moderate success. It may be conceded that seventeenth-century punctuation was largely rhythmical instead of logical, but it was not systematically so, as is manifest even from Mr. Simpson's own collection of examples, and this is the main point. Nor does the assertion of such lapses from a definite system—or rather such confusion of two systems, the one logical (itself differing in many respects from modern conceptions), the other rhythmical—involve any reflection on the intelligence of the compositors, as Mr. Simpson's Introduction implies. The irregular punctuation of the time simply marks a stage in the development towards a more or less fixed system, such as we have at the present day. With Caxton, our first printer, an oblique stroke sufficed for every form of punctuation. Our author exaggerates the regularity of seventeenth-century punctuation, but his book is an instructive discussion of the subject and may be recommended to all who are interested in Shakespearean textual problems.

The Service des Antiquités de l'Egypte announces the publication (Le Caire: Imprimerie de l'Institut Français d'Archéologie Orientale; Leipzig: Hiersemann) of the long-awaited photographic facsimile

of the famous papyrus manuscript of Menander, which was discovered at Kôm Iskaou (Aphroditopolis), in 1905, and first edited by its discoverer, Gustave Lefebvre, in 1907. (See the *Nation* for March 19, 1908). Accompanying the plates M. Lefebvre gives a fresh transcript of the text, in the decipherment of which considerable progress has been made since the *editio princeps* through the labors of A. Körte, Jensen, and the editor himself. A few small fragments found since the first publication are added. Several of these belong to the fifth, still nameless, comedy. One is of interest through the fact that it contains a portion of a two-line fragment (No. 211 Kock) which Stobæus quotes as from the "Hero," thus confirming M. Lefebvre's original conjecture as to the title of the first play in his edition. The most notable outward indication of the progress made in the elucidation of the text since the first publication of this papyrus is the present arrangement of the fragments. Every piece of importance has now been assigned to its proper play and to its proper position in the play in relation to the other fragments. However, valuable as this publication is for the study of Menander, undoubtedly its most notable contribution to classical literature is three new fragments, aggregating about 120 lines, of a play of the Old Comedy. Lefebvre tentatively ascribes them to Aristophanes, but they have already been identified by Körte and van Leeuwen as from the famous "Demes" of Eupolis, for seventeen years the principal rival of Aristophanes. In this play, produced about 417 B. C., the poet summons from Hades four of the national heroes of Athens, Solon, Miltiades, Aristides, and Pericles, to give advice to the Athenians on the questions of the day. In one of the new fragments Pericles makes his appearance upon the scene and greets his native land in stately lines, while another speaker, apparently Solon, in the rôle of clown makes fun of him. With this publication, the announcement of the discovery, among the Oxyrhynchus papyri, of almost one-half of a new play of Sophocles—and that a satyr-drama, the "Ichneutæ"—and, in an Egyptian sarcophagus of fifty hitherto unknown verses of Sappho, the close of the year 1911 brought gifts of unusual richness to the classical scholar.

No prophecy is more hazardous than one relating to the future of any theatrical enterprise, but it may be declared confidently that the formal opening of Winthrop Ames's Little Theatre—which in a certain way may be regarded as the successor of the New Theatre of unlucky memory—has been effected amid most favorable conditions. The house, if small, is artistic and commodious, the stage is spacious enough for all the demands likely to be made upon it and is fitted with every modern improvement, and the performance of the opening play showed good stage management and a well selected company. The piece was "The Pigeon," the latest stage work of John Galsworthy, one of the most serious, capable, and interesting of modern dramatists. Though described as a fantastic comedy, and actually somewhat light in texture, it deals seriously, if also humorously, with a live social question, the treatment of hopeless, but not criminal, wastrels. Like every other work of Mr. Galsworthy, it exhibits a wide knowledge of life and human character, is realistic in its personages and incidents, pertinent in its comment, and effective in its humor, pathos, and satire, though somewhat fanciful in plot.

The chief weakness in Mr. Galsworthy's play is that it asserts and discusses a problem, without attempting to offer any hint of a solution. The author imagines an artist, of the most sympathetic nature, who impoverishes himself by his indiscriminate charities to vagrants of both sexes. His more prudent daughter, Ann, protests in vain, and finally calls in a canon, a magistrate, and a professor—the church, the law, and social science—to advise them how to deal with three wastrels, a street flower girl, a French refugee, and a drunken old cabman, who have domiciled themselves in the studio. The experts send the girl to service, the Frenchman to an institution, and the cabman to prison, with disastrous results. The girl goes from bad to worse and tries suicide; the cabman, after enforced sobriety, gets drunker than ever, and the Frenchman is more confirmed in his vagabondage. In a striking scene he tells the artist, Wellwyn, that it is only men like him, with compassionate hearts, who can understand and help wild creatures such as himself, who ought to be let alone, so long as they harm nobody, to live or die as they choose. And this seems to be the view of Mr. Galsworthy also. But Wellwyn replies that he can do nothing, as he also is the helpless slave of his natural impulses and therefore irresponsible. He is simply a wastrel with means. All the leading figures in the comedy are drawn with admirable humor and veracity and illustrate the subject of poor relief in all its phases, with many comic and some tragic touches, but without reaching climax or conclusion. The implied moral is that what can't be cured should be ignored, a pretty dangerous social policy. But the play does direct attention to a difficult subject and also furnishes opportunities for much admirable acting. Frank Reicher gives a remarkably vital study of the Frenchman; Sidney Valentine another equally good of the drunken cabman, and Russ Whytal a charmingly sympathetic sketch of the sentimental artist. The whole representation was of a high order of general artistic excellence, and reflected great credit upon the management. If the Little Theatre can maintain itself at this level it ought to prosper.

There is some uncommonly good and some very poor work in "The Rainbow," the latest comedy of A. E. Thomas just produced in the Liberty Theatre. The central theme of it is the influence of an innocent daughter upon her father, a millionaire pleasure seeker, whose finer impulses have been dulled by constant association with gamblers, racing men, and besmirched women. In the scenes between the father and the daughter Mr. Thomas reveals a marked capacity for natural comedy. Few of our younger playwrights have struck a more sincere, natural, and sympathetic note. The development of filial and paternal love is shown with a simplicity entirely free from affectation. The climax, in which the mother decides to take away the girl, lest she be contaminated by her father's disreputable acquaintances, is productive of some exceedingly touching incidents. Unfortunately the bulk of the play is not up to this level. The theatrical machinery often creaks with age, and the dialogue, padded with the cheapest kind of witticism, is quite unworthy of Mr. Thomas's better abilities. But the best work in it is very good. Henry Miller played the father effectively in the pathetic episodes, and Ruth Chatterton, who acted the daughter with unaffected girlishness, pleased her audience mightily.

The London *Times* speaks in terms of warm appreciation of "The New Sin," by Macdonald Hastings, a play given in a series of special morning performances at the London Royalty Theatre by Messrs. Vedrenne and Eadie. The story—which may be strong and exciting, but does not sound reasonable—is of a gifted, industrious artist, disinherited by a millionaire father, who decreed in his will that until his (the hero's) death no penny of his wealth should be distributed. So the artist has to contribute continually to the needs of ten worthless and helpless brothers and sisters, and believes it to be his duty to die that his brethren may come to their own.

The rapid encroachment of the London music halls upon what has heretofore been regarded as the special province of the theatre, is emphasized by the announcement of a regular four-act drama at one of them. This is "The Life Guardsmen," a piece which has been immensely successful in the English provinces. In order to comply with the Lord Chamberlain's rules, it will be played in "one continuous turn," which means that the curtain will not be dropped between the acts. There will also be three or four short vaudeville acts on the programme. The result of this experiment will be watched with liveliest interest by West End managers, some of whom are beginning already to groan over the prospect of an inevitable drop in theatre prices. The public need not waste any sympathy upon them. If they wish to maintain the old breadth of distinction between the theatre and the hall, they will have to provide a superior kind of entertainment, with which the cheaper houses cannot hope to compete. The rivalry will benefit both drama and playgoers in the long run.

Music

"THE JEWELS OF THE MADONNA."

Not the least of the factors which contributed to the sensational success of Mascagni's "Cavalleria Rusticana" was the intermezzo. As a rule, the ordinary opera-goer is not supposed to care much for the orchestra, his attention being fixed mostly on the singers. In this instance, however, the orchestral interlude pleased even more than the singers, being redemanded at nearly every performance abroad as well as in this country. A dozen imitators have since followed Mascagni's example, some of them with success. The latest to do so is Ermanno Wolf-Ferrari. His opera, "The Jewels of the Madonna," has two intermezzi, and at its New York première, given at the Metropolitan last week by Mr. Dippel's Philadelphia-Chicago Opera Company, insistent applause

compelled the repetition of both of them. They did not deserve such a reception, except as a tribute to Cleofonte Campanini's remarkable skill as a conductor. Intrinsically they are among the poorest pages in the score, and both of them were obviously prepared after the recipe which Mascagni had found so useful in starting applause.

It is not only in his intermezzi, however, that Wolf-Ferrari has joined the "Young Italian" faction. His whole opera belongs to the "Veristic" school, both in its story and its music. Nor is it difficult to understand how he came to throw such a somersault—for a somersault it is. He had written two comic operas, "Suzanna's Secret" and "The Inquisitive Women," in which he did his best to revive the semi-colloquial style of the old Italian opera buffa and of some of Mozart's pages; but neither the countrymen of his German father nor those of his Italian mother took any interest in his production. Apparently, he thought the matter over, and concluded to attract attention to himself at all cost by setting a yellow story to garish music. The result was "The Jewels of the Madonna."

From the purely operatic point of view it must be conceded that his libretto is excellent; it is effective, it calls for musical treatment, and it has literary merit. The composer himself constructed the plot, entrusting the versification to two collaborators. Naples is the background, and the principal personages are Rafaele, the chief of the Camorrists; Carmela, a widow; her son, Gennaro, an ironworker; and Maliella, a beautiful and wilful foundling. She and Gennaro have been brought up thinking themselves sister and brother. When he discovers the truth, he promptly falls in love with her. She, however, has just become madly infatuated with Rafaele, whom she coquettishly teases until, in a moment of bravado, he offers to steal for her the jewels of the Madonna—the dazzling image which is just being carried along the street in a religious procession. He has no idea of carrying out this promise, but Gennaro, who has heard his words, in despair does commit the theft. He brings the jewels, lays them at her feet, and she, dazed in spite of her terror, puts them on. The excitement is too much for her senses; she falls into a mystical trance, and, thinking she is with Rafaele, loses consciousness in Gennaro's arms. Retribution comes in the last act. She flees to the haunts of the Camorrists. Rafaele, guessing from her actions and words what has happened, spurns her, whereupon she throws herself into the sea, while Gennaro, left alone by the Camorrists, stabs himself before a shrine of the Virgin.

Obviously, this story is quite in the latest Italian fashion. So is the music. There are echoes in it of various composers, from Mozart to Bizet and Richard Strauss. The Madonna's image made the composer remember one of the themes in Massenet's musical miracle play, "The Juggler of Notre Dame." But it is chiefly in the footsteps of Mascagni and Puccini that Wolf-Ferrari treads, piling effect on effect, as called for by the ghastly, sanguinary story. Unfortunately, he has not the melodic gift of Puccini, or even of Mascagni. The melody of Mascagni may be vulgar, but it is at any rate his own, and Puccini's also has a strong individual style. In "The Jewels of the Madonna" melody flows freely—much more freely than in Wolf-Ferrari's earlier operas—but it is for the most part commonplace. As exceptions may be mentioned a religious chant sung by the kneeling populace at the opening of the opera; Gennaro's duet with his mother, and his serenade in the second act; perhaps, also, his appeal to the image of the Virgin for forgiveness, before he commits suicide.

Technical skill is displayed in the festival turmoil, where several musical streams mingle with street cries. There are effective dances, and the Neapolitan local color is perhaps reflected as truly in the music as in the libretto—which, by the way, the composer has supplied with an abundance of detail, leaving little to the imagination of the scene painter and stage carpenter. The most disappointing pages of the music are the love scenes. The composer seems to lack the faculty (which constitutes the strength of Puccini) of making an ordinary melody emotional and stirring by the use of chromatic or ultra-modern harmonies and modulations. In a word, while superficially effective and likely to evoke loud applause for a time, "The Jewels of the Madonna" is far from being a masterwork. Its lack of originality dashes the hope that Wolf-Ferrari might prove the coming man in the operatic world. It is possible, but not probable, that a second hearing of the work, which is to be repeated at the Metropolitan next Tuesday, may mollify this verdict.

Massenet has been engaged for some years in writing his memoirs. They will be printed in *L'Echo de Paris* before appearing in book form.

In "The Irish Harpers," announced by Dutton, Mrs. Charlotte Fox seeks to revive an interest in what was once a national instrument in Ireland.

J. S. Bach's Passion Music According to St. John, with full orchestral accompaniment, will be sung by the Bach Choir in Westminster Abbey on March 29. The conductor will be Dr. Hugh P. Allen.

A German periodical, *Die Woche*, offered $3,000 in prizes for new military marches. The number of manuscripts received was 3,791. The first prize, $750, went to Hans Ailbout of Berlin.

The Brahms Festival concerts, which will be at Carnegie Hall, are set for Monday evening, March 25; Wednesday and Friday afternoons, March 27 and 29, and Saturday evening, March 30. The Oratorio Society will sing the "Song of Triumph," "Nänie," and "A German Requiem"; the Symphony Society will play the four symphonies and other works, and the soloists will include Mme. Matzenauer, the German contralto, of the Metropolitan Opera Company; Efrem Zimbalist, the Russian violinist; Wilhelm Bachaus, the German pianist, and others. The orchestral works will be conducted by Walter Damrosch, and the choral compositions by Frank Damrosch.

It is announced that the newest work of Richard Strauss will be produced at the end of October at Stuttgart in the smaller of the two new Court Theatres, which are being built on the plans of Professor Lipmann of Munich. The one-act opera with a text written by Herr Hugo von Hoffmannsthal is entitled "Ariadne auf Naxos," and is described as a "Divertissement als Nachspiel" to Molière's "Le Bourgeois Gentilhomme." There will be a Strauss Festival at Stuttgart with three performances of the new opera, two of which will be conducted by Herr Strauss himself. The principal parts for women will be taken by Mme. Destinn and Fraulein Frida Hempel, and the arrangements will be in the hands of Prof. Max Reinhardt.

The performances of Wagner's "Tristan und Isolde," in Boston, according to the *Transcript*, "interested the town more generally than any production the company has made." Reading this sign of the times, Mr. Russell has announced that he will add to his list, next season, Wagner's "Meistersinger." Mozart's "Don Giovanni" and Charpentier's "Louise" will also be staged. Mr. Parker recalls the great New York cast of Mozart's sublime masterwork, when Mahler was the conductor, and the singers were Eames, Gadski, Farrar, Scotti, Bonci, Chaliapine. As a matter of fact, "Don Giovanni" might have been given this season with an even greater cast than that. The public would have been overwhelmed with delight—but the public is not managing the Metropolitan.

The Covent Garden opera season in London will last fourteen weeks (from April 20 to July 29), as against New York's twenty-two weeks. Among the sopranos who will appear during the season are Mme. Melba, Mme. Tetrazzini, Mme. Emmy Destinn, Mme. Edvina, Mme. Salzmann-Stevens, and Mme. Tarquinia Tarquini, an Italian newcomer to Covent Garden, who will create the leading part in "Conchita," and who will also appear as Carmen. The contraltos include Mme. Edith Clegg, Mme. Dilys-Joncs, and Mme. Kirkby Lunn. Many new names figure in the list of tenors, including Giuseppe Cellini, A. Gaudenzi, André Gilly, Ippolito Lazaro, and Giovanni Martinelli, who will create the tenor rôle in "Giojelli della Madonna." Among the tenors who have been heard at Covent Garden before will be Bertram Binyon and John McCormack. The baritones and basses include M. Marcoux, M. Sammarco, and M. Van Rooy, as well as two newcomers, Franz Kronen and Virgilio Romano. The conductors will be M. Campanini, Paul Drach (Stuttgart), M. Panizza, Percy Pitt (the

musical director of Covent Garden), and Dr. Rottenberg (Frankfort).

Art

English Ironwork of the XVIIth and XVIIIth Centuries: An Historical and Analytical Account of the Development of Exterior Smithcraft. By J. Starkie Gardner. With 88 collotype plates from photographs chiefly by Horace Dan, Architect, and upwards of 150 other illustrations. New York: William Helburn. $16.80 net.

A small but increasing number of Americans who believe that architects and builders should spend more money on decorative ironwork will welcome this authoritative work by the author of the smaller handbooks on ironwork at the Victoria and Albert Museum. It is a book that dignifies the smith, without sentimentalizing him. It adds point to the argument of those who find encouragement in the considerable beauty of the wrought-iron gates, grilles, screens, and reinforced woodwork of the remodelled United States Military Academy, of Princeton University, and many recent American churches. For the lesson of the splendid outburst of smithcraft which Mr. Gardner describes is that, among a people whose ironwork for centuries has been contemptible, only an enlightened leadership and fashionable favor may be required to create almost instantaneously a school of superbly capable artist-artisans:

> The arrival from over sea of an exalted patron (William III) and a talented French Protestant refugee sufficed to wake the dormant or liberate the pent-up talent of the English smith. Without previous opportunities or education the skilled labor the Frenchman Tijou required seems to have been at once at hand, enabling him to accomplish work that in every detail has never been surpassed.

Ornamental ironwork, which was produced extensively in England in the Middle Ages, became a decadent art under the Tudors. Its revival began in 1689 when there came "Monsieur Jean Tijou," a Huguenot designer and protégé of the new King and Queen. Wren seems to have resented his presence, but elsewhere the newcomer found abundant favor. Curiously enough, though his is the greatest name in British ironwork, this artist refugee was but an indifferent blacksmith. He had not learned the trade. His own art was embossing. Comparison of his published designs for iron gates with the gates themselves shows that often important features proved impossible to execute and were modified by smiths who knew better than the master just what could be done with wrought iron. Tijou had, nevertheless, great constructive and executive genius. He was a born "works manager." In addition to ironwork placed in St. Paul's Cathedral during seventeen years' continuous employment, Tijou took commissions from many wealthy patrons, and, incidentally, trained several able craftsmen. These followers—Bakewell, Roberts, Edney, Buncker, and others—made the most of a fashion which for a time resembled a craze. Enough of their work is shown in illustration to prove that Mr. Gardner does not overstate its excellence.

The period of sumptuous projects in iron was short, nevertheless. So far as the nobility was concerned, the iron gate lost caste about 1730. The park without a fence suddenly became the sign of a great man's simple trust in his neighbors. The influence was felt of the architect Kent, who abjured the straight line and the formal garden and who would "scarce have left an acre of shade or trees three in a line from Land's End to Tweed." The middle class, however, did not drop the blacksmith so abruptly. Throughout the eighteenth century much good ironwork was executed to close the entrances of London and provincial residences. This craftsmanship was usually plain and severe, in contrast to Tijou's ornate efforts. As cast iron came in, the art deteriorated. Its debasement, Mr. Gardner asserts, was helped on by the increasing influence of professional architects. "By them the 'maître ornamentiste,' or professional craftsman and designer, the very originators of all applied design, were finally suppressed and squeezed out of existence, the result being, within a few decades, the utter collapse of all art in the country in the early Victorian days."

In describing the remains of the efflorescence of decorative iron Mr. Gardner deals chiefly with outdoor examples, which are more accessible and more liable to disintegration. His chapters, always vigorously and interestingly written, cover not only gates and fences, but also balustrades, balconies, stair ramps, grilles, lamp-holders, iron signs, weathercocks, and vanes. This volume, it is intimated, may lead to one on interior ironwork.

"American Church Silver of the Seventeenth and Eighteenth Centuries, with a few pieces of Domestic Plate, Exhibited at the Museum of Fine Arts, July to December, 1911" (Boston: The Museum), makes a notable volume in the history of American silversmithing, although the title does not show its restriction to the New England States. It contains thirty-eight pages of reproductions of silver, with a few copies of bills and coats-of-arms. The introduction on the early silversmiths of Connecticut is by George Munson Curtis of Meriden, himself a member of a firm of silversmiths. Mr. Curtis recognizes the fact that silversmiths could not have depended on their craft in those days, and as a result "these silversmiths, in order to eke out a living in communities that were not lavish in accumulating their work, were obliged to turn their attention to various other trades. Some were clock and cabinet makers, others were blacksmiths and innkeepers, and some were undoubtedly, to use a homely phrase, jacks of all trades. Many of them advertised extensively in the weekly press, and these appeals for custom vividly illuminate the social and domestic demands and requirements of their patrons, and present striking pictures of the times." Among the prominent apprentices were William Cleveland, 1770-1837, grandfather of the late President Grover Cleveland. Then follows a List of Plates and Explanation of Terms, by Miss F. V. Paull. This classifies the spoons from the first quarter of the eighteenth century to the first quarter of the nineteenth century. The catalogue of New England silversmiths contains, among others, the names of Daniel Boyer, Zachariah Brigden, Benjamin and Samuel Burt, John Cony, who made the only decorative piece of silver, a coffer copied from an English example, William Cowell, John Dixwell, son of the regicide, Jeremiah Dummer, John Edwards, Stephen Emery, George Hanner, Daniel Henchman, William Homes, John Hull, the first silversmith and coiner in Boston; Robert Sanderson, his partner; Jacob and Nathaniel Hurd, Cornelius Kierstead, who was Freeman of the city of New York in 1702; Knight Leverett, nephew of the president of Harvard College; Samuel Minott, William Moulton, John Potwine, the Reveres, William Simpkins, William Swan, Andrew Tyler, Samuel Vernon, and Edward Winslow.

The book concludes with a list of American silversmiths, but most of these were simply spoon-makers; those who made all kinds of silverware usually dwelt in the large cities. The one feeling created by this collection is the sameness of the vessels, the beakers being the ordinary vessel in use for the cup, which, with the tankards and other household utensils, filled the wants of the people.

Wilton Lockwood's recent exhibition in Boston displays a visible difference in quality between his present and his earlier portraits. This difference is not so much in change of style as in increase of skill, shown in the modelling of faces, the close perspective of figures and backgrounds, the steady improvement in warmth of coloring. Although Mr. Lockwood exhibits a few studio pieces, they serve on the whole to show him chiefly a portraitist. The best of them is a study of an old man, whose hair and beard and heavy eyebrows, whose wrinkled and yet still ruddy skin, whose weary and patient eye, could scarcely be better given. The portraits show a variety of types, closely studied and well rendered. Mr. Lockwood's gamut is wide, and if his art is without striking excellencies, it has sense, sureness, and clear perception of both outward and inner characteristics.

Prof. Kuno Francke, as curator of the Germanic Museum at Harvard, reports that for architect of the new building, which will be erected on the corner of Kirkland Street and Divinity Avenue, Prof. German Bestelmeyer of Dresden has been chosen. The exact date when ground will be broken for the building has not yet been settled. The gifts which have recently been made or

promised to the Museum include: From Johann Albrecht, Duke of Mecklenburg, a bronze copy of the Brunswick Lion, the bronze monument erected in 1166 by Duke Henry the Lion of Saxony in front of Brunswick Castle as a symbol of his territorial sovereignty; from Prof. Hugo Lederer of Berlin a cast of his colossal statue of The Fighter, recently exhibited at the Paris Salon; from the Provincial Government of Rhenish Prussia a collection of casts of monumental and architectural sculpture of the Rhineland from the Romanesque period to the Renaissance; from the Society of Arts and Crafts of the Rhineland and Westphalia a similar gift representing the development of the industrial arts in western Germany in the Middle Ages and the Renaissance—the two collections together will contain about twenty large and forty small objects.

W. Harcourt Hooper, who died recently in his seventy-eighth year, was in his day a wood engraver of distinction. From 1891 to 1896 he was engaged at the Kelmscott Press, and previously had done excellent work for noted artists.

Frederick Keppel, importer of pictures and writer and lecturer on art, especially on etchings and engravings, died suddenly at his home in New York on Thursday of last week. He was born sixty-seven years ago at Tullow, Ireland, and was educated at Wesley College, Dublin, and in England. Recently he wrote a book in which he described his friendship with Whistler. He was the father of Frederick P. Keppel, dean of Columbia College.

Bruce Home, one of the authorities on the history of the city of Edinburgh, died about a fortnight ago, in his eighty-second year. He is remembered chiefly for a series of drawings of "Old Houses in Edinburgh."

Finance

STOCK MARKET PROPHECY.

That prices on the financial markets, here and abroad, should not have declined decidedly on the depressing news of the past two weeks, might readily enough have been accounted for on the ground that the stock exchanges had already "discounted" the news. But it is usually a reasonable inference that if prices actually advance under such circumstances, it is a sign that the stronger part of the financial community is anticipating better things. To ascribe a movement of the sort wholly to professional speculators—people who had "gone short" of stocks on belief that the real investing public would take fright and sell, and who had been forced to buy back the stocks when the public refused to perform its allotted task—provides no conclusive explanation. It merely shifts the argument to the question, why the heavy liquidation of real stock, which the speculators had predicted as a result of the month's bad news, did not put in its appearance.

That phenomenon can hardly be explained except on the ground that the financial public thought prices low enough, even in the face of the unpleasant news, and was not disposed to part with its holdings, even at a somewhat higher range of prices. Such an attitude might have had its basis in the feeling that stocks had gone to the recent low values because exactly such news had been expected. Or it might have been grounded on the logic that, with money commanding only 3 per cent. in the open market, it was not advisable to turn dividend-paying shares into ready cash. Or it might have been induced by an underlying idea that affairs in finance and trade had already reached their own low point of reaction for the present, and were likely to show betterment in the not very distant future.

It is one or the other of such considerations as these, but more usually all of them combined, which give such value as they ever possess to the prognostications of the Stock Exchange. For if the great body of investors (which comprises the mass of experienced business men and corporation managers) believe that all of the bad news has been "discounted" in prices, then they can hardly believe that much worse news is just ahead. If they find that money is so easy as to encourage purchases of stocks of business corporations, they should logically be encouraged also to put money into their private business. And if they really are convinced that a turn for the better is at hand in general industry, there is certainly nobody who has better means of forming such opinion.

This is why practical business men who never speculate, and who may not be large investors in securities, look constantly to the stock market's fluctuations for light on the outlook in their own affairs. The main reservation which experienced people make in drawing conclusions from the market's action, arises from the question whether the turn for the better is to be only momentary, or is to mark a decided change in the general situation. That will in most cases be determined by the action rather than the inaction of the outside investing public, when the speculators have halted in their tentative manœuvres.

The advance in prices after the Steel Trust suit was announced last autumn, which was based on just such expectation of better business, continued precisely two weeks, then ceased as suddenly as it had begun. In 1904, it continued from the middle of July up to the last weeks of December. But the trade revival which followed the stock market's advance in last November was similarly brief, whereas the Wall Street rise during 1904 preceded the continuous industrial expansion of the next two years.

If, then, one is to ask what tangible signs of business improvement are in sight, there may be pointed out two different sorts of indications, which may be classed as positive and negative. There is, for instance, last week's 10 per cent. estimated increase over 1911 in the checks drawn on all the country's banking institutions. In last week's cotton trade compilations, there was abundant evidence that the Northern spinners were making up for the small volume of their purchases earlier in the season. Their takings of cotton the past week are more than three times as great as in the same week last year; in the three past weeks they have taken 293,000 bales, as against the same period's 68,500 bales purchased in 1911. Even in the active trade of this season in 1907, the Northern mill takings of the same three weeks were only 214,000. This must have meant expectation of improving trade.

These comparisons plainly show the trend of things in one trade; whether the fortnightly railway car returns were equally significant, might be a question. On their face, the figures are very striking. They not only showed the number of idle cars to have been nearly cut in half since the preceding statement, but the total of side-tracked equipment was, with the exception of a single week, the smallest since November, 1909. Since the present year began, the idle cars have been reduced from 135,900 to 7,800, whereas in the same period a year ago, they rose from 106,900 to 189,800. But the present showing is probably complicated by the abnormal Western weather and the slowness of transportation. On the other hand, the Steel Corporation's monthly report of unfilled orders on its books, given out last week, showed increase of 74,479 tons during February. This is less brilliant than the 294,000-ton gain of January, but it leaves the largest total since 1909.

The rise or fall of the country's monthly iron output is ordinarily a sign of underlying tendencies in trade, and the fact that February's average daily production was the largest since June of 1910 is at least suggestive. A full year's output at the February rate would be 27,000,000 tons, whereas the largest actual yearly product of the past was 27,303,000. Along with this it must be considered that the Western farm communities have sold at highly remunerative prices the bulk of their grain crops of 1911, and that the Government last week figured out the smallest unsold reserve of wheat since 1905 and the smallest reserve of corn since 1904. Experienced Western observers are inferring good results from this, even in politics; for contentment or discontentment in the agricultural States has often been a decisive factor in a campaign of political agitation.

All these factors are no doubt embodied in the less tangible expression of

belief that what we call "business sentiment" is changing for the better. The following extract from a private letter to its clients, by one of the largest mercantile houses in the interior trade, whose army of salesmen regularly report to it on such matters, is one illustration:

General business seems still to be very quiet all over the country. Sentiment, however, does not seem to be pessimistic in the least. On the contrary, business men appear to be only waiting for further developments.

I do not believe that the fact that this is a Presidential year has had much if any effect upon general business as yet. In fact, I believe that the possible disturbance of such a contest has already been discounted. In the same way, also, I believe that the pending plans to revise the tariff have played little part in holding back general business. There are always people who look for the worst to happen from such a readjustment, but my investigation leads me to believe that the great mass of people are not paying the slightest attention to the stories respecting the direful things which may happen if the tariff is reduced.

CHARLES DICKENS AS EDITOR

NEARLY 400 HITHERTO UNPUBLISHED LETTERS OF DICKENS.

Edited by

R. C. LEHMANN of "Punch"

This most important of the Dickens Centenary publications contains some 400 letters of the great novelist, only a handful of which have ever before been published, and all of them written at the most interesting period of his life. They voice Dickens's intimate opinions on his literary contemporaries and things in general. One group of them tells of his second American tour.

(Cloth. Crown 8vo. Photogravure Illustrations. Boxed. $3.25 *net, postpaid* $3.45.)

STURGIS & WALTON CO.

31-33 East 27th Street, New York

THE LIFE OF GEORGE BORROW

Compiled from Unpublished Official Documents. His Works, Correspondence, etc.

By HERBERT JENKINS

8vo. 13 *Illustrations.* $3.50 *net.* (*By mail* $3.75.)

The only adequate and complete biography of the remarkable "gypsy," philologist, and traveller. The author has had access to the most valuable material and it is believed that this may be regarded as the definitive life of the author of "Lavengro."

EUROPEAN BEGINNINGS OF AMERICAN HISTORY
By ALICE M. ATKINSON
Illustrated. $1.00.
Miss Atkinson's new book makes it clear to the child that the beginnings of American ways will be found far back in the story of the world. In a simple and vivid narrative, England has been made the connecting link between America and those European countries which have influenced our history. Primitive man, Rome and Greece, the Northmen, the Church, and the Crusades enter in this way, as well as mediæval life in town and country. The book is especially in line with the suggestions of the Committee of Eight for the teaching of history in elementary grades.

JUST PUBLISHED *HARVARD ECONOMIC STUDIES, VOLUME VII*

THE HISTORY OF THE BRITISH POST OFFICE

By J. C. HEMMEON, Assistant Professor of Economics in McGill University

8vo. Cloth. $2.00 net

A general survey of the development of the British Post Office from its infancy to the present time is presented in the first four chapters of this volume. The remaining chapters are concerned with a more detailed description of the different functions and activities which accompanied and largely constituted its development. These latter chapters include such subjects as Sailing Packets and Foreign Connections; Rates and Finance; The Telegraph and Telephone Systems; The Question of Monopoly and The Relations of the Post Office with the Telephone Companies.

For Sale

FOR SALE, AT POINT LOOKOUT, Isle au Haut, a cottage and a lot of about four acres. Cottage has large sitting room, writing room, and two bedrooms on the first floor, and five bedrooms on the second flour, four bathrooms, and all modern conveniences. It commands, from the windows, views of the Camden Hills, Deer Isle, and the mountains of Mt. Desert. The climate is the best on the coast—excessive heat is never known, and, being twenty miles from the mainland, the climate is exceptionally equable, the variation at times in twenty-four hours being even less than two degrees. The island is about 7 miles long by 2 miles wide, and the summit of the mountain is about 600 feet above tide. A fresh water lake, of more than a mile in length, is stocked with land-locked salmon. A road of thirteen miles around the island affords charming views, and gives access to cliffs rivalling those of Mt. Desert. For terms, apply to Ernest W. Bowditch, 60 Devonshire Street, Boston, Mass. Walter C. Harris, 750 Bullitt Building, Philadelphia.

For Rent

FURNISHED HOUSE in Cambridge, Mass., next the Longfellow House, to rent for winter season 1912-13; 4 master's living rooms, kitchen, laundry, and drying-room; 6 master's bedrooms, 2 baths, 3 servants', and 1 trunk-room. Occupancy given after August 1, 1912. Apply to owner at 113 Brattle Street.

Published by THE MACMILLAN COMPANY 64-66 Fifth Ave. N. Y.

The Nation

NEW YORK, THURSDAY, MARCH 21, 1912.

The Week

President Taft is a most vexing man to attack. He does not explode, nor go off half-cocked, and has a very exasperating way of keeping quiet under repeated challenges and demands and taunts. But just as his enemies are joyfully proclaiming that they have got him cornered and defeated, and are filled with glee at the great "issue" they have made against him, he comes out with a calm statement which sets the whole matter at rest. This is what Mr. Taft did on Monday in his address to the Massachusetts Legislature on the subject of Presidential primaries. His personal attitude was that of welcoming them wherever, as by the new Massachusetts statute, they can be properly safeguarded and made actually to express the will of the rank and file of the party. But he pointed out, what everybody knows to be the fact, that in the majority of the States it is impossible to procure such legislation in time for use this year. There are, however, existing primary systems in nearly all of the States for the election of delegates to the National Convention, and with those we must for the present get along as best we can. For thus frankly stating his position, the President was enthusiastically applauded by the Legislature, as he was, indeed, at all his appearances in Boston. It will be noted, also, that he received words of the warmest approval from Cardinal O'Connell, in flat disregard of Oyster Bay's proprietary rights in all Cardinals.

It would be premature to say that the Roosevelt movement is failing, but the fact is plain to all that it is not going ahead with the rush and roar predicted. And in the Colonel's case, the psychology of the crowd is a vital element. If he does not appear to be winning, there is imminent danger of his losing. When it cannot be said that his boom is going strong, then it must be admitted that it is going feebly. For the whole campaign for him was based on the theory of prairie-fires and earthquakes. The country was instantly to blaze and quiver when he announced his candidacy. But it did not, and it does not. Even the early blare is dying away, and the delegates continue to be instructed for Taft with monotonous regularity. His score now is about 130 to Roosevelt's 12 or 14. And in the States of large population and many delegates—New York, Pennsylvania, Illinois, Indiana—there is no sign of anything more than scattering and ineffective support for the Colonel. Even in far Western States, which were expected to give one shout for him and then all would be over, strong opposition to him is being manifested. In Indiana, the *Star* chain of newspapers has dropped the Colonel. If this sort of news keeps on coming day after day, his boom will begin to look sickly.

The La Follette factor in the Republican nomination quarrel came into distinct prominence with the publication of the Wisconsin man's open letter to the Republican Progressives of North Dakota, followed by his victory in the primaries. When Roosevelt became President, he says, the capitalization of the Trusts and great railway combinations was $3,874,000,000; "when he turned the country over to Taft, whom he had selected as his successor, the total capitalization of the Trusts and combinations amounted to the enormous sum of $31,672,000,000, more than 70 per cent. of which was water." And he declares the oppression of the people by the special interests that have been thus swelling visibly under the eyes of the Colonel and his "selected successor" to be the "one great issue overshadowing and including all others." For cold-blooded promptness in abandoning a man you have been professing to support, the instant he got into trouble, the shuffling-off of La Follette by the Rooseveltian Progressives would be hard to match. "Here's your hat—what's your hurry?" is not regarded as the most civil of all ways to get rid of a man of whom you have had enough; but it is the pink of politeness in comparison with what was done to the Wisconsin Senator by men who, only a day or two before, had professed to be his enthusiastic followers. Now comes the revenge.

It is stated on behalf of Mr. Woodrow Wilson's managers that they regard the result in Kansas as a good deal of a victory, because, although the delegation stands committed to Champ Clark for first choice, it is pledged to Woodrow Wilson for second choice. To our mind, there is even more reason than this for satisfaction in the case. To be the first choice of the profound statesmen who concocted the platform adopted by the Kansans would be a weight heavier than Mr. Wilson, or any other respectable candidate, ought to find it agreeable to be called upon to carry. Their programme includes, among other things, the Sherwood pension bill, which, of course, suits Champ Clark down to the ground, since he ostentatiously stepped down from the Speaker's chair for the purpose of having his vote recorded in favor of it. It calls for the election of Federal judges by direct vote of the people, and of Interstate Commerce Commissioners by the same method; and, since it also demands "the recall of public officials when they have become derelict in duty," it seems a safe inference—putting this and that together—that these true friends of the people don't propose to stand any foolishness on the part of the men whom the people have drest in a little brief authority to look into railway rates for them. The "initiative and referendum in all lawmaking" is their modest demand in that direction.

The proposal to provide by act of Congress for an extension to coal-mining of the arrangements for averting strikes which are furnished by the Erdman act in the case of interstate railways is worthy of the most serious consideration. The question of industrial peace or industrial war in a labor dispute often turns on the possibility of getting upon the dispute the light of a disinterested inquiry and the judgment of a set of men in whom both sides have a reasonable degree of confidence. In the present disagreement between the anthracite mine owners and the mine workers, while both sides have thus far seemed determined to stick to their positions, there has been apparently more readiness to make plain statements of the reasons for their attitude than used

to be exhibited in former times, and this is the next thing to a willingness to have the quarrel looked into by some impartial body. So far as the province of the Federal Government is concerned, the supply of coal may be ranked with the railways themselves as an indispensable part of the machinery of interstate commerce, and the providing of an apparatus of mediation and voluntary arbitration to keep that machinery from being unnecessarily blocked would not seem to be an unwarrantable extension of Federal functions.

For the first time for some years, the Supreme Court has presented the spectacle of a decision of intense public interest made by a close division of its membership. By a vote of four to three, it sustained the claim of the holder of a patent to such powers of control as, in the judgment of the dissenting judges, constitute an unreasonable extension of monopolistic privilege. The point at issue was the right of the seller of a patent mimeograph machine to compel purchasers to use in connection with it only materials supplied by himself. Apparently, the central point in Justice Lurton's argument sustaining this claim turns on the fact that the patentee could, if he chose, under our law, suppress his patent altogether, neither selling nor permitting any one to use the patented things. Having adverted to this, he goes on to say:

> The market for the sale of such articles to the users of his machines, which by such a condition he takes to himself, was a market which he alone created by the making and the selling of the new invention. Had he kept his invention to himself no ink could have been sold by others for use upon machines embodying that invention. By selling it subject to the restriction he took nothing from others, and in no wise restricted their legitimate market.

That this view is not without color of reason may be admitted; but it is a case of stretching the evil side of a law beyond its necessary consequences, a defect often to be found in judicial decisions.

Remedial legislation following up the decision of the Supreme Court in the patent cases ought not to be allowed to slumber. What the judges so plainly indicated as desirable, Congress should not neglect. Long before the decision of the Court was announced, the possibility of harmful and oppressive monopolies in connection with the sale and use of patents had been foreseen, and bills had been introduced to prevent the evil. Last June, for example, two bills were offered by Representative Thayer of Massachusetts against "restrictions or discriminations in the sale, lease, or license of tools, implements, appliances, or machinery covered by the United States patent laws." By the same Congressman a bill was introduced on January 15, providing for the annulment of patents not made use of within three years from their date. Hearings have been held by the Judiciary Committee on these and similar measures, and a report and recommendations ought soon to be forthcoming. The matter is of the greatest practical importance. Thousands of manufacturers and business men are impatiently waiting for Congress to act, and if nothing is done there will be not only widespread disappointment but suspicion of corruption.

The Congregational minister who is president of the Ohio Constitutional Convention is a new type in our political life. The clergyman in politics has hitherto appeared in a non-official rôle, and almost invariably in connection with what are usually described as "moral" issues—the liquor problem, public gambling, the protection of women and children, and tenement-house reform. From their pulpits the clergy have begun to speak out on public matters that are not so distinctly "moral." The Rev. Henry A. Buchtel was Governor of Colorado from 1907 to 1909, but even Dr. Buchtel attained public office by way of the chancellorship of the University of Denver. Of the able way in which the Rev. Herbert S. Bigelow presides over the deliberations of the Constitutional Convention at Columbus, there are no two opinions. His opponents content themselves with asserting that his methods are as "practical" as those of any professional politician, and that he has at his finger ends the science of manipulating caucuses and packing committees. But it is also on record that Dr. Bigelow has repeatedly left the president's chair and by sheer eloquence from the floor has overcome hostile majorities.

Immediate results of the Chicago Civil Service Commission's investigation of the Police Department, now ended, are the dismissal or resignation of twenty-eight policemen, including nineteen inspectors, captains, lieutenants, and sergeants; the closing of numbers of dives and saloons; the abolition of the position of inspector; and clear proof of politics in the Department. The full report of the Commission will come later, but already the sincerity of Mayor Harrison in ordering the investigation has been shown. The work has been accomplished in six months at a cost of $50,000. The wealth of material unearthed by the Commission is illustrated by the fact that only a small part of the evidence regarding police laxity was used in the various trials of accused men. A more attractive picture is the exoneration of four sergeants and twenty-nine patrolmen against whom charges were filed. The Mayor gave no sign of yielding to the political pressure that was put upon him to stop the investigation, and promise of a far-reaching reform is the result.

The Seattle election took place two weeks ago; nevertheless, the actual figures relating to the single-tax vote—which were only very vaguely referred to in the press dispatches—seem to us interesting enough to mention. There were two single-tax propositions submitted, and they were numbers 1 and 2 in the list of 27 propositions to be voted on by the people, so that they had the most favorable possible place for attracting attention. Proposition No. 1, described as a "graduated single-tax plan," was beaten four to one, the vote against it being 31,450 and the vote in its favor 8,032; proposition No. 2, designated as an "immediate single-tax plan," fared better, but yet was beaten more than two to one, the vote being 27,820 to 12,191. As will be seen, the total vote on either proposition scarcely passed 40,000, though the total vote for Mayor was 62,808. In view of the tremendous effort that had been made by the propagandists of the single tax, and the wonderful stories of magical prosperity produced by the move in that direction across the Canadian border at Vancouver, the fact that only 12,000 voters out of the 62,000 that went to the polls yielded to its seductions is highly interesting.

It is easy to believe that Senator Smoot is well within the truth in his

statements regarding possible savings in the Government Printing Office. Ten million virtually worthless documents in Washington, the accumulation of seventeen years, must be typical of smaller but equally useless collections of the same kind all over the country. Every college library that has been made a depository of Government publications not only discards many of them as soon as they are received, in many cases without going through the formality of opening them, but has whole shelves filled with reports of one sort and another that nobody ever looks into. Even when reverence for the printed page amounts to an obsession, it ought to be possible to draw the line at some of the Government presses. The actual loss due to defective methods of distributing public documents is put at not less than $25,000,000 in the last seventeen years; the loss due to printing matter that should either never have been put in type or issued in small quantities is beyond accurate estimate, but must be immense. One weakness in the existing system is the discretionary power of the Public Printer in the expenditure of a million dollars a year for machinery and material, but the cardinal defect is the publishing and mailing of tons of useless matter. In its seven years' work the Printing Investigating Commission has effected a saving of several million dollars at trifling cost. By means of Senator Smoot's bill, providing for a permanent organization for the Government Printing Office, or otherwise, even greater economies should be assured.

Professions of abhorrence for lynchings and lynchers have been frequently made by individuals and associations. Unfortunately, such declarations have not always been lived up to when mob passion has been aroused. Yet we note with pleasure a plank in the platform which the Republican Convention of Tennessee adopted on Tuesday. It reads:

> We condemn and deplore the anarchy of lynching. No more terrible crime can be conceived and committed than that of the mob which interferes with the orderly processes of justice, takes prisoners from the custody of officers of the law, and visits red-handed and barbaric vengeance upon the heads of untried and unconvicted men. This is not a crime merely against the helpless and miserable victim, but it is an awful outrage upon organized society.

By the death of Rear-Admiral Melville the navy loses one of its ablest and most virile officers. Endowed with an active and original mind, he was for years a bureaucrat who refused to become a mere routine desk-officer or one subservient to the controlling naval influence of the day. Nobody could make him change an opinion once conscientiously held, or silence him by throwing out any suggestions that it would be to his advantage to keep quiet. Thus he stuck to his triple-screw-ship idea when everybody else opposed it. He never conceded that the Maine was blown up from the outside, not even when to think otherwise was almost equivalent to treason. His annual reports as Chief Engineer were models of frank discussion of the questions at issue. He never gave in to the big-navy mania, and only recently he stated again his opinion that the taking of the Philippines was a horrible blunder. Not being a self-advertiser, he was comparatively unknown to the general public. Yet his services as Chief Engineer entitled him to the highest recognition. As for his Arctic services, the history of Polar exploration contains no more moving story than Rear-Admiral Melville's part in the ill-fated De Long expedition, where he acted with clear judgment, dauntless bravery, and determination. It is a fine type of public servant who has thus passed from the scene.

It seems that there are distinctions in the delicate art of city "boosting." For several months we have found many columns in the journals of "greater" cities from Bear Trap, Me., to Orange Pit, Cal., filled with accounts of the prosperity, probity, and push of their citizens, with other alliterative qualities, making them famous above all other towns. Indeed, special "boosters'" editions have been a thriving crop in the South and West. But only recently have we learned that boosting is more than mere noise or display; even more than art. It is an exact science. Dr. George Vincent defined it in Chicago the other day:

> There are three kinds of city boosting, he said, the self-hypnotic, the deprecatory, and the constructive. The hypnotic booster feeds on imagination. He says the city is beautiful, and by dint of constant repetition becomes convinced that it is beautiful. Boosting is the apotheosis of mendacity. The deprecatory booster raises himself by pushing another city down. This is the manifestation of the old gang spirit—the conviction that "my gang is better than yours." The constructive booster elevates real and not imaginary things.

The Germans may be robust in mind and equipped with masculine good sense, but they also have temper, and that temper is apt to be sadly rasped by Mr. Churchill's plain, blunt statement that Great Britain must keep her navy 60 per cent. above Germany's. Let it be admitted that Mr. Churchill spoke good sense. Germany's programme of building ships against England is a hopeless one under any eventualities that can be considered within the range of probability; and undoubtedly it would redound to the benefit of the taxpayers in both countries if the mad competition should slacken or cease. But Mr. Churchill virtually asked the German Government openly to declare itself beaten and drop out of the race; and that is a suggestion which the German temper is hardly capable of receiving with good grace. The British First Lord of the Admiralty is no such novice in politics as to underestimate the necessity of conciliating national susceptibilities. Contrary to what he said, it does require careful negotiation to dispose of so delicate a problem.

No broad significance attaches to last Thursday's attempt upon the life of the Italian King. The popularity of Victor Emmanuel III, always considerable, has grown of late as a result of the revival of national feeling occasioned by the celebration of the semi-centennial of Italian union and by the war with Turkey. There have recently been fervent demonstrations of loyalty in Rome, and such exhibitions of popular feeling tend to encourage counter-demonstrations among the small class of half-demented and physically degenerate fanatics who voice their protests "against the present organization of society" with revolver or dynamite. In general, it may be observed that the anarchism of to-day is drifting away from the crude method of protest by individual assassination. The foe of organized society, anarchism is itself tending towards organization. The anarchistic virus has to a certain extent penetrated into the socialist and labor movements. The euphemistic phrase, "direct action," has grown familiar. But if direct action does employ dynamite and sabotage, it uses them as part of a campaign, not as an instrument for sporadic individual killing.

A QUESTION OF FUNDAMENTALS.

The resolutions adopted by the Union League Club in New York the other night, condemning the recall of judges and Mr. Roosevelt's plan of "reviewing at the polls the decisions of our highest courts upon Constitutional questions," are couched in strong language. They denounce these projects as "dangerous and revolutionary proposals which threaten to overthrow in a common ruin both justice and freedom." Yet these resolutions were offered as the result of careful deliberation by the club's committee on political reform, were accompanied by an elaborate report, and were adopted without a dissenting voice at the meeting of the club, at which the attendance was of unusual magnitude.

A favorite method of belittling the opposition to a radical proposal like that launched by Mr. Roosevelt is to charge the objectors with extravagance of language. They, it is said, talk of chaos, and anarchy, and the mob, whereas it is quite plain that no such convulsion would be precipitated by the adoption of the proposal. But in a case which involves the fundamentals of government, it matters little whether the language employed by the opponents of an innovation is overstrained or not. The real question is whether they are right or wrong in their conviction that the proposal does actually strike at a vital part of the organization of our government. If they are wrong in this belief, there is nothing more to say; but if they are right, then it is of little pertinence to point out that they might have put their condemnation in more carefully guarded language. When the members of the Union League Club speak of "proposals which threaten to overthrow in a common ruin both justice and freedom," they are not talking about things likely to happen in the next six months, or the next four years; they are expressing, with the energy and emphasis which are natural in such a case, the conviction that to preserve "justice and freedom" permanently, we must have a judiciary independent of popular clamor, and judicial decisions unreversible by popular vote. Not those are shallow and superficial who point to the danger that these changes threaten in the future, but those who, grasping at the first convenient instrument for hastening their immediate ends, ignore the larger elements on which depend the permanent safety and welfare of the country. The sentiment expressed by the Union League Club resolution and by Mr. Taft in his various speeches is, we are convinced, the sentiment of sober Americans generally.

There is in Mr. Roosevelt's proposal a certain wrongheadedness which would make its adoption peculiarly dangerous. In actual operation, it could hardly fail to be far more destructive of the idea of Constitutional restraint than would a proposal to take away altogether from the courts the power of passing on the Constitutionality of legislative acts. If the Legislature were expressly made the final judge in the matter, it would be a solemn matter of conscience, with such of the members as had a full sense of their responsibility, to let no bill pass which, in their judgment, was not in keeping with the Constitution; and indeed it has often been objected to the present system that this sense of responsibility is weakened by the knowledge that the final word is not with the Legislature, but with the courts. But under Mr. Roosevelt's plan there would be an express acknowledgment that the real criterion of Constitutionality was not that furnished by a judicial study of the statute and a comparison of it with the fundamental law, but by the will of the people as it is to be declared in a popular election. A legislator might think in his own heart that a bill was unconstitutional; he might be confident that the courts would so declare; but he might well say to himself that, after all, it is for the people to say whether that was *their* view of the Constitution or not, and it was not for him to interfere. Can it be doubted that this would soon become the normal attitude of Legislatures, when a majority vote of the people had become established as the final arbiter of Constitutional issues?

Now, the wrongheadedness to which we have referred consists in nothing less than forgetting what Constitutions are for. Their paramount object is to prevent the powers that be at a given time from doing what they are inclined to do at that time, if the deliberate judgment recorded in the fundamental law forbids it. The very time that this restraint becomes of importance is the time when the people are strongly bent upon doing the forbidden or questionable thing. Mr. Roosevelt's proposed plébiscite could do nothing more than record this desire once again, as it had already been recorded by the Legislature. Congress, by an overwhelming vote, passed the Civil Rights bill in Andrew Johnson's time; it was passed over the President's veto by a two-thirds vote of both houses. The Supreme Court pronounced it void; but there cannot be a moment's doubt that a popular vote would have triumphantly endorsed the action of Congress. The nation bowed to the Court's decision; and if the question were to come up to-day, after a lapse of more than four decades, the popular vote would be ten to one in favor of the Court and against Congress. But, whether right or wrong, the Court, by its construction of the Constitution, on a matter of immeasurable public importance, squarely blocked a policy which an overwhelming majority of the people were bent upon pursuing. There is no telling when a situation equally grave, and fraught with equally lasting consequences, may arise in the Union at large, or in any State; and, under the principle embodied in Mr. Roosevelt's scheme, the Constitutional barrier would be as though it were not. Under the principle of it, we say; since it is not only the mechanism of the particular scheme, but still more the principle manifestly underlying it, that would work the mischief. For, however much it may be disavowed, that principle is in fact nothing less than the principle that a Constitutional restraint shall operate only with the consent of the majority for the time being; in other words, that the restraint shall be removed at the very time when it is most sorely needed.

STRENGTHENING THE NEUTRALITY LAWS.

Nothing more gratifying has happened in Washington for many a day than the prompt response of Congress to the President's request for more power in dealing with the vexed situation on the Mexican border. What he asked for was virtually an amendment of the neutrality laws, enabling him to prevent the shipment of arms and ammunition into Mexico. This is no war measure. It is distinctly a means of preserving peace. Yet Congress showed itself both swift and hearty in acting upon this suggestion by the President. This gives the lie to two contentions which have been

commonly made: one being that Congress, and especially the Senate, cannot be got to act rapidly; and the other that the only occasion on which House and Senate will unitedly "stand behind" the President is when he asks for fifty or a hundred millions to make ready to go to war.

The case for such action as the President has appealed for and Congress is willing to take is wholy clear. Our existing neutrality laws are inadequate to meet the conditions on the Mexican frontier. The sections of the Revised Statutes of the United States covering the obligations of neutrality have been left behind by modern developments. It is made by law a "high misdemeanor" to fit out or arm vessels for service under a foreign Government or against it, as it is also to set on foot or equip a "military expedition or enterprise" against the rulers or the people of another country; and to the President power is given to use our land or naval forces to prevent these violations of neutrality. The statutes, however, do not cover the sale and shipping of weapons and ammunition to foreign belligerents. In case of actual war, they would, of course, be sold and forwarded subject to seizure as contraband of war. Even as the matter stands in Mexico to-day, such arms are sold and sent on at the owner's or purchaser's risk, since the agents of the Mexican Government would undoubtedly seize them if they could lay hands on them. But the border is long and cannot be thoroughly guarded. The facility with which guns and cartridges can be shipped across is notorious. In effect, this often amounts to much the same thing as equipping a military expedition. The rifles are got over the river at one point, the men at another; on the other side the men get the guns, and the mischief is done.

What President Taft now asks and what Congress has granted is power to prohibit the export of arms and munitions of war, whenever he shall find that "conditions of domestic violence exist in any American country," and also is convinced that such disorder is inflamed and prolonged by ability to obtain military supplies in the United States. There can be no question that such authority would be used discreetly by the President. Nor can there be any question that warrant in law to prevent "gun-running" over the border is what our Government needs in order to cope with the state of affairs along the Mexican line. The duty of the President in the premises is twofold. He should seek to restrain American citizens from meddling in Mexico, and he should strive to render every friendly service possible to a neighboring republic threatened with causeless revolution and something like anarchy. There is, unfortunately, evidence that some Americans are selfishly interested in stirring up trouble in Mexico. The clamor and pressure for intervention by this country have been highly suspicious. If the reports are only half true which say that a fund of $4,000,000 is lying in El Paso banks for the purpose of financing a Mexican insurrection, inquiry ought to be made what Americans have given any part of the money and for what purpose.

On the other side, the general interest of this country surely is that the Madero Government should be able to sustain itself and give to Mexico the assurance of stability. There is much loose talk about the peril of American citizens and investments in Mexico. As to the former, nobody but marauders or crafty revolutionists would harm them, since intelligent Mexicans understand perfectly that the surest way to provoke intervention would be to commit outrages upon Americans. It is this fact which leads observers who have just returned from Mexico to affirm that Americans are safer in that country than any other persons. And as for American capital in Mexico, there is no evidence that it is in danger, while there is, if not evidence, at least a strong suspicion that some American capitalists are scheming to increase the value of their Mexican holdings by forcing an American occupation or annexation. Against their subterranean plans, too, the power which the President has sought from Congress could be effectively used.

ACCIDENTS AND BROKEN RAILS.

The wreck of the New York Central's Twentieth Century Limited near Poughkeepsie, last week, as a result of a broken rail, was the fourth railway accident of the present year due to that cause, and a fifth was reported immediately after it from Iowa. That lives were lost in only two of these successive derailings on the Rutland, New Haven, Wabash, New York Central, and Chicago Great Western Railways, is no doubt reassuring. Such immunity is reasonably ascribed to the increasing use of steel passenger cars in place of the old-time wooden cars, where the danger in case of accident came mainly from fire, "telescoping," or flying splinters.

But it will hardly do to trust in such immunity. The Interstate Commerce Commission, in its annual report of last December, called attention to the "numerous and startling" increase in accidents due to broken rails. In the year ending with June, 1902, the Commission pointed out, only 78 derailments were thus caused, whereas in 1911 the total was 249. In the past decade, 2,059 accidents were thus accounted for by the Commission, and they resulted in 106 deaths and 4,112 cases of personal injury. In concluding that part of its report, the Commission strongly urged a Governmental investigation of the matter "on purely scientific lines" and not necessarily by the Interstate Commission itself.

The Commission's own experts have already taken up the matter of the Twentieth Century wreck; but we strongly agree with their recommendation of last December that the investigation should be conducted on a larger scale. It is time, in our opinion, that the public at large should know from a thoroughly competent and impartial board of inquiry exactly what is the matter. This is, indeed, all the more necessary, since the discussion is already complicated and obscured by controversy between the rail manufacturers and the railways.

The rail-makers contend, in general, that present-day traffic is too heavy for a rail which used to serve all necessary purposes, and the Interstate Commission itself, in reporting on one accident of last year, suggested that "possibly the maximum weight of power and rolling stock that can safely be used on rails of present-day manufacture has been reached, if indeed it has not been passed." But against this explanation, some railway men allege that the quality of rails turned out to-day is deteriorating, and the statement that last week's broken rail on the New York Central was not of the smaller weight, but was a 112-pound rail, the heaviest nowadays laid down, is of great significance.

The vice-president of the Great Northern Railway, replying to the argument of the steel manufacturers, lately made this public statement:

> We have found this year that 68-pound rails laid down twelve or thirteen years ago are giving better service than 90-pound rails laid down two or three years ago, and this under exactly the same conditions of traffic.

Mr James J. Hill supplemented this by the statement that "most mills turn out too large a number of rails in a given time. We are still using some Krupp rails made in Germany twenty-two years ago, and they are in better condition than most American rails bought in recent years."

Still more explicitly, in commenting on last month's conference on this very question between steel manufacturers and railway officers, the *Railway Age-Gazette*, a high authority, had this to say:

> One road which recently made a careful analysis of over 500 rail failures found that 95 per cent. of them would have been prevented by good practice in manufacturing. If the trouble is with the specifications it is inexplicable that under the same specifications, one of the Steel Corporation's own largest mills makes rails which break twice as often in proportion as do those made by another of its largest mills. If, on the contrary, rail failures are chiefly due to excessive fast rolling or other defects of mill practice, the fact that the record made by the rails from one of these mills is very much better than that made by those from the other is easily understood.
>
> The Steel Corporation, by the admission of its president, has not been and is not now performing its public duty of making safe rails. His attempt to put the blame on the railways fails, for it was because the steel companies were making poor rails that the railways began insisting on improvements in specifications and mill practice—improvements they have as yet been unable, chiefly because of the monopoly conditions in the steel trade, to obtain.

It will be seen that a further question of very large scope is involved in this last citation—whether quality of output does not suffer as a result of restriction or suppression of free competition in manufacture. Into this question, which concerns many other industries than rail manufactures, and which has highly important bearing on the familiar assertion that the "era of competition is dead" and fortunately so, we do not propose at this time to enter. There will be opportunity enough for that when the question is settled whether or not the pressure on powerful manufacturing combinations to turn out their product hastily, so as to swell volume of output and maintain dividends on an enormous capitalization, was an incidental cause of these recent railway disasters. In any case, a matter in which the safety and life of the travelling public, in every section of the country, are so seriously involved, must be taken up at once by the Government authorities.

SERVING THE PEOPLE FOR PAY.

Dr. Wiley's retirement from the Government service takes place under circumstances which make it impossible to judge to what extent official difficulties and to what extent pecuniary considerations may have influenced his decision. No one will question his motives. After thirty years' faithful labor at Washington he is entitled to consider himself at liberty to serve his private interests as best he can. The Chief Chemist is a man of sixty-eight, though few people would suspect this from the vigor with which he has fought in a good cause. Advancing old age has its claims, and, unfortunately, the United States Government has not yet seen fit to pension the men who have grown gray in its service, as do the English and other European Governments. Thus Dr. Wiley takes his place with the long list of judges who have descended from the bench to resume the practice of law, of Governors who have declined a re-election because their duty to their family—so the common phrase runs—makes it incumbent upon them to find employers who pay better than the State.

But it would be unjust to say that in this matter all the responsibility lies with the State or the nation. When judges and Governors are paid something more than what is just enough to attract mediocre talent, when a system of civil pensions offers public servants a guarantee against old age, it will still remain true that on a mere money basis the Government cannot compete with the private employer in commanding the services of the highest talent in the community. A man of first-rate ability in the Governor's office may be easily worth a million dollars a year to the State, but no Governor will ever receive a salary of one-twentieth that amount; whereas there are corporation lawyers who do approach within comfortable distance of that respectable sum. Evidently, then, other considerations must come into play. And as a matter of fact, they do come into play all the time. Zeal in serving the interests of the people, and the laudable desire for distinction and high office, are constantly bringing into the public employ men who perform their public duties at what we usually describe as a personal sacrifice. The question is whether the force of such motives among us is not growing weaker with time—whether the rise in the standard of living, or the growth of extravagance, as one may prefer to call it, is not exercising a steadily increasing pressure on public officials. The demands of a man's duty to his family are growing more severe until in some instances it should almost seem as though the family were one of the enemies of the State we have to reckon with to-day.

To speak of a good name as being better than riches sounds like copy-book sentiment in this practical age. But one wonders whether the truths that underlie the sentiment have entirely disappeared. When Justice Harlan died last summer leaving behind him an estate of less than ten thousand dollars, there was an outburst of admiration all over the country for this example of republican simplicity and public devotion. It called up Rome "in the brave days of old." The tributes to Judge Harlan's memory were the acknowledgment of a virtue which only a few of us are strong enough to emulate. But we prefer to think that there must still be many boyish souls upon whom the example of Justice Harlan fell with a fine moral glow. We believe that the spectacle of a Governor of New York struggling along bravely on a meagre salary exercises a tonic effect upon the entire body of our citizenship. We are convinced that the old, austere virtues hold an immense appeal for the masses. We find this exemplified to a considerable degree in the person of Mayor Gaynor. In spite of conspicuous defects of temper and judgment, in spite of a formidable talent for making himself ridiculous, it is not to be denied that the Mayor has impressed himself on people of this city by revealing some of those blunt and robust qualities which we also think of as honest qualities—that rasping, Catonian courage we associate with the good old times.

Now, it is true that a man will frequently take risks himself that he refuses to impose upon those who are dear

to him. Duty to the state will yield before duty to one's family. A loyal public servant may find the memory of his services and his loyalty enough to sustain him in contentment during a meagrely-financed old age; but what of his children? This is a practical question which can be met in a practical way. Putting it very bluntly, a good name can be capitalized. Given the initial advantage of education, is there no value to any young man starting out in life in his father's good reputation? It is not a question of a man finding his problem solved just because he is his father's son, but of more easily obtaining a hearing because he is his father's son. The history of American politics contains many instances of the practical value of a well-known and honored name. Thus in more than one sense the man who gives his best to the country does not leave his children destitute.

The problem is complex with so many factors, personal and public, ethical and prudential, that no man can be criticised for acting up to his own knowledge and his own conscience. One can only regret that bread-and-butter considerations should contribute in any degree towards depriving the country's service of the talents of a man like Speaker Reed, or Dr. Wiley, or—as seemed probable for a time—of Charles E. Hughes. But one would think that there were duties and opportunities from which no material consideration ought to separate a man. Who, at first blush, would not be proud to enjoy the opportunities for magnificent effort and a magnificent reputation that the building of the Panama Canal offered? Here was a task upon which the eye of the world has been fixed from the beginning; even the pay is not bad. Yet the first three men to whom this splendid opportunity was given, one after the other, retired to go into private employ at higher pay.

ANOMALIES IN PICTURE-PRICES.

That veteran critic and collector, Henri Rochefort, lately remarked of the price of pictures that it all *depends* upon the nail on which they hang. To apply the dictum to local conditions, if the nail is driven through the plush of a Fifth Avenue dealer, the dependent picture is appraised in five figures or in six; if the nail is driven through the plaster of some humbler establishment in a side street, the same picture is dear at three or four figures; if the nail belongs to a little dealer or an obscure auctioneer, the picture is worth whatever you will offer for it. In short, almost nobody buys pictures, and the startling prices that are daily recorded in the press are not paid for pictures at all, but for the glamour of accredited salesrooms, the suavity of great dealers, or the notoriety of the former owners.

Some recent events seem to bear out this rather cynical theory that the high prices are a result of pure snobbery. William M. Chase has just sold at auction a lot of canvases collected with the taste of one who is at once a great painter and an accomplished connoisseur. Well, this elect lot of pictures, representing many of the most prized deceased artists, average to bring about three hundred dollars apiece. And here immediately arises a paradox. For three hundred dollars you might perhaps buy some slighter work of a young American exhibitor in the Academy, but it would require several times that sum to buy a work of any American artist of established reputation. That is, at this sale one could have bought good paintings by painters whose fame is already historic for a fraction of the price of current work by actively productive men whose enduring quality is not merely problematical, but obviously doubtful. The conclusion seems clear that most buying of modern painting must rest rather upon friendship or caprice than upon taste, or that there must have been some especial reason why Mr. Chase's treasures brought only a fraction of their value. The inference seems inevitable that in the studio of a mere painter and man of taste they had been hanging upon the wrong sort of nails.

Other recent facts support this interpretation. To name certain sales of the artistic remains of multi-millionaires might be invidious. Suffice it to note that these sales contained many painters, the examples no better, represented in Mr. Chase's collection, and the prices were from five to ten times higher. What made the difference? Why, the knowledge that these multi-millionaire pictures had hung on very expensive nails, the comforting assurance that lots of money had been spent for the pictures themselves, and perhaps a corresponding misgiving that Mr. Chase had bought his fine pictures cheap. The Italians have a proverb about the sweetness of lips that have already been kissed, and clearly the American amateur has somewhat the same predilection for pictures already consecrated by the golden shower.

On the purely economic side the case is worthy of investigation. The enormous prices paid for pictures that happen to be hung on the right nail has actually depreciated the general art market. The great run of fine pictures not technically of the highest rarity bring less to-day than they did twenty years ago. The large dealers flourish while the multitude of little antiquaries who minister to collectors of taste and moderate means find it hard to make a living. For the astute amateur this spells opportunity, for art museums with limited funds it means impotence, for the general art market a degree of demoralization. In twenty years all art objects conventionally "of highest rarity" have appreciated about twenty-fold in price, while, as we have said, the general scale of value for merely fine works of art has probably been considerably lowered. The art market has abolished the comparative degree, and works only in the positive and superlative. The cause of this somewhat grotesque phenomenon is the presence of half-a-dozen collectors, mostly Americans and none of the finest taste. They pay without question any price that is asked for what seems to them a masterpiece, and their competition has sent a narrow line of art values soaring with a speed for which the Stock Exchange itself affords inadequate parallels.

The question is, How long will it last? Even æsthetically active multi-millionaires are mortal, and three or four deaths might knock the bottom out of the present inflated market. Not necessarily, however. There might be sons of like mind, or there might conceivably be new recruits of equally enthusiastic disposition towards the pictures that have hung on the right nail. Yet when it gets about that masterpieces of the most indisputable artistic value have all along been bought off the wrong nails for very moderate prices, the zeal for costly extraneities may wane. If this were to come about, there would certainly be temporary consternation where the right nails are at present driven, but it is hard to see that the

republic would thereby take either æsthetic or financial harm.

THROUGH THE OUTLOOKING GLASS

Soon they came to the top of the hill and Alice saw a large, heavy man with a genial smile standing on the lawn of the White House.

"That," said the Red Knight with a frown, "is a deceptive candidate for the Presidency."

"Why do you call him deceptive?" said Alice.

"Because he always says what he means," replied the Red Knight.

"But that isn't deceiving at all," said Alice.

"Yes, it is," said the Red Knight angrily. "A man like that deceives people's hopes for novelty and excitement. Now *I* am a receptive candidate."

"I don't know what that means, either," said Alice.

"It means," said the Red Knight, "a candidate who receives his views and his principles as he moves along. I am also a perceptive candidate because I am as quick as lightning at perceiving which way the wind blows. Furthermore, I am an inceptive candidate, and a susceptive candidate, and an acceptive candidate. That big man you see over there is my friend. But he has queer notions about some things. For instance, he says he'd rather be a White Knight than be President."

"Aren't you going to say 'Good morning' to him, if he is your friend?" said Alice.

"Oh, no," said the Red Knight. "I never do things like other people. I treat my friends and my enemies alike. I give them all a square deal."

"It seems to me, then," said Alice, "that what you want to do is to walk over and shake hands and say 'I hope you are feeling quite well, and here is a square deal for you.' "

"That would never do," said the Red Knight. "When I give a friend a square deal, I give it to him between his shoulder-blades, especially if he has broad shoulders like this man in front of us."

"I don't see that the size of the man's shoulders has anything to do with it," said Alice.

"That is because you have forgotten your geometry," said the Red Knight. "If you hadn't, you'd know that a square deal on the hypothenuse is equal to the sum of the square deals on the other two sides."

"Sometimes," said the Red Knight, "a situation arises where mere words will not do at all. Look at this paper, for instance."

"It's a telegram, isn't it?" said Alice.

"A special night-letter," said the Red Knight. "It's from the Prime Minister of Kansas. It says: 'When you take a third cup at breakfast, do you drink coffee like the plain people, or cocoa like the enemies of progress?' Now, words alone could not express my views on the subject. The only way I can answer this highly important question is like this."

And then, to Alice's astonishment, the Red Knight descended from his horse and stood up straight in the air on his hands, as Alice had frequently seen her little brother do in the back-yard at home.

"On the one hand," said the Red Knight lifting his right arm from the ground and tipping dangerously to the left, "I believe that the right of the common people to drink coffee in the morning is inalienable, and if the Constitution is in the way, it should be recalled. On the other hand," suiting his action to the word and tipping dangerously to the right, "if some people are put upon a cocoa diet by doctor's orders, they should be at liberty to drink cocoa even if they are rich. I think," concluded the Red Knight as he got to his feet quite breathless and very red in the face, "that the Prime Minister of Kansas will henceforth know how I stand upon the subject."

"I didn't know you were so clever at gymnastics," said Alice with sincere admiration.

"Oh, I am," said the Red Knight with an air of justified pride. "I am the only man in the country who can sit between two stools without touching either or falling to the ground."

"I don't see how anybody can do that," said Alice.

"I do it by sitting on my record," said the Red Knight.

ARE THE ENGLISH CRITICAL?—I.

Some rather large claims have been made of late for English literary criticism. A main purpose of Professor Saintsbury, for example, in writing his general "History of Criticism" was plainly to depreciate French criticism and critics, notably Boileau, and to exalt English criticism and critics, notably Dryden, Johnson, and Coleridge. "One of my subordinate (and not so very subordinate) objects in writing the larger book," he avows in his "History of English Criticism,"* "was to vindicate our literature from the charge of being second-hand and second-rate in this matter." Both the general History as well as this new volume, which is mainly extracted from it, strike one as examples of conscious, and even more perhaps of unconscious, chauvinism.

It would perhaps be possible to make allowance for Professor Saintsbury's personal and racial sympathies and antipathies, and so get the benefit of that "vastly extensive learning" for which Lord Morley rightly praises him, were it not that the sympathies and antipathies often color not merely his interpretation of the facts, but his statement of them. Thus he says that "Dryden declined to bow the knee to William of Orange, while Boileau persistently grovelled at the feet of William's enemy." A reader dependent on Professor Saintsbury would infer that Boileau was a greater flatterer than Dryden. If Boileau praises Louis XIV, he is, of course, merely doing what virtually all the writers of his time did, and did sincerely, just as Spenser and the other men of his age were still more extravagant in their praise of Elizabeth. It is typical of Professor Saintsbury's method that without vouchsafing any explanation, he should arrive at an estimate of Boileau almost diametrically opposed to that of Sainte-Beuve, who, on his own showing, is the great authority here, the man who knew the seventeenth century as no one else has known it; and that with an equal absence of explanation Professor Saintsbury should depart in important respects from Johnson's estimate of Dryden, though Johnson, again, on his own showing, is not only a great critic, but at his very best in his "Life of Dryden." Boileau's stern integrity in general, even in his dealings with Louis XIV, is beyond question, whereas of Dryden's relation, not merely to one, but to many patrons, Johnson remarks that "in the meanness and servility of hyperbolical adulation, I know not whether, since the days in which the Roman emperors were deified, he has been ever equalled." One would be ashamed to mention facts so familiar were it not that Professor Saintsbury, who ranks to-day almost as the official critic of England, has seen fit to obscure them.

I.

I believe that a truly judicial comparison of the English achievement in the critical field with the achievement of other countries, especially France, would lead to conclusions curiously different from those of Professor Saintsbury. Pope said that "critic learning flourished most in France." This saying would seem about as true for the period that has followed Pope as for the period that preceded him. England has had, of course, a number of great critics, but the *genre* itself has occupied a somewhat secondary place in English literature. In criticism the English have always been more or less derivative and parasitic. For the best part of a century they took their theories of art ready made from the Continent; and then with the Restoration the French influence, or rather another form of the French influence, supervenes. According to Addison, "a few general rules extracted out of the French authors, with a certain cant of words, has sometimes set up an illiterate, heavy writer for a most judicious and formidable critic." Later the Germans displace the French. Hazlitt complains of "those among us who import heavy German criticism into this country in shallow, flat-bottomed unwieldy intellects." Still later, Matthew Arnold makes clear, at least, his own affiliations when he says that Sainte-Beuve has a position of supremacy in literary criticism of the same order as that of Homer in poetry. In short, English criticism is largely a history of foreign

*A *History of English Criticism.* By George Saintsbury. New York: Dodd, Mead & Co. $2.75 net.

influences. In this field the English have been constant borrowers, and only occasional lenders. Certain English critical works, notably Addison's papers on Milton and Burke's "Inquiry into the Sublime and Beautiful," acted on Germany in the eighteenth century—works that, though marking the maximum of English critical influence abroad, are in themselves somewhat second-rate performances, even judged by the standard of the best English criticism.

Not only has English literary criticism been comparatively uninfluential on other countries, it has been comparatively uninfluential on English literature itself. Nothing is more striking in French literature, on the other hand, than the intimate relation that has always existed between criticism and creation. The first important piece of modern French criticism, Du Bellay's "Defence and Ennoblement of the French Language," sets forth the conception of literature and poetry that Ronsard and the other members of the Pléiade actually tried to practice. Later on, the more narrowly classical school of French poetry takes its rise, or, as Sainte-Beuve puts it, struggles painfully forth from a man who was a critic rather than a true poet, Malherbe; and this, of course, indicates a weakness as well as a strength. Examples might be multiplied of the way in which an important creative movement in France has been preceded or attended by an important movement in criticism. In England, criticism and creation have too often worked at cross-purposes, or the same man has worked at cross-purposes with himself, according as he has been criticising or creating. For example, the requirements that Sir Philip Sidney lays down for the drama in his "Defence of Poesy" are very nearly the opposite of what one finds in the actual drama of the time. The Elizabethan critics are always harping on the need of observing decency, *i. e.*, decorum, in plays, whereas the Elizabethan dramatists no less constantly violate decency both in their sense of the word and ours. At bottom, there is an unreconciled gap between the critical theories of the Renaissance, based on the dogma of classical imitation, and the romantic spontaneity of the English imagination.

The opposition between English genius and foreign rules is also felt during the later period of French influence. We may note that with the advent of this influence at the Restoration we have about the first serious attempts to criticise contemporary writers, and very nearly at the same time the rise of a class of professional critics. "Till of late years," says Rymer, "England was as free from critics as it is from wolves, that a harmless, well-meaning book might pass without any danger." An Elizabethan playwright did not have to reckon, as did the playwright of the Restoration, with professional critics in this sense.

To poison plays, I see some where they sit,
Scattered, like ratsbane, up and down the pit,

says the author of the Epilogue to Congreve's "Mourning Bride."

Now, the critics who had thus come into existence were as a class formalists; their influence made for a tradition of sound prose, but the critical creed they had adopted allowed very insufficiently for the free play, and even for the very existence, of the creative imagination; and that is why we find in Dryden, the representative critic of this age, a constant struggle between his pursuit of the new formal correctness and his admiration for the achievements of the great Elizabethans, the "giant race before the flood." The opposition is very well brought out in his saying that all Spenser needed to be a true epic poet was "to have read the rules of Bossu." In the eighteenth century Johnson did succeed in formulating the neo-classical point of view with a certain consistency in that masterpiece of English prose, the "Lives of the Poets." But he thereby put himself out of touch with the creative forces of his own age which were once more beginning to run towards romanticism, and at the same time he missed much of what was most poetical in the English literature of the past. Of the fifty-two poets whose lives he has written we should recognize only about half-a-dozen as having been poets in our modern sense at all; and in several of these Johnson depreciates precisely what we should regard as most poetical. In short, England has never had a great critic like Boileau, whose work is in intimate sympathy and accord with a great creative literature, itself responsive to the main currents of national life.

II.

"The edicts of an English Academy," says Dr. Johnson, "would probably be read by many, only that they might be sure to disobey them." This aversion of the English for an institution like the French Academy is due, according to Matthew Arnold, to the fact that they are on the side of the man of genius as against everything that would seem to curtail his imaginative freedom in the name of a central standard. I believe this aversion of the English is due to another cause besides their more imaginative temper, which we may define as their love of humor and humors. We sometimes hear in this country the charge that the English are lacking in a sense of humor. If we are to judge from their literature, we should have to conclude, on the contrary, that they are the greatest race of humorists the world has ever seen. The Englishman likes everybody to abound in his humor, and is always partial to a genial idiosyncrasy. He feels affection for a man who is an "original," as people used to say, or as we should say nowadays, a "character." Virtue itself, as Addison tells us, is endeared to the Englishman by being combined with a certain flavor of oddity. Dryden is one of the first to note this predilection of the English for humor; but perhaps Sir William Temple brings out the point still more clearly in his "Essay on Poetry." "We have more originals" (than other countries), says Temple, "and more that appear what they are; we have more Humour, because every man follows his own, and takes a pleasure, perhaps a pride, to show it." The fact is possibly significant of deep differences of national temper that the word humor (*humeur*) when taken by itself has come in French to mean ill humor, and in English good humor. The Frenchman sees things intellectually from the point of view of the central standard, or if he departs from the standard it is in the name of some logical standard of his own. In either case he lashes with ridicule those who deviate from the norm; in other words, he is naturally a wit. The Englishman is no less naturally a humorist both in the older and the more recent sense of the word —that is, both in the sense of the man who abounds freely in his own humors, and in that of the man who renders with genial sympathy the humors of others. From the Prologue of the "Canterbury Tales" to a novel of Dickens, illustrated by Cruikshank, England has had a series of humorous masterpieces the like of which is not to be found in any other literature.

Even the English eighteenth century, which might seem at first glance an age of smug conformity and correctness, is extraordinarily rich in originals. One of the characters in Smollett's "Humphrey Clinker" announces with delight that he has discovered a family made up entirely of originals. The rich humorousness of the time also appears in the drawings of Hogarth and the Letters of Horace Walpole. A great humorous creation like Squire Western is taken from the very heart of English life. In the contempt Western expresses for lords and the court set in general, "Hanoverian rats," as he calls them, he is to be contrasted with the French *hobereau*, or country squire of the period, who felt himself ridiculous if he were not aping Versailles. Arnold rightly comments on the inferiority of Addison as a literary critic to La Bruyère, on Addison's intellectual lukewarmness, and lack of centrality. But La Bruyère has created no character comparable to Sir Roger de Coverley. In short, La Bruyère is vastly superior to Addison as a critic, but very inferior to the Englishman in geniality and humor.

III.

English literature, then, has possessed in a preëminent degree imaginative fervor, geniality, and humor. It has also possessed preëminently moral earnestness. Now, it is desirable that the critic should on occasion show geniality and humor, and it is still more important that he should be imaginative and morally in earnest. But all of these virtues are not primarily critical, and so it comes about that much that is most admirable in English literary criticism is admirable for virtues that are only secondarily critical. For example, Sir Philip Sidney succeeds in throwing the golden glow of his imagination over the stalest commonplaces of Renaissance criticism, and in his "Timber or Discoveries," Ben Jonson succeeds in bestowing upon these same commonplaces moral weightiness. Both Sidney and Jonson are almost entirely lacking in critical originality. Take again Dr. Johnson's "Lives of the Poets." In this work Dr. Johnson shows himself a great and genuine critic, but he shows even more greatness as a moralist. What most interests us in the "Lives of the Poets" is not the literary judgments—they are often flagrantly inadequate—but the profound and somewhat melancholy wisdom of life. We may go further and say that Johnson the moralist often prevails too completely over Johnson the critic. "The poems of Dr. Watts," says Johnson, "were by my recommendation inserted in the late collection, the readers of which are to attribute to me whatever pleasure or weariness they may find in the perusal of Blackmore, Watts, Pomfret, and Yalden." We cannot conceive of Boileau allowing his love of edification to triumph so completely over his literary sense. If the critical thus yields to the moralizing vein, even in so genuine a critic as Dr. Johnson, what are we to expect in lesser Englishmen? I am enough of an Aristotelian to believe that the excess of any virtue becomes a vice. Moral earnestness, acting in a mechanical and one-sided way, has often been fatal among men of our race, not merely to literary criticism, but to art and literature themselves, and in general to that whole side of life that is associated with the sense for beauty. The Middle Ages were artistic, even if they were not critical; but in the atmosphere of Puritanism, both art and literatue, as well as the criticism of art and literature, were well-nigh impossible. Carlyle was only faithful to the spirit of his Calvinistic forbears when he expressed his wish that the devil might fly away with the fine arts.

There are also examples in English of the way in which a certain imaginative and emotional excess has been fatal to critical judgment. Perhaps it would not be possible to find in any other literature a man so gifted as Ruskin and at the same time so whimsical and intellectually irresponsible. Few things again, are so contrary to the true critical temper as the extraordinarily narrow emotional vehemence of Carlyle.

We should also note that various periods of English criticism, especially ono of the most brilliant of all, the period of Coleridge and De Quincey and Hazlitt, have been poisoned by the intrusion of an element that may in its proper place and measure be a virtue, namely, the passion of party and politics. "This political criticism," says Hazlitt, thinking especially of Gifford and the *Quarterly Review*, "is a *caput mortuum* of impotent spite and dulness till it is varnished over with the slime of servility and thrown into a state of unnatural activity by the venom of the most rancorous bigotry." Yet Hazlitt has shown in his own "Letter to William Gifford" that the rancor of the Jacobin may be at least equal to the rancor of the Tory.

IV.

It has been assumed in all that has been said hitherto that the chief virtue of the critic is a certain poise or balance. If, as Tennyson was fond of asserting, a true critic is an even rarer apparition than a true poet, the reason doubtless is that it is harder to find a man who is balanced than one who is inspired. The writer or artist who is creative in the narrower sense of the word is usually too much imprisoned in his own gift to have this critical poise. When Poe, for example, says that the perfect poem must have not much more and not much less than a hundred lines, and that the most poetical subject in the world is the death of a beautiful woman, we simply smile and think of "The Raven." The true critic, on the other hand, has to have a knowledge and sympathy broad enough to compass all the modes of literary expression, and then—an even more difficult task—he must bring this knowledge and sympathy under the control of the strictest judgment. Only in this way can he hope to render a verdict that will finally be ratified by the good sense of the world. For if the French neo-classical definition of genius, as only sublimated good sense, is too narrow for genius in general, it is admirably adequate for the genius of the critic.

To say of a critic that he has poise and good sense is merely a way of saying that his point of view is not peripheral, but central. The romantic critic would expand in knowledge and sympathy, and this is well; but he would do nothing but expand, and so comes, like Professor Saintsbury, to identify judgment with appreciation and enjoyment (p. 415). Judgment and appreciation, however, do not move in the same, but in opposite directions; they belong respectively to the centripetal and the centrifugal powers of personality. The real test of the critic is his ability to mediate between these extremes; to have the appreciation and at the same time the back pull towards the centre. Without this mediation he will attain, not judgment and taste, but merely romantic gusto, joined, it may be, as in the case of Professor Saintsbury, to "vastly extensive" though not always accurate learning.

Professor Saintsbury would have us believe that we cannot react from the purely expansive virtues without becoming dogmatists; that concentration is not possible without contraction; that our only choice is between formalism and unrestraint, between the neo-classic narrowness and "falling," as he has so happily phrased it, "for ever and for ever through the romantic void." But the time may come when people will refuse to accept this vicious dilemma. If it should appear that the process of moving towards the centre may be as intuitive, as free from mere formalism, as the opposite process, the romantic flank will be turned and the way opened for an entirely different order of criticism. In the meanwhile, Professor Saintsbury is going on repeating eagerly half-truths that might have been a useful counter-irritant a century or so ago to the current conventionality and lack of perceptiveness, but which are an encouragement to the men of today to fall in the direction in which they already lean, that is, to plunge still more deeply into anarchy and impressionism.

IRVING BABBITT.

Correspondence

ROOSEVELT'S PLEDGES.

TO THE EDITOR OF THE NATION:

SIR: In your editorial of February 29, on "The Heavy Responsibility," you appear unwilling to credit Mr. Roosevelt with anything like sincerity of purpose in the course which he has pursued. You refer to him as "intriguer" and "secret plotter." That he has for months been conducting "a long and despicable intrigue," you regard as now proven beyond doubt. Permit me to remind you at once that in making such allegations concerning a gentleman of Mr. Roosevelt's character and standing, you assume, indeed, quite a "heavy responsibility." Is not Mr. Roosevelt's life-long record of truth and candor such as to make the truth of your aspersions seem entirely improbable?

Your indictment of Mr. Roosevelt is, in brief, that he has broken solemn pledges, made to the American people, that he would, under no circumstances, again become a candidate for the Presidency. Now, as a matter of fact, can the several declarations made by Mr. Roosevelt regarding the Presidency be interpreted as pledges to the

American people, or, for that matter, to any one? Why should he, on retiring from an office in which he had made his name famous the world around, make solemn pledges that he would never again seek that office! Was he such a scourge to the country, was he so feared and so hated that pledges must needs be exacted from him to the effect that he would not again accept a Presidential nomination? He was under no such compulsion. His declarations can be construed in no other sense than as expressing his own personal desire not to undertake the burdens of this high office again. But even assuming for the moment that Mr. Roosevelt had pledged his word not again to become a candidate for the Presidency, altered circumstances and conditions in the country might make it perfectly proper for him to disregard such pledge. He is now the only logical leader of the progressive forces of his party, and in assuming that leadership and standing for the Presidential nomination, he ought, in all fairness, to receive credit for acting upon the strength of his conviction that in yielding to the persuasions of the Progressives he was obeying a call to duty.

A goodly portion of the Republican party, if not of the people regardless of party, are welcoming Mr. Roosevelt's advent into the field with enthusiasm, and to these persons your animadversions on the score of breach of faith, etc., mean absolutely nothing. The real question is the merit of the Progressive movement, and of Theodore Roosevelt as its leader.

F. W. Dickey.

Cleveland, O., March 6.

RURAL AND URBAN NEW ENGLAND IN THE CENSUS.

To the Editor of The Nation:

Sir: The population bulletins of the thirteenth census for the several States have been awaited with much interest, for many reasons. Among others, it was believed that from them bearings might be taken from which to determine the rate and direction of the current of our population, whether from the country cityward, or from city to country. Nowhere have the effects of the trend cityward been more striking than in New England, and nowhere is the counter-movement said to be running more strongly. An examination of the bulletins for the New England States, however, fails to add much to our knowledge in this particular. Indeed, their contents are quite misleading, not to say positively incorrect.

In addition to the usual tables of population by counties and minor civil divisions, there are maps showing by counties the increase or decrease and the density of population. In one respect, these maps are a source of regret. In New England less uniformity exists both in the increase or decrease, and in the density of population within the same county, than in other parts of the country. This happens because prosperous manufacturing districts have sprung up in the same county with decadent agricultural neighborhoods, sparsely inhabited and decreasing in density. Hence, the true conditions would have been made more evident by taking towns for units rather than counties. It must be remembered that in the bulletins, as well as in these observations, the word "town" is used in its special sense as virtually synonymous with "township."

For census purposes, urban population is defined by the bureau as "that residing in cities and other incorporated places of 2,500 inhabitants or more." This definition serves in other parts of the country with sufficient exactness, but not in New England. In the three States of New Hampshire, Massachusetts, and Rhode Island village incorporation is virtually non-existent; in Maine and Connecticut it is found to a limited extent, while in Vermont it may be said to be in general use.

Appreciating the difficulty, the census authorities state that "in the New England States, in addition to cities having this population, all towns having a population of 2,500 or more have also been classed as urban, without regard to the population of the villages (whether incorporated as such or not), which they may contain," and also that, on account of the few instances of incorporation, "it is not practicable in the New England States to make a statistical separation of the actual villages from the towns in which they are located." The result is that the "urban areas" in New England include some population which in other sections of the United States would be segregated as "rural."

A few examples will reveal the extent of the error involved. Among the towns in Rhode Island classed in the census as "urban" is Scituate, which has an area of fifty-three square miles, and a population density of sixty-six to the square mile. Its 3,493 inhabitants are scattered in seven small villages, and over a rough and decadent farming country, but nowhere approaching urban conditions. In some Massachusetts towns there is one central group of people living under conditions somewhat urban in character; but there are in every town many, and in some of them hundreds, if not thousands, living in rural surroundings. Typical of such conditions are Middleborough, Bridgewater, Amherst, Barnstable, Plymouth, and Winchendon. There are still other towns in which there is no compact group whatever; for example, Dartmouth and Westport, each with an average population density of less than sixty. New Hampshire, with a much lower population density, has fewer towns of 2,500 inhabitants than the States above mentioned, but here the classification is not less misleading. In fact, it may safely be said that in the fifteen towns in the "urban" class a somewhat greater proportion of the population is really rural than in Massachusetts towns of similar size.

Of the twenty-one organized villages in the State of Maine, only four are of the "urban" class. The "urban" towns, exclusive of the four "urban" villages, contain a population of 119,195. It is conservative to say that not more than one-third of these people really live under urban conditions, and that more than 75,000 persons, or nearly 10 per cent. of the State's population, have been classified as urban when they are really rural. In Vermont, where the custom of incorporation is more general, the total error is greater than in Maine though more easily detected. The population of "urban" towns is 109,958, while that of the nine "urban" corporate villages is 39,932. This leaves 70,026, or above 16 per cent. of the population of the State, falsely termed urban.

In Connecticut neither the city nor the borough is a primary civil division, but lies within and forms a part of some town. In such cases the whole town and not merely the city or borough part is rated as "urban." Killingly, containing the Borough of Danielson, with a population of 2,934, has its remaining 3,630 inhabitants distributed over about fifty square miles, with an average density of seventy-two. Salisbury, without an organized borough, and with but two or three small villages, has its 3,522 "urban" inhabitants spread over sixty square miles of territory. After deducting the number of persons in cities and boroughs of above 2,500 population, in Connecticut, there remain 269,042 persons living outside the cities and boroughs, but classed as "urban." It cannot be said, in the absence of exact statistics, how many compact groups of 2,500 people there are among these, but from evidence available it seems certain that the aggregate population of all such groups would not exceed 25,000 persons. This leaves more than 240,000, or more than 21 per cent. of the State's population, who have no claim to be counted as urban though they have been so enumerated in the census.

Frank G. Bates.

Providence, R. I., March 14.

THE SPELLING-BOOK IN COLLEGE.

To the Editor of The Nation:

Sir: The plaint of Mr. Bellows (*Nation*, February 29) will find echoes in the hearts of many college teachers of English composition. I dare say he knows that the spelling-book, if not the spelling-bee, has been introduced into at least one of our great universities. In time, no doubt, the grammar and the first reader will follow, to the end that the secondary schools may be left comparatively free to conduct their multiple pedagogical experiments. The situation, of course, would be simplified if these schools, completely taking over the twofold office of pleasing children and preparing them for life, were to leave the universities in undisturbed possession of the three R's and other educational austerities. For the present, secondary and, we may add, primary education stand condemned in college rhetoric courses on more counts than one. It appears there that mental visions which have been trained on the main chance from the first peep of the intellectual day, can only with the greatest difficulty be focussed on objects of non-vocational value. If the capital ends of education are mental training and a disinterested concern for things of the mind, then the central reason for complaint would seem to be that much of our preparatory education does not educate.

Urbana, Ill., March 13.

WASHINGTON'S CHERRY TREE.

To the Editor of The Nation:

Sir: It was a surprise to me to see Mr. Norris, in your columns (February 29), trace back the story of George Washington and the cherry tree to a real event. It goes back indirectly to the Seven Wise Masters. As I have not the English transla-

tion at hand, I give a short résumé of the Italian version ("Il Libro dei Sette Savj di Roma," 1864, p. 43):

The mother of a young wife wishes her to try the patience of her husband. She advises her inexperienced daughter to cut down her husband's favorite tree, just to see what he will do about it. One day when the husband is absent, the young woman, as the servants refuse, takes the hatchet, cuts the tree herself, and carries the firewood thus obtained into the house. On being surprised by her husband, she explains the matter by saying that, expecting him to return home all chilled, and knowing that there was no firewood in the house, she had cut down the tree for the purpose. The husband recognizes his favorite tree, but forgives his wife because she has acted for his sake. JOSEPH DE PEROTT.

Worcester, Mass., March 15.

ST. BERNARD AND NATURE.

TO THE EDITOR OF THE NATION:

SIR: In a letter published in the *Nation* of March 7, Prof. Albert S. Cook seems to me to have fallen into deeper error than when he criticised Mr. Taylor for suggesting in "The Mediæval Mind" that St. Bernard had no eye for nature. "Among the works printed by Dr. Eales in his translation as St. Bernard's," says Mr. Cook, "is one concerning the site of the abbey of Clairvaux ('Life and Works of St. Bernard,' II, 460-467)." And Mr. Cook proceeds to give certain florid extracts from this writing as evidence of St. Bernard's delight in nature.

St. Bernard was not the author of the writing from which these extracts were taken, neither does Dr. Eales intimate that he was. Dr. Eales must have known that the writing was not St. Bernard's, for he was translating from Mabillon's edition (followed by Migne) of St. Bernard's works and the contemporary or somewhat later Latin literature relating to him. The original of Dr. Eales's translation is entitled "Descriptio positionis seu situationis monasterii elaræ-vallensis," and is printed in Migne's Patrologia Latina, Tome 185, Col. 569-574, where it is not placed among even the doubtful writings of the Saint, but with the works of other men who wrote about him or his monastery. It is the work of some pious cicerone, who (at least, as I should surmise) belonged to a later generation. J. H.

New York, March 14.

THE RECALL.

TO THE EDITOR OF THE NATION:

SIR: You commend the "sober words" of Gov. Harmon before the Kentucky Legislature, "when he said that the ultimate force behind the movement for the initiative, referendum, and recall was supplied by the shortcomings of the man in public office."

Having studied at close range the movement referred to, and the trend of laws passed in response to the demand for a direct appeal to the people, I am convinced that Gov. Harmon has confused cause and consequent. The movement for the initiative, referendum, and recall, as I view it, is rather a protest against the frequent betrayal of public trust by shrewd manipulators of nominating conventions, in the interests of candidates whose after "shortcomings" are measured only by their opportunities for betrayal.

While the inauguration of these reforms will not result in the total elimination of betrayals of public trust, it will surely minimize the evil, by imposing upon individual voters an individual responsibility well-nigh lost in the delegate convention, and by placing in their hands an adequate weapon of protest and defence, as a working substitute for the manipulated party convention. JOHNSON BRIGHAM.

Literature

SOUTH AMERICA.

The Incas of Peru. By Sir Clements R. Markham. New York: E. P. Dutton & Co. $3 net.

South America of To-day. By Georges Clemenceau. New York: G. P. Putnam's Sons. $2 net.

Brazil. By Pierre Denis. Translated with an historical chapter by Bernard Miall and a supplementary chapter by Dawson A. Vindin. New York: Imported by Chas. Scribner's Sons. $3 net.

Argentina. By W. A. Hirst. Introduction by Martin Hume. Imported by Chas. Scribner's Sons. $3 net.

Argentina, Past and Present. By W. H. Koebel. New York: Dodd, Mead & Co. $4 net.

Argentina and Her People of To-day. By Nevin O. Winter. Boston: L. C. Page & Co. $3 net.

The Wilds of Patagonia. By Carl Skottsberg. New York: The Macmillan Co. $3 net.

Peru of the Twentieth Century. By Percy F. Martin. New York: Longmans, Green & Co. $2.40 net.

Sir Clements Markham's somewhat disappointing book is the result of a long lifetime of careful, painstaking research and some personal acquaintance with Peru. Sir Clements had the good fortune to make a journey from Lima to Cuzco when he was a young officer in the British navy. Later, he journeyed into the interior of Peru to gather chinchona plants for transplanting to India. Since then, as it is hardly necessary to say, he has become master of all the available original authorities on Inca civilization, has edited a dozen of the Hakluyt Society's volumes dealing with the earliest Spanish expeditions and chronicles, and has written several books on Peru. For more than sixty years he has been a student of Inca history. Accordingly, we have the right to expect great things of this, his valedictory.

In the first place, Sir Clements has given us a remarkable exposition of the empire of the Incas and its growth. There is nothing so good elsewhere, although he has placed too much reliance on purely documentary evidence. It is unfortunate that since his return from Peru, nearly fifty years ago, Sir Clements has not had the opportunity to revisit that country and combine his extensive literary researches in early Peruvian history with archæological field work. There is too little appreciation of actual conditions. In this he falls behind Mr. Bandelier's work on the islands of Titicaca and Koati, although naturally he is more trustworthy than Prescott.

Readers who are looking for an account of the conquest of Peru will be disappointed, as well as those who would like to pursue the subject in detail through direct references to chapter and page in the original authorities. The book is intended for popular reading. There are few footnotes and a good many *obiter dicta.* Peculiar and unusual spelling of common Peruvian place-names make it difficult to follow the text, even on the very excellent map which accompanies the volume. The full and satisfactory index is nevertheless an illuminating commentary to use in connection with a study of the Quichua tongue. Sir Clements's unrivalled knowledge of the language of the Incas has led him into a somewhat too frequent use of Quichua words. To be sure, he usually translates them, but it mars the style.

The main interest in the book lies in the author's attitude towards that ancient civilization which has for years charmed readers of Prescott. Sir Clements's bias towards the subject is well shown by the following quotation:

> The Incarial system of government bears some general resemblance to a very beneficent form of Eastern despotism such as may have prevailed when Jamshid ruled over Iran. There was the same scheme of dividing the crops between the cultivator and the state, the same patriarchal care for the general welfare; but, while the rule of Jamshid was a legend, that of the Incas was an historical fact. The Incarial government finds a closer affinity in the theories of modern socialists; and it seems certain that, under the very peculiar condition of Peru when the Incas ruled, the dreams of Utopians and socialists became realities for a time, being the single instance of such realization in the world's history (p. 166).

Although it is true that some of the Spanish chroniclers give a basis for such opinions, many conservative students of American ethnology will not be willing to agree with these conclusions. Sir Clements is a bit too ready to look at his heroes through very rosy glasses. He naturally believes that the condition of the people under the Incas procured for them a large amount of material comfort and happiness. Had he been more recently in

Peru, and made a careful study of geographic influence on environment, he might have abated some of his enthusiasm. As it is, he feels that the world will never see again the delightful form of state socialism which he believes existed in Peru.

Sir Clements continues to hold his firm belief in the genuineness of the original Inca drama. The play of Ollantay is again reprinted as an appendix. To a student of comparative literature, its plot and *dramatis personæ* smack rather too strongly of sixteenth or seventeenth-century Spain.

Notwithstanding all its drawbacks, "The Incas of Peru" deserves to find a place in every library, alongside of Squier's "Peru" and Prescott's "Conquest." No book can compare with it for a comprehensive summary of Inca geography, history, polity, religions, and customs.

Of the other books on our list we must speak more briefly. Ten years ago any one who should have ventured to predict the extraordinary interest in modern South America evident in the United States to-day would have been called either an enthusiast or a fool. For years it was difficult to refer an inquirer to a satisfactory book in English on any particular South American republic. There were, to be sure, books like Frank Carpenter's "South America," telling of that country's commercial development. There were Akers's "History of South America from 1854 to 1904," much too full of names and dates for the beginner, and Dawson's "South American Republics," equally unsatisfactory for those who had already acquired what the larger encyclopædias had to tell them. But for the past two years we have been fairly deluged, not only with official propaganda from the Pan-American Bureau and the various publicity stations maintained by the more advanced republics, but also with the output of publishers. The series brought out by Fisher Unwin and imported by Scribners includes volumes on "Peru," "Chile," and "Uruguay," besides the two on "Brazil" and "Argentina" here reviewed. It is not to be wondered at that there are more books dealing with Argentina than with any other republic. Her economic superiority is so apparent, and her capital city so marvellous that even those who care little about the other countries are demanding specific information regarding this wealthy young giant of the South. The one thing that is borne home to the American reader is the folly of our Monroe Doctrine as applied to such countries as Argentina and Brazil. It does them no good; and it actually hurts us.

The book which by reason of its distinguished author will command the widest attention is not so broad as its title indicates. M. Clemenceau only visited the east coast, and his study of the "South America of To-day" is limited to a somewhat cursory view of Argentina, with impressions of Uruguay and Brazil. He kept no notes of his journey and finds it annoying to record his impressions at the precise moment when one feels them most vividly and when they are of most value to a possible future audience. His remarks frequently give the impression that this distinguished statesman who was so enthusiastically received in Latin-America enjoyed laughing in his sleeve; at other times much of the possible irony seems to be more probably an attempt to make adequate return for hospitality. It should also not be forgotten by readers of this volume that there is a strong effort now making in France to capture that extremely desirable market on the east coast, where Brazil and Argentina have a trade balance in their favor of hundreds of millions of francs. Nevertheless, every one interested in the present condition of Argentina will wish to read this book.

Brazil has had to wait for many years to get recognition in English literature of travel. The delay has not, however, been in vain. It is not too much to say that Prof. Pierre Denis's work is the most remarkable member of Scribner's series. It differs from the other volumes in having less history and more description, but both history and philosophy are interwoven in this penetrating study. M. Denis is an unusual traveller. Not only can he discuss such relatively dry topics as "money and exchange" with vividness, he is equally capable of handling the geographical aspects of the colonization of the Paraná valley. He appreciates the extraordinary power of expansion of the "colonial" population of Brazil. German, Polish, and Italian colonists are accomplishing astonishing and repeated conquests. The fertility of their families is amazing. The author's insight into race movements is noteworthy, as is also his handling of recent Brazilian history. The weak point in the book is the evidence that M. Denis did not visit the Amazon Valley. Nevertheless, his study of the little-known state of Ceará is a unique contribution. It is impossible within the limits of this review to call attention to the many excellent features of his really remarkable book. It will appeal not only to historians and geographers, but to every one interested in the present and future of Brazil. The maps are unusually good.

The best book on Argentina is Mr. Hirst's. It is a pleasure to find a writer on Spanish America who realizes that the conquering and colonizing Spaniards were not bloodthirsty fiends. It is still more noteworthy when one is found willing to remark that Spanish colonial policy was in some respects "statesmanlike and even humane according to the standards of the time." Mr. Hirst makes no pretence at erudition, and does not even include all the best-known sources of information, yet his compilation is very useful. The historical chapters are done in an appreciative rather than a destructive spirit. There is a bibliography which, as might be expected from a stanch Britisher, overlooks most recent American contributions to Argentine history, such as Professor Moses's excellent "South America on the Eve of Emancipation" and Professor Paxson's "Independence of the South American Republics." As a result, Mr. Hirst's chapter on the war of emancipation is not nearly so good as it might have been. He fails to appreciate the part played by the Argentine patriots in spreading revolutionary doctrines. Their repeated efforts to free upper Peru receives scarcely the slightest mention, and he disposes of San Martin, the greatest hero that South America has ever seen, in a dozen lines; whereas he gives an entire chapter to the episode of the British occupation of Buenos Ayres. From a descriptive point of view, the picture of Buenos Ayres is unsatisfactory and has often been better done. Similarly, the chapter on Town and Country shows little originality or power of observation. That on Education and Literature is unusually good.

A few years ago Mr. Koebel wrote "Modern Argentina." More recently he has published a capital book on Uruguay, already reviewed in these columns. His new "Argentina, Past and Present" is a really sumptuous performance. It is too clumsy to be a useful handbook, yet it deserves to be favorably known. The artistic side is faithfully presented, and there is more of the element of travel and observation in it than in the ordinary book on the country. Although he makes no pretence to writing a guide-book, it is just the kind of book which a traveller would like to take with him if it were not quite so large and awkward to handle. The history of the country receives scant attention, but Mr. Koebel has a facile pen and a good eye for the picturesque.

The same thing cannot be said of Mr. Winter's volume. To those who have read his "Mexico" and his "Guatemala" little need be said, except that it is the same sort of book. Like his "Brazil," it is a careful compilation made by a conscientious traveller who has seen something of the country in a somewhat superficial manner. The sub-title states that the book is "An account of the customs, characteristics, amusements, history, and advancement of the Argentineans and the development and resources of their country." Rather a large order! However, it is difficult to collect the kind of information that has gone into this book, which undoubtedly meets

a certain demand for popular information about "foreigners."

"The Wilds of Patagonia" sounds like a book of adventure, but its sub-title, "A narrative of the Swedish Expedition to Patagonia, Tierra Del Fuego, and the Falkland Islands in 1907-1909," comes nearer to enabling one to get a just estimate of the value of this noteworthy contribution to the geography of the southern part of Chile and Argentina. The pictures are unusually interesting and the text is even more so. Dr. Skottsberg was also in the Swedish Antarctic Expedition of 1903 and engaged in this second expedition in order to solve unanswered problems which presented themselves while working on the results of his former tour. As a specialist he devoted himself chiefly to botanical work, while his companions were more interested in geology. The good-natured freshness and modesty which pervade the book are engaging. It is a pleasure to extend a hearty welcome to this delightful work, and to thank its distinguished author for not confining the story of his interesting expedition to the Swedish edition.

The contrast between this capital story, written by a charming, modest, scientific observer, and such a book as "Peru of the Twentieth Century" is very striking. Percy F. Martin has been for many years a travelling correspondent for various journals. His frequent letters to English journals are marked by bitter prejudice against the United States and that careless handling of ordinary facts which is too often characteristic of the highly productive correspondent. He has published books on Mexico and on the East Coast republics, but evidently has not learned accuracy, modesty, or honesty in his travels His latest volume is attractive in appearance and well illustrated, and contains a great many statistics of more or less value. As the sources of his facts are not indicated, the value of such a compilation is seriously impaired. The book has many evidences of hasty preparation, and there are numerous mistakes of the kind that are sometimes called "errors in proof-reading." Bolivar is spoken of as the "brave Argentine"; Atahualpa's ransom is paid in "gold coin"! The patronizing reference to Sir Clements Markham shows both stupidity and conceit. While there is evidence of a desire to please the authorities and advertise Peru's resources, there is no evidence of that balanced attitude towards the fabulous natural resources of a tropical country which Frederick Palmer showed in his illuminating "Central America and Her Problems," where he paid equal attention to the "human handicaps" that prevent development. Enoch's "Peru," notwithstanding its weak points, will not be replaced on the shelves by Mr. Martin's volume, even though the latter does give the birth months of the foreign ministers and consuls in Lima and Callao!

CURRENT FICTION.

A Hoosier Chronicle. By Meredith Nicholson. Boston: Houghton Mifflin Co.

Mr. Nicholson has shown a good deal of versatility heretofore, dealing variously in romance and satire and pictures of "real life" in our own time. Here he has attempted a serious and careful study of Indiana life, political and social, in the present generation. There are three fairly distinct elements in the story: the purely local or Hoosier element, the romantic element, and the political element which belongs to America rather than to Indiana. Mr. Nicholson was born and bred in Indiana, and the charm of the book is the result of his acquaintance with the Hoosier State and his affection for it. We are still too ready to take for granted an inferiority of atmosphere, a relative meagreness of setting, in our provincial America, in comparison with those which the English novelist and playwright have at their service. So when a Phillpotts shows his deep and affectionate intimacy with the moor-country, or a Bennett limns with tireless zeal even the smallest graces of his Five Towns, we lay the success of the performance largely to the accident of material. Mr. Nicholson is as familiar with his province, and as fond of it, as any Briton of them all. Her traditions do not seem to him trifling, or her atmosphere lacking in charm, because they are not the direct growth of centuries. His pride in such literary figures as Maurice Thompson and James Whitcomb Riley is none the less pride because they are not among the major luminaries. He dwells affectionately upon the lineage of Indiana's best families, and upon the memory of her statesmen. The best of his characters, he confesses, lives in his own street and has offered him (vainly, it appears) sundry bribes not to "put her into a book."

Like other current novelists of a realistic bent, he does not allow that bent to handicap him in his choice of plot. Beautiful and brilliant and well-bred young girls who are uncertain of their paternity undoubtedly exist in considerable numbers upon this globe. But we do not take it that they are particularly common in Indiana; or that they are as easily to be found anywhere as fiction and melodrama would lead us to suppose. Certainly it is a pity that Mr. Nicholson should have felt moved to make use of a situation so hackneyed as the pivot of his Hoosier tale. The reader knows almost from the outset who Sylvia's father is, and it is a bit tedious waiting about for the other persons in the story to run him down. Morton Bassett, the father, is a political boss who, himself content with a chair in the State Senate, has for years held the Democratic party in the hollow of his hand. Though there is a young and not inconsiderable hero to pair off with Sylvia, Bassett is really the central figure in the scene. We are made to understand—we are assured again and again—that there is something mysterious and potent in his character. If that be true, the mystery is not solved in the course of the narrative. He appears to be merely that transparently simple person, the American boss—the man who by systematically applying the rule of thumb to the manipulation of his fellow-man, and ignoring all other rules, becomes a physical power in the land—for a season. Bassett is a mean man on a big scale; and his violent conversion to the rôle of reformer at the end of the story—though the scene in which Sylvia converts him is managed with a good deal of skill—is simply a stage conversion. As for Sylvia herself, that extremely self-possessed young person also comports herself in accordance with conventional rules by refusing to marry her young man because of her parentage. Of course, she gives in at the end; but what American girl, to be accredited with such phenomenal commonsense in all other directions, would remember her duty as a heroine in this regard?

In reviewing Miss Sedgwick's "Tante" the other day, we noted that the book owes its distinction to a minor and homely character, rather than to the advertised stars. The same thing is true of "A Hoosier Chronicle." The hero, Dan Harwood, is recognizably human. But the life of the book is to be felt in such persons as the typewriter girl, Rose Farrell, with her irresistible lingo, and her loyal heart; Ike Pettit, the country editor, that authority on American humor, and, above all, Mrs. Sally Owen, the old lady of his neighborhood whom Mr. Nicholson had not been able to resist putting into a book. As for the political part of the story, its picture of the general conditions under which democracy labors, boss-ridden and blundering and half-hearted, and yet somehow surviving, is vividly and simply set forth. Mr. Nicholson is an optimist, like his sharp-eyed, soft-hearted Sally Owen, and the remark with which she closes the book may be taken as his motto: "It's all pretty comfortable and cheerful and busy in Indiana, with lots of old-fashioned human kindness flowing around; and it's getting better all the time. And I guess it's always got to be that way, out here in God's country."

The High Adventure. By John Oxenham. New York: Duffield & Co.

Lovely young Russian princesses named Sonia have become a recognized property of current romance. It is their business to get themselves into situa-

tions of distress, so that stalwart young Englishmen may have the opportunity to rescue them. The writer of the present story has the courage of his convictions. He does not allow any considerations of probability to fetter his imagination—such as it is. To read his first page is to leap into the midst of a plot involving Russian tyranny, Siberia, murder, the rescue of the murderess from prison, a long flight afoot through Switzerland, the death of the murderess (who is Sonia's sister) by avalanche, and so on. The hero is attaché of the English embassy at Paris, and the author repeatedly informs us that he is a perfect gentleman. We see no cause to doubt the statement. Witness the fact that when the death of the murderess leaves Sonia in the sole company of the attaché, he does not take advantage of the situation to make violent love to her. When he discovers that she is married, his chivalry, if possible, redoubles. By dint of saving each other's lives half-a-dozen times, they achieve a bond which, we feel confident, fate will ratify; and our trust is not misplaced. Their parting, when inevitable rescue restores them to the realm of Mrs. Grundy, is gratifyingly brief. The villain who has married Sonia is summarily executed by his author, and all is as it should be according to the conventions of vulgar romance. The only touch of novelty in the yarn is the development of the avalanche motive: that obliging instrument of fate not only carries off the inconvenient sister, but buries the hero and heroine in an Alpine hut—which serves as an excellent substitute for the desert island of literary commerce.

Rayton: A Backwoods Mystery. By Theodore Goodridge Roberts. Boston: L. C. Page & Co.

Our scene is the backwoods, and not the bush, but our hero, Mr. Reginald Baynes Rayton, is a figure with the conventional riding-breeches, moustaches, and haw-haw of the stage Britisher. The unconventional thing about him is his boundless good-humor, and his tolerance of the foibles of the rough American community in which he has chosen to make a place for himself. The whereabouts of Samson's Mill Settlement is not clearly indicated, but it is somewhere on the edge of the real woods, and with farming in summer and lumbering in winter, it offers a living to any man with energy to take it. Rayton is such a man, but has also the social and sporting instincts of his race, and it is he who introduces poker into Samson's Mill Settlement. As a matter of fact, he has to do it in order to give Mr. Roberts a handle for a story. For the appearance of two red crosses on a playing-card affords the basis for our mystery, such as it is. Just that symbol happens to have been more than once a forerunner of death in the family of one of the players present. The marked card is not dealt to him in this instance, but it is he who raises an outcry and breaks up the game. Sure enough, the youth who has received it is quickly in trouble, and very nearly loses his life. The natural thing is for the same group to play another game of poker presently, and this time it is Rayton who receives not one but three cards marked with the fatal symbol. Death does not visit Reginald, let us hasten to explain, but he has a close rub of it. The question then is, Who marked these cards, and why did he do it? The answer is delightfully simple—if one glances at the last few pages of this mildly amusing story.

CASANOVA.

Casanova et son temps. By Edouard Maynial. Paris: Mercure de France.

Lettere di donne a Giacomo Casanova. By Aldo Ravà. With ten portraits and one facsimile. Milan: Treves.

The contention of the Bibliophile Jacob that the "Memoirs of Casanova" were entirely a production of erudite fancy, and that specifically they were the work of Stendhal, is only an exaggerated example of an attitude forced upon readers by the wonderful concatenation of events in Casanova's life; it is a life which at first glance seems too remarkable to be true and yet too realistic to be fabricated. But at last the Casanova problem, as a problem, no longer exists. His Memoirs represent the actual record of an actual life, and form one of the most authentic and thoroughgoing documents for the history of eighteenth century manners.

The delightful volume of M. Maynial is really a study of charlatanry and superstition in the times of Louis XV. Following out his plan of demonstrating the reliability of the Memoirs from this point of view, he reconstructs the biography of the Count of St. Germain, who like Casanova subsisted entirely by imposing upon the credulity of the ladies of Paris, and even of the King. He examines minutely the diplomatic activities of St. Germain at The Hague, where, from personal motives, Casanova matched him in magic and finally accomplished his ruin.

Those familiar with the Memoirs will see that M. Maynial's book follows in large part material already well known. It is nevertheless replete with keen judgments and it is executed with Maynial's usual brilliancy. We may point out that Casanova's initiation to magic and alchemy must have been as early as his residence in Podova; for on his first trip to Naples, he gulled a Neapolitan merchant by selling him a secret for increasing the bulk of mercury. M. Maynial fails to point out also, in the interesting chapter on Casanova's visit to Voltaire, the strange misunderstanding at the bottom of the argument on the subject of Venetian liberty. Voltaire interprets Venetian liberty—a stock phrase of the days of the Republic—as meaning personal freedom of speech and movement. Of course, the only meaning the phrase ever had was that of Venetian independence.

The most startling confirmation of the veracity of the Memoirs has been offered by the researches of Aldo Ravà, a prolific and brilliant compatriot of Casanova, who has written some twenty-five articles on this subject in the last three years. The richest sources of Mr. Ravà have been the original autograph papers of Casanova in the Waldstein library at Dux in Bohemia. These papers had been catalogued by Mahler, and incompletely examined by Arthur Symons and D'Ancona. Mr. Ravà was the first to have unlimited access to them, and full rights to copy; so that his discoveries are quite exact and thoroughgoing. The present publication, the most bulky of his series, outlines with sober criticism and wonderful richness of detail the figures of many of Casanova's warmest relationships. Delicious the naïve femininity of Manon Baletti, her doubts, her yearnings, her frank and childlike expressions of a love tender and disinterested, constantly fanned into nervous heat by the alternating coldness, condescending charm, impetuous passion of Casanova, who felt for her perhaps of all his women the most domestic sentiments. The mysterious Henriette, who abandoned Casanova in such stress of emotion in Geneva, and who found him later an old man unrecognized at Dux, has left us, under her full name of Henriette de Schuckman, five letters as a testimony to their renewed and respectful friendship. The letter of Maria Zorzi throws interesting light on Casanova's allegation that his imprisonment in the Piombi, from which he made his world-famous escape, was due to the jealousy of the husband of that lady. Among the papers appears in its gray bluntness a letter from the keeper of the "harem of Little Poland," which is described in the Memoirs. The enigmatic Spanish Countess A. B., who figured as protagonist in the ridiculous comedy of Casanova's intrigues in the Carnival of 1763 at Milan, and who had recourse to sorcery to be revenged upon Casanova, is here revealed as Teresa Bolognina. So these collections run along as it were in commentary on the Memoirs. But we should note likewise their relation to the last years of Casanova's life, not described in the Memoirs as we possess them. In this respect the letters are only an example of what Ravà will give us later in the critical edition of the autograph manuscript of the Memoirs, shortly to be published by Brockhaus.

The patient researches of Casanovians in the last quarter century, the use of the original papers of Dux, and the co-operation of contemporary scholars with Mr. Ravà, will soon have completed the transformation of the Memoirs from the unsavory masterpiece of the past into a precious historical document.

The Religion Worth Having. By Thomas Nixon Carver. Boston: Houghton Mifflin Co. $1 net.

In a volume of one hundred and forty pages Professor Carver of the Department of Economics of Harvard University has settled questions which have tried the souls of many thousands of the noblest minds. In one form or another the quest for a worthy and tenable faith has occupied the strength of the world's choicest spirits and has led them into deep questionings as to the constitution of the universe and the meaning of life. The basal conviction of these theophiles of all ages has been that the religion worth having is the religion that is true. Their standard of value has been correspondence to reality, not effect and consequence in temporal affairs. The search for reality has been a painful one, and trying differences of judgment have continued to the present time. Notwithstanding the difficulty of the inquiry and the uncertainty of the result, the quest has been deemed necessary and many are still engaged in it.

It appears from Professor Carver's essay that all this anxiety of spirit might easily have been spared. The religion worth having is simply the religion which makes men good economic producers. "That is the best religion which acts most powerfully as a spur to energy, and directs that energy most productively." It is the kind of religion which "would build up a prosperous and powerful community, which would support more life and support it more comfortably than any other." It is not necessary, therefore, to inquire deeply concerning the nature of God; one has only to note the creed which prevails with the most successful merchants. The question of the immortality of the soul need occasion no wakeful nights: investigation of the creed of the most thrifty will settle the matter. The dollar is the measure of all things, only Professor Carver would have us regard the dollar not as a means to provide enjoyment, not even the higher pleasures of art and culture, but as an instrument to beget other dollars. The present problem of the Protestant Church, having brought its adherents to prosperity, is to "hold them true to the productive life." An Indiana farmer, having raised a large crop of corn, increased his drove of hogs, bought more land, raised more corn, fattened more hogs, and continued in the circle. According to the present essay, this hog-raiser not only fulfilled the ideal of an economist, but also attained the religion worth having.

It may appear to some that such a view does scant justice to religion, even as it is preached and exemplified in these days of little faith; but they must argue the matter out with Professor Carver. To him the suggestion of Mark Twain, that an anchorite, whom he found swaying back and forth continuously, should be hitched to a sewing machine, seems quite inspired, and he would attach all pious exercises to productive machinery of one sort or another, and test the piety as one would measure horsepower. It is declared that this is the view which is to dominate the consideration of religion in the practical days to come. Doubtless, however, there will be those who will call to mind certain prophets who were stoned and sawn asunder, who wandered in caves and holes of the earth, who appeared to have found a religion worth having, even though they made no acres more fertile and added nothing to the world's trade. The holy man of Assisi may not altogether have been forgotten, who as poor served the poor, and there may be those who will recall that a religion which has approved itself to many as quite worth having has had for its symbol, not a full dinner pail, nor a work bench—to use Professor Carver's sign for his philosophy of life—but a cross. An evangel of thrift may be needed in our time, but it is not religion.

Lafcadio Hearn. By Nina H. Kennard. New York: D. Appleton & Co. $2.50 net.

As a whole, this new life of Lafcadio Hearn may be classed with the flood of amateurish biography that is coming from Great Britain. But Mrs. Kennard, through friendship or relationship, we do not know which, with living members of the Hearn family, has had at her disposal a number of documents and some traditional information which have enabled her to add a good deal to our knowledge of Lafcadio's early years. In particular she has drawn from a series of letters written by Hearn from Japan to his half-sister, Mrs. Atkinson, which show that through all his wanderings the feeling of family and home was not entirely broken, and which help to reconstruct his childhood. We see how little care the boy got from his ignorant, languid mother and his volatile father. We learn a little more about Mrs. Brenane, his great-aunt, who took charge of him when, in 1857, his father married a second wife and proceeded with his regiment to India. A weak-minded woman she must have been. Falling under the influence of a certain Henry Molyneux and his wife, she settled her property on them and went to live in their house at Tramore. The consequences may be read in one of the letters to Mrs. Atkinson:

> Henry had been brought up by the Jesuits. He had been educated for commerce, spoke four or five languages fluently. He soon became omnipotent in the house. Aunt told me she was going to help him for her husband's sake. The help was soon given in a very substantial way, by settling five hundred a year on the young lady he was engaged to marry. . . . Mr. Henry next succeeded in having himself declared heir in Aunty's will; I to be provided for by an annuity of (I think, but am not sure) £500. "Henry," who had "made himself the darling," was not satisfied. He desired to get the property into his hands during Aunty's life. This he was able to do, to his own, as well as Aunty's, ruin. He failed in London. The estate was put into the hands of receivers. I was withdrawn from college, and afterwards sent to America, to some of Henry's friends. I had some help from them in the shape of five dollars per week for a few months. Then I was told to go to the devil and take care of myself. I did both.

For the detailed information of this sort to be got from Mrs. Kennard's volume, any one interested in Hearn's life will be grateful. But the book by no means supplants, even for the early years, the biography by Mrs. Wetmore. The deeper influences that shaped the boy's imagination are related far more satisfactorily by the American friend, and there is, of course, nothing in the present volume to take the place of the correspondence published by Mrs. Wetmore, the new letters to Mrs. Atkinson being incomplete and for the most part trivial. For the rest, Mrs. Kennard relates the events of Hearn's life in confused manner and with little literary skill. At the end she adds a fairly entertaining account of a visit to Hearn's Japanese home after his death. The work as a whole is simply a mistake. Mrs. Kennard should have presented her new material in a separate small volume. As such it would have been highly valuable.

Manili Astronomicon Liber II. Edidit H. W. Garrod. New York: Henry Frowde. $3.40 net.

Mr. Garrod's book appears at an especially favorable time, when M. Cumont's recent lectures on Eastern astrology, delivered at various seats of learning in this country, have given Manilius a striking advertisement. Manilius has been very little known in recent times outside the circle of the especial initiates who are supposed to devote their days, and more particularly their nights, to whatever is most removed in the classical field from general interest. He has been ranked, perhaps properly enough, among the "hard" authors, and if the reader who is making his first essay in a new field of literature should

by ill luck blunder upon the "dodecatemories of dodecatemories," only a previous intense zeal for astrological science could save him from consternation. It would indeed be idle to assert that Manilius should be ranked in a gentleman's reading alongside of Virgil and Horace, of Catullus and Lucretius, and yet Manilius abounds in passages of high grandeur and brilliantly lucid expression. He can combine at times the exaltation of Lucretius with the limpidity of Ovid. The great Richard Bentley is said to have asserted that Manilius and Ovid alone of the Latins had "wit." Bentley was, to be sure, somewhat given to perversities, but this is not such a cryptic paradox as it might appear.

Mr. Garrod's text is acompanied by an adequate and readable prose translation, and though the second book of Manilius is not the one (if one only it must be) that we would select for an introduction to the author, we may yet hope that text and translation together on opposite pages will decoy some otherwise hesitant reader into an untried field of wide outlook. That is the main reason for mentioning here such a work of abstruse scholarship. There are some faint lights on the distant horizon that seem to give hope of a new dawn of the ideal of culture. We welcome every effort that may hasten it. The projected Loeb series of translations is of this sort. Only it must be remembered that the divine gift of poetry resides in the original verse, and but rarely can be sufficiently felt in a translation, which must be treated only as an auxiliary.

The Book of Khalid. By Ameen Rihani. New York: Dodd, Mead & Co. $1.30 net.

If Ameen Efendi Rihani could get over being what Mr. Kipling, or rather Wali Dad, called a "product," he might easily come to have the position in English which he holds already in Arabic. He has a very pretty gift of language, and he has discovered a literary *genre* where the East and the West, Arabic and English, can almost touch. But they do not quite touch, and that is the pity. "Sartor" and the humorous Maqáma, blackguard Arabic songs and the grinning satyr of Sterne, the essay that plays at autobiography and heart-sick Arabic poems that can tell anything so long as it will distil into the teller's emotion—all are within a hand's reach of one another. There is much kinship, too, between the Carlylean thunder and crack of words—the smack and roll of them on the tongue—and the Oriental loftiness of style gained by hunting in the dictionary. Only the words in English must be, in some measure, intelligible; it is only an Arabic reader who likes to be put to his lexicon. And the play on words which Arabic literature permits in all its range has its footing in English also; though a slippery one. Many have fallen there. So Ameen Rihani just misses it. His *genre* will not do in English, unless he can learn to handle it differently; but it is a most entertaining *genre*, all the same, and has possibilities. Especially he must understand that things may be said in French which are not possible in English, except, of course, if one happens to be Sterne. In these matters English is silent or downright—even as Arabic; the allusive snigger of a certain French school is alien and repellent.

But to his matter. This is the book of confessions of a Syrian Teufelsdröckh crossed with Gil Blas and Walt Whitman and Rousseau and what not—all having suffered an Oriental change. He wanders from Baalbek to New York and has various experiences there as shopkeeper and peddler and Tammany henchman. Beyond Tammany he penetrates to the demi-monde and to the world of Bohemian eccentricity, but not further, at least as Khalid. What Ameen Rihani himself may know or think about American life we do not learn. Autobiography is certainly here, but it is more apparent in the earlier and later pictures of peasant life in the Lebanon. To the Lebanon, then, he returns, and among laborious monks and money-making hermits, Bahais with their satellite American women, Jesuits in their intrigues, Turks of the Committee, and Arabs dreaming of a new empire of the desert, he finds texts enough for Carlylean meditations, sulphurous and kindly, biting and tender. And therein is largely the value of the book. With all the posturing and word-hunting and imitation, the discerning will find here the revelation and the problem of the keen-brained Syrian, sprung of a stock calling itself Arab and Phœnician, but mixed with blood from Scandinavia, central Asia, and northern Africa, skeptical, philosophical, businesslike, cynical, and yet a dreamer.

Notes

Among the books which the University of Chicago Press have in hand are: "The Sociological Study of the Bible," by Louis Wallis, and "Railway Economics," being a collectors' catalogue of books in fourteen American libraries prepared by the Bureau of Railway Economics, Washington, D. C.

Algot Lange's "In the Amazon Jungle" is in the press of G. P. Putnam.

The Century Company announces a series of six books under the general title of "Century Readings in United States History." The volumes are entitled: "Explorers and Settlers," "The Colonists and the Revolution," "A New Nation," "The Westward Movement," "The Civil War," and "The Progress of a United People."

"The History of an Amateur Gentleman" is the title chosen by Jeffery Farnol for his latest novel.

The spring list of L. C. Page & Co. includes in travel: "The Spell of France," by Caroline Atwater Mason; "Three Wonderlands of the American West," by Thomas D. Murphy, and "Chile and Her People of To-day," by Nevin O. Winter.—Fiction: "Chronicles of Avonlea," by L. M. Montgomery; "The Forbidden Trail," by Edgar M. Dilley; "Rayton: a Backwoods Mystery," by Theodore Goodridge Roberts; "The Dominant Chord," by Edward Kimball; "The Sword of Bussy: a Romance of the Time of Henri III," by Robert Neilson Stephens, and "Naomi of the Island," by Lucy Thurston Abbott.—Juveniles: "Ralph Somerby at Panama," by Forbes Lindsay; "The Pioneer Boys on the Ohio," by Harrison Adams; "Our Little Polish Cousin," by Florence E. Mendel.—Revised editions: "Mexico and Her People of To-day," by Nevin O. Winter, and "Panama and the Canal To-day," by Forbes Lindsay.

The Society for the Promotion of Researches into Zoroastrian Religion will publish the complete text of the Pahlavi Dinkard, Book III-IX, from the oldest extant manuscript, now in the Mulla Feroz Library, Bombay. The work is under the supervision of Dhanjishah Meherjibhai Madan.

The Manchester University Press is getting out a series of lectures on "Germany in the Nineteenth Century." Among the topics discussed are "The Political History," by Dr. J. Holland Rose; "The Intellectual History," by Professor Herford; "The Economic History," by Professor Conner, and "The History of Education," by Dr. Sadler. Lord Haldane contributes an introductory note.

Dodd, Mead & Co. are bringing out this week: "The Mystery of the Boule Cabinet," a detective story by Burton E. Stevenson; "The Green Vase," a novel by William R. Castle, jr.; "Peter and Jane," a story of English country life by S. Macnaughtan; "A Book of Prayers," by Samuel McComb; "The House of Dornell," a volume of essays by Fergus Graham, and "Children of the Resurrection," a devotional book by the late Ian Maclaren.

For its centennial, which the Princeton Theological Seminary will celebrate in May, Scribners are planning to publish "Biblical and Theological Studies and Discussions," being essays by the Seminary professors. The titles are: "Theological Encyclopædia," by Francis Landey Patton; "On the Emotional Life of Our Lord," by Benjamin Breckinridge Warfield; "The Child Whose Name is Wonderful," by John D. Davis; "Jonathan Edwards: A Study," by John DeWitt; "The Supernatural," by William Brenton Greene, jr.; "The Eschatological Aspect of the Pauline Conception of the Spirit," by Geerhardus Vos; "The Aramaic of Daniel," by Robert Dick Wilson; "The Place of the Resurrection Appearances of Jesus," by William Park Armstrong; "Modern Spiritual Movements," by Charles Rosenbury Erdman; "Homiletics as a Theological Discipline," by Frederick William Loetscher; "Sin and Grace on the Biblical Narrations Rehearsed in the Koran," by James Oscar Boyd; "The Finality of the Christian Religion," by Caspar Wistar Hodge, jr.; "The Interpretation of the

Shepherd of Hermas," by Kerr Duncan Macmillan; "Jesus and Paul," by John Gresham Machen, and "The Transcendence of Jehovah, God of Israel," by Oswald Thompson Allis.

The following books are promised by Sturgis & Walton Co. this month: "Jaconetta Stories," by Fannie Heaslip Lea; "Making Home Profitable," by Kate V. Saint-Maur, and "Memoirs of the Duc de Lauzun.

The Selden Society, which publishes the sources of English law, hopes to issue two publications for the year 1912. One of these will be the second volume of the "Year Books of the Eyre of Kent," edited by William C. Bolland; this is nearly ready and should be in the hands of members early in the year. The other is a volume on "Select Charters of Trading Companies," edited by Cecil T. Carr. The Society regrets that there has been delay in the appearance of Volume XXVI for 1911, but hopes that it may shortly be in the hands of members. It is the sixth volume of the Year Book Series containing reports of 4 Edward II, and is edited by G. J. Turner. The manuscript materials collected by the late Prof. Charles Gross, for the second volume of "Select Cases in the Law Merchant," have at last been found, and Professor Morgan has undertaken to complete this work for the Society. Provisional arrangements (subject to contingencies) have been made for the following further publications: another volume of the "Year Books of the Eyre of Kent," by Mr. Bolland; other volumes of the "Year Books of Edward II"; a volume of "Select Cases before the King's Council," by I. S. Leadam; a volume of "Select Ecclesiastical Pleas," by Mr. Harold D. Hazeltine; and an edition of the "Liber Pauperum" of Vacarius, by F. de Zulueta.

By an inadvertence, we noticed last week the Index of the Encyclopædia Britannica as the nineteenth volume. It is the twenty-ninth.

The Macmillan Co. has reprinted in a uniform edition three volumes of essays, by Prof. George Edward Woodberry—"The Torch," being eight lectures on the race power in literature, delivered before the Lowell Institute; "Great Writers," including Cervantes, Scott, Milton, Virgil, Montaigne, and Shakespeare, and a monograph on "Swinburne."

In "Our Magic" (Dutton) Nevil Maskelyne and David Devant explain, indeed, the performance of many kinds of legerdemain, but their real interest is in setting before the reader what may be called the philosophy of holding and deceiving an audience. The book is good reading, even for those who go to it for no practical instruction.

Maeterlinck's little treatise on "Death" (Dodd, Mead) is well translated by Alexander Teixeira de Mattos. Maeterlinck has many nice things to say on the subject of immortality, as on other subjects. "The soul is insensible to all that is not happiness"; "it will have no other career than infinity, and infinity is nothing if it be not felicity," etc., etc. Those may take comfort in this kind of thing who do not stop to ask where M. Maeterlinck obtained his lofty information.

"A Little Pilgrimage in Italy," by Olave M. Potter (Houghton Mifflin Co.), contains agreeable discursive chapters on Southern Tuscany and Umbria, with a digression to Ravenna and Loreto. It gives neither a traveller's systematic record nor an impressionist's word-pictures and emotions, but something between the two. The author has evidently been much influenced by Henry James, although she is never so cryptic as her original. At her best, she is good, and occasionally even striking, but the perpetual hunt for adjective and adverb we find cloying. Even the household fly ought to be allowed to come and go sometimes without an unusual epithet. The illustrations, by the Japanese, Yoshio Markino, are numerous and interesting, although most of them are out of drawing, according to an Occidental standard. The make-up of the book is attractive.

St. George's Church, on Stuyvesant Square, New York, which is well known throughout the country for its splendid religious work, celebrated last year the centenary of its foundation as a church, and for that occasion caused its history to be prepared in book form ("History of St. George's Church in the City of New York. 1752-1811-1911": Harper). The work, a fine volume of above 500 pages, was compiled by the Rev. Henry Anstice, D.D., son of a former vestryman of the parish, and one who, from his infancy, has been familiar with its history and traditions. It will be remembered that St. George's existed as a chapel of Trinity for almost sixty years before it became an independent parish. It was the earliest chapel of that corporation, founded in 1752. The first two chapters constitute a religious history of the city of New York from the first settlement in 1623 to the incorporation of St. George's Church in 1811, at which time it still occupied the original site on Beeckman Street. St. George's has been, on the whole, extremely fortunate in its rectors. Three of these, Drs. Milner, Tyng, and Rainsford, were great religious leaders, albeit differing much in character and methods of work, and it is owing to their leadership that St. George's has taken the position which it now holds in the religious life of the city. Each of these men may be said to have formed and fashioned the church after his own mind, and to have gathered about him for that purpose a band of lay supporters whose readiness to work and to contribute under such leadership was phenomenal.

Probably the most remarkable achievement in this direction was that of Dr. Rainsford, who took charge in 1883), when the church population had moved away, and St. George's had virtually no congregation and no workers outside of the vestry. These latter were willing, however, to give him free hand to do what he would, to guarantee sufficient means for him to set the work in operation, and to agree to render personal assistance. That done, Dr. Rainsford soon gathered about himself a most remarkable body of supporters, men and women, who made St. George's, during the period of his rectorship, and up to the present time, probably the model institutional church of the country, and a force for righteousness in civic life. The book contains brief histories, generally accompanied by portraits, of all the wardens and vestrymen who have been connected with the church, as well as of the clergy who have ministered there. In a short notice of the Trinity Chapel controversy, in which the rector of St. George's, Dr. Tyng, and the Hon. William Jay were anti-Trinity leaders, Dr. Anstice points out how much more effective the old endowment of the church in New York has been when divided among the churches, as was the rightful method, legally provided for by act of Legislature in 1814, than when multiplied in the hands of one corporation. We especially commend the history of St. George's to the consideration of Trinity Corporation.

In his "Motor Routes of England, Western Section" (Macmillan), Gordon Home presents in the most acceptable form two sorts of information—that which the driver needs to know, and that which will be of interest to the sightseer. This very inclusive tour—from London to farthest Wales and back again—is divided into eleven sections and eight loops, a chapter being devoted to each; and each of these chapters has its detailed map, its tables of distances, grades, and places of interest along the way. All information regarding hours of admission, entrance fees, etc., is printed in italics. The descriptive text itself is far from being the mere parrot prattle of the professional guide; Mr. Home is an ardent ecclesiologist and antiquarian, and thoroughly intelligent in architecture. Indeed, certain American motorists will feel the need of a glossary when they come to such terms as *rerdos, merlon, triforium.* In other respects the book is as clear as sunlight: he who rides may read. Above all, Mr. Home is a delightful travelling companion; he never bores you, and he can enjoy the sight of a glorious mountain without feeling obliged to pile up a mountain of adjectives to vie with it.

"Some Old Egyptian Librarians" (Scribner) is the title of a paper read by Dr. Ernest C. Richardson, librarian of Princeton University, before a convention of fellow-workers. It is not intended as a joke, but is a serious attempt, historical and archæological. On the basis of trustworthy translations and by the aid of adaptation of phrases and the exercise of imagination, he has carried the history two millenniums earlier than Asurbanipal and nearly three earlier than Alexandria. He finds twenty-one librarians in Egyptian history known by name, besides mention of a number of others unnamed. Such minute details constitute one of the marvels of Egyptian archæology. If Dr. Richardson had consulted Weigall's "Guide to the Antiquities of Upper Egypt" (p. 338), he might have included also a description of a temple "library" as well.

"New Poems by James I of England, from a hitherto unpublished manuscript (Add. 24195) in the British Museum" (Columbia University Press; Lemcke & Buechner), edited, with introduction and notes, by Allan F. Westcott, is a work of historical rather than literary interest. *Mediocres poetas nemo novit, bonos pauci.* The first clause of this dictum of the Roman historian is hardly open to dispute, whatever one may think of the second, and there is nothing in the present volume to change the opinion of the world as to which of the two classes of poets includes the royal author.

Nevertheless, owing to the circumstances of his birth, James played an important part on the stage of European life in his day, and nothing that serves to illustrate his character is wholly destitute of value. Of the fifty-seven poems printed in the volume, twenty-six appear now for the first time, and of those which have already been published, nine are here first identified as coming from James's pen. MS. Add. 24195 was written, for the most part, apparently by one of the King's Scotch secretaries, but some of the sonnets are in the hand of his son, Prince Charles, and the King himself made changes in the volume. It contains, besides the poems, specimens of the author's correspondence with foreign scholars and other short prose pieces, some of which Mr. Westcott has printed in an appendix. The editor has done his work with the most exemplary thoroughness. His notes embrace some contributions worthy of attention to the now burning question of French influence on British poetry during the period of the Renaissance. In his Introduction he observes justly that in forming a judgment of James's poetical abilities, we should remember that his work in this line belongs almost wholly to his early life, and should, accordingly, be measured by the standards of that time, the early Elizabethan period. This is true, but, of course, the mediocre quality of the poetry remains—for James had culture, but not a spark of inspiration. It does not strike us that the editor is particularly happy in his indication of what are the best pieces in the volume. We should for our own part, select "Constant Love in All Conditions" (p. 7) as the most favorable specimen of James's verse. This reads smoothly, and is altogether not unlike the average work of the better-known Scotch poets early in the same century.

Mr. Westcott's Introduction, which makes very agreeable reading, is a detailed discussion of James as a writer and a patron of literature. He reviews his education under the great humanist, George Buchanan, his poetical apprenticeship under Alexander Montgomerie, and his subsequent relations with literature and authors. Under this head he might have mentioned the incident in George Herbert's life, before his disappointments as a courtier drove him into saintship, when the poet, lecturing on oratory one term at Cambridge, based his discourses on a Latin oration of James's, instead of the usual oration of Cicero or Demosthenes, as offering a more perfect specimen of the art than anything that antiquity had produced. Mr. Westcott tries to prove that the influence of James was in some degree responsible for the growing classicism of English poetry in the later years of his reign. The considerations which he advances in regard to the matter do not seem to us to amount to much. Nevertheless, the whole of the Introduction is instructive, and no historian of James I can afford to neglect the study of his intellectual interests which is embodied in these pages.

An interesting review of the "Attitude of American Courts in Labor Cases" has been added to the series of Columbia University Studies in History, Economics, and Public Law, by Prof. G. G. Groat of Ohio Wesleyan University. Mr. Groat does not concern himself with points of law which may be regarded as established, but endeavors by the assembling of extracts from authoritative decisions to show the drift of judicial opinion on problems still unsettled. He has carefully selected his material from the reports of leading cases in the United States Supreme Court, the Federal Circuit Courts, and the courts of last resort in the separate States. Throughout most of the book his work has been largely confined to the task of compilation, and to the linking together of excerpts into a fairly consecutive exposition of guiding principles. But in the chapters which conclude the two main divisions of his study, dealing respectively with the legality of the acts of organized workers and with the validity of progressive labor legislation, he summarizes sanely, and on the whole interestingly, the considerations which seem to dominate our judiciary at the present time. His point of view is not that of the jurist; it is that of the student of economic conditions who is convinced that many venerable conceptions of liberty and justice and personal rights in general have now become obsolete and inapplicable. The emphasis of the book is consequently on one side; but it is on the side where an increasing number of legal thinkers believe that hope for the future lies.

Those who have faith in the economic interpretation of history will be interested in A. M. Simons's "Social Forces in American History" (Macmillan). The author, who is evidently a thorough going Marxian, offers here explanations on economic grounds of the chief events in American history from the discovery of America to the rise of the Knights of Labor. These explanations he has assembled from a wide range of miscellaneous reading. Virtually all of them can be found in suggestion at least in works by serious students, but in very few cases did their originators offer them as the whole explanation of the particular events under consideration.

Edward A. Foord's "Byzantine Empire" (Macmillan) may do much harm if it prevents some competent person from writing a "short popular history of the Later Roman Empire." For there is need of a book which shall hit a mark somewhere "between Professor Oman's sketch in the 'Story of the Nations Series' and monumental works like those of Gibbon, Finlay, Bury," Rambaud, Schlumberger, Diehl, Krumbacher, Gelzer, Strzygowski, Lampros—if we may add a few foreign names to Mr. Foord's poverty-stricken British list. It is true that experts like Professor Diehl believe the time not yet ripe for a sound synthesis of Byzantine history; but even the layman knows that Professor Diehl himself has breathed life upon the dry bones of many Byzantine kings and queens, and that the investigations of French, German, Russian, English, and Greek scholars have cast light upon many dark places in Byzantine art, politics, and institutions since Oman wrote his hasty, but serviceable, compendium. We have our quarrel not with Mr. Foord's task, but with its execution. After reading through to the end a volume remarkable on the positive side for the triviality of its materials, criticism, and style, on the negative side for its ignorance of the modern literature and of all the great problems of Byzantine history, we are shocked to re-read in the preface that the work is only the introduction to a larger one, "embodying the results" of the author's "own original research." Would that the author had been less niggardly with originality in his prolegomena! Gordon Home was, it seems, the wicked counsellor who persuaded Mr. Foord that a "knowledge of what was required, combined with a real enthusiasm" for the subject, would compensate for his hopeless amateurishness. Was there no one to tell him to do his research first and to refrain from a comprehensive work until he had come into intimate relations with his theme? Has he never been advised that to give "little space" to "ecclesiastical controversies" is to crush from his history the very breath of Byzantine national life? The true historian is not at liberty to neglect what he dislikes or what is unfamiliar to him. In short, Mr. Foord's book shows all the vices which we have come to expect in English "pot-boilers"—captiousness of judgment, defective training, and ignorance of all but standard native works. It is not redeemed by the common English virtues—political sense and dignity of style. It reminds us in many ways of Diodorus the Sicilian.

Science

The World's Minerals. By Leonard J. Spencer. New York: Frederick A. Stokes Co. $2 net.

The author of this volume is connected with the British Museum, where one of the three great mineral collections of the world is exhibited. With obviously thorough command of his subject, he has prepared a work upon one hundred and sixteen of the commoner species, out of the eight or nine hundred that are known. The book is intended to be interesting and intelligible to the general reader and to convey to him the main facts of composition, crystal form, occurrence, and uses. Special emphasis is therefore laid upon the more popular points. Gems are always uppermost in the minds of those who have not given special attention to the scientific side of mineralogy. The book therefore begins with the diamond, to which more space, twice over, is devoted than to any other mineral except the ubiquitous and protean quartz.

Certain usages in England different from those current in America will be at once observed by a discriminating reader. The carbonate of iron is called chalybite across the ocean, but siderite on this side. In the book, it is described as chalybite in the text and figures as siderite on the plates. The blue carbonate of copper universally passes as azurite in America, but is known as chessylite in England. Again, the text favors England, the plates America. The carbonate of zinc is named calamine by Mr. Spencer, and the carbonate is the only zinc ore mentioned except zincblende. In this country calamine is applied only to the hydrated silicate of zinc,

which is many times more abundant than is the carbonate smithsonite. Mr. Spencer makes no mention of the silicate. Cerusite, on page 150, should be cerussite.

The writers of books upon mineralogy have manifested in later years a growing desire to illustrate their subject, not only by the conventional line drawings of crystals, but by half-tone photographs, or, as in the present instance, by colored plates. Crystallized minerals are singularly attractive objects. They make their appeal both by regularity and symmetry of form, and by beautiful coloring and brilliant lustre. Colored plates of minerals are not easy to prepare. The fire and lustre, the transparence and play of colors, can only be brought out with the exercise of great skill and care. The plates in Mr. Spencer's book are not always satisfactory. Criticism, however, should be tempered with an appreciation of the difficulties involved. Nevertheless, for the general reader they are more significant than geometrical drawings, and they will add to the interest of a work which is intended to be, and succeeds in being, popular and elementary in treatment.

On March 23 Scribners will issue "Criminal Responsibility and Social Constraint," by the late Dr. Ray Madding McConnell, and "Suggestion and Psychotherapy," by Dr. George W. Jacoby.

L. W. Page's "Roads, Paths, and Bridges" will soon be added to Sturgis & Walton's Young Farmer's Practical Library.

McBride, Nast & Co. have in preparation "My Three Great Flights," by André Beaumont, who won the Paris-Rome, the Circuit of Europe, and Circuit of Britain aerial races.

Benjamin M. Davis is bringing out, through the University of Chicago Press, "Agricultural Education in the Public Schools."

"The Great Plateau of Northern Rhodesia" (Longmans) is a work of unique value, being the only book on a fascinating region in tropical Africa. Isolation from the outside world has enabled the virile natives to preserve their primitive customs more perfectly than has any other great negro race. The main object of the authors, Cullen Gouldsbury and Hubert Sheane, was to describe this native life minutely, carefully, and reliably. The facts they give were not gathered by ordinary travellers, but are the results of careful research by men who have spent many years in close touch with the natives in their own surroundings. A brief sketch of the history of the country, so far as it is known, is followed by a detailed account of the natives' religious beliefs and rites, their social life, arts, industries, and amusements, with much information on the land and its fauna and flora. "Every Central African," says Mr. Sheane, "is a born lawyer":

> From childhood upward he has been familiarized with the procedure in innumerable cases heard in the open village courtyard, or has listened to the accounts of old-time decisions, rounded off by some neat proverb or epigram, and, accordingly, when he has attained to man's estate, the mind of the average native is a veritable storehouse of past precedents. Should the need arise, he can act as his own pleader, and set forth his case with fluency and lawyer-like adroitness. It is doubtless from this early-acquired knowledge and legal bias that the natives derive the great respect for constituted authority shown in their singularly law-abiding nature.

Many will be interested in the light which these two officials shed on the methods of British colonial government. The fundamental principle is to govern the natives through their chiefs, in accordance with their own laws and customs and their own councils and courts, except in the case of customs entirely at variance with the laws of humanity and civilization. The success of such methods is shown by the fact that a region as large as England, which twenty years ago was the abode of turbulent savages, is now one of the most peaceful lands in the world. "Since the occupation of the country, more than a decade and a half ago, with the exception of one or two trivial affairs, not a shot has been fired in enmity." The foreign governing body consists of twenty officials without a single white soldier and only 100 native police. A large part of this success, it should be said, is due to the educative work of the missionaries. In one division, with a population of above 20,000, about 7,000 can read and write a little. "Boys reading by the campfire and the moonlight are a common sight." White officials come into close touch with the natives by annual visits to each village. It is a land rich in possibilities from its adaptiveness to the cultivation of rubber, cotton, and valuable timber. The elevation of the plateau, from four to six thousand feet above sea-level, gives it a delightful and fairly healthful climate. When the railways now in progress of construction from the north, the south, and the east reach it, Northern Rhodesia may become a much-valued corner of the Empire. There are eighty-one illustrations, some of beautiful scenery, and an excellent map.

Rear-Admiral George Wallace Melville, U. S. N., retired, who died in Philadelphia on Sunday, was born in New York in 1841. After serving throughout the Civil War he was chief engineer on three expeditions to the Far North, on the Tigress, in search of the ill-fated Polaris, on the Jeannette, and on the Thetis in search of Greely. For his bravery he was honored by Congress and by scientific and geographical societies; he received honorary degrees from many universities, as well as decorations from foreign monarchs. In 1896 he was appointed engineer-in-chief of the navy, and in 1900 became rear-admiral. He was the inventor of several mechanical appliances.

John Bernhardt Smith, who died last week at his home in New Brunswick, N. J., aged fifty-three, had been for several years State entomologist, and had done notable service in attacking the mosquito pest. He was also professor of entomology in Rutgers College and was the author of two books on his special subject.

Dr. Henry Wilson Spangler, who died on Monday at the age of fifty-four, was professor of mechanical engineering in the University of Pennsylvania, where he had served for more than twenty years. Before that he had been in the employ of the United States Navy. He was the author of "Vaive Gears," "Notes on Thermodynamics," and "Graphics," and wrote in collaboration "Elements of Steam Engineering."

Drama

It is a strange conjunction with which the reader is confronted in a new Oxford book just issued by Henry Frowde—"Shakespeare's Hamlet, Coriolanus, and Twelfth Night," edited with introductions and notes, by G. S. Gordon. Why these three plays should have been selected to march through the land together is not clear, nor why they should be cursed by an ugly, faded-green binding. Each is introduced by a longish essay, well written but contributing nothing new to the literature of the subject.

"The Terrible Meek," by Charles Rann Kennedy, the nature of which had been carefully kept secret—an old managerial device—was presented in the Little Theatre on Tuesday afternoon, and demonstrated the elasticity of Winthrop Ames's policy as director. He would scarcely have produced it without the conviction that the stage still retains some traces of its religious origin and that its mission is still didactic, as well as artistic, satirical, and humorous. Doubtless he reasoned also that a piece uncompromising in its socialistic radicalism would gain sympathy by its sentimental and religious appeal even should it fail to vanquish by its logic. Evidently he is not altogether in bondage to the narrow creed of the modern realists. "The Terrible Meek" is notable if only for the boldness of its challenge, the fervor of its purpose, and the vigor of its utterance. It is strong in sentimental and spiritual appeal, and closes upon an inspiring note proclaiming the coming triumph of brotherly love—the fulfilment of an ideal, divine altruism—but it is often reckless in its generalizations and anarchical and dangerous in its implications, savoring more of the zealot than the philosopher. Moreover it is not wholly free from the taint of theatrical artifice. The scene is at the foot of Calvary, in the darkness following the Crucifixion. This darkness is used—not very successfully—to mystify the audience concerning the time, the place, and the particular incident, and to give these a contemporaneous application. The Centurion of the Gospels and a private soldier—talking like a British officer and a "Tommy"—discuss the deed of the day. Neither knows just why the dead man has suffered. The private had known him, had been inclined to like him, and had seen no harm in his words or his actions. He helped to kill him, as a matter of duty, when the Captain gave his orders, and would do so again under similar circumstances. The Captain, troubled in conscience, moralizes on the meaning of duty, amazes his companion by mutinous utterances, and finally in despair proclaims himself a murderer. Then the peasant mother of the victim—the Virgin Mary—in a long, pathetic soliloquy, summarizes the career of her murdered son and vows to spread the tale of his lovely life and cruel death throughout the world. The Captain, confessing his part in the transaction, implores her pardon, fiercely denounces the crimes done through the ages—

up to the present moment—in the name of patriotism, religion, and civilization, and ecstatically prophesies the impending annihilation of the Kingdoms of the world and the entrance of her son's disciples—the terrible meek—into their inheritance. In a word the millennium. Presently he refuses to obey a new order from his general, preferring death to wrongful obedience. This, he says, is the easy solution of the world's troubles. Then the stage is illuminated, and Calvary is disclosed, with the crosses and their occupants, the speakers in their appropriate costumes, and the foreground filled with peaceful sheep.

Doubtless the piece will provoke controversy, and, probably, some derision. Skeptics will laugh at it as the dream of a rhapsodical sentimentalist. Not all the church-folk will approve it, while sociologists will shudder at its pernicious fallacies. But there is a great basic truth at the root of it, that the hope of the world lies in the perfection of that human fellowship which is the essence of the Christian creeds. It is to this end, of course, that most enlightened social reformers are working. But the idea of the Centurion that the law of the individual conscience will suffice to solve the problems and dissipate the evils of our complex society is too fantastic for debate. A certain looseness of thought is discernible even in the title of the sketch, the qualifying epithet being strangely out of harmony with the general tenor of the text. Are the meek to win by violence, the sheep to rend the wolves? This is not the Christian legend. But it would not be fair to subject so sympathetic and emotional a work to searching critical analysis. Even should the production fail, the Little Theatre will lose nothing in prestige.

Madame Simone has appeared in the Hudson Theatre as Gilberte in Meilhac and Halévy's "Frou-Frou," thus completing her promised list of plays in English. Her impersonation is the best seen since the early days of Bernhardt. The gay frivolity of the opening scenes was wonderfully airy and spontaneous. The gradual development of jealousy in the young wife was marked with her wonted subtlety, and her outbreak of insane fury against her sister Louise was delivered with utter abandonment. Her appeal to her avenging husband in the fourth act had in it a note of true despair and suffering. But in nothing that she has done here has Madame Simone suggested her possession of the highest tragic powers. Her domain, apparently, lies within the limits of comedy, romance, and melodrama, but clearly is of very wide extent. She has won her triumphs here by her unaided ability, for her support, as a rule, has been abominable.

It is announced that Israel Zangwill's new play, "The Next Religion," which fell under the English censor's ban, will be given at the London Pavilion, by the New Players, on the afternoons of Thursday and Friday, April 18 and 19. The performances will be private.

"Plain Brown," a new comedy by Cosmo Hamilton, has been obtained by Charles Frohman. It will have its first New York performance at the Garrick Theatre in September.

Charles Frohman announces that Maude Adams will be seen in a number of new plays in the Empire Theatre next season. This implies a modification of the original "Chanteeler" arrangement, and all the best friends of the actress will be glad to hear of her release from the conditions of whimsical ineptitude to which she has been so long in cruel subjection.

Ian Maclaren, now acting in support of George Arliss in "Disraeli," is planning for a special production of "Hamlet" in Wallack's Theatre on April 23, in commemoration of the birthday of the poet. He hopes that this performance may be the first of regular annual celebrations of the day in imitation of the example set at London and Stratford on Avon. There is nothing to be said against such an enterprise, if it be undertaken in the right spirit. Few lovers of the poet will agree that an inferior Shakespearean performance is better than no performance at all. Public maltreatment of his text—equally suggestive of indifference and incompetence on the part of the performers—is a queer way of showing reverence. A conscientious endeavor on the part of ordinary players, in the regular way of business, may be tolerated, or even encouraged, but a special performance—an artistic sacrifice upon the altar of the author's genius—is another affair altogether. Who is to play the Prince? So far as general knowledge goes, there is no one in the country—unless Forbes Robertson, by any lucky chance, should happen to be available—who is capable of interpreting the part with any eloquence, refinement, imagination, distinction, or glimmer of special insight. Some shift might be made, possibly, to present one of the less exacting plays, either comedy or tragedy, with comparative decency; but "Hamlet," at this juncture, seems pretty hopeless.

Music

PROFESSOR PARKER'S PRIZE OPERA.

On December 15, 1908, the manager of the Metropolitan Opera House announced that the directors had decided to give a prize of $10,000 for the best opera composed by an American. When the contest closed, on September 15, 1910, it was found that twenty-four manuscripts had been submitted. These were placed in the hands of the appointed judges, Alfred Hertz, Walter Damrosch, Martin Loeffler, and George W. Chadwick, and on May 1, 1911, it was announced that they had agreed on bestowing the award on "Mona," an opera in three acts, music by Prof. Horatio Parker of Yale University, "book" by Brian Hooker, who was also at one time a member of the Yale faculty. Preparations were begun at once to procure a sumptuous scenic setting, as well as a good cast of singers. The singers, with Mr. Hertz as conductor, entered on their task with great energy, and after many weeks of rehearsing, "Mona" had its first hearing on Thursday, March 14, by an audience of great size, which recalled the composer, the librettist, and the singers many times.

The announcement that the prize had been bestowed on Horatio Parker had been received with some surprise, for notwithstanding his high rank among American composers, it was known that among his works, comprising above sixty opus numbers, there was not one which was concerned with the theatre. Successful opera composers are born, not made. Mozart grew up in a stage atmosphere; when he was twelve years old he was already concert-master, and he was only eleven when he wrote his first opera. Weber had a chance to learn "how the wheels go round" from his boyhood, as his father was manager of a travelling company of players and singers; and Wagner had the same advantages through his stepfather's connection with the Dresden Opera. When Weber wrote his first opera he was thirteen years old; Wagner composed his first work for the stage at twenty; Verdi, at twenty-three. Schumann's and Beethoven's operas, on the other hand, were afterthoughts. "Genoveva" and "Fidelio" do not reach the level of their best works, except in places.

The same must be said of Parker's "Mona," which will never enjoy the vogue of some of his choral works, notably his "Hora Novissima." The opera is too obviously the work of a newcomer on the stage; and the fault is aggravated by the fact that Mr. Hooker's libretto, though exceptionally good as literature, is also the product of one not used to stage ways. Some of the scenes are dramatic and thrilling, but on the whole there is too much dialogue, and the action does not always make clear to the spectator what the reader of the book finds elucidated in copious notes and directions. The disadvantages of too much dialogue can, it is true, be overcome by a Richard Wagner, but Wagners are not common.

Like Bellini's once popular "Norma," Parker's opera is based on a story of the old Druids during the time of the Roman domination in Britain. The heroine, Mona, is a sort of Jeanne D'Arc. She has on her breast a mysterious birthmark, and she proves to be, not, as everybody was led to suppose, the daughter of Arth and Enya, but a lineal descendant of Boadicea. Some fanatics among the Druids urge her to head an uprising against the Romans. She has been haunted by dreams and visions of the future, and decides to accept the leadership, despite the warnings and entreaties of her lover. This lover, who is known as Gwynn, is the son of a captive British woman by the Roman Governor. Neither Mona nor the other Britons know of his part-Roman parentage. His object is, by his union with Mona, to establish permanent peace. For a time her heart yields to womanly

promptings and she accepts his caresses, but the wave of Druidic fanaticism overpowers her when he confides to her the secret of his birth. Like a tigress she turns on him, summons the Britons, and all march off to assail the Romans. The battle goes against them. In the last act, wounded Britons run across the stage, followed presently by Mona. Gwynn appears, but she, refusing to believe that he is the Governor's son, takes him to be a traitor and stabs him with his Roman sword. Too late she understands the error, the crime, of her fanaticism—understands that, had she listened to the womanly promptings of her heart, she could have achieved infinitely more than by leading men to battle.

There is nothing American in the story of the prize opera, unless it be that Mona's conversion, with which Mr. Hooker adorns the tale, may be supposed to point a moral which our suffragettes should heed. His going back two thousand years and placing the scene among the Druids of Britain need not have prevented the composer from writing a genuine American opera, any more than the fact that the heroine of "Norma" was a high priestess of the Druids prevented Bellini from making it a typically Italian opera. An interesting comparison might be made between "Mona" and Victor Herbert's "Natoma," which was produced here last year by the Chicago-Philadelphia Company. That opera also suffered from the fact that its libretto, though interesting in substance, was the work of an amateur. The music, however, betrays the hand of one thoroughly versed in stagecraft. "Natoma" is a genuine opera, the first real American opera; American, because of its story, but still more so because of its music. Though born in Ireland (which prevented his competing for the $10,000 prize), Mr. Herbert has spent the greater part of his life in this country, and he has done more to create a real American atmosphere in music than any one excepting Stephen Foster and Edward MacDowell.

In Parker's opera one listens in vain for a note distinctively American. His score consists of substantial, serious, scholarly music, such as any one of a hundred German, English, or other composers might have written. While there is a veiled allusion here and there to familiar phrases, the opera as a whole is surprisingly free from reminiscences, except in a general way—in its use of phrases that have long been the common property of all composers. Of such phrases, indeed, "Mona" is compact. There is little individuality of style or thought. The leading motives associated with the characters are not sufficiently incisive to make a mark on the memory, and therefore they miss their effect. The constant use of declamation in place of ingratiating vocal melody (which, to be sure, does not come at one's bidding) is wearisome. The orchestration is the work of an expert, usually appropriate, sometimes impassioned, as in the love duo, at other times (especially in the march of the Roman soldiers at the close) imposing, after the manner of a Spontini. The most interesting parts of the opera are the choruses, which are admirably conceived and carried out; and this brings us back to our starting point. In writing choral music, Professor Parker is in his own sphere; in writing operatic music, he is not—at least, not yet.

After the usual series of performances in Chicago, Philadelphia, and New York, Andreas Dippel will take his company next season to San Francisco, visiting, also, Los Angeles, Portland, Seattle, and Denver. This will keep him, his singers, players, and stage hands busy at least twenty-six weeks. Since the Metropolitan company no longer goes on tour, he will have no rival in the field.

The principal works to be performed at the Cincinnati Festival, May 7 to 11, are: Beethoven's "Eroica" symphony; Benoit's "Into the World"; Berlioz's "Requiem"; Franck's "The Beatitudes," Liszt's "Dante Symphony," Mendelssohn's "Elijah," Strauss's "Heldenleben," Van der Stucken's "Pax Triumphans," scenes from Wagner's "Götterdämmerung" and "Meistersinger," and Wolf-Ferrari's "The New Life."

When Handel began to write oratorios, he intended to have them performed like operas, with scenery, costume, and action. The Bishop of London, however, forbade the performance on the dramatic stage of Biblical stories. The Rev. H. R. Haweis, whose "Music and Morals" has just been issued in a new edition by the Harpers, pleaded eloquently for the carrying out of Handel's original intentions, on the ground that dramatic presentation might restore to popularity some masterworks that are now neglected. But it was not until a few weeks ago that an attempt was made to test this claim. Mendelssohn's "Elijah" was performed in a dramatic version at Liverpool by the Moody Manners Opera Company. The production was received with great enthusiasm by an audience that crowded every part of the theatre. In a few places where the oratorio did not yield a continuous plot, extra pages were added, with music taken from other works by Mendelssohn. According to the London *Times*, the oratorio stood the test remarkably well. "Of course, there were things in it which sounded rather foolish under these conditions, but the really strong portions proved their dramatic quality by being made positively more vivid by the action of the stage."

Oscar Hammerstein's London Opera House threw open its doors on November 13, and the winter season closed on March 2. During this period the enterprising manager produced "Quo Vadis?" "William Tell," "Norma," "Rigoletto," "Traviata," "Lucia di Lammermoor," "Faust," "Hérodiade," "Le Jongleur De Notre Dame," "Tales of Hoffmann," "Louise," and Rossini's "Barber." Hammerstein's summer season is to begin on April 22 and last till July 13.

For a new translation of the "Don Giovanni" Italian text into German the Deutsche Bühnenverein has offered a prize of no less than $2,400, which shows in what esteem Mozart's opera is held in Germany. The prize libretto must be satisfactory, not only as literature, but must be accurately dovetailed with the music.

Wassili Safonoff is one of the busiest conductors in Europe. He does not forget his American experiences. At Rome, where he conducted two concerts not long ago, chiefly of Russian music, he also presented an American composition, Henry Hadley's symphonic poem, "Salome." It was not, however, very favorably received.

Massenet's latest opera, "Roma," has won a decided success at Monte Carlo. It is based on a story the scene of which is laid in Rome during the Punic wars, 246 B. C. The heroine is a Vestal virgin who, being detected in a love affair, is condemned to be buried alive. The love music is said to show the composer at his best in his familiar style; the critics, however, were also impressed favorably with the military music, which abounds in the score and recalls his turbulent "La Navarraise."

Art

THE SPRING ACADEMY.

The present exhibition of the National Academy in the Fifty-seventh Street Galleries sets in view 296 paintings and 26 pieces of sculpture, the work of 261 artists, as compared with 345 paintings and 67 sculptures, the work of 322 artists, shown at the winter Academy in December and January. Among the sixty exhibitors in December not represented in this exhibition will be found John D. Alexander, Cecilia Beaux, E. H. Blashfield, William M. Chase, Cyrus E. Dallin, Paul Dougherty, Daniel C. French, William Glackens, Jerome Myers, John S. Sargent, J. Alden Weir, Irving Wiles; nor has this spring show brought out the earlier absentees—Benson, Burroughs, Dearth, Dewey, Henri, Marsh, Melchers, Pratt, Ranger, Sterner, Tarbell, Thayer, Tryon, and others. In short, the exhibition is small enough to gain in an effect of selective arrangement, but not representative of the full available strength. Piece by piece, there are many interesting things here.

Everett L. Warner, whose March Day at the entrance sets a pair of pines against a far screen of deciduous trees in a reddish haze, has also a capital picture of the river-front, with open spaces, old sloping roofs, and spanning bridges. Francis C. Jones's wooded hillside is a high slope rising against the sky into the corner of the canvas. Elsewhere, he shows a pair of children taking a sewing lesson from an attentive young woman, an affair of gold and baby blue and rose pink. Robert Vonnoh does the reflections of trees in a pond and a stretch of afternoon landscape broadly and in simple color in a high key. His

Octogenarian is a character study, showing a withered head in black hood, the seated figure wrapped in its cape, the eyes sunk, the skin taut and tinged with orange.

Frank A. Bicknell keeps his last glow of an October day warm in color, with the light focussed on the middle distance. Gifford Beal paints the snow-covered banks of a frozen stream lined with snow-laden spruce, with broad not to say coarse touch. His old homestead presents a sward that is soaked with green, high lights, and shadows, a rich expanse of tree-shaded lawn before a columned portico. It is the allurement of colors which leads Karl Anderson into his garden splendor, where the woman is effulgent in azures and purples, with a background in which the gamboge lilies heighten the richness of the air. This allurement of color has many illustrations here. Cullen Yates, in landscape again, finds it in the tobacco browns of Indian summer or the mustard yellows of a high-mounding hillock swelling up into a blue sky.

Norwood Macgilvary uses his nude figure attitudinizing before a crouched leopard and holding at arm's length a glass of magic wine as an opportunity for luscious vermillions and purples in the silks and for a glimpse of the gem-like Mediterranean sea. There are several nudes here, as it happens. Sergeant Kendall's Cicada, owned by Adolph Bernheimer and seen at the Pennsylvania Academy a year ago, is a successful if not altogether satisfying painting. There is a high measure of craftsmanship about it, without much charm. F. Luis Mora's Embroidered Patterns is a group of two nude figures, very much posed, the scene most deliberately set, and yet the whole so simple that it escapes affectation and has a kind of ingratiating delicacy. The kneeling figure is perhaps the more fortunately posed. Lilian Genth's sea nymph on the beach is much the usual figure that this painter has delighted in for several years, rather better in color and freer in management.

Bruce Crane's partly cleared hill, with the road leading into the thick second growth in the hollow, is a soft, veracious bit of barren countryside. Carlton T. Chapman's sea fights are alone in their sort. Here he has the fight off Cape Vincent, the ships coming on under crowded heads of sail in long lanes, engaged two-by-two as they course along, their sides lifting with fire and trailing smoke and torn rigging. J. Carroll Beckwith does a portrait of his wife, full of deft detail, but rather fussy in consequence. Charles Bittinger's crinoline dames, grouped in a Colonial room making ready for the dance, are studies in cross-light. F. C. Frieseke gives us a string of waterside willows, and a nude standing under the trees in the dappling sunlight.

W. R. Leigh, who has exhibited some interesting studies made among the Mexican Indians, has entered the field of *genre* in the manner of Remington with his Poison Pool. Kenyon Cox's August contains a figure clasping her draped knees and holding a sickle negligently, which carries the mind to much panelling of public walls. John F. Weir's portrait of James W. Pinchot, one of the founders of the Yale Forest School, among the few full-length portraits here, is drily painted, definitely limited within its boundaries, the whole rather graphic and flat. Mary Fairchild Low has a portrait of Mrs. R. L. Stevenson, and one of Ben Ali Haggin's full-length young women in black gown stands with some air of challenge in her pose.

Jonas Lie uses a dramatic and tumbled sky for the morning scene on the river, with the bridge in perspective framing in the left, one of the crop of New York Bridge pictures which is touched with imagination and guided by a pictorial purpose. George Bellows's scene on the Jersey City docks in winter is framed in by the slab side of a large ocean liner in berth. The men, all turned at some word or act at the left, are of the dynamic caricature that Mr. Bellows finds adapted to the vigorous manner of his painting. By Joseph Pennell there is a small gray canvas called London Roofs.

The sculpture, of course, includes a tortoise fountain by Miss Janet Scudder. No exhibition would be ready to open without one. But there is in fact little sculpture here. We noted a head of the Rev. Edward Everett Hale, by Henry H. Kitson; the standing figure of Caruso, by Paul Troubetzkoy; a little figure of a child playing, by Lindsey Morris Sterling.

The prizes awarded were the following: Thomas B. Clarke prize to Charles Bittinger for his painting, Preparing for the Dance; the first, second, and third Hallgarten prizes to Charles Rosen, Everett L. Warner, and Eliot Clark for their paintings, entitled Rocky Ledges, Along the Riverfront, and Under the Trees; the Inness gold medal to Albert L. Groll for his painting, entitled Lake Louise, British Columbia; the Saltus medal to Bruce Crane for his painting, entitled The Hills; the Julia A. Shaw memorial prize to M. Jean McLane (Mrs. Johansen) for her Portrait of Mrs. John Henry Hammond and Daughter.

The exhibition continues to April 14.

Ernest A. Batchelder's "Design in Theory and Practice" (Macmillan), illustrated, is one of the best elementary manuals that has come to our notice. It provides practical exercises, but is perhaps most valuable in its steady and pungent insistence upon fundamental principles. The author approaches nature through design. What counts for him is not casual divination, but close and logical working out of pattern with regard to all material conditions. The point of view is suggested in the following: "We aim to produce studio-trained craftsmen. What we need most are shop-trained artists." It would be hard to put in fewer words what ails modern art of every degree.

"The Painters of the School of Seville" (Duckworth-Scribner), illustrated, by N. Sentenach, is a scholarly book covering unfamiliar ground. It has the defect, rather common in works of this class, of being somewhat too elaborate for the layman, while incomplete from the point of view of the special student. We miss especially any well-defined critical attitude towards the subject.

Walter Lofthouse Dean, a marine artist, died last week at his house in East Gloucester, Mass. He was born in 1854, and after a course in the State Normal Art School in Boston under Achille Oudinot, he studied under Boulanger and Jules Lefebvre in Paris. One of his pictures represents the Vigilant skimming past the Valkyrie in the race of October 13, 1893. The Halibut Catchers is another.

The death is reported from Cairo, Egypt, of the American artist, Henry Bacon. He was born seventy-three years ago at Haverhill, Mass. In the Civil War he was field artist for *Leslie's Weekly*, and afterwards went to Paris. He remained there twenty years, studying under Frère and Cabanel, and several of his pictures were hung in the Salon. Latterly he had spent his winters in Egypt and painted pictures of caravan life and desert scenes. Although he was successful in oil, his water-color pictures were the best. One of his best-known paintings is Gen. Gates and the Boys of Boston Common, which hangs in the old Adams House in Boston.

George Dunn, whose death is reported from Maidenhead, England, was at the time of his death the leading English authority on early printed books; he was also well known as a collector of old silver, besides being a distinguished photographer of stars.

Finance

A COAL STRIKE AND "PROSPERITY."

At the close of last week, after a surprising advance in the face of unfavorable home and foreign news—including the continuance of the English coal strike—the stock market halted, wavered, and declined. This change in direction might have been assigned to what Wall Street calls the "technical situation"—the fact that, after a ten-point rise in prices, there are always less people willing to buy than there were before, and more willing to sell. But the fact that the reaction in stocks followed immediately on the news that our own anthracite coal-mine owners and the representatives of their employees had failed, after repeated conferences, to come to terms, and that the outlook was

for the calling of a strike when the present three-year wage agreement expires on April 1, led to a rather general inference that the market was now, for the first time, beginning to reflect our own industrial dispute.

The first question asked in the financial markets was, How would such a strike, especially if long continued, affect the general trend of business, the national prosperity, and, incidentally, the financial markets? There is some material from which to give the answer; for the anthracite coal strike of 1902 was quite as extensive and prolonged as it could very well be this year.

It began on the 12th of May. It was at first called "temporary"; then, on the 15th, the convention of miners' delegates at Hazleton, by a vote of 461¼ to 349¾ (the fraction denoting a divided constituency) called on the 145,000 miners to quit work until their demands were granted. With June, the engineers began to desert the pumping machinery; in July, riots occurred and an effort was made to induce the soft-coal miners also to quit work. Only a part of them did so; but the whole Pennsylvania militia had to be called out in October, and an effort by President Roosevelt to bring about compromise came to nothing. Only when employers and employees agreed, on October 22, to submit their dispute to an impartial committee of five, named by the President, did the strike come to an end.

What happened, during this time, in finance and industry? Anthracite coal production for the whole of 1902 was 31,200,000 tons, the smallest since 1884, as against 53,568,000 in 1901, and wholesale prices rose from $4.50 per ton in April to $12 at the close of the year, and as high as $25 just before the strike ended. All this bore heavily on the individual householder, especially after cold weather began. But anthracite is not the common fuel of American manufacture and transportation; therefore there was no paralysis of industry at large such as Great Britain is now experiencing. In fact, the country's output of pig iron during the last half of 1902 was greater than in the first half, and exceeded by 10 per cent. any previous half-year in our history.

As for financial markets, stocks broke somewhat sharply in May, became quiet in June, advanced with great activity in July and August, and were checked in September only by a sudden tightening of the money market. This generally sanguine attitude was maintained, despite the facts that, even in April, the New York bank surplus was down to $2,600,000 and call money up to 7 per cent., and that, instead of following a year of liquidation, as in the case of 1912, the stock markets of 1902 came on the heels of a wildly extravagant financial boom, based on enormous borrowings from Europe.

This chapter in past history goes some distance towards explaining the generally hopeful attitude—the strange indifference, some people have called it—which our markets displayed on the eve of the breakdown which had been generally expected from the negotiations. Even the railways which mined and transported anthracite coal came out surprisingly well from the five-months' stoppage of mining during 1902. Coal earnings of the Lackawanna, for example, had in 1901 contributed 45 per cent. to the company's gross earnings, and they amounted to $10,749,344. Yet instead of declining the four or five millions which might have been predicted, the Lackawanna's coal earnings for 1902 amounted to $8,145,000—a decrease of only $2,604,000, and the decrease in total gross earnings for the year amounted to only $2,109,000. What happened to the other anthracite roads in 1902 is shown in the following table, giving coal earnings for three years, 1901, 1902, and 1903:

	1903.	1902.	1901.
Laekawanna	$13,826,844	$8,145,920	$10,749,341
Del. & H. ..	11,528,821	5,809,649	7,723,306
Reading	13,134,624	12,436,159	12,391,307
Lehigh	10,104,764	9,328,959	9,636,802
Jer. Cent. ..	6,054,769	5,717,062	7,230,817
Erie	11,384,421	9,066,059	9,037,086

Three explanations may be found for the unexpectedly favorable returns of the anthracite roads for 1902. In the first place, large shipments of coal were made up to May 12, in anticipation of the strike, and then from October 23 until the end of the year the mines were worked night and day to supply the demand. That was one reason why the decrease in earnings was not larger. The next was that the loss in anthracite tonnage was made up largely by an increase in bituminous shipments; in 1902, for example, Reading's anthracite tonnage decreased 1,057,000 tons, or 10 per cent., but the bituminous shipments increased 1,068,000 tons, or 21 per cent. The third reason why the anthracite roads did not drop very far behind in 1902 was set forth by President Truesdale of the Lackawana, in his annual report for that year, as follows:

> The year 1902 was a prosperous one for the territory through which the lines of this company run, as is apparent from the increase in earnings from all sources excepting from the transportation of coal.

If we are to have another anthracite strike this year, the chief questions at issue, from the standpoint of the industrial situation, will be, first, whether the dispute can in the end be settled with as much mutual satisfaction as that of 1902, and next, whether a simultaneous strike of miners in the bituminous coal fields can be averted. The soft coal is the fuel of industry, in this country as in England; that is why our own anthracite coal strike of 1902 embarrassed so little the railways and the manufacturing plants, whereas the strike of this month in England, which affected the coal which the mills and railways and steamships use, had within two weeks tied up a great part of England's industry and thrown out of work perhaps two million employees in other trades than mining.

The question is highly interesting for this country—especially when it comes on top of the extraordinary industrial contest in Great Britain—which has seemed at times to be assuming the shape of that so-called "syndicalism," whereby the new school of industrial agitators on the Continent have entered deliberately on the programme of paralyzing all productive industry at once, in order to force the hand of the Government in their favor and deprive capital of the right to manage productive industry. Doubtless, a simultaneous shutdown in the coal production of England, Germany, France, and the United States would go far towards creating the condition which the syndicalist desires. It is worth asking, however, just what class of the community would inevitably suffer most from it. England has already given the answer, in the enforced idleness of its working classes, in the face of a similarly enforced advance in price of fuel and provisions. Perhaps it is the confidence of experienced observers, in the check which such results of the experiment are plainly indicating, that has inspired the stock market's obstinate disbelief in the predicted industrial and social catastrophe.

KELLOGG'S BEYOND WAR: A Chapter in the Natural History of Man.

By VERNON L. KELLOGG, author of "Darwinism To-day," etc. 12mo. $1.00 *net.*

Not an essay to debate the virtues or evils of war, but a compact setting out of the characteristics and course of the actual evolution of man since his origin as a distinct animal species. But this account of his natural history—which in itself might be considered a sufficient reason of being for the book—reveals itself as a new and strong biological argument for peace.

CONSTANCE D'ARCY MACKAY'S PATRIOTIC PLAYS AND PAGEANTS

Probable price, $1.35 *net.*

By the author of The House of the Heart and Other Plays for Children, and The Silver Thread and Other Folk Plays for Young People. Each $1.10 *net.* Miss Mackay's plays have been most successfully used for thousands of school entertainments. Detailed contents on request.

FICTION.

THE PRISON WITHOUT A WALL

By RALPH STRAUS. $1.30 *net.*

Sylvanus is a gentle, sensitive youth—a lovable recluse who willingly endures the cloistering of Cambridge, of which he is a Fellow. He hears the call of the world and of love, and, like Queed, seeks to be more like other men—but with different results. He experiences London, Bohemia and otherwise, and both love and treachery come to him. Sylvanus, his sister, his aunt, and a little London dancer are characters of uncommon charm.

VIEWS AND VAGABONDS

By R. MACAULAY. $1.35 *net.*

A well-born, educated young man of "advanced views"—a blacksmith from a sense of duty and the husband of a working girl for the same reason—some friends with "views"; and a pair of lovable young vagabonds without a troublesome idea in their heads are thrown together in typical English scenes.

READY TO-DAY.

ROME

By W. WARDE FOWLER. The contents of this, one of the most brilliant works in the series, include: The Advance of Rome in Italy, Training of Roman Character, Carthage and Hannibal, Dominion and Degeneracy, The Revolution, Augustus, Life in the Roman Empire, The Empire under the Antonines.

CANADA

By A. G. BRADLEY. This account of the free, self-directing commonwealth, and of the transformation that has come over it within the past generation, has great interest and importance to those in the United States.

THE HISTORY OF ENGLAND

By Professor A. F. POLLARD. Furnishes sound history and sane political philosophy.

PEOPLES AND PROBLEMS OF INDIA

By Sir T. H. HOLDERNESS. This little volume, by a great authority, is not scrappy or insufficient, but a clear treatment of the intricacies and subtleties of Indian history, social structure, and religions.

FRENCH LITERATURE

By G. L. STRACHEY. Thanks to the author's sense of critical values and his gifts of style and presentation, the great names and great facts of this literature stand out in strong relief from these pages.

THE PROBLEMS OF PHILOSOPHY

By BERTRAND RUSSELL, F.R.S.

ARCHITECTURE

By Professor W. R. LETHABY. "Architecture is the matrix of civilization" and this discussion of what it is and what it is not, what in it is good and what bad, will be found to give—for most laymen—an altogether new interest to a walk in any great city.

ANTHROPOLOGY

By R. R. MARETT. Seeks to plot out and sum up the general series of changes, bodily and mental, undergone by man in the course of history.

THE SCHOOL. An Introduction to the Study of Education.

By Professor J. J. FINDLAY. Presents the history, the psychological basis, and the theory of the school with a rare power of summary and suggestion.

Sets of new volumes will be issued every few months. Thirty-nine volumes are now ready. Lists will be sent on request

CHARLES DICKENS AS EDITOR

NEARLY 400 HITHERTO UNPUBLISHED LETTERS OF DICKENS.

Edited by

R. C. LEHMANN of "Punch"

This most important of the Dickens Centenary publications contains some 400 letters of the great novelist, only a handful of which have ever before been published, and all of them written at the most interesting period of his life. They voice Dickens's intimate opinions on his literary contemporaries and things in general. One group of them tells of his second American tour.

The Nation

VOL. XCIV.—NO. 2439 THURSDAY, MARCH 28, 1912 Reg. U. S. Pat. Office. PRICE 10 CENTS.

AMONG THE NOTEWORTHY SPRING BOOKS

Three Wonderlands of the American West

Being the Notes of a Traveler concerning the Yellowstone Park, the Yosemite National Park, and the Grand Canyon of the Colorado River, with a chapter on other wonders of the great American West.

Written by Thomas D. Murphy

"The author has caught the atmosphere of the 'Wonderlands' and has the rare gift of being able to make the reader see with *his* eyes; to produce pen pictures second only to the marvelous illustrations themselves," writes *Mr. Charles L. Bowman, President of the Union Library Association.*

With 16 reproductions in full color from paintings by Thomas Moran and 32 duogravure plates. *In a box, net* $3.00 (*carriage* 30c. *extra*).

Chile and Her People of Today

By Nevin O. Winter

Author of "Argentina and Her People of Today," etc.

A new volume in the *SERIES OF THE LATIN-AMERICAN REPUBLICS.*

"A comprehensive narrative covering every phase of life and history which one would wish to know about this country."—*Boston Herald. Profusely illustrated, in a box,* $3.00.

The Art of the Berlin Galleries

By David C. Preyer

Author of "The Art of the Metropolitan Museum," etc.

A new volume in the *ART GALLERIES OF EUROPE SERIES*, devoted to the art treasures of the Kaiser Friedrich Museum and the Royal National Gallery. It is one of the most entertaining of this author's productions and is literally a description of the works of the old masters, since it contains few biographical incidents. *With 48 full page duogravure plates, in a box, net* $2.00 (*carriage* 20c. *extra*).

Illustrations of Design
Based on Notes of Line as used by the *Craftsmen of India.*
By LOCKWOOD DE FOREST
$2.00
A carefully selected set of plates reproducing the exquisite work done by the craftsmen of India among whom the author has studied for thirty-five years. The method of working from notes of line, as used by the Indian craftsmen, is clearly developed. By beginning thus with the simplest problems the book becomes valuable for the youngest pupil as well as for the skillful workman. Issued in portfolio form in the Biflex Binder; *Illustrations of Design* is of great convenience in the classroom as it allows the different plates to be removed for individual use.

THE
Spring Announcement Number
OF
The Nation
WILL BE PUBLISHED APRIL 11

Besides its regular circulation, a large number of copies will be mailed to libraries, clubs and literary people.

MOFFAT, YARD & COMPANY'S SPRING PUBLICATIONS

THE AMERICAN MEDITERRANEAN. By Stephen A. Bonsal. 8vo. Illustrated.....*net.* $3.00
A comprehensive study of the various islands of the West Indies. The book deals with their history, foreign occupation, and their relation to the United States. (*Ready May 1st.*)

SURGERY AND SOCIETY: A Tribute to Listerism. By C. W. Saleeby, M.D., F.R.S.E., 8vo. *net.* 2.50
A realization of the many vital public needs which are involved in Listerism and cannot be met until public opinion is acquainted with the facts of Lord Lister's achievement, prompted Mr. Saleeby to undertake the fulfilment of this important work.

THE SCHOOL IN THE HOME. By Adolf A. Berle, D.D. 12mo.....*net.* 1.00
Talks with parents and teachers on intensive child training. The human and the educational elements in this book are so blended as to make it as fascinating as a story. The extreme simplicity of the whole contention which underlies the author's argument will cause hardly less surprise than the results attained.

BIG BUSINESS AND GOVERNMENT. By Charles Norman Fay. 12mo.....*net.* 1.00
This book treats of the problems of Big Business and the Trusts from the viewpoint of the "insider" and later of the opponent—a point of view of the problem which has not been presented before in book form in so complete and thorough and practical a way.

LETTERS AND MEMORIES OF HARRIET HOSMER. Edited by Mrs. Lucien Carr. Large 8vo. Illustrated .....*net.* 3.00
A delightful volume about this famous American sculptor, including many letters from Robert and Elizabeth Barrett Browning, William Wetmore Story and many other English and American celebrities.

MORE LETTERS TO MY SON. By Winifred James, author of *"Letters to My Son."* 12mo.....*net.* 1.00
"The charm of the writer's rare personality, the pathos of her ignorance, the caressing quality of her voice, enlist our sympathy in knowing her as intimately as her communicativeness permits."—*The Athenæum.*

THE CANDLE AND THE FLAME. By George Sylvester Viereck. 12mo.....*net.* 1.20
"The Candle and the Flame" will arouse again the interest of two continents, for Mr. Viereck is regarded as America's first authentic voice in poetry since Whitman and Poe. He is a lyric insurgent who to the artistry of Poe and the social conscience of Whitman adds the new note of passion.

NEW FICTION.

THE SENTENCE OF SILENCE. By Reginald Wright Kauffman. 12mo.....*net.* 1.35
Like "The House of Bondage," this book fearlessly and realistically portrays things as they are; but, unlike its predecessor, is instinct with a mellow philosophy; and displays a flow of humor, a delineation of character and a literary technique that show its author achieving his maturity. This novel is one that promises help; it elevates and encourages.

THE PRINCIPAL GIRL. By J. C. Snaith, author of "Araminta," etc. 12mo.....*net.* 1.25
"'The Principal Girl' is charming light-comedy throughout, and introduces the reader to as engaging a hero and as sprightly a heroine as have graced the pages of a novel for many a day."

MY LADY PEGGY LEAVES TOWN. By Frances Aymar Mathews. 12mo. Illustrated. *net* 1.25
The hero of this breezy extravaganza is an American descendant of that other Lady Peggy—so daringly impetuous and yet so lovable and charming—about whom Miss Mathews built her earlier story of "My Lady Comes to Town."

THE BLIND ROAD. By Hugh Gordon. 12mo.....*net.* 1.20
This is an intense and ably handled story of married life. It develops in a logical fashion and shows the various effects produced upon a man and woman under certain conditions of modern metropolitan life.

THE MYSTERY OF NUMBER 47. By J. Storer Clouston. 12mo.....*net.* 1.10
An ingenious story of mystery and a delightful travesty on the modern detective thriller.

MOFFAT, YARD & COMPANY, Union Sq., New York

J. B. Lippincott Company's Spring Books

A TIMELY BOOK.

The American Government

By FREDERIC J. HASKIN. The book that shows Uncle Sam at work, endorsed by the President, the cabinet, the heads of departments, and prominent educators. With 24 full-page Original Illustrations. 8vo. Popular Edition, $1.00 net; postpaid, $1.15.

To fill a book with a great mass of facts about the Federal Government, having them so accurate that the highest officials of the land can vouch for them, and at the same time weaving them into a story that compels the closest attention of the readers, is conceded to be a difficult undertaking. The author has demonstrated that this can be done.

AN IMPORTANT EDUCATIONAL WORK.

Current Educational Activities

A Report Upon Current Educational Movements Throughout the World

Being Vol. II. of the Annals of Educational Progress. By JOHN PALMER GARBER, Associate Supt. of Public Schools of Philadelphia. In Lippincott's Educational Series, edited by MARTIN G. BRUMBAUGH. 12mo. Cloth. $1.25 net.

A report upon current educational activities throughout the world, dealing with such problems as vocational and agricultural education development affecting the public schools and higher institutions of learning, social problems, foreign educational institutions, meetings, etc. A unique year book. Very serviceable.

MISCELLANEOUS.

The Wit and Humor of Colonial Days

By PROFESSOR CARL HOLLIDAY. Crown 8vo. Cloth, gilt top, $1.50 net. Postpaid, $1.65.

If there is any branch of literature in which America has excelled other modern nations, it is Humor.

In the present work the author traces the course of our wit and humor from the days of the first settlement up to the opening of the nineteenth century.

A Manual of Heraldry

By GALE, PEDRICK F.R. Hist. S. Illustrated. Crown 8vo. $1.75 net.

This is a Popular Introduction to the Origin, Significances and Uses of Armorial Bearings; a Guide to the Forms and Regulations of the Art-Science of Blazonry; and a Prelude to the Influence of Heraldry upon Poetry, Art, Architecture, and Literature.

Amateur Gardencraft

By EBEN E. REXFORD. Profusely illustrated. 12mo. Cloth, $1.50 net. Sent postpaid $1.65.

A careful description of the desirable varieties of trees, shrubs, vines, and species of flowers and of ornamental plants, arbors, summer houses, pergolas, and new garden features, as well as the requisites for a velvety lawn, is given particular attention, also the elimination of insect pests.

Garden Design in Theory and Practice

By MADELINE AGAR. Illustrated in color and line, with numerous diagrams throughout the text. Small 8vo. Decorated cloth, gilt top, $2.00 net.

This book for garden architects is devoted entirely to the design and layout of gardens, everything of a purely horticultural nature being omitted.

TRAVEL.

My Adventures Among South Sea Cannibals

By DOUGLAS RANNIE. With 39 illustrations and a map. Demy 8vo. $3.50 net.

An Account of the Experiences and Adventures of a Government Official among the Natives of Oceanica.

The Tailed Head-Hunters of Nigeria

By Major A. J. N. TREMEARNE, A.B. (Cantab.), F.R.G.S., F.R.A.I. With 38 illustrations and a map. Demy 8vo. $3.50 net.

An Account of an Official's Seven Years' Experiences in the Pagan Belt of Northern Nigeria, and a Description of the Manners, Habits, and Customs of Some of the Native Tribes.

Through Timbuctu and Across the Great Sahara

By CAPTAIN A. H. W. HAYWOOD, F.R.G.S. With 45 illustrations and a map. Demy 8vo. $3.50 net.

An Account of an Adventurous Journey of Exploration from Sierra Leone to the Source of the Niger, following its Course to the Bend at Gao and Thence Across the Great Sahara to Algiers.

Among the Eskimos of Labrador

By S. K. HUTTON, M.B., Ch.B. VICT. With 47 illustrations and a map. 8vo. Cloth, gilt top. $3.50. net

A Record of Five Years' Close Intercourse with the Eskimo Tribes of Labrador.

A NEW SERIES. AS INTERESTING AS FICTION.
CONQUESTS OF SCIENCE

The Railway Conquest of the World

By FREDERICK A. TALBOT. About 100 illustrations from photographs. Numerous maps and diagrams. 12mo. Cloth, $1.50 net.

A fascinating and instructive account of railway building all over the world since the earliest days of railroading. The author describes for us the difficulties and obstacles which were overcome by the men of genius whose names are immortalized in railway annals.

Moving Pictures

How They Are Made and Worked

By FREDERICK A. TALBOT. About 70 illustrations from photographs, with many diagrams. 12mo. Cloth, $1.50 net.

The object of this volume is to tell in a popular manner everything about Moving Pictures—how trick pictures are produced—pictures that move and talk—color pictures, etc. The author also recounts many of the thrilling adventures experienced by daring photographers.

In Preparation.

Guardians of the Coast

The Lighthouses and Other Lights of the World

By FREDERICK A. TALBOT. About 80 illustrations from photographs, with diagrams. 8vo. Cloth, $1.50 net.

NEW FICTION.

From the Car Behind

By ELEANOR M. INGRAM. Colored illustrations by JAMES MONTGOMERY FLAGG. Cloth, $1.25 net. Postpaid, $1.37.

A brilliant automobile story with plenty of go and vim. The speed never slackens from start to finish, and one turns the pages breathlessly.

The Mystery of Mary

By GRACE L. H. LUTZ, author of "Marcia Schuyler," etc. Colored frontispiece by ANNA W. SPEAKMAN. Cloth, $1.00 net. Postpaid, $1.10.

One of the author's most entertaining novels. In addition to a sweet love story there is a mystery which results in a number of unusual situations.

Hidden House

By AMÉLIA RIVES, author of "The Quick or the Dead," etc. Colored frontispiece by GAYLE HOSKINS. Decorated lining papers. Cloth, $1.20 net. Postpaid, $1.32.

A remarkable study of dual personality, which, for sheer power and fascination of interest holds the reader breathless until the unusual ending.

One of Us

By EZRA BRUDNO, author of "The Tether," Cloth, $1.25 net. Postpaid, $1.37.

This is a big psychological novel, yet charmingly simple in the telling. Adventure, intrigue, and the powerful play of human passions clothe the spiritual theme of this book in a fascinating garment of outward action.

Publishers J. B. LIPPINCOTT COMPANY Philadelphia

The Nation

NEW YORK, THURSDAY, MARCH 28, 1912.

The Week

At Portland on Saturday Mr. Roosevelt pushed his garbling and misrepresentation of President Taft several degrees further than in his Carnegie Hall speech. It is a performance intellectually contemptible and morally quite shameless. Bryan at his worst was never capable of anything so low. Mr. Taft had merely stated the truism that in this country the people have to govern themselves through representatives. It was no more than Roosevelt himself had asserted in his Columbus speech, in which he said that the initiative and referendum, advocated by him, should not be used "to destroy representative government." But now he makes the President's statement mean approval of "government by the bosses, by the men who represent the combination of politics and big business." And then he proceeds to declare that the President has in mind men like Senator Penrose and Senator Gallinger and Chairman Barnes as the really "representative part" of the people who ought to rule. It is not necessary to point out that the aid of all these men has in times past been gladly received by Theodore Roosevelt. Nor need we stop to remark that at this very moment he is hand in glove with even more disreputable politicians and with rich men, two of whom have been under indictment for illegally combining politics and big business. All that it is needful to remark is that the chivalrous Roosevelt, in his attack upon a sworn friend, has been guilty of a base perversion of that friend's language. This touches a depth of meanness and demagogy which no Presidential candidate ever before reached.

"It is an advantage to a public man to have a grievance." This was said to Martin Van Buren by an English statesman, at the time when the news came that Van Buren, though appointed and actually serving as American Minister in London, had been rejected by the Senate. The saying certainly proved true in Van Buren's case. He fulfilled the prediction which Benton at the moment made to the Whig Senators: "You have broken a Minister only to make a Vice-President." The public man to-day who has a grievance is President Taft. He is not airing it, but everybody feels it, and it is working mightily in his favor. The outrageous nature of his treatment by Mr. Roosevelt is turning thousands of voters to the support of the President. The American people do like fair play, and they know that Mr. Taft is not getting it from the greatest shouter for fair play. Proof of this is seen in the caption which the Topeka *Plaindealer* spread across the first page of its issue of January 26: "Why don't some People Learn Sense? Roosevelt won't run against Taft. He's not that kind of Man." But when Roosevelt showed, by his letter of February 24, that he was exactly that kind of man, there was nothing left for the *Plaindealer* but to come out for Taft.

There can be no mistaking the significance of the vote by which the income tax bill—nominally an excise tax measure, to be sure—was passed in the House of Representatives. When a proposal conspicuously put forward as part of the Democratic programme, on the eve of a Presidential campaign, is passed in the House not merely by a majority of six to one, but by a two-to-one vote of the Republican members voting, there is no room to doubt the strength of the popular feeling in favor of the policy it embodies. Eighty Republicans voted for the income tax, while only forty stood out against it; and when it is added that the avowed ground of opposition on the part of these was in considerable measure the doubtful constitutionality of the bill, even that small protest loses much of its force. It can hardly be doubted, therefore, that the income-tax amendment to the United States Constitution will before long be approved by the small number of States still needed to procure its ratification.

Chairman Underwood asserts that an examination of the Tariff Board's report has furnished no grounds for changing the wool bill presented by his committee at the last session of Congress. The assertion seems to us entirely justified by the facts. The Tariff Board's report gave the results of a long and painstaking inquiry, but it left the question just about as unsettled as it had been before. It still remains a matter of individual judgment where the line should be drawn, even if the principle of difference of cost of production is accepted as binding, since that difference, in the case of wool at least, is too vague and too varied to serve as a definite guide. If the bill should now be passed by House and Senate, as it was last year, it will become the President's duty to consider it on its merits, and in the light of the Tariff Board's report. The more boldly and explicitly he refuses to take into account any question of political tactics, any fear of seeming to have done a foolish thing when he vetoed the bill last year if he signs it this year, the better, we are sure, he will stand in the forum of public opinion. The Board has at least shown that a great deal of the present wool schedule goes far beyond any reasonable measure of what the protection should be. What the President refused to do when this information was not before him he may with perfectly good grace do now.

"We cannot emphasize too strongly," says the minority report on the Panama toll question, "the elementary proposition that tolls levied upon vessels engaged in commerce between our Eastern and Western seaboards increase the amount the transcontinental railroads may charge for the same service." No, and we cannot emphasize too strongly the equally elementary proposition that the expenses of these vessels for coal, for seamen, or for repairs "increase the amount the transcontinental railroads may charge for the same service." The trouble about the "proposition" is that it is altogether too elementary. Nobody denies that any tolls that may be charged will form an addition to the transportation expenses; but unfortunately that seems to go a very small way towards freeing us from our solemn obligation to treat foreign and American vessels alike in the matter of tolls.

It happens that the Democrats are preparing to live up to their platform pledges in the matter of Philippine independence. The proposed bill drawn

by the House Insular Affairs Committee provides for a period of probationary independence of eight years from July 4, 1913, to July 4, 1921, and after that full independence. Until the bill itself actually appears it is, of course, hardly worth while to discuss its particular merits. But it is of enormous importance that this question of the independence of the islands should be kept before the public and constantly discussed. Throughout the country at large no enthusiasm for retaining the archipelago can be found. Professional jingoes, big-navy advocates, and those who desire to see the islands exploited by "big business" will oppose. But the plain people know by this time that we have nothing to gain in a trade way by administering the islands which we cannot obtain if the country governs itself; that the islands are a source of expense, and that Americans and Filipinos have little or nothing in common.

The bill now under consideration by the Foreign Affairs Committee of the House to improve the organization of our consular and diplomatic service ought to be passed during the present session of Congress. Towards the state of things which the bill proposes to establish in a systematic way, there has now been for a series of years a steady approach in the actual practice of the State Department. The essential feature of the bill is seen in its first section:

> That the President may make all appointments of secretaries in the diplomatic service and of consuls-general and consuls to grades instead of places, subject to the advice and consent of the Senate in each case.

Then follow sections prescribing the system of reports on efficient service, and of examinations as to qualifications, which are to form the basis of the organization of this graded service, as well as a definition of the grades themselves and the accompanying salaries. To make an appointment in the consular or diplomatic service the stepping stone to a career, as well as to procure fairly qualified appointees in the first place, and to eliminate the spoils factor, is the object of the scheme; and so far have we got ahead that probably not a man will be found in Congress to attack the carefully considered method of examination.

Representative Lindbergh's proposal to abolish the Senate and the Vice-President, and to cut the membership of the House to 315 has at least the merit of thoroughness. Nor is it altogether certain that the country would miss the presiding officer of the Senate or the seventy-odd Representatives thus shorn of their powers. But that the rest of the House and all the orators of both parties, to say nothing of the newspapers and magazines, would consent to being deprived of their one perennial object of attack by the disappearance of the Senate is so inconceivable that even this bold innovator dares not suggest it without a plausible substitute. He would have fifteen Representatives elected from the country at large as a "Committee-at-Large," to be entrusted with control and veto power over the legislation of their three hundred humbler colleagues. The mighty fifteen would exercise their functions under the constant peril of the recall. The President, we presume, would do his best to keep up appearances by sending messages to the fifteen, and signing or vetoing whatever bills they were so gracious as to transmit to him, with as great a flourish as he could command. In this way, the great ideal of a really business administration of national affairs would be realized. The people, acting as a board of directors, would select and recall members of the Committee-at-Large as often as they could find time to attend to them, and life would be one long election day.

Indiana Democrats threw Gov. Marshall's hat into the ring last week by instructing the thirty delegates to the Baltimore Convention to present his name as that of their first and only choice for the Presidential nomination. There are cynical spirits who profess to see a string tied to this resolution, with one end in the hand of National Committeeman and Delegate-at-Large Thomas Taggart. The speech of the Governor as temporary chairman of the Convention was strangely calm for these parlous times in which the very right of the people to rule is at stake. Until graver evils come than have thus far arisen, Gov. Marshall sees no reason for the initiative, referendum, and recall. In a mollycoddle spirit, he confesses that, although he often chafes under what he conceives to be the unwarranted interference of the courts with his prerogatives, he refrains from denouncing them as instruments of oppression, and looks for relief to the remedies we already have.

There was more than a mere formality in the adjournment of the House on account of the death of Representative Foster of Vermont. A member of Congress for five terms, David J. Foster had particularly impressed all his colleagues by the weight of his character, as by his industry and the clear sanity of his judgment. Serving on the Foreign Affairs Committee, he made himself known, especially in the last Congress, as a firm champion of equity and moderation in international relations. The arbitration treaties had no firmer friend or more constant advocate. Of the best American stock and with a long record of varied public service, he was a Representative whom Vermont did well to honor and whose loss she and the country have reason to deplore.

Nemesis has at last overtaken the muck-raking magazine. Its own shames are now to be held up to public scorn. From "Masters of Wall Street" we are to proceed to "Masters of the Magazines," the way, we take it, being a short one. The mere announcement of the series whets one's appetite. "There is nearly as much fiction about magazines as there is in them," we read, and then the eye is greeted with such phrases as "recent changes in magazine ownership," "centralized control of the magazines," "the advertiser holds the power of life or death—the final word." We are assured in the customary manner of the writer's intellectual and moral fitness for his delicate task. Not only is he a veteran in the magazine and advertising field, a practical publisher, and "a fair and open-minded student of the life that goes on about him," but he has "the punch"; that is, he speaks "with all the sympathetic understanding of an insider, yet he speaks boldly and forcefully—and fearlessly."

Straw votes in the colleges uniformly show that the sympathies of the American undergraduato are emphatically with the Republican party. Wesleyan University's underclassmen are three Republicans to one Democrat. A recent poll at New York University, in the very citadel of Democracy, showed an even stronger drift towards the Republican party. One explanation is to

be found in the fact that the American undergraduate, unlike every other college student on earth except the Oxford man, is conservative. This does not necessarily mean that the undergraduate mind regards the Republican and Democratic parties as the embodiment, respectively, of conservatism and radicalism. The undergraduate is conservative in the sense that he believes in the *status quo*. Hence his inclination towards the Republican party which for sixteen years has been in control of the Government. There may be freshmen now in college who were born after Bryan's first defeat. And to the entire present college generation a Democratic President is hardly even a memory.

We should not forget the great services to the cause of conservation rendered by the late Gen. John W. Noble, whose death occurred on Friday. It was during his incumbency of the office of Secretary of the Interior that the forest reservation policy was originated under the act of March 3, 1891. The great Sierra Reserve was one of the first proclaimed, thanks to General Noble's initiative. So vast was this reservation that many timid persons criticised the Secretary of the Interior for going too far. Fortunately, this did not deter him from stretching his authority a trifle in order to preserve the banks of that greatest of our scenic wonders, the Arizona Grand Cañon of the Colorado. Thanks to the Sierra Reserve, California has had the use of the water resources needed for the irrigation of the San Joaquin Valley. For this alone that State owes to General Noble a lasting debt of gratitude.

Monsignor Brann's advice to his hearers in New York to pray for the newspapers, arrests attention. What is worth praying for cannot be beyond hope. As a practical suggestion, however, there is greater force in Monsignor Brann's accompanying words: "And as for the bad ones—don't buy them; don't read them." It might be whispered that, as between praying for the editor and refusing to buy his paper, an ounce of the latter is worth a ton of the other, but there is no reason why the clergyman's parishioners should not do both. If they prefer sensation to certainty, they will go where sensation is to be found. Such readers, however, are estopped from complaining of the existence of the thing which they are keeping alive. The remedy for it lies in their own hands. The way to Trust regulation may not be clear; even the means of escape from political bosses may require consideration; but to dispose promptly and absolutely of gutter journalism is ridiculously simple—that is, if people really want to dispose of it.

If the Department of English of the University of Kansas has really begun a campaign against slang, it deserves the thanks of everybody who has ears to hear. That there is something to be said for slang cannot be denied. Those who devise it and those who use it are not always actuated by a desire to degrade speech. At bottom there is the search for newly-minted coins which in a Shakespeare the world applauds. Some of the methods employed are common to slang-writer and literary artist, as the seizing upon metaphorical expressions and the drafting of a noun to do service as a verb. But the practice is so overdone in quantity and so underdone in quality that the principle has been buried under a mass of nondescript verbal concoctions. Such a fevered movement must die a natural death in the end, but meantime the not over-sensitive twentieth-century ear is being so violently abused as to make it questionable whether it will long have any power of discrimination left. The virtue of the campaign said to have been undertaken by the University of Kansas lies in its endeavor to strengthen the sense of word values in persons who are not too old for reform.

While British labor leaders are being sent to prison for inciting troops to mutiny, the anti-militarist movement in France, the place of its origin, seems to be distinctly on the wane. Thus is once more exemplified the rôle of France, the pioneer of ideas, discarding the ideas about the time the rest of the world is beginning to put them into application. The present popularity of the army in France may be taken as part of the general awakening of the national spirit consequent upon the late crisis in Franco-German relations over Morocco. It is attested by the recent revival of the custom of parading the troops of the garrison of Paris through the streets of the city, whereas only a year or two ago, as one writer says, it was the custom to have the soldiers slink through the back streets of Paris for fear of arousing the ire of the anti-militarists. Military ceremonies, for some time fallen into disuse, have also been revived. Military reviews have become more frequent. Characteristically enough, the militarist spirit is being fostered by a Minister of War who not so long ago was a Socialist, namely, M. Millerand.

Violence by English suffragists continues to elicit strong expressions for and against, but perhaps the most significant action taken is that by the Women's Liberal Federation. At a recent meeting of the Executive Committee a resolution was carried, which was moved by Lady Carlisle, and which utterly repudiated and condemned "the disastrous acts of violence," and held that such "organized outrages endanger the cause of women's suffrage." This women's organization represents 860 Women's Liberal Associations. It concluded its resolution by appealing to members of Parliament not to "swerve from their championship of a great cause" merely because of "the wrongdoing of a small section of the army of women who demand the Parliamentary vote." On the other hand, Annie Besant has published a letter defending the militant and law-breaking tactics.

Equal suffrage for women in China! It is limited, as yet, but evidently the people are going to rule, and not merely the male half about which our ex-President is suddenly so deeply concerned in this country. What an argument our own suffragists will have hereafter, everybody must see. What can a poor, badgered legislator say when, surrounded by a bevy of eager pleaders, he is met by the question: "Do you want your State to be behind *China!*" Plainly, the Chinese Parliament, which is reported to have granted the suffrage to women simultaneously with the election to it of the Chinese Mrs. Pankhurst—who rejoices in the euphonious name of Yik Yug-Ying—intends to cure all the evils of democracy in advance by having the completest possible equality. When in history was there a revolution such as has come over the Celestial Empire, at least in so short a time and with such complete overturning of old forms of government?

THE ENGLISH CRISIS.

Mr. Balfour's reappearance in the House of Commons as the spokesman for his party was more dramatic than fruitful. He put the temporary Conservative leader, Mr. Bonar Law, aside but he could not overcome Mr. Asquith. On the second reading of the bill to settle the coal strike the Ministry had more than their normal majority. This did not mean that the Liberal party, or, indeed, the sober opinion of England, was satisfied with the Government measure. Brought forward only as a last resort and with many misgivings, supported in the House merely as an emergency bill of limited life, it is looked upon by all thoughtful men as a step which may have the gravest consequences. These were forcibly depicted by Mr. Balfour, but the sense of overpowering necessity was too strong for him, while his statement that, even if the Government were defeated, the Opposition would not seek to force a dissolution, took the fight out of his followers. Party advantage cannot well be got out of a crisis in which the Conservatives have no alternative plan to offer.

Politically, Mr. Balfour's return will be accepted as marking the failure of Mr. Bonar Law's leadership. With it there have been increasing signs of dissatisfaction. Mr. Law has abundant energy, but not too much discretion. He has made several glaring blunders. The Liberal press has been able to bring him into ridicule. And it was observable some weeks ago that a movement was quietly on foot to bring Mr. Balfour back. In place of the old initials, B. M. G., there was getting to be substituted these other, B. M. R.—that is, instead of the foolish cry by disgruntled Conservatives, "Balfour Must Go," there came to be the refrain, "Balfour Must Return." It is, of course, not certain that he will at once resume the leadership, but the yielding of Bonar Law to him in the present crisis bears out the prediction made at the moment of Balfour's resignation: "In six months' time he will have them all at his feet again."

Mr. Balfour well expressed the sentiments of those who feel that the proposed action of Parliament, in dealing with the coal strike, is something so new in English law-making as to be almost revolutionary. Yet it will not do to exaggerate the lengths to which the proposed bill would go. It may be said to be, in effect, an extension of the functions of Government conciliation in labor troubles, as already possessed and discharged by the officials of the Board of Trade. The coal-strike bill proceeds on the assumption that the mining industry is so much a thing by itself, and that conditions in certain districts are so exceptional, that special legislation is proper and necessary. What is planned is to set up boards for the several coal-mining regions, of which the duty shall be to attend to the grievances of the miners and, roughly, to fix their wages. In each instance the whole question of peculiar circumstances and competition and profits will be gone into thoroughly, and the results determined in the cautious English way of applying reason and justice to the facts.

Up to this point, the bill could hardly be called startling, though it is clear that the Government would never have thought of going even as far as this had it not been for the strike. But the novel thing, the thing that may fairly be called revolutionary in English legislation, is the legal recognition by the bill of the principle of the minimum wage. This, to be sure, is in general terms. The miners have been pressing Mr. Asquith to do two things; first, to embody in the bill the entire scale of wages, up and down, which they have demanded of the owners; secondly, at least to state in the law the exact minimum wage to be insisted upon, namely, $1.25 a day for men, and 50 cents for boys. The former the Prime Minister flatly refused to do, at the time of his conference with the miners. But he left the door open in the matter of specifying the minimum wage, and it was thought that he might yield on that point. But he has not done so. His position is, apparently, that the acceptance of the principle of the minimum wage—that is, that the worker must get enough to keep soul and body together—does not require that the Government shall say what such a minimum wage is, but that this question shall be left in every given instance to be determined by the local boards that are also to pass upon the other matters in dispute.

While waiting for the ultimate economic and social effects of the bill to show themselves, public attention and speculation in England will most eagerly fasten upon the politics of it all. There has been a feeling, for which some justification exists, that the Asquith Ministry is losing its hold on the country. Some have even declared that the Government is tottering to a fall, and have predicted that the Conservatives will be in power before the year is out. The bye-elections have been going ominously against the Liberals. But apart from the ups and downs of incidental pollings, stands the large fact of the actual Liberal strength in Parliament, together with the announced policy and purposes of the coalition Ministry. It still has behind it in the House a majority of more than 100. This Parliament has been in existence only about a year and a quarter. It has a normal prospect of life of over three years more. And the cohesion and tenacity of the Government must be greatly strengthened by the situation in which it finds itself. After great exertion and successive general elections, it was able to pass the Parliamentary Act, removing after a two years' interval the veto power of the House of Lords. But that measure was not an end in itself. It was only a means. The thing all the while aimed at was the enactment of legislation which the Liberal party had at heart, and to which it is pledged; and the Parliament Act was merely a preliminary to that, simply a tool to remove obstructions from the path. The whole logic of the position, then, is that the Liberals should stand by their guns, and press on the bills for Home Rule, for Welsh Disestablishment, for the abolition of plural voting, and for the reform of public education, which they have promised the country, and to prepare the way for which all the long and bitter struggles of the past three years were primarily undertaken.

"SYNDICALISM."

The Lawrence strike has brought into public notice in this country a new type of labor union and a new philosophy of the labor movement. The strike at Lawrence was conducted by the Industrial Workers of the World, familiarly known as the I. W. W., whose principles go by the name of Syndicalism. The term has been popularized recently by events in England, where Mr. Tom Mann, a veteran labor leader and the exponent of the new movement in the

British trade unions, has been put in prison for preaching sedition to the army in connection with the coal strike. Isolated theories and practices of Syndicalism have already become fairly familiar to the general reader. Such are the "general strike" which constitutes the basic principle of Syndicalism, and "direct action" which has achieved notoriety through the acts of the McNamara brothers. Even the French word *sabotage* has become acclimated in the newspapers. But a general account of the Syndicalist movement has been wanting till recently. The deficiency is now supplied by an admirable monograph, entitled "The Labor Movement in France," from the hand of Mr. Louis Levine and published under the auspices of the Columbia University Department of Political Science.

Syndicalism in its latest phase has arisen out of peculiar conditions in the French labor movement. But the truth of Mr. Levine's contention is quite apparent: Syndicalism is essentially a revival of conditions that prevailed at the beginning of the international labor movement fifty years ago. When the "Internationale" was founded in 1864, it was almost from the beginning torn between two conflicting tendencies, which in broad terms we may characterize as the revolutionary spirit and the evolutionary, the anarchistic and the Socialistic, the gospel of violence as preached by Michael Bakunin, and the gospel of gradual transformation under the laws of industrial development as set forth by Karl Marx. In other words, the labor movement is only human. Like all great social and political movements, it has had its moderates and extremists, its legalists and its revolutionaries. Labor and Socialism have witnessed the alternate ascendency of one faction or the other. In France, characteristically, this shifting of bases has always found its most vigorous expression. There, on the one hand, Socialists have consented to enter a bourgeois Cabinet and cooperate with the "exploiters" of the working classes. And there, on the other hand, the syndicalist theory has been most completely worked out.

Syndicalism or revolutionary trade-unionism is, in the first place, a sharp reaction against political or parliamentary Socialism. In theory it holds that the presence of Socialist or trade-union representatives in Parliament is useless or worse than useless. It not only repudiates individual representatives of the working class, such as Millerand, Briand, and Viviani, as traitors to their class; but it regards the parliamentary system in itself as conducive to the sacrifice of principles, the encouragement of petty intrigue, the fostering of cowardly conciliation, and thus to the weakening of the revolutionary spirit among the workingmen. Moreover, parliamentarianism leads to the domination of the working-classes by non-workingmen. It is the "intellectuals" who get themselves elected to Parliament; and such men, with all the good will in the world, cannot really enter into the feelings and the aspirations of the working-class. The "intellectuals" are necessarily inclined to take a philosophic view of the "war between the classes." They are content to make gradual progress. They accept reforms. They cannot understand the real workingman's passionate yearning for liberation, to be obtained in his own day and by any means.

Syndicalism, therefore, rejects the idea of capturing the bourgeois state by legislative methods. It rejects palliatives and reforms because they do not go to the heart of the trouble, which is simply irreconcilable class warfare. Because the state is always bound to be under the control of the propertied classes and the "intellectuals," Syndicalism declares war against the state. It finds in the workingmen's organizations the only efficient agent for overturning society. It regards the general strike as the lever that will accomplish the overthrow. The general strike may come to-day or at any time. Meanwhile it is necessary to maintain the class spirit unimpaired, to nourish it on partial strikes, on constant agitation. Every victory over the employer is to be made the base for further conquests. The irrepressible conflict is to be hastened by a policy of constant irritation. Better than having Socialist Deputies in Parliament, is to force a bourgeois Parliament into concessions by force—by strikes, *sabotage*, protest meetings, and every other form of mass action. The labor unions are the "standing army" of the revolution. They may not represent a majority of the workingmen. Even within the unions the majority may not be in favor of direct action. But that does not matter. In every historic movement, the conscious, resolute minority has carried the indifferent majority with it.

Syndicalism has also its constructive philosophy. When the looked-for "general strike" has come and succeeded, when the present system of capitalist protection is overthrown, then the labor unions are to step in and assume control of the business of production. The future state, as pictured by Syndicalism, will be a loose, federative structure of producers' unions in which the workmen will also be the owners, directors, and distributors. But, as a matter of fact, Syndicalism does not concern itself greatly with the nature of the future state. It has taken the old cry that the laboring-class has everything to gain and nothing but its chains to lose, and has given to this watchword a philosophical cast. The most eminent theoretician of the Syndicalist movement, M. Georges Sorel, is a confessed Bergsonian. We must trust ourselves to the stream of life. Creative evolution, working in the domain of industry, will work out the salvation of society.

Just now the most significant thing in Syndicalism is that it constitutes a menace, not to society, but to the Socialist party. It brushes away disdainfully the results of decades of Socialist effort and says virtually that the 110 Socialist members of the Reichstag, the seventy-odd Socialist members in the French Chamber, the forty labor members in the House of Commons, the large Socialist party in the Austrian and Italian Parliaments, amount to nothing. All this is interesting to us of America, where political Socialism is learning its first steps. Socialists have hardly done rejoicing over Milwaukee, Schenectady, and Mr. Berger, when up rises this spectre of "direct action" in their path. They are willing to accept the established doctrine that the Socialist party and the unions represent the two arms of the militant working class. But the Syndicalists arise and proclaim themselves alone as the people. Salvation will not come through a Socialist majority of "intellectuals" in the House of Representatives and the Senate, but through a minority of determined workingmen leading the masses into battle on the economic field. No wonder the Socialist *Call* loses its temper and declares that "worse than the 'aristocracy of intellect' is the 'aristocracy of revolution.' . . . It becomes 'an aristocracy of

revolutionary intellect' without a glimmering of intelligence and none of the revolutionary impulse. It becomes merely a personal concern, with no shado of democracy in it, with subservient followers and with unquestioned leaders." This exposition of Syndicalism, we leave to speak for itself.

PROTECTING THE IMMIGRANTS.

In the closing days of the session of 1910, the New York State Legislature passed four bills which marked a new era in the humanitarian and industrial legislation of the State. It established a policy and created a new kind of administrative machinery which now seem destined to lead both the Federal and State Governments in the development of a domestic policy in dealing with admitted aliens. These were the four immigration bills which created the Bureau of Industries and Immigration, and regulated private bankers, steamship ticket agents, and notaries public.

These words are the introduction to the first annual report of the Bureau of Industries and Immigration. It was fortunate at its inception in obtaining at its head Miss Frances A. Kellor, whose work in connection with the supervision of employment agencies and in other fields of social endeavor had won her a deserved reputation. The report before us is from her pen.

In brief, by passing this legislation the State of New York decided to assume a new attitude towards the immigrant. He was no longer to be left to the tender mercies of transportation companies and to those of the sharks who lie in wait for him at every corner. The State decided to see to it that he should be protected both on and after his arrival. It created a bureau to look out for him wherever aliens are found in congested quarters, camps, or colonies. The process of Americanization was to be furthered and supervised. But, above all, the immigrant was to be protected from exploitation because of his ignorance of the country and of its language. Obviously, this opened up a field in which sentiment might easily get the better of judgment. Miss Kellor has endeavored to carry out the new policy in four ways: first, by assuring to every admitted alien in the State who has a grievance a hearing in his own language and an impartial inquiry into his alleged wrongs, with the State acting as mediator for him where the wrong is established, or as his attorney if arbitration is impossible. The second object is to enforce existing legislation and procure whatever new laws are needed; the third is to investigate and study existing conditions of life and labor; and the fourth is to publish the results of these studies.

The Bureau has made only a beginning of its work. Yet no less than 2,956 investigations of subjects, and 749 direct investigations of complaints, have been made. Throughout the State were found colonies of aliens needing attention; some grouped around industrial centres such as Rochester, Syracuse, Utica, etc.; others in remote mining or railway camps and along the great new aqueduct. In some of these colonies the conditions were found to be shocking in the extreme. To help immigrants who have been victims of this kind of ill-treatment or have been defrauded or maltreated by employment agents, contractors, private bankers, padrones, ticket agents, land and transportation companies, etc., has been the ceaseless aim of the Bureau. Where relief or financial aid was needed, the Bureau directed the applicants to existing charitable agencies. Through a group of fifty newspapers representing all nationalities and languages, it has reached thousands of immigrants and laid before them news of frauds detected and proved, exploiters apprehended, besides setting forth the dangers that threaten, and the labors of the Government and of individual societies in their behalf.

Already the Bureau is in a position to make important recommendations. It would have the State establish free employment bureaus for the distribution of unskilled workers now at congested centres. It urges a "camp-school bureau or commission" to deal with the educational needs in immigrant colonies and camps; and desires that the immigrant lodging-place law shall be extended to temporary labor camps. For the Federal Government there are eight recommendations, two of the most important of which are that the Government shall license and regulate labor bureaus which now supply labor to those engaged in interstate business, and that naturalization shall be restricted to Federal courts. The need of extending welfare and educational work to small communities, camps, and colonies throughout the State, and of establishing an experimental school of citizenship, is also considered. Curiously enough, under this new law immigrants are protected where natives of the country working alongside of them are beyond the scope of tho Bureau; on the other hand, the foreigners in such outlying camps and communities are usually overlooked in the matter of schools, recreation, libraries, and so on.

The most striking thing about the Bureau is its personnel and its spirit. Twenty-five years ago it would have seemed a matter of course to put at its head some cheap politician wholly without experience or fitness for the work. It would have been deemed preposterous to choose a social worker, and a woman at that. The ordinary political bureaucrat will rub his eyes with amazement when he learns that not only did Miss Kellor bring a fine personal enthusiasm to her work, but that when it was found that there was not money enough appropriated properly to organize the office, the head of the Bureau and her chief special investigator, Miss Carola Woerishoffer, contributed the funds necessary. A work which is carried on by such officials is bound to prosper. Unfortunately for the State, death robbed it of Miss Woerishoffer's service last summer with cruel untimeliness. Rightly, the first page of the report before us is given to a tribute to her from which we extract the following: "The State has had no enrolled soldier who has responded to every call more promptly, who has performed the duties set him more unflinchingly, or who has given his life more utterly on the field of battle than she in the cause in which she believed."

THE EXTINCT ANGEL CHILD.

Justice requires that a good word be said for the saintly infant of two generations ago whom devoted parents brought up on pap and treacle to be a missionary among the cannibals. It has become too much the fashion to call him a prig and a snivelling humbug. To this sweeping charge at least a twofold objection can be taken. In the first place, if the mid-Victorian child was a prig, it was because his parents were prigs; which is always a reasonable defence. In the second place, the mid-Victorian angel child never existed outside of the books written for him by his elders. About 1830 Dr. Kendall produced, among other books for children,

"The Prize for Youthful Obedience," of which the story moves in this vein:

A kind and good father had a little lively son, named Francis; but, although that child was six years old, he had not yet learned to read.

His mamma said to him one day: "If Francis will learn to read well, he shall have a pretty little chaise."

The little boy was vastly pleased with this. He presently spelled five or six words, and then kissed his mamma.

"Mamma," said Francis, "I am delighted with the thoughts of this chaise, but I should like to have a horse to draw it."

"Francis shall have a little dog, which will do instead of a horse," replied his mamma; "but he must take care to give him some victuals, and not do him any harm."

The natural desire that arises in the modern soul to assassinate little Francis and his mamma is only stayed by the reflection that among little Francis's contemporaries were Tom Sawyer and Huck Finn. Obviously the fault lies not with little Francis but with his creator.

The child has always been the victim of standards imposed upon him by his elders, in literature as in every other phase of life. And always, we imagine, the child soul has been very much what it is to-day. It was so in seventeenth-century Massachusetts when the Rev. Michael Wigglesworth wrote his charming little lyrics about infants in hell fire, and when two-year-old babes lisped:

> I, in the Burying Place, may see
> Graves Shorter than I;
> From Death's Arrest no age is free,
> Young children too may die.

It is so to-day when little Socialist children in Socialist Sunday-schools construe in their Socialist primers exercises of the following general tenor:

> See the Capitalist.
> Is he a fat Capitalist?
> Yes, he is a fat Capitalist.
> See the Workingman.
> Is he a thin Workingman?
> Yes, he is a thin Workingman.
> Why is the Capitalist so fat?
> Because the Workingman is so thin.

But even in Massachusetts of the seventeenth century it is on record that the histories of Tom Thumb and Jack the Giant Killer were circulated in printed form. Whatever the Puritan father may have thought about it, the conjecture is a safe one that the Puritan mother put her children to bed not with extracts from the Rev. Michael Wigglesworth, but from the vast body of Mother Goose literature which no age and no country has ever been without. It is undoubtedly true that the Socialist child of to-day does not pursue his inner spiritual life under the shadow of the Materialistic Interpretation of History and of the Class Struggle. They have games and folk dances and flag drills with the red flag, of which the symbolic meaning may not always be present to their young minds.

To-day it is true in one sense that the gap between child nature and the nature of child literature is narrower than it was with the Puritans and the Victorians, and than it threatens to be under the Socialist régime. We take pride in recognizing the existence of the "real" boy and the "real" girl. Animal spirits, far from being banned, are explicitly encouraged; not only on the theory that boys will be boys, but on the impressive philosophical assumption that the individual life mirrors the history of the race and that the boy has a scientific excuse for being something of a savage. Hence the present-day literature deals with boy scouts and boy hunters, with pirates and treasure trove, with football and college fraternities.

And then all at once you observe a peculiar lapse into didacticism; for the modern boy has his educational books about wireless and aeroplanes, about Dreadnoughts and submarines. Wherein, now, are we better than the Victorians who wrote about pony chaises in connection with obeying mamma and being kind to the dog? The Victorians encouraged moral prigs. We are turning our children into scientific and technical prigs. Recall how pedagogists insist on reminding us of the joy the child takes in making believe that a dog is a prancing charger, or in raising large families of calico-dressed clothespins taken from the wash-line. In themselves the wireless and the Dreadnought have no greater appeal for the child than good dog Ponto harnessed to a wagon. Only we choose one way of preparing the child for citizenship and the Victorians had another. We are interested in the evolutionary effects of play, and the Victorians were interested in moral effects. It is to be doubted, however, whether the Victorian mind was capable of conceiving a monstrosity like "directed child play," which, we understand, is one of the rising new sociological sciences.

Other times, other—no, not other customs—but other ways of formulating the same old habits of mind. Whether the object of education is to make a good man as the Victorians called it, or a socially efficient citizen as one supposedly ought to call it to-day, it is really the same object. Only once upon a time people went directly at their goal. Little Francis's education was in closer touch with actuality than many of our own methods. There did exist cannibals whom a little boy might reform, convert by kindness. But an education in pirate-treasure and wood-lore is no preparation for a clerkship in a shoe-shop or a bank. For all that he was a prig and a nuisance, little Francis was in touch with those great principles of morality and conduct which underlie every condition of life and every state of society. The modern librarian ejects the Horatio Alger books from his shelves, presumably on the theory that stories for boys, no matter how interesting they are, must necessarily be smug and priggish if they speak of bootblacks who became wealthy merchants through industry, honesty, and fidelity. That librarian's shelves are crowded with best-sellers, for adults, which are nothing but the Alger gospel warmed up and served with modern trimmings.

TEACHING THE FARMERS TO PLAY.

The common conception of country life as all work and no play is one of those generalities that are established rather than weakened by investigation. The life of the average farmer, says Prof. John M. Gillette of the University of North Dakota, in the "Country Life" number of the *Annals* of the American Academy of Political and Social Science, "is a round of eating, working, sleeping, saving, economizing, living meagrely, recognizing only the bare necessaries, skimping along with inconveniences." Let such a man accumulate wealth, and move into the city to enjoy it, and he becomes one of the most helpless of men. "He still practices the stern economies, lives in houses without modern conveniences, keeps the old rag carpets, attends no theatres, goes to no lectures unless they are free, and acts as a man in a strange world or as one with a starved soul." The rural telephone, rural mail delivery, and increased use of machinery have greatly altered conditions for the better, but the farmer who runs down to the station in his automobile to meet his dinner guests from the near-

est city is as yet much oftener seen in cartoons than in life.

The result is that much of the relaxation which he manages to get is artificial; it is apt to be either solitary or amid surroundings that are not of his making. In either case, it is not what it should be, and is quite different from that enjoyed by the urban laborer. The solitary forms of his play, such as hunting and fishing, tend to diminish; while the other sort, for which he resorts to the village or town within easiest reach, is made up of moving-picture shows, saloons, billiard halls, and lodge-rooms. The mere geographical fact that these attractions are on alien ground exerts a subtle psychological influence upon him. He feels himself, if not in a new heaven, at least on a new earth, and he has a consequent sense of release from the checks and balances of his native heath. This disparity in location between his labor and his play has another unfortunate effect in making him dissatisfied with the place of his work, and drawing him towards the spot which he associates with his brighter hours. This circumstance alone is sufficient demonstration of the vital connection between work and play, and of the need for the development of the latter in the rural communities themselves. Their dearth of social intercourse in all but the most rudimentary ways is doubtless connected with their lack of intellectual stimulus.

It may seem that this view gives scant credit to the cultural value of the informal gatherings in the store, the post office, the railway station, or the one building that houses all three. One of our traditions has been the hard-headed tiller of the soil, listening at the Saturday evening assembly to the reading of a newspaper, and then engaging in homely but pithy discussion of the questions that are puzzling the wise men at Washington. The facts seem to be quite different. The social mind of our rural communities, according to Dr. Warren H. Wilson, Presbyterian Superintendent of Church and Country Life, is saturated at such times, not with political wisdom, but with economic commonplaces. The church does little more for the social instinct. Being far too numerous for the population they serve, the churches "become the vehicle of expressing grudges, resentments, narrow and mean social feelings." The old-fashioned rural home has disappeared, and consolidation and centralization of country schools has only begun.

The way to better things is a double one. In the first place, conscious effort is now made to supply the wanting social activity. With what might seem to a stranger a merry jest, the metropolitan centre of the hemisphere is the headquarters of an organization that proposes to train our rural inhabitants in the art of recreation and amusement. Parents shall be instructed in telling stories, clubs shall be organized for the boys and girls, there shall be lecture and entertainment courses, reading circles, public libraries, choral unions, more intelligent church and school socials, itinerant social and literary meetings, systematic teaching of plays and games, modern forms of camping, encouragement of tramping and houseboat parties, and a great many more delightful doings. One's head reels at the elaborateness of the programme. Carried out in its entirety, it would inevitably defeat its purpose by driving the exhausted merry-makers from the country to the cities, for the sake of rest and quiet. But probably it will not be carried so far. Programmes seldom are. The inertia of the rural subjects of the experiment will furnish a sufficient counterpoise to the enthusiasm of the experimenters. Tried tactfully, as no doubt it will be tried, it must awaken many a community to the realization that there is a better means of escape from the grind of toil than "recreations" which leave the body little better off, and the mind decidedly worse off.

The larger hope, however, would appear to lie in less self-conscious, less external, less specific methods. Typical and perhaps most important of these at the moment is the Chautauqua. Here people sit together without petty distinction of creed or party, listening to vigorous utterance and challenge of opinion, and finding their way into new intellectual realms. The extent of the movement in rural regions may be known from the statement that in Nebraska, with its sixty towns of a population of more than a thousand each, there are fifty-five Chautauquas; in Iowa, there are nearly two hundred; and in Kansas and Missouri, fifty each. The brevity of the time during which the sessions are held, the average being only ten days, renders them a means of suggestion and inspiration rather than a social institution. But in this circumstance is their value. Instead of supplying the farmer and his household with ready-made schemes of recreation, they quicken his mind, open for him horizons beyond his farm, and, best of all, make it harder for him to enjoy the thin and vapid amusements of the neighboring village. With such a hint, he can be trusted to develop a social life of his own, without peril to the natural character which no one wishes him to lose.

THROUGH THE OUTLOOKING GLASS

The Red Knight had been rowing for a long time and Alice noticed that they were still in the same place. That was on account of the peculiar way in which the Red Knight handled the oars. He pulled at the right oar as hard as he could and he pushed with the left oar as hard as he could, and the boat went round and round in a circle.

"We aren't getting any nearer the shore, are we?" he asked anxiously.

"Not a bit," said Alice.

"That's fine," said the Red Knight. "Now you can see that I am neither a wild-eyed radical nor a moss-grown reactionary."

But Alice's conscience began to trouble her.

"You know," she said, "I promised Mamma that I would go out in a boat under no circumstances."

"That's all right, then," said the Red Knight. "It's just what you are doing."

"But I am *not*," said Alice.

"You are very stupid," said the Red Knight. "Suppose you said, 'I will go out in the rain under no umbrella.' Wouldn't that mean that you intended to go out without an umbrella?"

"It *might* mean that," said Alice.

"And suppose you said, 'I will go to bed under no blanket,' it would mean that you preferred to sleep without a blanket, wouldn't it?"

"I suppose so," said Alice.

"Now, were there any circumstances why you should have gone out with me in this boat?" asked the Red Knight.

"No," said Alice.

"Well, then, isn't it as plain as anything that you are going out in this boat under no circumstances?"

But Alice only began to whimper.

"I promised Mamma," she said, "that I should be home at five o'clock."

"Selfish!" said the Red Knight.

"I am not selfish," cried Alice. "I promised Mamma I'd come and I want to keep my promise."

"That's what I call selfish," said the Red Knight; "giving somebody your promise and wanting to keep it, too. I'd never be guilty of such conduct. It's like giving somebody your piece of plum pudding and wanting to keep it at the same time."

"But a promise isn't plum pudding," said Alice.

"Of course it isn't," said the Red Knight. "Plum pudding is much harder to swallow."

"Oh, you know well enough what I mean," said Alice, quite out of patience. "It isn't the *promise* I want to keep; it's *what* I promised about."

"Oh, in that case, we quite agree," said the Red Knight. "If you give people a promise and keep something else, it's all right." And he began to row harder than ever.

"When I went to school," said the Red Knight, "I was particularly good at Riddles, Revcrence, and Rithmetic."

"I've studied arithmetic in school and played riddles *after* school," said Alice, "but I don't know what you mean by Reverence."

"I'm surprised," said the Red Knight. "Reverence means doing honor to great men. For instance, when I look at myself and am reminded of Abraham Lincoln, George Washington, Napoleon, Mark Twain, Admiral Peary, and Joan of Arc, that means reverence. But perhaps you'd rather have me ask you riddles?"

"I think I should," said Alice.

"Very well. What's the difference between a Southern postmaster in 1908 and a Southern postmaster in 1912?"

"I'm sure I don't know," said Alice. "What is it?"

"I give it up," said the Red Knight.

"What a queer way of asking riddles!" said Alice.

"Not at all," said the Red Knight. "What's the difference between taking a canal from Colombia and taking candy from a child?"

"I never did understand politics," said Alice. "What is it?"

"I give it up," said the Red Knight.

"Oh, pshaw," said Alice. "Please, do be sensible."

"I am sensible," said the Red Knight. "Why is George W. Perkins like the voice of the people?"

"Well, why?"

"I give it up," said the Red Knight.

"Oh, that's too absurd for anything," said Alice. "If you like to tease people, please find some one else to tease."

She walked away to one side, quite angry, and began to play with the daisies in her new spring hat. The Red Knight sat down on the river's edge and broke out crying. He wept so bitterly that Alice felt sorry for him. She came back to where he sat and said, "I'm awfully sorry. I didn't mean to hurt your feelings." But the Red Knight only went on weeping.

"Please, do stop crying," said Alice. "Take out your handkerchief and wipe your eyes; come now."

"I can't," said the Red Knight. "I had my handkerchief in my hat, and my hat is in the ring," and he sobbed as if his heart would break.

So Alice took out her own handkerchief and wiped his streaming eyes, but still he would not stop. So, to quiet him, she said, "But you said you were good at arithmetic."

"Oh, I am," said the Red Knight, and his face grew quite radiant. "Have you ever figured out how many Governors have come out for me?"

"No," said Alice.

"Well," said the Red Knight, "there's the Governor of New Hampshire, and the Governor of West Virginia, that makes two; and the Governor of New Hampshire, that makes——"

"But you counted the Governor of New Hampshire," said Alice.

"Only once," said the Red Knight. "People say that the Governor of New Hampshire is of two minds about me—that means twice, doesn't it?"

"Does it?" said Alice.

"Of course, it does," said the Red Knight. "Then there is Kansas, which makes five, and Nebraska, which makes eleven, and California, which makes twenty-four, and New Mexico, which makes thirty-seven out of a total of forty-eight Governors."

"I don't see how you figure that out at all," said Alice.

"I do it by long addition," said the Red Knight.

ARE THE ENGLISH CRITICAL?—II.

V.

Thus far in my comparison of English criticism with that of other countries, especially France, I have been trying to show that it has suffered from the superabundance of certain virtues—imaginative fervor, moral earnestness, geniality, and humor. We still have to consider how far it has been affected by certain positive deficiencies in the English.

In the first place, they would seem, as compared with the French, to lack taste (using the word in a somewhat literal sense). In this sense, taste, as Voltaire says, is a "prompt discernment like that of the tongue or palate, and which like it anticipates reflection." The taste of the critic should be the literary equivalent of that of the connoisseurs in Sancho's story who were able to detect the flavor of iron and leather in the wine; their verdict being afterwards confirmed by the discovery of an old key with a leathern thong at the bottom of the hogshead. Sainte-Beuve, like Voltaire, was fond of insisting on this analogy between taste in the literary and taste in the physical sense, and he adds that he had noted that doctrinaires were nearly always indiscriminate eaters. M. Guizot, for example, would have eaten cardboard and never known the difference. Now, I believe that we may detect a certain coarseness in both the physical and the literary tastes of some of the great English critics. Dryden confesses that he prefers Juvenal to Horace, and there is something about this preference that coincides with what we know about Dryden's taste in food—a taste that was hearty rather than delicate. Dr. Johnson piqued himself on culinary refinement and boasted that he could write a better cook-book than had ever been seen in England, but from what Boswell and others tell us we should infer rather that he was a huge and indifferent feeder.

After all, the critic is simply a man who knows a good book when he sees it, whether the book was written yesterday or a thousand years ago, and who, if the book is good, can also tell what is its class and degree of goodness. Now, a gift of this kind must always in some measure be intuitive. According to Professor Saintsbury, it is "beyond controversy" that "Boileau has left us not a single impartial and appreciative criticism of a single author, ancient or modern." If this means that Boileau did not warm up to real excellence, it is palpably false, as the "Second Satire" to Molière and the "Seventh Epistle" to Racine would suffice to prove. Boileau was not only capable of the "enthusiastic appreciation" which, according to Professor Saintsbury, is the "highest function of criticism"; he was also capable of that judgment which is in reality its highest function. He probably made fewer mistakes in his actual verdicts than did any other critic of whom we have record; and this not because he had a code of rules, but because he backed up the rules with an almost infallible literary intuition. Johnson had the same rules, but comparatively little of the intuition; and so he praises Blackmore's "Creation," and calls "Lycidas" disgusting, and declares Fielding a barren rascal and disparages Gray. We can at least understand Cowper's point of view when he writes to Unwin: "I am convinced, by the way, that he [Johnson] has no ear for poetical numbers. Oh! I could thresh his old jacket till I made his pension jingle in his pocket!"

The love of fine and artistic speech would almost seem with the French an inborn aptitude. I am not, to be sure, setting up any theory of racial fatality. The French may lose their taste; indeed, there are signs of late that they are losing it; it is likewise possible that certain critical virtues that have in the past been somewhat rare among Englishmen may in the future become common. Still, the members of the French Academy, who, as we are told, spent three months examining critically one of Malherbe's poems without getting beyond the first stanzas, seem to be the legitimate descendants of the ancient Gauls, one of whose chief ambitions was, according to Cæsar, to express themselves discriminatingly (*argute loqui*).

Possibly it is the keen and intuitive response of the Frenchman to the concrete work of art that has kept him in spite of his logic and love of abstract reasoning from flying off like the German into the intense inane of æsthetic theory. We are told that during his last illness Boileau set out to read one of Crébillon's plays, but finally threw the book across the room exclaiming that the play was so bad that it was shortening his life. It is also related of Sainte-Beuve that during his last illness he got so excited in the course of an argument with Gaston Boissier as to the merits of Ovid that his physician had to warn him to desist. Now we may

be sure that neither Boileau nor Sainte-Beuve would have been greatly stirred by learning that some German professor had just written a series of volumes to prove, let us say, that beauty is a process of "infeeling."

VI.

Mention has just been made of the French love of logic. Though this has not led them into an excess of æsthetic theorizing, it has given to their criticism method and coherency. In England we find distinguished individual critics, in France an almost symmetrical succession of critical schools. There is a sort of logical rhythm that runs through French criticism, just as there is a logical rhythm that runs through the architecture and streets of Paris compared with the architecture and streets of London. The French of course have often suffered from the excess of this their prime virtue of logical thoroughness. John Adams's saying that man is a reasoning but not a reasonable animal, would seem to apply with special force to Frenchmen. The English are fond of comparing with this logicality of the French the superior merit of their own habit of muddling along. But the superiority of the English to the French is a moral one. The English lack of clear and logical thinking is a grave defect even from the purely practical point of view. However that may be, ideas, especially since about the middle of the eighteenth century, have been uncommonly scarce in English as compared with French literature. In their stanchness and mental inflexibility the English have something that recalls the ancient Romans, whereas the intellectually versatile French have more in common with the Greeks, even though we should have to add with one of their own moralists that they are only Greeks in profile.

Critics have at times been so numerous in France that they have had to fall to criticising one another like the sword of Hudibras which

> ate into itself, for lack
> Of somebody to hew and hack.

Taking the word in a broad sense and allowing for many individual exceptions, we may affirm, indeed, that the French have often suffered from an excess, the English from a deficiency of criticism. For criticism with its tendency to dissolve everything and to call all things into question has very grave dangers, dangers of which the Athenian jury had a dumb inkling when it condemned one of the greatest representatives of the critical spirit, Socrates. The intellect is fatal to earnestness, says Emerson; Goethe has said still more wisely that everything that emancipates the intellect without giving us a corresponding self-mastery is pernicious. Many Frenchmen seem to have more intellect than their character entitles them to. As M. Faguet puts it, the French character does not measure up to the French mind. On the other hand, one not infrequently encounters in England men who are giants of character, but who remain intellectually infantile. Goethe was not really inconsistent when he expressed great admiration for the Englishman and then said almost in the same breath that the "Englishman is properly speaking without intelligence" (a saying by the way that merely repeats the substance of Dryden's line: "Like true-born Britons who ne'er think at all").

The natural opposition between character and intellect is pleasantly expressed by Bagehot's boast that in "real, sound stupidity the English are unrivalled." This saving stupidity, according to Emerson, masks and protects their perception as the curtain of the eagle's eye. Burke, who could be on occasion one of the keenest of critics in his own field of political thought, shows a similar satisfaction in the intellectual imperviousness of the Englishman when he compares the radicals of his day to a few grasshoppers—"the little, shrivelled, meagre, hopping, though loud and troublesome, insects of the hour, who make the field ring with their importunate chink, whilst thousands of great cattle repose beneath the shadow of the English oak, chew the cud, and are silent." This is to renew the error of Aristophanes, who refused to distinguish between Socrates and the sophists and thought it possible to check the inevitable advance of intellectual self-consciousness by falling back on a stolid Toryism. The natural working out of such a point of view is seen in the recent pathetic exhibition of Lord Hugh Cecil and his aristocratic friends with their resort to lung power, when it is so perfectly plain that only brain power will serve. Things have already reached a pass where the only hope for the conservative is to oppose a first-rate criticism of society to the second and third-rate criticisms we are now getting from the Socialists and other radicals. Unfortunately, the present crisis is finding the Englishman intellectually unprepared. His mental constitution has not been gradually hardened and inured to our modern contagions. The danger is that when he does catch ideas they may prove, like measles for the South Sea Islander, a fatal disease. It is not unusual for an Oxford student, on breaking away from traditionalism, to become an anarchist.

VII.

Another positive limitation of the English that appears in their criticism and is almost too familiar to insist upon, is their insularity. "For anything I see," said Dr. Johnson, "foreigners are fools." Something of this faith still survives in the average Englishman. In the seventeenth century Saint-Evremond complained that Frenchmen were incapable of getting outside themselves, and even went to the point of calling a man a foreigner in his own country. Nowadays this is a trait that we should associate rather with the English. I remember, indeed, once asking an English acquaintance at Paris whether he did not feel very foreign among so many people whose language he could neither speak nor understand. "No," he replied, "but these people seem very foreign to me."

Both the insularity and intellectual imperviousness of the English are more or less bound up with the splendid convention of the English gentleman. The English gentleman is distrustful of thought, but prides himself, and rightly, on being great as a man of action. Scott, the best example of the gentleman in English literature, happens to be also one of the greatest of English humorists. He can scarcely be said to display any interest in ideas except as they may be used to illustrate either individual or national humors, as we see, for example, in his treatment of the Covenanters. In striking contrast to the richness and variety of his Scottish and other humors is the monotony and colorlessness of his ladies and gentlemen, and that, as I conceive, is because his ladies and gentlemen are all governed by the same convention. Scott shows too much Tory complacency; he is too unconscious of the undermining by the French Revolution of the whole social order upon which the convention rests. In his preface to the "Human Comedy" Balzac records his indebtedness to Scott; but Balzac differs from Scott in no respect more than that his whole work is dominated by a logical idea—the attempt, namely, to show the moral disintegration that has resulted in French society from the Revolution. His novels are really a caricature of the modern French, a sinister and lurid picture of the fatal triumph of egoism in a society that has broken away from traditional religious restraint. Balzac's conception is, if not fundamentally false, at least very one-sided, though I note that M. Paul Bourget, himself a reactionary, to be sure, declares in a recent essay that Balzac has shown himself a wonderful diagnostician of the ills that have actually fallen upon modern France. The point I wish to make, however, is very similar to my previous point in comparing Addison and La Bruyère. Balzac is more intellectual and critical, Scott more genial and humorous.

VIII.

In my enumeration of the virtues and defects of the Englishman and their relation to literary criticism, I have failed as yet to speak of what is perhaps the master-instinct of the whole English-speaking race—the instinct for practi-

cality. What logic and ideas the English have had, they have put mainly in the service of utilitarianism and scientific positivism. One is sometimes inclined to think that Bacon catching his last illness while stuffing a chicken with snow in an attempt to discover the principle of cold-storage is more typical of the English race than Shakespeare in the act of composing Hamlet. Students of comparative literature know that the foreign influence of Shakespeare, even his influence in Germany, is easily exaggerated. But wherever in the world we see smoking factory chimneys looming on the horizon we have a tribute to the potency of the Baconian influence. The gap between this utilitarian side of the English-speaking race and its imaginative side is too wide, just as the gap is too wide between Oxford and an English manufacturing town. The great representatives of the utilitarian and positivistic tradition—Bacon himself, Newton, Hobbes, Locke, Hume, Adam Smith, Bentham, Stuart Mill, Herbert Spencer, Darwin—have had ideas a-plenty and at times plenty of logic, but in matters artistic and literary have been little better than Philistines. It would be easy to run down the list from Newton, who could see in the finest statues only stone dolls, to Herbert Spencer, who went to Homer "to study superstitions," but was so bored that he could not get beyond the sixth book; and finally to Darwin, who confessed at the end of his life he could see nothing in Shakespeare.

The ultra-utilitarians are not only as completely lost for art and literature as the Puritans, but their point of view is far more catching. We see the waves of utilitarianism rising higher and higher every year in France and Germany, and even threatening to engulf the Gothic turrets of Oxford. It is doubtful whether in a world so completely devoted to utility there will be any room for art and literature as these terms have been understood traditionally. Here again the right attitude is that of the Aristotelian. Practicality, the Aristotelian would admit, is one of the main virtues of the peoples of English descent, along with imaginative fervor, moral earnestness, geniality, and humor; but practicality pursued mechanically and one-sidedly may become a vice. And this utilitarian excess would seem to have been reached not only in England and America, but more or less in the whole Occidental world.

IX.

It would carry me quite beyond the limits of the present subject to discuss the means by which we may hope to recover sound literary standards and guard against the present drift towards a scientific and industrial materialism. One of the most obvious needs is that we should revive in ourselves the sense of literary tradition. To this end it is urgent, if I may venture to repeat what I have said elsewhere, that students and teachers of English and other modern literatures should coöperate cordially with the representatives of the ancient humanities instead of tending to ally themselves as now with the utilitarians.

But though we need to revive our sense of tradition we cannot afford to be mere traditionalists, lest we suffer from that lack of ideas which is the chief lack I have noted in English, and I may add in American, criticism. Our holding of tradition must be in the highest degree critical; that is, it must involve a constant process of hard and clear thinking, a constant adjustment, in other words, of the experience of the past to the changing needs of the present.

Who are to be our models for this right critical interpretation of the past? They are curiously hard to find in the nineteenth century, in spite of the fact that it is commonly supposed to be the most historical of centuries. There prevailed during this period two main attitudes towards the past which may be defined, respectively, as the scientific and the romantic. The man with the scientific attitude is chiefly concerned with investigating and establishing the facts of the past. The romanticist, for his part, revels in the mere picturesqueness of the facts or else takes refuge in the past from the present, uses it, as Taine would say, to create for himself an alibi. But the past should be regarded primarily neither as a laboratory for research nor as a bower of dreams, but as a school of experience. Where, then, is the man who has been fully initiated into tradition, and at the same time knows how to bring it to bear upon the present? Even Sainte-Beuve does not fully satisfy us here. He was one of the victims of that naturalistic fatalism that has lain like a blight upon the human spirit for the past fifty years or more. "Man," he says, "has the *illusion* of liberty." What is the use of knowing the past if one is not free to profit by the knowledge? We think by contrast of Goethe (whom Sainte-Beuve himself calls the king of critics), and of Goethe's saying that the chief benefit one may derive from a total study of his work is a certain sentiment of inner freedom.

Goethe, indeed, comes nearer than any other modern to what we are seeking; not the romantic or scientific Goethe, it should be added, but the humanistic Goethe, who is revealed in the conversations with Eckermann and others, and in the critical utterances of his later years. For Goethe, after having found in "Faust" the happiest formulæ for the two main forces that were to dominate the nineteenth century—scientific positivism (*Im Anfang war die Tat*) and Rousseauistic romanticism (*Gefühl ist alles*)—lived long enough to repudiate the romanticism, and, while holding fast to the science, to insist that it should keep in its proper place. As an actual practitioner of the art of criticism, he seems to me inferior to the best of the Frenchmen; but as an initiator into the critical habit of mind he is incomparable. He has assimilated not merely tradition, but all traditions, and that without ceasing to be a modern of moderns. As Sainte-Beuve puts it, he keeps watch for every new sail on the horizon, but from the height of a Sunium. He would use the larger background and perspective to round out and support his individual insight and so make of the present what it should be—not the servile imitation, nor again the blank denial of the past, but its creative continuation. "To the errors and aberrations of the hour," he says, "we must oppose the masses of universal history." He would have us cease theorizing about the absolute and learn to recognize it in its actual manifestations. This particular form of the humanistic art of seeing the One in the Many would seem especially appropriate to an age like ours that differs above all from other ages, Greek and Roman antiquity, for example, in having at its command a vaster body of verified human experience. Goethe can, therefore, be of more help than any English or French critic in solving one of our most pressing problems: that of finding standards to oppose to the scientific and utilitarian excess, on the one hand, and, on the other, to the excess of romantic impressionism. In his general History Professor Saintsbury says that Goethe's high standing as a critic is a "superstition, now somewhat stale"; which suggests that we might begin our reaction against romantic impressionism by reacting against Professor Saintsbury. His own reputation as a critic may turn out to be the real superstition. That this reputation should be as great as it is, is perhaps in itself a proof that the English are not critical.

Irving Babbitt.

NEWS FOR BIBLIOPHILES.

A new edition, condensed and somewhat revised, of Arundell Esdaile's "Bibliography of George Meredith" is printed at the end of Vol. XXVII of the Memorial Edition of his works, recently published. Though called a "bibliography" on the title-page, it is more correctly described as a "chronological list" in the head lines. Only much abbreviated titles are given, and no collations whatever. A good bibliography of Meredith is a desideratum. As there is a strong interest at present in the first editions of Meredith among collectors, the following bibliographical notes may be of interest.

In the "Poems" (London, 1851), Meredith's first published volume, there should be found a slip of errata, showing four errors. Below the heading "Errata" is a

short rule with a diamond-shaped expansion in the centre. At some time this slip was reprinted, the later form having a straight rule, a trifle shorter than the original. The space between the rule and the first line of text is somewhat less in the reprint than in the genuine slip. Harry E. Widener owns an important copy of the book, the errata slip of which contains an additional correction in Meredith's autograph. This seems to fix the priority of the variety with the diamond-shaped expansion in the rule.

There are two distinct editions of Meredith's third volume of verse, "Poems and Lyrics of the Joy of Earth," printed in 1883, which have, heretofore, been bought and sold indiscriminately as first edition. The actual first edition was printed by R. Clay, Sons & Taylor, and has their imprint on p. vi. The second edition, page for page, has the imprint of R. & R. Clark, Edinburgh. Some copies of this volume contain an errata slip, but, in most copies, apparently, the first of the errors noted, "Revotl" for "Revolt," in the last line of p. ix, has been corrected. The presence of this error seems to indicate the earlier issue. Some copies contain a cancelled leaf for pp. 63, 64, pasted on the stub of the original leaf, which has been removed. Some copies, also, contain at the end a Catalogue of Macmillan's publications, dated "April, 1883." There are also slight variations in the binding.

The second edition, printed by R. & R. Clark, though an entire resetting, contains most of the errors indicated in the errata slip of the first edition. The most important textual difference between the two are the improved titles of three of the sonnets. These are corrected to read as follows: P. 162, "The Spirit of Shakespeare: Continued"; p. 176, "Camelus Saltat: Continued"; p. 150, "My Theme: Continued." In the first edition printed by Clay, the title of each of these three sonnets is merely "Continued."

Almost all copies of "A Reading of Life" (1901) contain two cancelled leaves, pp. 65-68, printed as a separate sheet and pasted on the stub of one of the original leaves which have been removed. We have never seen a copy containing the originals.

At least three "separates," or early pulls, from the types of poems contributed by Meredith to magazines have been preserved. These are:

(1.) "Mother to Babe." A leaflet, one page, verso blank. Apparently printed from the types of the *English Illustrated Magazine* for October, 1886. It is without the illustration by William Meredith, which was printed on the same page when the poem appeared in the magazine. In the magazine, also, there was a page-number "25" besides printing on the reverse of the leaf.

(2.) "The Appeasement of Demeter." Four pages, numbered [1], 2, 3, and 4, the page numbers in the centre, and without headlines. Apparently printed from the types as set for *Macmillan's Magazine* for September, 1887. In the magazine it is paged 374 to 377, and occupies three leaves, there being other printing on pages 373 and 378. There are also head-lines.

(3.) "Outside the Crowd." A leaflet, one page, verso blank. Printed, apparently, from the types of the *National Review* for September, 1896, where the poem was first published. In the magazine there was printing on the reverse, also the page-numbers "25" and "26."

These cannot, strictly speaking, be called proof-sheets, but are pulls from the types after corrections had been made.

The private, unauthorized, first edition of "Jump to Glory Jane," of which fifty copies were printed in 1889 as a little pamphlet of sixteen pages, the last blank, was not mentioned in the first edition of Esdaile's "Bibliography," but is included in the "Chronological List."

Another private reprint, "Twenty Poems by George Meredith," being a collection of pieces contributed by him to *Household Words* between 1850 and 1856, issued in an edition of twenty-five copies only, in 1909, is not noted by Esdaile. These poems, when they appeared in *Household Words*, were unsigned, but their authenticity is proved by the office record of the magazine. Two other poems published in the same magazine in 1850 were, with some alterations, reprinted by Meredith himself in his first volume, published the next year, 1851.

"George Meredith and the Monthly Observer" is the title of an essay by Maurice Buxton Forman, of which twenty-one copies were printed privately in London last year, and which will interest Meredith collectors. The *Monthly Observer* was a manuscript magazine, of which Meredith was one of the editors and contributors, and which contains his earliest literary works known to be extant. Only five numbers are known, Nos. 11, 13, 14, 15, and 16, for January, March, April, May, and June, 1849. These were sold at Sotheby's about a year ago.

L. S. Livingston.

Correspondence

MR. ROOSEVELT AND THE RECALL.

To the Editor of The Nation:

Sir: The comments on Mr. Roosevelt's address before the Ohio Constitutional Convention have varied as much perhaps as the popular idea of how Constitutions should be construed will vary. While there is much that is fundamentally moral and well said in the address, there are parts which I think, and even more strongly feel, are unsound. We should scrutinize rigidly those doctrines which appear to touch the welfare of the masses when they come from one who depends preëminently on the masses for his following.

Mr. Roosevelt's position, as I understand it, is essentially this: that the people have, by their Constitution, expressed, or attempted to express, their will as to the fundamental law which they desire to govern them; that their servants, the judges, are selected to interpret the fundamental law so that it will be in accord with the will of the people. As conditions change the will of the people may change, and the interpreters who are to apply the Constitution as the touchstone are to do so in a manner to fit actual conditions of life at the time the construction is called for. There should be, in the main, no quarrel with this view, provided it were admitted that conditions might so change as to make it impossible to interpret even the most pliable Constitution to fit them. In other words, certain parts of a Constitution might become antiquated. Mr. Roosevelt would not advocate a construction directly opposed to every conceivable meaning of the words of the Constitution or a resort to fiction simply to make a highly favored law constitutional. In such cases there would be reason for amendment.

But Mr. Roosevelt takes the further position that the final decision as to the construction of the Constitution should rest with the people. This view presupposes a higher order of intelligence and greater popular grasp of fundamentals than even the people of Edward Bellamy's Utopia possessed. It is a flattering homage to the masses by a man who depends on those masses for the support of his ideas. To hold that their judgment could be other than sound would be self-condemnatory on his part.

This plan, if adopted, would nullify one of the primary purposes of Constitutions. State Constitutions are meant to provide a sufficient bulwark against the momentary impulses of the people, and to postpone action, by making it difficult, in order to ascertain whether the ills suffered are really permanent and due to the supposed causes. Carried to its logical conclusion, it might be argued that where the people, through their agents, the legislators, pass a favored law, they at once express their decision as to the meaning they want attached to their Constitution, and that it would be the duty of the judge to construe the Constitution so as to conform to that law. This assumes that the construing judge knows the prevailing opinion in regard to that law. And is the converse true? If a judge is of the opinion that the law will not promote the ends of justice, or, rather, if he is of the opinion that the people think it would not promote justice, would it be correct for him to interpret the Constitution in all cases so as to invalidate the law?

Mr. Roosevelt quotes Lincoln: "With Lincoln, I hold that this country, with its institutions, belongs to the people who inhabit it. Whenever they shall grow weary of the existing government, they can exercise their constitutional right to amend." How different is this statement of Lincoln's from advocating that the final tribunal for the construction of the Constitution should be the people themselves. Lincoln was too sound a thinker and endowed with too high an order of practical judgment to advocate such a doctrine. He believed that the power of government resided in the people. He also knew that the people, by their own free will, and by means of this very power, placed limitations on the ease with which they could use their power and thus prescribed a constitutional method of amending.

There is merit in the statement that a judge who has outgrown his usefulness should no longer remain in office. There is merit in the statement that there should be some method of retiring judges who have become so steeped in the technical dead letter of the law that by their decisions they thwart all reasonable reform. But in such a matter the method is everything. The plan of recall as applied to the judiciary presents grave doubts. It is not so much the effect which the actual recall of a judge or which the power of recall will have on remaining judges, but the power

of threat which such an institution furnishes. Unscrupulous attorneys with a political backing may make use of it covertly and indirectly to influence decisions, especially when the question before the court has a political or quasi-political tinge.

And it must be remembered that the recall is a measure which is likely to be abused more and more as its ease of usefulness is better understood. More than most measures, its good effects will teach the way to misuse. JAMES H. WOLFE.

Salt Lake City, Utah, March 15.

PUBLIC SCHOOLS AND THE RECALL.

TO THE EDITOR OF THE NATION:

SIR: The public elementary schools of this country are often blamed for the faults and ignorance of the ordinary citizen, and it is comforting, therefore, to come across a good piece of work that may fairly be credited to the American schoolmaster. It is an easy thing to teach and not difficult for the pupil to understand that in theory, at least, the laws in the United States are made by the Legislature, but are interpreted and applied by the judiciary.

Given this simple elementary fact, well hammered into the youngster's head, together with the subsidiary fact that a judge who respects his oath of office must decide strictly according to laws laid down for him by another branch of the Government over which he has no control, the conclusion is inevitable that the remedy for miscarriage of justice, in the absence of moral obliquity of the court, is to be sought in reforming the law, and not in assailing the judge. Indeed, it should seem as if the American people were beginning to see that a judge who should distort and nullify a law that seemed to him unjust, would usurp functions foreign to his office, and, worse than that, set a precedent that would upset all established commercial, moral, and industrial relations of society.

There are, of course, many other aspects of the case against the recall of judges, but they all depend on the fundamental fact that, with us, the laws are not made by the courts that interpret and apply them.

That this simple and single fact has been well drilled into the heads of the present generation is to the credit of the American schoolmaster. E. L. C. MORSE.

Chicago, March 20.

THE NERVOUS DEBILITY OF JAPANESE ART.

TO THE EDITOR OF THE NATION:

SIR: When I say that I received almost no impression from the annual Government Exhibition of Japanese Art, opened last November in Uyeno Park, nor, let me add, from any other exhibition I have seen in the last five or six years, I have a sort of same feeling with the tired month of May when the season, in fact, having no strength left from the last glory of bloom (what a glorious old Japanese art!), still vainly attempts to look ambitious. Although it may sound unsympathetic, I must declare that the present Japanese art, speaking of it as a whole, with no reference to separate works or individual artists, suffers from nervous debility. Now, is it not the exact condition of the Japanese life at present? So it is. My mind recalls this moment a certain clever English critic, who said it was life that imitated art; but here it is the art following after the life of modern Japan, vain, shallow, imitative, and thoughtless, which makes us pessimistic. The best possible course art can follow in the time of its nervous debility might be that of imitation; I know, of course, there is a moment even for imitation, when it almost becomes creation. The question is how you imitate. And what does the Japanese art imitate? What it imitates is the Western art as the life here copies the civilization beyond the seas. When it tells something, I thank God, it is from its sad failure; indeed, the present Japanese art is a lost art, since it explains nothing, alas, unlike the old art of idealistic exaltation, but the general condition of life. It is cast down from its high pedestal.

I do not know exactly what simplicity means, when the word is used in connection with our old art; however, it is true we see a peculiar unity in it, which was cherished under the influence of India and China, and always helped to a classification and analysis of the means through which the artists worked. And the poverty of subjects was a strength for them; they valued workmanship, or the right use of material, rather than the material itself; instead of style and design, the intellect and atmosphere. They thought the means to be the only path to Heaven. But it was before the Western art had invaded Japan; that art told them of the end of art, and laughed at the indecision of æsthetic judgment and uncertainty of realism of Japanese art. It said: "It is true that you have some scent, but it is already faded; you have refinement, but it is not quite true to nature and too far away." Indeed, it is almost sad to see the artists troubled by the Western influence which they accepted, in spite of themselves; I can see in the present exhibition or any other exhibition that many of them have long ago lost their faith by spiritual calamity, and it is seldom to see them able to readjust their own minds under such a mingled tempest of Oriental and Occidental. Is it not, after all, merely a waste of energy? And how true it is with all the other phenomena of the present life, their Oriental retreat and Occidental rush.

Again here are so many pictures which are the works of workmen bored, after the Western fashion, sometimes offensive, often overstrenuous, their personal vanity being too clear, as well as the loss of the humanity and love that always went with the better old art. You do not know what bad effect Millet, Corot, and others had upon the artists who thought their *genre* pictures quite adoptable; but they did not know, as it seems to me, that the real realism was not a matter of mere external aspect. It was the literature, I mean the novels, first, that cast away offhand the old ideals earned through sacrifice and pain, and even laughed wildly with De Maupassant and other "Madmen" as if they thought nakedness was the happiest thing they had found out; well, that is not entirely bad as a protest or temporary change. When I say that the present Japanese art, too, is moved by such a tendency, I do not mean that it makes a kotow before the shrine of realism, but that it has sadly strayed from subjectivity, the only one citadel where the old Japanese art rose and fell; I wonder if it is not paying a too tremendous price only to gain a little objectivity of the West.

This morning I was informed by the press that the four Government Exhibition jurors of the old Japanese school had suddenly resigned, saying that their opinions and desire to preserve the time-honored art intact had been always insulted, jeered, and laughed at by the other jurors of the Western imitation, who always outnumbered them. The resigning jurors published their proclamation to the effect that the real Japanese art was dying. I murmured to myself: "This is the autumn of life and the country when the leaves and art are falling."

Our Japanese life, indeed, suffers from nervous debility as a result of the wholesale Western invasion, under which we have become spiritual gypsies, losing our own homes. YONE NOGUCHI.

Kamakura, Japan, February 9.

SASHOK AND SASHKA.

TO THE EDITOR OF THE NATION:

SIR: I have supposed these many years that in Russian the name Sashok was a pet abbreviation for Alexander, and that Sashka was the corresponding girl's name. Certainly the little Russian boy who lived in the house with me, in Geneva, was invariably called Sashok by his elder brother and by his tutor. And Rembrandt's famous painting, in the Dresden gallery, of himself, and his wife sitting on his knee and drinking a glass of champagne, is commonly known among Germans as Die Sashka. But now it seems that in Andreiev's new novel, soon to appear under the title "Sashka Ziguiev," the titular hero is the son of an old general. Will not some one of your Slavic scholars enlighten me? M.

New York, March 21.

THE HIGH SCHOOL TEACHER OF ENGLISH.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* of February 29th, Professor Bellows cleverly explains that "Hamlet" and Dr. Johnson will not suffer if high school students cease to write about them. This is only too true, but it is just as true that the student, as well as the high school he represents, will suffer when he takes his college entrance examination if he cannot write "a perfectly meaningless little essay on 'Dr. Johnson and his Club' or 'Was Hamlet Mad?'" The high school teacher, however, has at least one legitimate motive for assigning theme topics which colleges force upon us and then ridicule. In sheer self-defence, the teacher of English, haunted by visions of ungraded themes and test papers, must combine the study of the classics and the writing of themes in a vain attempt to kill two sparrows with one wax bullet.

We devote the first two years to a mastery of the principles of rhetoric with a slight mixture of philology; in the third and fourth years, we survey the history of American and English literature. In addition each year we study *intensively* in class six classics and read four others at

home. We also require at least one theme a week, generally based upon the classics read. You can readily see that the student is meeting the college entrance requirements with a vengeance.

The teacher of English is apparently the general factotum of the school. Literary societies, school publications, and the coaching of debating teams come as dessert after the *pièce de résistance* in the form of five classes each day. Classes in English are never small and never select. Students are required to take it, and the teacher is required to get them through it. The high school teacher may not be so independent as the college professor, and of necessity considerations other than the student's ability enter into his being "passed." We polish the pebble with the same tools, if not with the same fervor, we polish the diamond, and after four years we send him to the college—a finished pebble.

The college trains the teacher of English, prescribes what he is to teach, and is horrified at the result. A similar attitude is maintained by the high school towards the grade teacher, who defiantly places the blame upon heredity. This would be amusing were it not so tragic. The student blames everything or nothing; the student likewise pays the fiddler. The high school teacher as well as the college professor sees the farcical side of the teaching of English, and just as earnestly seeks relief.

Central High School, Muskogee, Okla., March 18.

Literature

CARDINAL NEWMAN.

The Life of John Henry Cardinal Newman: Based on His Private Journals and Correspondence. By Wilfrid Ward. 2 vols. New York: Longmans, Green & Co. $9 net.

A biography of the great convert which gives only a single chapter to the events of his life down to and including his conversion, and devotes the remainder of two bulky volumes to his experiences in the Roman Church, might seem to resemble "Hamlet" with the prince left out. For this outrageous disproportion Mr. Ward is not altogether responsible. The story of the early years and conversion has already been related by Newman himself in the "Apologia," and this has been supplemented by the two volumes of his letters edited by his sister-in-law, Miss Mozley. It was Newman's own desire that nothing should be added to those records by his present official biographer. Mr. Ward's work, therefore, should properly be read, not as a complete and independent memoir, but as a continuation of Miss Mozley's record. We are bound to say, however, that even with this reservation, the present volumes err somewhat in proportion. Newman was seldom at his best as a letter-writer, and a good deal of the correspondence now printed is, in our judgment, neither necessary to an understanding of Newman's character nor entertaining in itself. Much also of his life after 1845 was passed amid petty, thwarting circumstances; and the tale of these ecclesiastical intrigues will seem to the taste of most readers somewhat too finely-spun. For the rest, Mr. Ward's difficult task has been admirably and courageously carried through. When he himself takes the pen in hand his narrative and characterization are clear, succinct, and interesting. His balance of judgment, however it may appear to those more concerned in the questions at issue, seems to the present reviewer a notable achievement. His tact is particularly in evidence when he deals with such delicate matters as the negotiations at Rome over the Cardinalate; evidently he feels something slippery and unfair in the acts of Manning and Talbot, but at the critical point he merely quotes documents without committing himself on the question of veracity. On the other hand, though his work as a whole is distinctly a vindication of Newman, he by no means attempts to dissimulate the weaker sides of the Cardinal's own character. Perhaps we can best express our opinion of the writer's honesty by saying that we know of no book composed by a Catholic which is more likely to deter sympathizers with the church from entering the bondage of Rome.

At the close of the chapter which includes the conversion Mr. Ward quotes the beautiful words of Principal Shairp on the effect of what seemed to Anglicans an act of apostasy:

> How vividly comes back the remembrance of the aching blank, the awful pause, which fell on Oxford when that voice had ceased, and we knew that we should hear it no more. It was as when, to one kneeling by night, in the silence of some vast cathedral, the great bell tolling solemnly overhead has suddenly gone still. To many, no doubt, the pause was not of long continuance. Soon they began to look this way and that for new teachers, and to rush vehemently to the opposite extremes of thought. But there were those who could not so lightly forget. All the more these withdrew into themselves. On Sunday forenoons and evenings, in the retirement of their rooms, the printed words of those marvellous sermons would thrill them till they wept "abundant and most sweet tears." Since then many voices of powerful teachers they may have heard, but none that ever penetrated the soul like his.

With no desire to intrude into the debate between Anglican and Roman, with interest centred rather upon the purely human aspect of the act, one may well feel, even to-day, something of that deep chagrin which Principal Shairp and Matthew Arnold and other contemporaries expressed. Not for Oxford controversialists alone, but for all who draw their spiritual sustenance from English literature, that event was, if not the silencing, at least the muffling, of a magic voice; say what one will, there was something in Newman's conversion of personal defection, a betrayal of the will, and, despite the fact that his greatest work is just the "Apologia" for his change, he was debarred by his surrender from taking the supreme place as an English author or as a religious leader which belonged to him by birthright.

And this is the lesson we read in Mr. Ward's narrative of the years from the conversion to the end. It was as if the convert, by altering his direction, had suddenly brought himself face to face with a stone wall. To every plan he broached for new activity came the benumbing reply, *Non possumus*, if it was not *Non possis*. He was, as it were, hemmed in, barked at by opposition on every side, beaten down by exasperating distrust and envy. Mr. Ward tells with valiant honesty all the plans of the convert that were balked in one way or another. The difficulties that beset him as editor, as rector of the Irish Catholic University, and as promoter of a propaganda in Oxford to influence the intellectual life of England, are typical of his career. In the end, when his active years were past and he could no longer disturb those in authority, he received due recognition in the Cardinalate, and his closing days were, we like to believe, crowned with a great peace. It is true also that more than once in his bitter years, with a tone of conviction it would be dishonorable to question, he repudiated the suggestion of regret over his move. In his saddest moment he could write—*ex animo*, as he said—"that Protestantism is the dreariest of possible religions." He could distinguish clearly between the church and its rulers:

> To-day is the 20th anniversary of my setting up the Oratory in England, and every year I have more to thank God for, and more cause to rejoice that He helped me over so great a crisis—Since A.B. obliges me to say it, this I cannot omit to say:—I have found in the Catholic Church abundance of courtesy, but very little sympathy, among persons in high place, except a few—but there is a depth and a power in the Catholic religion, a fulness of satisfaction in its creed, its theology, its rites, its sacraments, its discipline, a freedom yet a support also, before which the neglect or the misapprehension about oneself on the part of individual living persons, however exalted, is as so much dust, when weighed in the balance. This is the true secret of the Church's strength, the principle of its indefectibility, and the bond of its indissoluble unity. It is the earnest and the beginning of the repose of heaven.

Yet it is true nevertheless that he resented keenly and sometimes denounced sharply not only the thwarting of his personal ambitions, but also the limitations imposed upon his intellectual and spiritual mission. He who felt himself born to be a leader of his people found himself suddenly thrust into ignoble ob-

security. To his beloved Ambrose St. John he wrote, in 1857: "To the rising generation, to the sons of those who knew me, or read what I wrote fifteen or twenty years ago, I am a mere page of history. . . . It was at Oxford, and by my Parochial sermons, that I had influence—all that is past." And three years later, in the intimacy of his diary, he could exclaim: "O my God, I seem to have wasted these years that I have been a Catholic. What I wrote as a Protestant has had far greater power, force, meaning, success than my Catholic works, and this troubles me a great deal." It is not strange that his inner vision was at times perturbed, his faith almost touched. "As years go on," he records in his diary, "I have less sensible devotion and inward life." He even notes a change in his physical expression: "Till the affair of No. 90 and my going to Littlemore, I had my mouth half open, and commonly a smile on my face—and from that time onwards my mouth has been closed and contracted, and the muscles are so set now, that I cannot but look grave and forbidding." Inevitably as this feeling of failure and loneliness deepened, he contrasted the poverty of the present with the actual power and richer promise of his Oxford career. There is a pathetic letter written in 1863 to Keble, who had begun the Oxford movement with him, or even before him, but had drawn back at the edge of the precipice—a letter whose closing words are, as it were, the revelation of a great and hidden tragedy:

> I have said all this, knowing it will interest you. Never have I doubted for one moment your affection for me, never have I been hurt at your silence. I interpreted it easily—it was not the silence of others. It was not the silence of men, nor the forgetfulness of men, who can recollect about me and talk about me enough, when there is something to be said to my disparagement. You are always with me a thought of reverence and love, and there is nothing I love better than you, and Isaac, and Copeland, and many others I could name, except Him Whom I ought to love best of all and supremely. May He Himself, Who is the over-abundant compensation for all losses, give me His own Presence, and then I shall want nothing and desiderate nothing, but none *but* He *can* make up for the loss of those old familiar faces which haunt me continually.

It would be easy to exaggerate, possibly the tone of Mr. Ward's narrative tempts one to exaggerate, the sadder aspect of Newman's life in the Catholic Church. It must not be forgotten that his "Apologia," which contains some of the most beautiful religious writing of the age, his "Idea of a University," and other works which will not be forgotten, were written after his conversion. But we repeat that the more deeply one considers his career, the more thoroughly is one convinced that the act of 1845 was something of a *gran rifiuto;* in succumbing to an authority which promised to allay the anguish of his intellect he rejected the great mission of the imagination that he might have fulfilled. For at bottom it was as a poet of the mystic imagination, and not as a logician or theologian, that he affected the men of his generation, and might have affected them more profoundly and permanently had he remained true to himself. The mere physical change from the glories and haunting traditions of the colleges of Oxford to the blank and utter newness of the Oratory at Edgbaston took away one of the props of his imagination. The feeling that he no longer belonged to the faith of the great body of his countrymen, but was regarded by them, whether rightly or wrongly, as one of a sect, deprived him of that support of sympathy which was necessary to the full unfolding of his genius.

Newman, as we have seen, speaks of the contraction of his features under the stress of his new life. The word, to one who examines his later portraits, does not seem quite precise; the marks of struggle are visible enough, but signs of contraction, in the sense of hardening or strengthening, we do not see. The mouth is strong, but the lines are a little relaxed; the eyes are veiled and look wistfully beyond what is immediately before them to some visionary hope; the brow is high and wrinkled transversely from the perplexity of an inner conflict. Something has gone out of this face, the contact with individual facts has been broken, and in its place has come the sweetness of self-surrender, the submissive pride of one who has given up much that he may find all—if haply he has found.

This, in the end, must be our reservation in the praise due to Newman's beautiful life, that he stopped short of that purest faith which demands no revelation and is dependent on no logic, but is content within itself. It is written: "Blessed are they that have not seen, and yet have believed." He was not strong enough to hold fast to the actual facts of life and to discern his vision of peace quite apart from their illusory sphere, but found it necessary to surrender the discordance of experience for a divine law within them. There is a sentence in a letter of Cardinal Wiseman which comes naturally to memory when one thinks of the agony through which the later prelate was to pass. Speaking of his own struggle as a young man in Rome, Wiseman wrote:

> I was fighting with subtle thoughts and venomous suggestions of a fiendlike infidelity which I durst not confide to any one, for there was no one that could have sympathized with me. This lasted for years; but it made me study and think, to conquer the plague—for I can hardly call it danger—both for myself and for others. . . . But during the actual struggle the simple submission of faith is the only remedy. *Thoughts against faith must be treated at the time like temptations against any other virtue—put away.*

There is the quick of the matter: *thoughts against faith must be treated at the time like temptations against any other virtue—put away.* The sentiment, it must be admitted, recalls a little the original metaphor of Hobbes: "For it is with the mysteries of our religion as with wholesome pills for the sick, which, swallowed whole, have the virtue to cure, but, chewed, are for the most part cast up again without effect." The same idea occurs over and over again in Newman's writings, is, in fact, the very basis of his logical system. In an era which assailed him with unanswerable doubts he could not lift his faith to those serene certainties which need no confirmation of the reason and from which his imagination might draw the substance of healing visions for his people. He was not strong enough to accept skepticism and rise above it; in identifying dogma and faith he, the man of perhaps the finest religious nature of the century, failed his country at her hour of greatest need.

CURRENT FICTION.

Odd Numbers. By Sewell Ford. New York: Edward J. Clode.

"Most of us are so shy of lettin' go of any sentiments that can't be had on a rubber stamp that it takes a mighty small twist to put a person in the queer class." This remark, as its author, Shorty McCabe, might say, makes one think of John Stuart Mill's line of talk, though it's not exactly in his lingo. "Shorty," the narrator of these tales, as a philosopher recalls not only Mill, but Mr. Dooley; as a story-teller he owes something to O. Henry. He is an expugilist of wide observation and experience who conducts a Physical Culture Studio on Forty-second Street. He is especially interested in "odd numbers," that is to say, persons in the queer class, and he describes a motley and entertaining group of them. The formula on which most of the stories are constructed is simple. Begin with a bit of conversation or moralizing, not necessarily relevant, but calculated to rouse curiosity; then introduce your "odd number," who, though odd, usually represents some tolerably familiar type; old-fashioned grandmother or aunt from the country, imaginative and impecunious promoter, mental-healing crank, or girl from the backwoods who has a little money and means to "take in" New York. Describe the queer one briskly, and then let him do something which is not only queer, but altogether aside from his normal line of queerness; or else let him succeed contrary to all probability in his simple and child-like plan. On this theme a good many variations are possible; but the stories owe their

interest not so much to formula or variations as to diction. Mr. Ford uses a large slang vocabulary with considerable aptness and freshness.

The Great Gay Road. By Tom Gallon. New York: Brentano's.

The audacious vagabond has had many abler apologists than the present writer. Indeed, a desire to emulate the successful performances of Mr. Farnol *et al.* would seem to have been this aspirant's sole qualification. Certainly his tale is without any saving grace of imagination or of diction. For plot, one clever idea suffices. Thanks to the nightly candle and the unlocked window, which for twenty years have invited the return of Sir Crispin Vickery's long-lost son, two hungry tramps obtain access to a comfortable London establishment. One of them is mistaken for the overdue prodigal, and welcomed accordingly. By this point, unfortunately, the author has quite exhausted his ingenuity. There is not the slightest flavor of adventure about any of the ensuing incidents. No more successful is the characterization. A highly disagreeable impostor is this Hilary Tolfrey Kite, a mere impudent windbag. His henchman, Perkins, is a nondescript adult waif, whose gutter slang is not even amusing. Less grotesque but even more wooden are the martinet Sir Crispin, his downtrodden maiden sister, their pretty young niece, her youthful lover, and the faithful family servant—the stockiest of stock characters, one and all.

The Way of an Eagle. By E. M. Dell. New York: G. P. Putnam's Sons.

The heroine is placed in the embarrassing position of owing her life to a suitor who inspires her with much the same sentiments that a young rabbit might entertain towards a hovering bird of prey. It is the immense difficulty of habituating her to his presence that chiefly retards the courtship. Other people found him charming, in spite of his monkey-like agility and leanness, his yellow, wrinkled face, his claw-like hands, his sunken but fiercely gleaming eyes, "like the eyes of an eagle." But the fastidious fair one viewed this physical make-up with uncontrollable repugnance. The hero's handicap was also heavily increased by gruesome memories of their Anglo-Indian adventures in common—the horrors of a siege in a hill-country fort, the grim promise that constituted him her protector (to shoot her rather than to let her fall into the hands of the hostile natives), the stray tribesman he killed before her eyes, not to mention the summarily administered opiate which obviated her initial opposition to being rescued at all. But "Omnia vincit Amor" is the motto, and the extraordinary patience of the lover in time prevails over the extraordinary reluctance of the maiden, although it is first necessary to them both to journey home to England and back again, for Nick to lose an arm and Muriel her alternative lover, and for more than one mutual friend to fall grievously ill that they may be associated in bedside vigils.

CHARLES JAMES FOX.

George the Third and Charles Fox: The Concluding Part of the American Revolution. By Sir George Otto Trevelyan. Vol. I. New York: Longmans, Green & Co. $2 net.

Thirty-one years have passed since the appearance of the "Early History of Charles James Fox," the merits of which received immediate recognition. Sir George resumes the biography, but now connects it with his history of the American Revolution. By 1778 the policy of coercing the revolted colonies had failed, and the Royal Peace Commission had ended its labors by the issue of a proclamation which announced the King's attitude. After three years of costly war, waged without distraction from a foreign enemy, the King held only New York, and outside of that city not another mile of territory in the northern and central colonies. He now proposed to harass the States into submission, determined never to recognize their independence. A few leading points would be occupied, the seaport towns plundered and burnt, and Indian incursions against the frontier settlements encouraged. The capture of Charleston seemed to assure the complete reduction of the more Southern States. The descent of Arnold upon Virginia and Connecticut, the desultory operations in the North, the defeat of Gates at Camden, and even the treachery of Arnold, were the fruits of this policy, cruel to both colonists and loyalists. The war became an international war. France openly sided with America, and other European governments gave aid or sympathy.

Interest thus centres upon the course of events in Europe, and the English commanders in America were deliberately sacrificed to the political exigencies at home. Mr. Adams has shown that the generals were not of a high order in strategy, and had failed to display qualities necessary to success. Sir George indicates one leading cause of their shortcomings—they were subject to the stifling atmosphere of political intrigue and official dishonesty. Liberal appropriations were made, but they were squandered with little result and under ill-considered instructions. Barrington, Germaine, and Sandwich, plotting against the best officers in army and navy, directing the campaigns from Downing Street, issuing contradictory orders or none at all, and bent upon enriching their followers, offer Sir George subjects for a series of brilliant portraits, and they do not lose in effect by his comparing North's Cabinet with that of Chatham.

To expel these men from office, and to reform the system of court subsidy and favoritism under which they could continue in power became the leading questions in Great Britain, and so the Senate came to be more important than the camp. For the period of the American Revolution the most distinguished reputations made were those of civilians, not soldiers, and among the civilians, after the death of Chatham, Burke and Fox stood preëminent. The one, says Sir George, was the precise complement of the other. Burke thundered against the ill-tempered proclamation of the Peace Commission, the employment of Indians, the corrupt and extravagant expenditures, and the restrictions on Ireland and the Catholics. Fox sought to drive Germaine and Sandwich from office. He denounced the sacrifice of Burgoyne's army and the state of unpreparedness for war with France; he supported Keppel when under trial for his life; he attacked Sandwich for his incompetence, for the demoralization of the navy; and he sought to obtain a wider hearing for public measures.

This "opposition" policy suffered temporary defeat because the King could purchase support by direct bribery or by a drastic use of patronage. Further, the British public could not know what was being done by Parliament or by Ministers. The majority of the members of Parliament were too closely bound to the King to be representatives of the people, and the debates in the House on questions of moment remained unknown to the country, no reporters or spectators being permitted in the gallery during such debates. The news from the seat of war was doctored for the public consumption:

> Washington's army was killed several times over, and died several times over of hunger and disease, in the columns of the *Morning Post* and the *Morning Chronicle*. The history of Burgoyne's operations took a fantastic shape in the inspired newspapers.

The affair of King's Mountain was called a "ridiculous rumor"; Washington appeared as deserting the American cause, and yet again as plotting in an extraordinary manner against London and the shipyards. The public knew only what the subsidized press found its interest to print, and could read only such speeches as were written out by the speakers, the "very burlesque of parliamentary reporting." Fox procured a greater degree of publicity, which told in favor of the "opposition."

Fox is represented as one who has outlived the follies of his youth, yet as retaining to the full the qualities which charm, and as seeking only the national welfare with a generous self-sacrifice

and whole-souled patriotism. Once a member of North's Administration, he had not committed himself on American questions, and after 1778 he was the undisputed leader of the Opposition in the Commons. Not only eloquent, he had a policy. In the face of war with France and Spain he would leave America alone, until these European enemies had been defeated, believing that the Americans would act lukewarmly when the contest was transferred to Europe, where their interests were small. Defence at home and victory against the hereditary enemies of Britain formed the cardinal features of his policy. In seeking its attainment, he suffered temporary defeat, but he brought into prominence the dangers of court influence as exemplified by the King and his ministers.

On the style of this volume little need be said, for the high qualities of Sir George as a compiler and narrator are well known. His digressions, such as those on social life in the country, on Brooks's Club, and on landscape gardening, are interesting and do not interrupt the relation of the political history. He depends too unquestioningly upon Isaac Arnold's life of Benedict Arnold, and it was a letter from Howe, not Gage, that Washington refused to receive. Certainly, no fault can be found with his judgments on American affairs. Though he is no cool partisan, and deals gently with the shortcomings of George III and the good-natured North, his distribution of praise and blame commends itself by its good foundation in balanced and thorough investigation.

Modern Riding and Horse Education. By Major Noel Birch, Royal Horse Artillery of Great Britain. New York: William R. Jenkins Co. $2.

It is always refreshing to find an Englishman who gives consideration enough to horsemanship to lead him away, for however brief a time, from the claims of the hunter and the cross-country course. But the world moves in the matter of horse education even if it does forget and return periodically to rediscover the essentials and glibly to argue the points mooted by succeeding generations of horse lovers. Major Birch has faithfully endeavored to qualify himself as a writer on the subject of the horse by reading the long procession of books from Xenophon down to the idealistic volume on the "Psychology and Training of the Horse" by Cesaresco.

The resulting volume is interesting in many ways, but in none more than the frank manner in which he states his views of the methods of numerous reputed masters of the subject. The conclusions reached on many points accord with the experience of students generally. It is readily observed that Major Birch has honestly tried to let in some light to his fox-hunting, cross-country brethren, to the effect that there is really something worth while in a well-balanced animal, trained for general purposes under the saddle. To present this view has long been regarded as a hopeless task, even in the British cavalry and field artillery.

As far back as 1839 American officers were sent to the justly celebrated French Cavalry School at Saumur to acquire a knowledge of equitation and mounted drill regulations. The influence of their work upon the regular cavalry still lingered, but the source of this influence was forgotten, until Saumur was rediscovered by one of our accomplished military attachés. The result of the reawakening has been to extend a knowledge of equitation throughout the American service and to create on all sides a desire to reëstablish our rapidly disappearing breeds of worthy saddle horses.

The advantage of such a volume as Major Birch's arises from his discussion of balance, grip, the use of the reins, the jumping seat, and various details of riding and training the horse from the point of view of one who has been an unprejudiced seeker after truth. In America the methods of Fillis have appealed strongly to students of equitation and his discourses have been accepted as authoritative, but there is always room for such a volume as "Modern Riding and Horse Education" where the absence of dogmatic theories will appeal to those who ride for pleasure and who prefer a trained, well-balanced horse, particularly one made so by instruction of its owner. The Horse Shows are giving evidence constantly that the public is acquiring a better appreciation of horsemanship in distinction from mere ability to ride difficult animals. If the present revival of the popularity of the horse continues for a reasonable time, the nation will be the beneficiary in more ways than one. The automobile will answer for getting about in town, but for country life nothing can take the place of the horse.

Notes

John Muir's guidebook to "The Yosemite," together with "Captain Martha Mary," by Avery Abbott, and C. H. Claudy's "The Battle of Base-Ball," will be brought out by the Century Co. next month.

Beethoven's love-affair with the Countess Guicciardi has been made the subject of a Swedish novel, "Quasi, Una Fantasia"; the book will be issued in English form by Sturgis & Walton Co.

A handbook on Bahaism is in preparation by Longmans; the author is Francis H. Skrine.

The Yale University Press announces for publication in the spring or early summer Stewart L. Mim's "The Commercial Policy of Colbert toward the French West Indies." It is a study based upon researches in the archives of France.

Macmillans will have ready in April a new edition of Joseph Conrad's first book, "Almayer's Folly," and "Marcus Alonzo Hanna; His Life and Works," by Herbert Croly.

The "Fame Seekers," by Alice Woods, shortly to be published by Doran, is a story of Parisian life.

An authoritative account of the history and activity of the Jewish national movement from the earliest times to the present day will soon be issued by the Zionist Central Office, Berlin, through W. Speaight & Sons of London. The pamphlet, which is written by Israel Cohen, is entitled "The Zionist Movement: Its Aims and Achievements."

"The Revival of Printing: a Bibliographical Catalogue of the Works Issued by the Chief Modern English Presses," edited by Robert Steele, is a work which Macmillan will publish in April for the Medici Society of London. The volume will be issued in three different styles, and is specially prepared for the student of modern printing.

March 30 is the date set by Houghton Mifflin Co. for the publication of the following books: "Polly of the Hospital Staff," by Emma C. Dowd; "A Child's Journey with Dickens," by Kate Douglas Wiggin; "Tales of a Greek Island," by Julia D. Dragoumis; "The Home-Made Kindergarten," by Nora Archibald Smith, and, for the Riverside Press edition, "Lines of Battle, and Other Poems," by Henry Howard Brownell, with an introduction by M. A. De Wolfe Howe.

Four new volumes are announced by Dana Estes & Co. in their Beautiful Ireland series: "Ulster," "Leinster," "Munster," and "Connaught."

The same house has in the press "A Year with the Gaekwar of Baroda," by the Rev. Edward St. Clair Weeden, and "John Lavery and His Work," by Walter Shaw-Sparrow.

Among the books which Putnams will shortly issue are: "The Comedy of Catherine the Great," by Francis H. Gribble; "The Devil's Wind," by Patricia Wentworth; a revised edition of "The Social Evil," with new material covering the years 1902-1911, edited by Prof. R. A. Seligman; "My Friendship with Prince Hohenlohe," being the Memoirs of the Baroness von Hedemann; "Leaflets from Italy," by M. Nataline Crumpton, and "The Heroic Age," a book dealing with the early heroic poetry and traditions of the Teutonic peoples, by H. M. Chadwick.

The list of E. P. Dutton & Co. includes, in biography and history: "The Life of Hiuen-Tsiang," by Hwui Li and Yen-Tsung; "The Life or Legend of Gaudama, the Buddha of the Burmese," by the Rev. P. Bigandet; "The Sisters of Lady Jane Grey," by Richard Davey; "The Life and Work of Romesh Chunder Dutt, C.I.E.," by J. N. Gupta; "Thomas De Witt Talmage," an autobiography; "The Making of Western Europe," by Prof. C. R. L. Fletcher; "Modern England," by Louis Cazamion, and "A History of the Renaissance," Temple Cyclopedic Primers, by B. F. Oldham.—General literature: "Poetry and Prose: Essays on English Poetry," by A. A. Jack; "A Book of Scoundrels," "Studies in Frankness,"

"The Pageantry of Life," all three by Charles Whibley; "Posthumous Essays," by Churton Collins, edited by C. L. Collins; "First and Last," by Hilaire Belloc; "The Views of Vanoc," essays by Arnold White; "Neighborhood," by Ticknor Edwards; "Modern Tariff History; Germany, United States, France," by P. Ashley; "Animal Life in Africa," by J. Stevenson Hamilton; "Inland Transport," by E. A. Pratt; "Two Visits to Denmark," by Edmund Gosse; "The Creed of Half Japan: Sketches of Historical Buddhism," by Arthur Lloyd; "The Irish Harpers, with a Memoir of Edward Bunting," by Charlotte Milligan Fox; "A Magician in Many Lands," by Charles Bertram; "Rowlandson's Oxford," by A. Hamilton Gibbs; "The Evidence of the Supernatural," by Ivor D. Tuckett; "North Sea Fishers and Fighters," by Walter Wood; "English Philosophers and Schools of Philosophy," by Prof. James Seth, and "Practical Library Administration," by W. S. S. Rae.

In "Socialism and the Ethics of Jesus" (Macmillan), Prof. Henry C. Vedder of Crozer Theological Seminary sketches the history of Socialistic principles, defines the fundamental principles of present-day Socialism, and compares these principles with the ethics of Jesus. He promises to make this investigation "not as the champion of any social theory, or the briefed defender of any social system, but in as impartial and candid a spirit as possible, as a student of history, of the Scriptures, of economics. of social institutions." Candor and impartiality stay by the author in the first few chapters, in which he discusses the social enthusiasms of the Anabaptists and early French and German Socialism, but in the subsequent portions of the book these desirable qualities are signally lacking. A man who can refer to the late E. L. Godkin as one who "spends one-half his talent and energy in telling the workers that they have no right to aspire to the pursuit of happiness, that it is their duty to accept their hard lot without murmuring or questioning; and the other half in administering sedatives to the consciences of the well-to-do, so that they shall rest content with what they have and make no effort to better conditions," is not impartial, and it is difficult to see how an intelligent person who can make such a statement is candid. This is only one instance of the author's vicious practice of calling names. He criticises Socialism himself, but he allows no one else to do so without falling under his rebuke for writing "nonsense." To occupy both sides of a question has always been the genius of theologians, and Professor Vedder enjoys this ability. In one chapter he is a fully persuaded Socialist, denouncing capital with the vigor of a street orator, and, like the veriest demagogue, accusing Wall Street of producing panics, while in the next he exposes the fallacies of the Socialists with equal violence. The book is energetic and sprightly, but if the author is able to maintain his present attitude, it is difficult to see how his readers will not desire to go further in either one direction or the other.

The passage of the Parliament Act last year was universally felt to mean a profound change in the English Constitution, and already we have the systematizers recasting their general schemes. Thus Sir William R. Anson brings out a revised reissue of the fourth edition of his "Law and Custom of the Constitution" (Clarendon Press), the alterations in Vol. 1, dealing with Parliament, being almost wholly confined to explaining the new legislation referred to. Sir William is, as is well known, a prominent Conservative, and a certain tinge of party bias shows itself in what he writes of the clipping of the veto powers of the House of Lords; yet he states the matter accurately, makes it clear precisely what has been taken away and what has been left, and keeps up a measurably good hope for the future. The same subject is treated from the Liberal standpoint in the new edition of "May's Constitutional History of England" (Longmans), edited and continued by Francis Holland. May's work closed with 1860, and his present editor has added a third volume to bring the history down to date. The method is not strictly chronological, but chapters are given to separate subjects. These are dealt with compendiously, but impartially and accurately, so far as we have been able to apply tests. The whole is a useful continuation and reprint of a work which already had a secure reputation.

Coming events cast their books before, and "The Framework of Home Rule," by Erskine Childers (Longmans, Green & Co.), confessedly has its reason for being in the approaching renewal of the great debate in Parliament over the question of Irish Government. The author starts out by pointing to the fact that Ireland is, historically, an English colony, and then he shows what England has done for her other colonies—Canada, Australia, South Africa—in the way of large grants of home rule. All candid persons admit, in fact, that the founding of the Australian Commonwealth and the establishment of the South African Confederation, both events having taken place since the Irish Home Rule bill of 1886, have profoundly modified the point of view. If Ireland were 3,000 miles away from England, she would have had home rule long ago. Mr. Childers takes it for granted that she is soon to have it, and his volume is a full and careful discussion of the details—legislative, financial, and administrative. It is a work based on wide knowledge and embodies the latest official statistics relating to population, taxation, land purchase, and the like, so that it will be a very handy book to have by one as the Parliamentary discussion comes on after Easter.

The shifts to which a war correspondent is put form the subject of Stanley Washburn's book, "The Cable Game: The Adventures of an American Pressboat in Turkish Waters During the Russian Revolution" (Sherman, French). The author, a writer for the Chicago *Daily News*, was at Peking, when without yet knowing the meaning of it, he received the message: "Russia direct. When do you start?" It was the assignment for the Russian insurrection. The romance of the game, Mr. Washburn assures us, becomes utterly engrossing when one realizes that one's paper

will pay fabulous sums, $2,000, $5,000, even $10,000, for an account of a world event. A single story of this kind is printed in ten thousand papers in fifty different languages within twenty-four hours after the correspondent files it in a cable office. His version of the affair is read first by every foreign office in the civilized world. On his story, the editorials on the "situation" are based, from London to Buenos Ayres.

What strikes the reader most in Mr. Washburn's account is the resourcefulness often needed by a person in his capacity. The cable is to such a one what the air tube is to the diver, and how he shall beat the other fellow to it keeps him continually planning for the future. When Mr. Washburn arrived at Constantinople, for instance, on his way to Russia, he wisely concluded to charter a tug-boat. With it he could freely enter turbulent Russian ports, gather news, and race for an uncensored cable. One of the most readable chapters describes his ingenious measures to obtain ready money in the Rumanian town of Sulina. The consternation of the natives over the spectacle of a private individual wishing to send a thousand words by cable, and the formidable impression which he contrived to make, though without securities, upon a banker there, are amusingly told. It is easy to understand Mr. Washburn's statement that

the correspondent that represents a conservative paper has a truly mean time when he is on an assignment with a number of fellows who are cabling for the other type, for it is not at all uncommon for them to take rumors, even fakes, agree on the details, and send them broadcast.

We may suggest, however, that when placed in such a position, a correspondent might fill his time, to the great benefit of the far-away public, with discrediting such rumors.

While the day of the square-rigger and deep-water ships seems to have passed, it is a pertinent fact that the fore-and-aft rig is not only not on the decline, but, as a matter of fact, is multiplying both for commercial and for pleasure purposes. For that reason the history of this rig, which has been traced by E. Keble Chatterton in "Fore and Aft" (Lippincott), makes a peculiar appeal to yachtsmen and to all who love the sea. Mr. Chatterton follows the fore-and-aft rig from its origin in the days of the Egyptian, down through the ages, taking up the history of the rig in northern Europe, in Holland, in England, and America, and of its introduction to yacht use. The book is filled with illustrations of the rig as seen at various periods, in drawings, reproductions of paintings from the Dutch school, and in photographs of the various models to be found in museums in Europe, while at the end line drawings and sail plans of yachts, fishing vessels, and working boats are given. In most essentials the fore-and-aft rig is the same to-day as it was hundreds of years ago, some of the same details of rigging now used being in evidence then; although in the cut of the sail and in the lightness and convenience of the rigging we have made marked improvement. The service which Mr. Chatterton performed for the history of the sailing ship, two years ago, in his "Sailing Ships and Their Story," he has now done for the fore-and-aft-rigged vessel in particular. He has made an interesting and useful volume.

A new edition of Horace White's valuable textbook, "Money and Banking"—long recognized as a high authority on current financial problems in the United States and

on American financial history—has been put out by Ginn & Co., so as to extend the discussion to the plans of banking and currency reform which have been placed before the American people since the third edition of the book was published in 1908. The full text of the Aldrich plan, endorsed a few months ago by the Monetary Commission and now in the hands of Congress, is included in the present book. There are also added a chapter on the guarantee of bank deposits, and another on the relations of the Stock Exchange and the money markets—a subject on which Mr. White speaks with particular authority as the chairman of the special committee appointed by Governor Hughes in 1909 to investigate the question of speculation in stocks and commodities on the various exchanges. The additions bring this useful book completely up to date for purposes of reference on the pressing financial and banking problems of the day.

We have received the "Yiddish Dictionary," dealing with the Hebrew and Chaldaic elements in the present-day Yiddish vernacular. We take the appearance of this volume as an interesting sign of the efforts that are being made to raise the Yiddish, hitherto regarded as a formless jargon, to the level of an ordered language. The authors and publishers of the dictionary are Dr. C. D. Spivak and Solomon Bloomgarden, of whom the latter has won distinction as a poet, under the pseudonym "Jehoash." He has translated "Hiawatha" into the Yiddish.

Maximilian Harden, the well-known editor of the Berlin *Zukunft*, does not show to great advantage in the English dress Julius Gabe has given him in "Word Portraits" (Brentano's). Some of the sketches are characteristic enough of their author, and in their day probably served to entertain or startle Berlin for a brief hour, but in the years that have elapsed since Old William, Richter, Waldersee, Stoecker, the Empress Frederick, and Bismarck himself evoked so much sound and fury, the world has learned to speak of these subjects dispassionately. Least of all is posterity to accept Herr Harden's rhetoric as the judgment of history. There have been political pamphleteers who have outlived their day and generation, but few of them were Germans, and none of them wrote as Harden does. Stored as his mind is with varied and surprising knowledge, he has neither strict logic nor telling satire nor deep feeling at his command. Wit is not his in the sense in which Heine and Börne have accustomed us to it. He is essentially a rhapsodist and, for all his revolutionary flings at tradition, a sentimentalist—a talker, not a *causeur*. Least of all is he a great thinker. His vehemence is studied, his pathos false, his heaping of metaphors intolerable—even in the original German, where much is forgiven to a show of learning. Unfortunately, Harden's influence on newspaper diction has been considerable. He has introduced and made popular the *staccato* phraseology that marks so much of progressive journalism—not only on the other side of the ocean. The political essays in this collection, with the exception of that on Gallifet, are all grouped around the overshadowing figure of Bismarck, the one deity Harden worships. Literature is represented by clouds of words on Ibsen and Zola; art, far more interestingly by essays on Böcklin, Lenbach, and Menzel; acting, by overwrought papers on Charlotte Wolter, Mitterwurzer, and Matkowsky.

At the suggestion, we believe, of President Butler of Columbia the Weidmannsche Buchhandlung of Berlin has undertaken the publication of an important series of books, of which Dr. Butler and Dr. Wilhelm Paszkowski are the general editors. This is nothing less than a translation into German of the principal books on American institutions, history, and culture. Three volumes of the series have already been issued, and come to us from G. E. Stechert & Co. of this city; they include "George Washington," von Henry Cabot Lodge, in two volumes, and "Die Amerikanische Literatur," von C. Alphonso Smith. The names of the translators are not given on the title pages.

The latest successor of Mademoiselle de Gournay is Miss Edith Sichel, who recounts her likings and her reflections in "Michel de Montaigne" (Dutton). The book consists largely of sentences and paragraphs translated from the "Essays" and so grouped as to illustrate various characteristics of Montaigne the man and Montaigne the philosopher. The passages are for the most part well chosen and well rendered. It is to be hoped, though, for Miss Sichel's peace of mind, that she will never discover the real point of the anecdote she has quoted on pages 43 and 44. The discussion in which the translated passages are set reveals a knowledge of Montaigne at once genuine and eager. The appraisal of his qualities is just; but the attempt is too often made to reconcile his inconsistencies. Miss Sichel's style is modelled, consciously or unconsciously, on that of Montaigne, but her epigrams do not ring true, and her frequent carelessness in the use of words convicts her of instability in constructive thought. Witness this paragraph:

> No shibboleths for Montaigne. *Dilettantisme oblige* was his motto. And dilettantism must not be an insipid business. "No wind maketh for him who hath no destined port," he once wrote, and he steered straight for knowledge—rich, haphazard knowledge of human life.

Miss Sichel has but little to say that is worth the attention of those who are already familiar with Montaigne. Such others as read her study are likely to gain from it a good measure of immediate enjoyment and the resolution to know Montaigne for themselves. The book is well indexed and well printed, and the illustrations are excellently chosen.

Prof. H. S. Jevons has performed a useful service to students as well as an act of filial piety in editing a fourth edition of Prof. W. Stanley Jevons's "Theory of Political Economy" (Macmillan). The work has become an economic classic, and Jevons's exposition of some fundamental points of economic theory is still unsurpassed. In the new edition the text is unchanged from that of the second and third editions, except for the correction of some obvious slips, and the addition of a few notes designed to make the meaning of obscure passages clearer or to correct slight errors. Three new appendices are added to the two contained in the second and third editions. The most interesting of these is a fragment on Capital and Interest which Jevons had intended to use in his "Principles of Economics."

The venerable, but still active historian, Prof. Pasquale Villari, has just issued "Scritti Vari" (Bologna: Zanichelli), a volume containing fourteen essays, most of which have appeared before. Their subjects are fairly balanced between history and literature, and range from a long discussion of history as a science, to short studies of Margaret Fuller, De Amicis, and Tenca, and a paper on Gaetano Negri, written as an introduction for the Duchess Litta's translation of that author's well-known work on Julian the Apostate. The most recent essay is on Dante's "De Monarchia."

Charles Ezra Sprague, president of the Union Dime Savings Bank of New York, died at his home last week, in his seventieth year. Besides inventing many devices for savings banks and other bookkeeping, he wrote the following treatises: "Hand-Book of Volapük," "The Accountancy of Investment," "Interest Bond Tables," and "The Philosophy of Accounts."

The death is reported from Warsaw of Prof. Max Mandelstamm, the expert on international law.

Science

Science books in Dutton's spring list include: "British Trees and Shrubs," by the Rev. C. A. Johns; "British Fungi," with a chapter on Lichens, by George Massee; "British Ferns and Their Varieties," by C. T. Druery; "Return to Nature," by A. Just; "Every Boy's Book of the Zoo," W. S. Berridge and W. Percival Westell; "The Boy Fancier," by Frank T. Barton; "Pepper's Boy's Playbook of Science," by John Mastin; "The Advance of Photography: Its History and Modern Applications," by A. E. Garrett; "The Great Star Map," by H. H. Turner; "Liquid Fuel and Its Apparatus," by William Booth; "Talks about Ourselves," by Viscountess Falmouth; "Science of the Sea," by G. Herbert Fowler;; "Sport in Vancouver and Newfoundland," by Sir John Rogers; and "The Noble Science of Fox Hunting," by F. P. D. Radcliffe.

Chemistry is one of the most impersonal of the sciences, and it is only recently that efforts have been made to give it some of the human interest attaching, say, to astronomy or zoölogy, by biographical sketches of the founders of the science. Apparently, E. Roberts's "Famous Chemists" (Macmillan) is such an attempt, but if so, it is not altogether successful, for the biographical details are packed into a few paragraphs at the beginning of each chapter, and the rest are devoted to an explanation of the discoveries of the chemist under consideration. There are no portraits, and the reader gets no conception of a personality, such as, for example, is furnished by Ostwald's "Grosse Männer." But this little volume is well worth the space it occupies, for its explanations are clear, and it will be handy for the student who wants to know what contribution to science this or that chemist made. Twenty-eight chemists are included, beginning with Stahl and Boyle and ending with Perkin and Meyer.

The American Ephemeris and Nautical Almanac for 1914, just issued from the Government Printing Office by the Department

of the Navy, under the direction of Prof. W. S. Eichelberger, is like its predecessor in material and arrangement. American geodesists and astronomers are particularly favored with a copious catalogue of stars whose positions are computed with all needful precision. In this respect our national ephemeris is now far in advance of all similar European publications. Mars comes to his next opposition January 5 of that year, there is a total eclipse of the sun for two minutes on August 21 from Russia to Persia, and a transit of Mercury on November 7. The moon passes over or occults Regulus October 14, but no planet or other bright star. Many observers will value the very convenient data for physical observations of sun, moon, and planets which Professor Eichelberger now regularly incorporates in the Ephemeris each year.

Prof. Thomas Harrison Montgomery, jr., professor of zoölogy in the University of Pennsylvania, who died last week, at the age of thirty-nine, was the author of one book, "Analysis of Racial Descent in Animals."

Prof. Ralph Stockman Tarr of the department of physical geography in Cornell University, one of the best-known geographers in the United States, and an authority on glaciers and earthquakes, died suddenly from cerebral hemorrhage a week ago, aged forty-eight. He once led a Cornell expedition to Greenland, and spent several summers in Alaska at the head of the expedition for the United States Geological Survey. In 1882-83 he was Assistant United States Fish Commissioner, being also at that time connected with the Smithsonian Institution. He was the author of several monographs on geographical and geological subjects, and of a well-known series of textbooks.

Drama

Edward Dowden's "Shakespeare, a Study of His Mind and Art," will be brought out by Dutton in a completely revised edition.

Cleverness and originality mark most of the work of Percy Mackaye, and both qualities are exhibited in his latest play, "To-morrow" (Frederick A. Stokes Co.); but the piece is not particularly impressive, whether it be considered as drama or as a plea in favor of a great principle in eugenics, which is its professed purpose. Theoretically, of course, its main contention is sound enough—no thoughtful person ever dreamed of disputing it—but unfortunately it is not now, nor is ever likely to come, except in special instances, within the region of practical politics. That the multiplication of the criminal, insane, diseased, and degenerate classes is a hideous evil is generally admitted. How to deal with it is a problem that has long occupied the attention of the most earnest and able sociologists. To check it, here and there, by legislative and police methods, has been proved possible in a very limited degrée. Mr. Mackaye, inspired apparently by the horticultural triumphs of Luther Burbank, has adopted the loose theory, no longer fresh, that the human race may be perfected, physically, intellectually, and morally, by the enforcement of principles of selection analogous to those practiced by the expert gardener, forester, dog-fancier, or cattle-breeder. So he presents an illustration. Peter Dale, philosopher and plant-grower in northern California, has reared his daughter, Mana, with such tact and wisdom that she is a paragon of health, beauty, discretion, and innocence, a creature comparable with Eve before the fall. He designs her for Mark Freeman, his trained assistant, and, in his eye, the perfect male. A serpent enters this Eden, in the shape of Julian, a brilliant young politician, full of fascination and all sorts of poisonous blood taint. In spite of Peter's opposition he woos and has almost won Mana, by his sophistries and passion, when the sturdy Mark interferes and flings him over a cliff. Then, it is needless to say, she discovers that it is Mark alone whom she has loved all the time. The love story Mr. Mackaye tells prettily and effectively, but it denotes nothing, and the action is sorely impeded by the didactic passages in which he deduces laws for human regeneration from horticultural experiments. These are among the commonplaces of modern agriculture. But how are such processes to be applied in wholesale or effectual fashion to humanity? Who is to confine, select, or exterminate? Mr. Mackaye appears to imagine that these responsibilities might be entrusted safely to the doctors. The proposition scarcely needs discussion. There is a fairly good stage story, with some excellent literary dialogue, in "To-morrow," but the anthropological speculations are negligible. Moreover, the subject belongs to the lecture-room and not to the stage, since it is entirely and necessarily incapable of significant dramatic illustration.

Josephine Preston Peabody may be congratulated on having found for her "Piper" so sympathetic and skilful a German interpreter as Margaret Münsterberg. "Der Pfeifer" (Munich: Süddeutsche Monatshefte) preserves all the charm of the original, which indeed lends itself particularly well to German adaptation. The play, in this version, will no doubt be appreciated in the fatherland, as it has been in this country. Barring a single halting line, "Ich sagt' euch alles—das ist des Teufels Pakt" (which can be matched by Mrs. Marks's "In it, is Love. It is clear well-water"), the translation reads smoothly throughout. As an example of Miss Münsterberg's mastery of versification, we refer to her rendering of the exquisite song beginning with "Out of your cage." By a change of metre in the sixth line she produces a happy rhythmical effect lacking in the original, where "Scribe and Stay-at-home" is left unrhymed.

We give both versions of the song:

Out of your cage,
Come out of your cage
And take your soul on a pilgrimage!
Pease in your shoes, an' if you must!—
But out and away, before you're dust:
  Scribe and Stay-at-home,
  Saint and Sage,
  Out of your cage,
  Out of your cage!—

Heraus aus der Haft,
Heraus aus der Haft,
Und schick' deine Seele auf Wanderschaft!
Und musst du, so pilgre mit Erbsen im Schuh!
Nur heraus, eh du Staub bist, und fort ohne Ruh:
Schreiber, Gelehrter und Heiliger dazu,
Alles was hockt zu Haus,
Komm aus dem Käfig heraus,
Komm aus dem Käfig heraus!—

This is the spirit of the true translator, who (as Fulda does in his version of "Cyrano") succeeds only if he keeps constantly in mind the different poetic susceptibilities and melodic standards of the two languages he is concerned with. It was the slavish endeavor to pour the precise syllabic content of Goethe's "Faust" into English metre that prevented Bayard Taylor's version from being more than an extraordinary *tour de force*. If Miss Münsterberg's effort attains, as it deserves, a second edition, she will have an opportunity to eliminate a few slight blemishes, such as "eine *schäbige* hölzerne Tür" (p. 37), and "das Sprudelwasser" (p. 69), for "bubbling water." The quaint line, "Man muss sie fangen, wenn sie *halt* noch jung sind!" introduces an Austriacism rarely met with in German literature. For the meaningless stage direction, "entschuldigt leidenschaftlich" (p. 94), the equally awkward English "excuses passionately" is responsible.

"When It Comes Home" has been selected as the title of the first of the three comedies which Augustus Thomas has contracted to deliver to Charles Frohman. It is in four acts, and the scenes are in old and new New York. Gail Kane, Ffolliot Paget, Louise Muldener, John Findlay, Earle Browne, and William Courtleigh are among the performers. The piece will be seen first in Chicago on the 8th of April.

Arrangements have been perfected for the construction of a Children's Theatre on the roof of the Century Theatre. It is expected to be open in October, and the plays will be of a kind specially adapted to juvenile appreciation, such as "Alice in Wonderland," etc. The need of a Children's Theatre has long been felt in this city, especially at Christmas time, when there has been nothing to fill the place of the old pantomimes. But it is to be hoped that the Lieblers will not make the mistake of supposing that children are only capable of enjoying sheer nonsense, the sort of knock-about fooling that they get in the circus. Children have a wonderfully keen appreciation of the romantic, beautiful, heroic, and sentimental, and the new institution ought to give great scope to their imagination.

As a successor to "The Dust of Egypt," when that piece has ended its career at Wyndham's, in London, Frank Curzon and Gerald du Maurier have chosen a new four-act play, provisionally entitled, "The Kangaroo," by Horace Annesley Vachell. This tells a story of our own times, the action taking place partly in London and partly up the Thames. Although light in places, it maintains a serious interest. The character designed for Gerald du Maurier is that of a young man, a rough diamond, who inherits a fortune.

Charles Hawtrey has accepted a play by George A. Birmingham. Although not a dramatization of any of his novels, it deals with characters which figure in the "Search Party."

Edward Knoblauch and Arnold Bennett seem to have made a hit with their comedy, "Milestones," which has just been produced at the London Royalty Theatre. It is agreeable to know that the play has already been obtained for this country.

Music

Studies in Musical Education, History, and Æsthetics. Sixth Series. $1.60.

By those interested in serious discussions of important musical topics no publication is more gladly welcomed than the annual volume containing the Papers and Proceedings of the Music Teachers' National Association. The sixth is now in print, containing the most important papers read at the Association's thirty-third meeting, which was held at Ann Arbor, Mich., last December (copies may be obtained of Waldo S. Pratt, Hartford, Conn.). Glancing at the table of contents, one may perhaps be surprised to find an article entitled, "Was Richard Wagner a Jew?" Its author, however, is none less than the scholarly Oscar G. Sonneck, of the Library of Congress; and the inclusion of an article or two in a lighter vein in each of these volumes has become a habit—a wise one, since, particularly in this case, the more widely prevalent interest in biography than in discussions of the artistic or scientific aspects of music may attract the general reader.

No fewer than five of the papers in Volume VI are concerned with orchestras, and are therefore particularly timely, since the multiplication of orchestras in the cities of the United States is the most remarkable musical fact of the day. The Orchestration of Bach is considered by Frederick Wolle, the organizer of the unique Bach festivals at Bethlehem, Pa. The "Orchestra before Berlioz" is described by Louis Adolphe Coerne, of the University of Wisconsin, the author of a valuable history of instrumental coloring. The "Orchestra since Berlioz" is discussed by Frederick A. Stock, the admirable conductor of the Theodore Thomas Orchestra in Chicago, who also speaks as a thorough expert. "Conductors and Non-Conductors" is the title of a diverting paper by Charles K. Skilton of the University of Kansas; and Samuel Pierson Lockwood of the University of Michigan writes amusingly about "Amateur Orchestras" and the trials and tribulations of their conductors.

Dr. Wolle refutes the charge that Bach's instrumentation is monotonous; he tells of an amusing tiff he once had with Theodore Thomas on the vexed question of Bach's trumpet parts, and urges musicians to pay more attention to the works of the Leipzig Cantor. In Mr. Stock's paper the most valuable pages are those in which he traces the successive steps by which Wagner improved his orchestral coloring, from "Rienzi" to "Parsifal." Referring to those who say that "Tchaikovsky's music sounds much better than it is," he replies that it is "difficult to determine whether to apply this in a praising or fault-finding sense," adding that this great Russian's "handling of the orchestra is that of a genius, and his music is of that kind in which every note sounds and sings." We wish to call particular attention to what Mr. Stock has to say about two other masters whose genius was of a much more transcendent kind than most professional musicians realize:

> It would be a sin of musical omission to speak of orchestral music without mentioning another Frenchman who "made a school," and still is making it, Bizet, the genius-composer of "Carmen." It can be stated with all confidence that seekers for knowledge in orchestral matters can derive a hundred-fold greater practical good from the study of the score of "Carmen" than from a dozen instruction-books on instrumentation. Some of the scores of Johann Strauss, the Waltz-King, also furnish most excellent material for studying purposes; their practical value from this point of view has never been fully appreciated.

Mr. Skilton gives interesting information regarding the formation of school orchestras, which is one of the hopeful signs of the times. Few of them are more than ten years old, but already they have created a new interest in student life, being more artistic than the mandolin or glee club, more educational than the dramatic club. In this line the colleges for men or for women alone are, it seems, at a disadvantage as compared with co-educational institutions, where the strings are chiefly played by women students and the wood-wind and brass instruments by male students or instructors. Mr. Skilton is an optimist; he sees in the growing interest in music indications that "the tidal wave of materialism which has overwhelmed our land during the last decades is beginning to recede."

Liszt is another timely subject discussed in this volume. The centenary of his birth naturally suggested the query: What has been done in pianoforte music since his death, a quarter of a century ago? Albert Lockwood and Allen Spencer discuss this topic, the first-named holding that nothing further can be said after Liszt until the very nature of the keyboard has been changed; while Mr. Spencer calls attention to the significant fact that it is the "quite recent acknowledgment of his genius that has given piano-playing its newest development." In naming the great pianists who have made the real Liszt known to the public, he forgets the greatest and most persuasive of them all, Paderewski. Edwin Hughes of Detroit, in discussing recent composition for the piano, gives a page to Debussy as "the first really creative innovator in piano-playing since Liszt"; yet it cannot at all be said, he adds, that he has revolutionized piano-playing after the manner of Chopin or Liszt. He also tries to show wherein Godowsky and Rosenthal, in their transcriptions of Chopin pieces and Johann Strauss waltzes, have gone beyond Liszt in the matter of "clever keyboard intricacies."

We cannot dwell on the suggestive points made in several papers printed under the heads of "Report of Harmony Conference," "Report of Voice Conference," and "Report of Public School Conference." A word must be said, however, about two important papers contributed by Mr. Sonneck; the one already referred to, and another, most curious one, entitled "MacDowell versus MacDowell," in which he relates in a most entertaining way the difficulties he has encountered in trying to procure for the Library of Congress a complete file of the first editions of the foremost American composer's works. No less readable is his paper, "Was Wagner a Jew?" It was Nietzsche who first set in vogue the notion that he was a Jew, by asserting that "his father was a stage-player named Geyer," and that "a Geyer is almost an Adler." Mr. Sonneck's argument to prove that Geyer was only the step-father is intricate and ingenious; but he does not succeed in obliterating the impression that Wagner himself lived and died in doubt as to his parentage. One thing, however, is certain: Wagner was not a Jew, regardless of whether or not he was the son of Ludwig Geyer. The researches of Glasenapp and Bournet have proved a purely Protestant lineage for Geyer, as far back as it can be traced (1640).

"Historical, Descriptive, and Analytical Account of the Entire Works of Johannes Brahms" is the title of a volume of 599 pages, by Edwin Evans, just issued by the Scribners. It covers the vocal works—lieder, part songs, and choral works. Vol. II of this exhaustive work will be devoted to the piano and organ works; Vol. III to the chamber and orchestral works.

Saint-Saëns has changed his mind in regard to Offenbach, as he confesses in *L'Echo de Paris*. Once he prophesied: "Posterity will not know him." But he was mistaken. "Offenbach is again in fashion." "Les Contes d'Hoffmann," and "Le Belle Hélène" are going around the world again. Composers of our day look down on gayety as inartistic, and as the public cannot do without it, there is a revival of operetta. What makes Offenbach interesting is "a superabundance, a fertility of melodic invention of which there are few examples." His "Tales of Hoffmann" is very rich in melody, sparkling in spontaneity, full of dash; in short, it is "music comparable to Grétry's." He even, now and then, "made curious harmonic discoveries." Saint-Saëns concludes his article with the words: "It is time for me to stop; a little more and I shall be saying things I don't want to say."

Arrigo Boïto celebrated his seventieth birthday a few weeks ago (February 24), and still that long-expected second opera of his, "Nero," is not forthcoming.

D'Albert's new opera, "Die Verschenkte Frau," which had its première in Vienna, has already been accepted for performance in ten other German cities. His "Tiefland,"

which was a failure in New York, had its 400th Berlin performance a few weeks ago.

Art

PRE-RAPHAELITES AND POST-IMPRESSIONISTS IN LONDON.

LONDON, March 12.

This winter's show of Pre-Raphaelite pictures at the Tate Gallery, lent by the Birmingham Corporation, could not have come at a more opportune moment. We have been seeing a good deal lately of what the young men in England are doing in imitation of the new movements on the Continent, and it is interesting to compare their work with that of those other young Englishmen who were considered so daring and revolutionary now a little more than half a century ago.

Of these Pre-Raphaelite pictures it would be more than useless to write in detail. Everybody knows the collection, and probably no other group of modern painters have had as much said and written about them, or have been the subject of more exaggerated praise and more exaggerated blame. It is only today that they are beginning to be seen in the proper perspective, and it is a curious sign of the times to find the writer of the Introduction to the Tate Gallery exhibition, while admiring them, still admitting in their work "a trace of camera photographing reality," "an element of the uncouth and provincial," "a stamp of Victorian sentiment and manners": the very last things the Pre-Raphaelites in their zenith would have been credited with. But the result of all this talk is that nothing remains to be added to it. The value of the exhibition at the Tate Gallery is not in anything new it can show to London. The principal pictures in the exhibition have been already seen here more than once.

It is the representative character of the exhibition which gives it value. These artists may not have been the masters they once were thought, nor their pictures the masterpieces. They may have mistaken absorption in their subject for the observation of Nature which was the very foundation of their creed, so that their pictures often degenerated into painted anecdotes, sometimes almost grotesque, sometimes almost comic, and their revelation of "delicate relationships between man and woman in domestic life, history, religion, and romance," so far from being the "real addition to the treasure of art" which the Introduction approves, has little to do with art at all. But whatever the weakness in their work, however mistaken their aims and objects, there can never be any question of their seriousness, their determination to study and work out the artistic problems they had set themselves in their own fashion. Nor did this, with them, lead to any desire or effort to throw off the healthy shackles of tradition.

It is a curious and suggestive contrast to turn from the exhibition at the Tate Gallery to some of the contemporary exhibitions recently held and still open in London. On every side ample evidence is furnished of the effect the "Post-Impressionists"—the absurd name given to them which I use for convenience—have had since they were seen last winter at the Grafton Gallery. There was no reason why their work should then have come as such a surprise. Examples had often been hung in the International Society's exhibitions. But London is as slow to open its eyes to the new as it is quick to go off its head once it has opened them. When Post-Impressionism finally dawned upon the town, it made a sensation that neither Romanticism nor even Impressionism enrolled in its day. The result was a torrent of nonsense published in the press and talked at meetings held for the purpose; also a rush to France and Germany of those who wanted to learn the trick and make a sensation themselves. The more gradual result has recently been seen in the galleries and in a series of decorations in a public building. There has been at least one "one-man" exhibition, that of Roger Fry, whose chief business is writing and who has not until now been over-industrious as an artist. I remember in the past his allegiance seemed to hesitate between the eighteenth-century landscape painters and the early English water-colorists, but then he exhibited comparatively little. This winter, however, under the spell of Post-Impressionism, he filled a whole gallery with landscapes and portraits and still-lifes in which Cézanne, Van Gogh, and the other accepted masters were more or less reflected. There is at least one exhibiting society, the Friday Club, in which almost all the members—mostly men and women with reputations still to make—have apparently no other aim than to proclaim themselves disciples of the group whose work a year ago was the talk of the studios. And there is hardly any exhibition in which Post-Impressionists do not make some sort of an appearance. Only yesterday, visiting the Women's International at the Grafton Gallery, I found a number of landscapes and still-lifes upon which the movement—new in London as it grows old in Paris—has set its stamp.

We have been told only too frequently that the great virtue of what is called Post-Impressionism is its defiance of all convention and its encouragement of all individuality of expression. Eloquent descriptions have been given of the unwearied research, the heart-breaking struggles which the masters of the new school willingly undertook and endured in their determination to break loose from tradition and to evolve their own personal method of expression. The Expressionists, for this reason, is the name enthusiasts have bestowed upon them. To the artist's personal expression everything else should be sacrificed, even if to attain it he must put himself in the attitude of a child, of a savage, when he confronts himself with Nature. Now, whether this is possible, whether the artist any more than the writer can free himself from centuries of tradition; again, whether the masters of the present Post-Impressionists prized the expression of their own individuality any more highly than any other artists since the world began, I do not care here to discuss. To begin with, there is not space for such a discussion; nor is there really any necessity. But the reminder of the principles and aims attributed to the masters is useful in helping to explain how far the disciples are from understanding or approaching them. As yet, in the mass of work produced so rapidly that one can but suspect a pleasant facility in the recipe, I have seen, with a few not too notable exceptions, nothing that suggested to me an effort to express any personality save that of the master who happened to be chosen for the assiduous study, if imitation is not a better word, of the moment. The mannerisms, the limitations even, that is, the characteristics least desirable, in the work of Cézanne or Gauguin or Van Gogh, the exaggerations of Matisse, the dots of Seurat and Signac, the eccentricities of the most strenuous of the Indépendants in Paris—those are what I find; not any endeavor of the artist to see with his own eyes and put down what he sees in his own way. The Post-Impressionists in London have escaped from one convention only to bind themselves more irrevocably by another. The Pre-Raphaelites, it may be said, did much the same thing. But, then, they believed it was only by respect of the right tradition that they could develop whatever talent or genius they might possess, and the seriousness with which they studied, with which they trained themselves by hard work, is seen in everything they did.

The essence of Post-Impressionism—so we are told—is to distrust or to scorn all tradition, and the diligence with which this distrust or scorn is being expressed by faithful adherence to a new tradition makes one wonder if the attraction may not be, not the principles of the school, but the short cut it seems to offer to art. The work of one of the London groups has been solemnly explained in what is usually considered an official quarter, as the effort to discover a method of painting that can be practiced successfully without a long training in the schools—to make painting more easy is now, we are assured, an aim all over Europe. There, I think, you have the reason of the popularity of Post-Impressionism with those who

profess it. All that hard research, all those heart-breaking struggles, on the part of the leaders were simply that the followers might escape the drudgery of the school and the tedium of hard work in the studio. Art, once an art education was put within the reach of almost everybody, attracted hundreds of men and women, who ought to be serving behind counters or sitting on the high stool of office, by the easy and pleasant way of making a living they were foolish enough to believe it promised. But experience quickly showing how little ease there is in the life of an artist, Post-Impressionism is now welcomed as a nice and light substitute for the old-fashioned notion of long and arduous training. N. N.

Finance

THE VERDICT.

On Monday of the present week, the stock market reached the highest figures of the year Since February, the more active shares had scored advances ranging from 5 to 11 per cent. On the London Stock Exchange, also, English railway shares advanced, while the English coal strike, with its increasingly hurtful influence on transportation, was obstinately continuing.

Since Monday, along with the news of the English Government's failure to settle the coal strike in that country and with the near approach of April 1, when our own anthracite miners are to quit their work, prices on the Stock Exchange have ceased to rise and have occasionally declined rather sharply. Whether this was a consequence of increasing doubt over the industrial outcome, or was merely a natural reaction after a prolonged advance, is no doubt debatable. But the problem of the recent continuous rise in London and New York prices, under conditions which might easily have led to a rapid fall in prices, remains the foremost consideration.

The real significance of the attitude of the stock exchanges towards the highly sensational industrial incidents of the day is the evidence that the responsible part of the community is keeping its head, and is not going into premature hysterics over a disquieting social situation. For the trend of discussion of the English coal strike, and of the probably impending dispute in the same trade here, indicates that the problem is social quite as much as industrial or financial, and it has been entirely possible to picture the outcome in such colors as to suggest a temporary breakdown of civilized institutions.

Not only the events themselves, but other circumstances surrounding and preceding them, might easily be cited to deepen such an impression. A world-wide overhauling of established traditions of government; insurgent republics in such unimagined places as China and Portugal; arson and assassination, in behalf of a labor union, defended in public as a kind of patriotism; public leaders in the United States clamoring for a changed Constitution and a fettered judiciary; ladies rioting and fighting the police in the streets of English cities; and all this restless excitement, in the words of an English social critic, "running around England, Europe, America, Asia, and the world, like the Dancing Mania of the Middle Ages"—here is certainly an interesting background on which to project a strike so contrived as to bring to a stop the whole movement of a nation's trade and industry.

The scope of the present labor demonstration may readily enough, in fact, have suggested recollections of the great Stockholm strike in 1909, when the unions placed a ban on transportation, street lighting, and the gas and water supply, or the attempt of the French labor-syndicates in 1910 to stop all railways and the entire postal service. It certainly recalls unpleasantly the manifesto of the Continental syndicalists not so long ago, to the effect that the general strike, through making unworkable by capital the enterprises affected, will eventually dislodge the capitalist owners of the industrial plant, leaving its management in the hands, not even of the state, but of the labor unions, the laborers thereafter to be the masters and the managers the employees.

Wild as this dream may have seemed to be, it is not so much wilder than the manifold other dreams that are troubling the repose of the body politic, and nothing is easier, if the imagination is allowed free play, than to conceive of the existing situation as prelude to a formidable effort in exactly that direction, with consequences as difficult to foresee as the social and political sequel was in 1789. The Stock Exchange is above all things imaginative, and nobody could have blamed it, or regarded its action as unreasonable, had it fallen into outright demoralization at the preliminary moves in that direction. For if this had actually been the signal for the crusade to expropriate capital from its control of industrial affairs, then it must also have been the beginning of a movement to reduce stocks and bonds to the status of so much waste paper.

This view of the situation, which has more or less dimly suggested itself, at times, even to the sober-minded part of the community, is itself the sufficient explanation for the importance which observant people have attached to the recent attitude of the Stock Exchange. It is because the stock market expresses the mature and sober judgment of the majority of experienced men on the public events of the day, that other people who have had trouble in shaping their own opinions are so often influenced, in doing so, by the course of prices. At the present moment, it would be hard to say whether general opinion on the outcome of the labor controversies has not been quite as much influenced by the rise on the Stock Exchange as the Stock Exchange itself has been by the absence of excited and hysterical prediction in the matter.

But one fact is indisputable—the Stock Exchange, both here and at London, has flatly refused to indulge in any of these prevalent mental extravagances regarding the breakdown of society, and has taken the ground that the thing is impossible in itself, that conspiracies to establish any such new order of civilization will collapse of themselves, long before they threaten existing institutions, and that, if labor unions and labor leaders have entertained any purpose of the sort, it is quite as well that the matter should be brought to a practical test, so that even the laborer will learn what the universal strike would mean for him. This self-possessed attitude has had precisely the good effect on the thinking community which is exerted when a chorus of confused and excited voices, in bewildering controversy, is interrupted by a word of calmly emphatic and authoritative common-sense.

READY THIS WEEK.

The Squirrel-Cage
By Dorothy Canfield

Illustrated by J. A. WILLIAMS. $1.35 net. *Second printing before publication.*

The main theme of this novel of American life comes close to the sympathies and experiences of most of us; but it is, primarily, an absorbing, personal, and real story of family life in a Middle-Western city.

Grant Allen's Historical Guides

Each, complete in itself and sold separately, rounded corners, pocket size, $1.50 net.

Now re-appearing in a new form with enlargements and revision. . . . Their object is to supplement rather than to compete with standard travellers' hand-books. It was Mr. Allen's purpose to give his readers the results of his own thirty-five years of foreign travel, and to explain to them in compact form many things not elsewhere obtainable. And his work abundantly fulfills all its claims . . . to expound the history and meaning of each work—to put the intelligent reader in such a position that he may judge for himself of the æsthetic beauty and success of the subject before him."—*Boston Transcript.*

Smaller Tuscan Towns
By J. W. and A. M. Cruickshank
New volume, illustrated.

Contents: *Northern Tuscany*—Massa, Pisa, Lucca, Bagni di Lucca, Pistoia, Prato. *Eastern Tuscany*—Grosina, Arezzo. *Central Tuscany*—Empoli, S. Miniato al Tedesco, S. Gimignano, Siena. *Southern Tuscany*—Chiusi, S. Quirico d'Oricla, Pienza, Montepulciano, Monte Amiata. *Western Tuscany*—Volterra, Massa Marittima, Grosetto.

THE AMERICAN YEAR BOOK
For 1911 Now Ready

THE DRUNKARD
By GUY THORNE
Author of "When it Was Dark."

A powerful novel written by a man of the world for men and women of the world. To the general reader it is a strong story of deep human appeal. To those to whom drunkenness is a painful personal and social problem, it is the sympathetic revelation of the physical and mental state of the drunkard, which makes help for him possible. Probably the most startling and impressive story in any language concerned with the psychology of intemperance. In "When it Was Dark" the author proved his power of holding spell-bound a vast company of readers. (*Cloth*, 12*mo*. $1.35 *net; postpaid*, $1.47.)

STURGIS & WALTON CO.

Economic Prizes

NINTH YEAR

In order to arouse an interest in the study of topics relating to commerce and industry, and to stimulate those who have a college training to consider the problems of a business career, a committee composed of

Professor J. Laurence Laughlin, University of Chicago, chairman;
Professor J. B. Clark, Columbia University;
Professor Henry C. Adams, University of Michigan;
Horace White, Esq., New York City, and
Professor Edwin F. Gay, Harvard University,

has been enabled, through the generosity of Messrs. Hart, Schaffner & Marx, of Chicago, to offer in 1913 four prizes for the best studies in the economic field.

In addition to the subjects printed below, a list of available subjects proposed in past years can be had on application. Attention is expressly called to the rule that a competitor is not confined to topics proposed in the announcements of this committee, but any other subject chosen must first be approved by it.

1. Is a money trust possible?
2. How far is competition actually crippled to-day in American industries?
3. A study of various forms of combination.
4. Recent developments of the German Kartel.
5. A study of the industrial effects of the dissolution of the tobacco trust.
6. Methods of forcing employers to accept the demands of labor unions.
7. How far is the theory of trust regulation applicable to labor unions?
8. A study of the code of ethics peculiar to labor unions.

Class B includes only those who, at the time the papers are sent in, are undergraduates of any American college. Class A includes any other Americans without restriction; the possession of a degree is not required of any contestant in this class, nor is any age limit set.

A First Prize of One Thousand Dollars, and A Second Prize of Five Hundred Dollars

are offered to contestants in Class A.

A First Prize of Three Hundred Dollars, and A Second Prize of Two Hundred Dollars

are offered to contestants in Class B. The committee reserves to itself the right to award the two prizes of $1,000 and $500 of Class A to undergraduates in Class B, if the merits of the papers demand it. The winner of a prize shall not receive the amount designated until he has prepared his manuscript for the printer to the satisfaction of the committee.

The ownership of the copyright of successful studies will vest in the donors, and it is expected that, without precluding the use of these papers as theses for higher degrees, they will cause them to be issued in some permanent form.

Competitors are advised that the studies should be thorough, expressed in good English, and although not limited as to length, they should not be needlessly expanded. They should be inscribed with an assumed name, the class in which they are presented, and accompanied by a sealed envelope giving the real name and address of the competitor. If the competitor is in CLASS B, the sealed envelope should contain the name of the institution in which he is studying. The papers should be sent on or before June 1, 1913, to

J. Laurence Laughlin, Esq.

Chicago, Illinois

The Nation

VOL. XCIV.—NO. 2440 THURSDAY, APRIL 4, 1912 Reg. U. S. Pat. Office. PRICE 10 CENTS.

IMPORTANT NEW AND RECENT PUBLICATIONS OF
THE HOUSE OF CASSELL

Selected from the Standpoint of Editorial Exactness and Timeliness of Interest

The New Garden of Canada Net, $2.50

By F. A. TALBOT. The eyes of the Twentieth Century are fixed upon Canada, "the Country of the Future." On the back of a pack horse the author traveled through undeveloped New British Columbia, and in this book brings the reader face to face not only with new wonders of Nature, but with enormous riches, agricultural, mineralogical, forestal, industrial—all lying dormant, and silently calling to the plucky and persevering. With 48 full-page plates and a map of the author's route.

Breeding and the Mendelian Discovery Net, $2.00

By A. D. DARBISHIRE. During the past decade public interest has rapidly developed regarding Mendel's theories, and the moment has arrived for a cheap and authoritative book embodying the results of the latest investigations. Mr. Darbishire, who is Special Lecturer on Heredity at the Imperial College, South Kensington, has met this need in his book, which is a concise and simple exposition of Mendelian principles, and of their commercal value. The four color illustrations in this book are unique. There are also 34 other illustrations.

Astronomy For All Net, $3.00

By BRUNO H. BURGEL. Translated by STELLA BLOCH. This is a translation of a popular book on Astronomy which has had an enormous success abroad. It is a very rare gift to be able to explain in a simple and attractive fashion the wonders of the celestial regions above us. In "Astronomy for All" the author has succeeded admirably in imparting to his subject a new and living interest, which will open up to the casual reader a whole field of fresh sensations and reveal these marvels to him in a new and clearer light. The book contains 96 photographs and drawings.

Cassell's Cyclopedia of Photography Net, $3.75

By BERNARD E. JONES. For years a really complete dictionary of photography has been demanded. This work is the first attempt *on a grand scale* to meet the demand. The text is plainly worded and as non-technical as possible, the needs of the amateur being always borne in mind, though the work makes its appeal to every photographer without exception. Whatever the photographer's dilemma, he will find invaluable help here, as the book contains the most exact information, contributed by the leading photographers of the day, in a simple and easy style. With five color plates, nineteen full-page and hundreds of other illustrations. 576 pages, 4to.

The Life of Tolstoy Net, $1.50

By PAUL BIRUKOFF. Translated by W. TCHERKESOFF. M. Paul Birukoff was one of Tolstoy's closest friends, and Tolstoy himself actually collaborated with him in the present work, and collected personally the letters and other documents from which extracts have been quoted. In order, moreover, that the book shall be complete, M. Birukoff has added to his famous Russian work a short accounts of Tolstoy's latter days and a Prefatory Note, which should make the book a permanent unit in any Tolstoy collection. With photogravure frontispiece and 16 full-page illustrations.

Marvels of Fish Life Net, $2.00

By DR. FRANCIS W. WARD, F.Z.S., F.R.P.S. The study of fish life from the photographic standpoint has never received the attention it deserves, and Dr. F. W. Ward, who is the leading authority on the subject, has produced a book which, to say the least, will attract and even astound the majority of readers. Over 100 novel photographs of fish, taken in their natural surroundings, serve as a basis for a series of chapters dealing with many new facts about fish life.

Dr. Ward also describes special ponds, and details his methods of taking photographs of fish under water, so that one may see fish as they appear to each other.

Wonders of Plant Life Net, $1.25

By S. LEONARD BASTIN. A fascinating book, which describes in non-scientific terms the wonderful methods of growth of plants, the extraordinary means adopted for seed-dispersal and fertilization, and the manner in which insects are lured to further the aims of the plant. Parasitic growths and the influence of the seasons form interesting chapters. The book is invaluable to teachers of Nature Study. Illustrated with 40 photographic plates by the Author, and eight Lumiere plates by H. Essenhigh Corke, F.R.P.S. 8vo, 148 pages.

The Desert Gateway Net, $1.75

By S. H. LEEDER. "Biskra and Thereabouts" is the subtitle of this charming book. It deals in the flesh with the characters who people "The Garden of Allah," and the book contains an answer to the thousand and one questions that daily and inevitably occur to every visitor to the Arab country, to whom the Arab has until now been an impenetrable mystery. "It is the only accessible work of its kind on the region described in 'The Garden of Allah.'"—*American Library Association Book List.*

The Garden at Home Net, $2.00

By H. H. THOMAS. The association of practical information with the charming literary style that secured such a warm welcome for "The Ideal Garden" is to be found in Mr. Thomas's new book. The author suggests here innumerable ways of adding to the delight of the garden at home, and shows how it may be filled to overflowing with luxuriant blossoms, delicious fruit, and wholesome vegetables. With 12 color plates and 96 half-tone illustrations from Lumiere plates by H. Essenhigh Corke, F.R.P.S. 8vo, 288 pages.

Wild Flowers as they Grow Two vols., each Net, $1.25

Photographed in Color direct from Nature, by H. Essenhigh Corke, F.R.P.S. With descriptive Text by G. CLARK NUTTALL, B.Sc. With 50 plates. These volumes inaugurate a new era in book-illustration: photographs direct from Nature—*on one plate*—with the colors of the plants and their habitat, are reproduced with startling fidelity. The text is of interest not only to the botanist, but to the non-scientific Nature-lover. Both text and photographs are the work of foremost experts.

Can be purchased through all booksellers. If by mail, add 10 per cent. for cost of delivery

Illustrations of Design
Based on Notes of Line as used by the *Craftsmen of India.*
By LOCKWOOD DE FOREST
$2.00
A carefully selected set of plates reproducing the exquisite work done by the craftsmen of India among whom the author has studied for thirty-five years. The method of working from notes of line, as used by the Indian craftsmen, is clearly developed. By beginning thus with the simplest problems the book becomes valuable for the youngest pupil as well as for the skillful workman. Issued in portfolio form in the Biflex Binder; *Illustrations of Design* is of great convenience in the classroom as it allows the different plates to be removed for individual use.

John Brown: A Biography Fifty Years After

By OSWALD GARRISON VILLARD

SOME TRIBUTES TO THIS REMARKABLE HISTORICAL WORK.

Philadelphia PUBLIC LEDGER. "A tremendous book; more thrilling than any book of fiction, powerful in its appeal, and which, while it is written soberly, as befits history, by the very nature of the narrative often rises to the highest dramatic level."

THOMAS WENTWORTH HIGGINSON. "I can only say after reading from first to last its more than 700 pages that I have never encountered anything this side of Gibbon's 'Rome' which has made me feel more the personal power of a single work."

JOHN T. MORSE, Editor American Statesman Series, in ATLANTIC MONTHLY. "Perhaps in thus dramatically fashioning his volume, Mr. Villard obeyed an instinct rather than acted upon a preconceived plan; that is often the case with a great work, where a writer's feelings are deeply enlisted. Be this as it may, the merit and charm are none the less; he has seized well a splendid opportunity and has written one of the great biographies of our literature."

HORACE WHITE. "In my judgment a contribution to American literature to take rank with the very best historical writing of our time or any time. The only impartial history of the Kansas war."

ST. CLAIR McKELWAY in the Brooklyn EAGLE. "A biography replete with facts and marked by courage and candor, learning and justice."

PORTLAND OREGONIAN. "The most valuable and comprehensive biography issued this season, and the best and most candid estimate of John Brown."

W. E. CONNELLEY in the Topeka CAPITAL. "The unprejudiced student and seeker for truth will herald the book as a great contribution to American history."

Des Moines CAPITAL. "More powerful in its appeal, more dramatic than any book of fiction, is this wonderful biography of John Brown"

The North Carolina REVIEW. "In this biography Mr. Villard has touched high-water mark. The book is a delight to the reader for many reasons. Full of life and movement, . . . written in an attractive and scholarly style, full of sympathy, and yet without any loss in accurate presentation, it sets a new standard for biographical efforts."

Baltimore AMERICAN. "While the book has popular features in that it is entrancingly interesting, its scholarship is of the highest order and its style reminds one a little of Anthony Froude. . . . Mr. Villard has illustrated in this book the finest ideals of literary conception and execution."

London TIMES. "It is scarcely likely that any later writer will be able either to add anything of importance to Mr. Villard's collection of material or to better his interpretation of the whole story. . . . It at once becomes the standard, and probably the final authority on its theme."

Washington (D. C.) STAR. "Mr. Villard draws a compact, vivid, historic picture of the terrible focussing of this period upon our Civil War. Straight and clear in its literary way, this biograaphy is a marvel of research and fair-mindedness."

HENRY WATTERSON in Louisville COURIER-JOURNAL. "No fault may justly be found with Mr. Villard's telling of the story. It is minute and lucid, altogether fair and unvarnished."

Burlington (Iowa) HAWKEYE. "It is a book which will take a place in the library of every well established home in this part the country."

Third Edition,

Fully illustrated with portraits and other illustrations. With copious notes and bibliography.

A strong novel abounding in clever strategy, humor, and romance. $1.25 *net; postpaid* $1.32.

Joseph in Jeopardy
By Frank Danby
"The most humorous and entertaining novel of the season." $1.35 *net; postpaid* $1.45.

The Touchstone of Fortune
By Charles Major
Another charming story as dramatic and human as the popular author's great success, "When Knighthood Was in Flower." $1.25 *net; postpaid* $1.35.

The House of Pride
By Jack London
Gripping, vivid relations of life in the Hawaiian Islands. $1.20 *net; postpaid* $1.30.

NEW BOOKS OF POETRY

The Everlasting Mercy
By John Masefield
Some of the most daring realistic verse which has appeared since Burns's "Jolly Beggars." $1.50 *net; postpaid* $1.60.

The Hill of Vision
By James Stephens
Original verse, as striking and picturesque as the author's previous work "Insurrections." $1.25 *net; postpaid* $1.35.

Daily Bread
By Wilfrid Wilson Gibson
Dramatic poems, poignantly presenting undercurrents of lives which, on the surface, are merely earning daily bread. $1.25 *net; postpaid,* $1.35.

The War God. A Tragedy in Five Acts
By Israel Zangwill
A compelling plea for humanity, described as "the most powerful dramatic work of the season." $1.25 *net; postpaid* $1.34.

OTHER IMPORTANT NEW MACMILLAN WORKS

The Wisconsin Idea. By C. M. McCarthy
Professor of Political Science in the University of Wisconsin.
Of vital interest to all concerned in State regulation of railroads, public utilities, the referendum, the recall, primaries, etc., by an expert who has been closely identified with the "Wisconsin" development of these great questions of the day. $1.50 *net; postpaid* $1.62.

The Record of a City: A Social Survey of Lowell. By Dr. George P. Kenngott
A critical, exhaustive account of twenty years' industrial changes and present conditions in an old Massachusetts town. $3.00 *net; postpaid* $3.16.

Meteorology. By W. I. Milham
Professor of Astronomy in Williams College; Author of "How to Identify the Stars," etc.
A volume explaining the entire mechanism controlling our ever-changing weather. $4.50 *net; postpaid* $4.73.

Earth Features and Their Meaning. By William Herbert Hobbs
Professor of Geology in the University of Michigan; Author of "Characteristics of Existing Glaciers," etc.
Gives the geological meaning of landscapes, with numerous appropriate illustrations. $3.00 *net; postpaid* $3.24.

Democratic England. By Percy Alden, M.P.
A brilliant study of the humanistic movement and the important social problems which have partly bridged the gulf between British political parties and classes to the advantage of the entire community. $1.50 *net; postpaid* $1.62.

The New History. By James Harvey Robinson, Ph.D.
Professor of History in Columbia University.
A popular account of the great revolution overtaking historical study through the social and intellectual changes in modern times. $1.50 *net; postpaid* $1.62.

The Social Aspects of Education. By Professor Irving King, *of the State University of Iowa.*
A complete survey and discussion of the relations of the school to the community as an instrument for social progress. $1.60 *net; postpaid* $1.72.

Food for the Invalid and the Convalescent. By Winifred Stuart Gibbs
Dietitian for the New York Association for Improving the Condition of the Poor.
A manual of value to help social workers and physicians in their efforts to treat disease and to conserve wealth. $0.75 *net; postpaid* $0.80.

Farm Boys and Girls. By William A. McKeever
Professor of Philosophy in Kansas State Agricultural College.
An interesting study of the rural home, character, development, environment, and related topics. *Illustrated.* $1.50 *net; postpaid* $1.62.

The Training and Breaking of Horses. By M. W. Harper
Assistant Professor of Animal Husbandry in the State College of Agriculture, Cornell University. Author of "Manual of Farm Animals."
A work fully describing the most successful methods for developing and training young colts and the various classes of horses. *Illustrated.* $1.75 *net; postpaid* $1.92.

Published by THE MACMILLAN COMPANY 64-66 Fifth Ave. N. Y.

The Nation

NEW YORK, THURSDAY, APRIL 4, 1912.

The Week

The vote on the Underwood bill reducing the wool duties shows that the tariff-reform sentiment among the "insurgent" Republicans has by no means died out. In one respect the vote of the twenty Republicans who joined the Democrats in passing the bill is more significant than the similar vote of the insurgents last year; for now the Republican "regulars" are ready and willing to make a substantial cut in the rates, and yet these men stand with the Democrats and their more radical proposal. It should not be forgotten that more is involved in the difference between the two proposals than is shown by comparisons usually made as to the amount of the cut in the two cases. The reduction made by the Democratic bill is estimated to be about an average of 42 per cent., and it is said that the Republican proposal would make a reduction of not much less than this percentage; but the salient feature of the Underwood measure is the abolition of specific duties, the whole schedule being put on an *ad valorem* basis. In the specific-duty system, there are always many chances for getting in "fine work" for the benefit of the protected interests, the effect of which it is difficult for the public to estimate; and furthermore there is in it an inherent tendency to bear more heavily on the cheap grades of goods, in which the masses are chiefly interested. The Democrats have done well to stand to their guns; and if the Senate or the President should reject their plan, they can point to the fact that in two successive sessions of Congress it was approved by the House of Representatives by a more than two-thirds vote.

A caucus by the House Democrats last week made opposition to an appropriation for more battleships this year or for new public buildings a party measure. The vote was so overwhelming in favor of this policy that there can be no doubt of its prevailing. It will be a notable stand in behalf of public economy, as the amount to be saved is estimated to be between $40,000,000 and $50,000,000. Nor can it be seriously argued that the public interests will take harm by this saving. Navy theoreticians, indeed, have their "scientific" programmes, calling for two new battleships a year, but it cannot be shown that the navy will be crippled or the country imperilled by omitting the new ships from this year's naval bill. The action of the caucus is, by so much, proof that the Democrats mean to live up to their pledges to keep down public expenditure. We are bound to add, however, that they would appear in a much better light if they had not first passed the Sherwood Pension bill, entailing a yearly outlay of $75,000,000.

The Senate has done the expected Presidential-year act in regard to pensions. It has not swallowed the Sherwood dollar-a-day bill, of course, which the patriots of the House of Representatives so eagerly passed, but it put through a hasty make-shift, which is said to mean an addition of only a trifling $25,000,000 a year to the pension list, instead of $75,000,000. With this the "old-soldier vote," it is to be presumed, will rest satisfied for a while, supposing that the bill remains after conference and receives the approval—or rather the signature—of the President; then the pension machine will seize the first opportunity for making another "strike" when the politicians are in a sensitive condition. The sixteen Senators who voted against the scheme are all Democrats. The names of two of them merit special mention as coming from States that do not belong to the "Solid South," namely, Rayner of Maryland and Owen of Oklahoma.

The country will not be profoundly impressed by the language of the majority of the Lorimer investigating committee in its conclusion that Lorimer should not be ousted. The resolution of the majority declares "that nothing has developed in or by this investigation that justifies a reversal of the solemn and deliberate judgment of the United States Senate rendered during the last session of the Sixty-first Congress holding valid the election of William Lorimer as a Senator of the United States"; but if the verdict of acquittal has to be buttressed by an appeal to the moral weight of "the solemn and deliberate judgment" rendered by the Senate last year, it looks as though the case for it were decidedly shaky. Out of the eighty-six Senators who then voted on his right to the seat he holds, forty declared against him, and among these forty were twenty-two members of his own party, including a large proportion of those having the highest standing in point of ability and character.

We are not troubled by the view that the acquittal of the packers in the criminal prosecution under the Anti-Trust law is a blow to efficient administration of the law. Mr. Wickersham suggests, in his comment on the matter, that "the jury was loath to find officers of the Beef Trust individually guilty for what they were alleged to have done as a corporation." This feeling doubtless had its influence; but a far greater influence must have been exerted by the reluctance of jurors to inflict the penalty of imprisonment for offences which had not habitually been regarded as felony, and which were committed at a time when interpretation of the Anti-Trust law itself was disputed and uncertain. It is true, the evidence was convincing that the packers, through their actions as corporation managers, had violated the law as it is to-day understood and interpreted. But it is not by any means so convincing that they violated the law as they, their lawyers, and their business associates honestly believed it to have been applied and interpreted at that time. This might easily explain a decision for acquittal by a conscientious jury.

But to imagine that such an attitude, on the part either of a jury or of the people at large, insures immunity from punishment for future offences of the kind, is altogether unreasonable. With the recent plain application of the Anti-Trust law, by the highest court and in specific instances, we do not hesitate to say that repetition, by the Standard Oil people, or the Tobacco Trust people, or the Beef Trust people, of such high-handed actions in restraint of trade and in suppression of competition as are

known to have been committed in the past, would be met by imposing the full penalty of the Anti-Trust law's criminal section, and rightly so. The corporation officers are themselves under no delusion on this point, and the public, which takes, we believe, a just and fair attitude towards the older practices, is in no mood to condone deliberate violation of the law, when there is no misunderstanding what the law forbids.

One of the reasons for the conciliatory attitude of the coal operators in the bituminous field, according to the *Coal Age*, is that by yielding to the demands of their men the mine-owners are in a position to raise prices to their principal customers, the railways. Writing of the situation a few days ago, before the agreement between operators and workers was reached, the *Coal Age* finds that the railways would oppose advance in the price of coal at a time of enforced economies; but "if the operators can have it appear that any advance they give has been forced by the miners, aided in their fight by public opinion, then, so the coal owners figure, a better face will be put on the entire matter and consumers will be more likely to stand for a raise in the price of coal." This argues a bit of procedure on the part of the mine-owners which may be interesting as an exercise in Machiavellian tactics, but otherwise serves no useful purpose. It is to be presumed that railway men read the newspapers and are thus informed as to just what concessions the mine-owners have made. If the increase in prices asked for is out of proportion to the sacrifice made by the operators, the railways will presumably have something to say on the subject. Why not give the coal-owners credit for simply recognizing the fact that their interests would be better conserved by granting the slight increase asked by the workers than by precipitating a bitter struggle at an unpropitious moment?

Unwieldy ballots are proving troublesome in Chicago, where they are too large for the voting machine. The manufacturers doubtless thought they were providing generously enough when they arranged nine rows of seventy spaces each, a total of 630 places for names of candidates. But they underestimated the extent of political ambition in the Western city. In some parts of it, as many as 635 candidates are trying to help the people rule, and the election commissioners are facing the pretty problem of obeying the law that allows any citizen who can get a few signatures to a petition to have his name put on the ballot, and also the regulation that the voting must be done by means of machines. Fortunately, only a thousand of the machines have been purchased, and perhaps they can be placed in parts of the city where desire to serve the community has not outrun the capacity of mere machinery to contain it. But the episode holds out a warning of the day in which men of an adventurous spirit will enter voting-booths with Baedeker's "Guide to the Ballot" in one hand and a lunch-box in the other, their faces set in a grim determination to discover at all hazards the latitude and longitude of the names in which they are especially interested.

Secretary MacVeagh has actually had the hardihood to speak up for that worthless class of Americans—the tourists returning from Europe. He has urged Congress to pass a bill relieving these undesirable citizens from the inquisition and the penalties, in the custom-houses of their native land, which all good protectionists—except at the moment of leaving a steamship themselves—believe that they richly deserve. The easy-going Secretary would allow these recreant Americans to bring in free of duty the clothes they may have happened to buy abroad, as also to include in the $100 exemption whatever trinkets they have picked up on their travels as souvenirs or gifts to friends. All this looks to us like a cunning attempt by the Administration to curry favor with the tourist vote.

It is refreshing to come across such a quiet, well-informed presentation of facts as is contained in President Fitch's article in the *Biblical World* on "Religious Life at Harvard." The writer confesses to entering upon his task "with some trepidation," which manifestly excludes him from the ranks of the professional exposers. But his insight is revealed by his generalization that young men at Harvard as elsewhere are unconventional in their religious expression, and more apt to disguise than to display their deeper convictions. The "first and universal characteristic of the Harvard undergraduate," he finds, "is a dread of seeming to appear better than he is." As a consequence, "he often appears worse than he is, lest you should think him to be what he is not." Prayer-meetings repel him, and yet the daily morning service in Appleton Chapel is attended by one hundred of the fifteen hundred who could be expected to attend it. In what ordinary community of fifteen hundred could you support a daily service with such an attendance? And, in addition, this average of one hundred "means at least three hundred men whose attendance is regular although not daily."

That Jefferson County, Alabama, in which is situated the city of Birmingham, has long been one of the most lawless places on the globe, with more murders a year than occur in all of Great Britain, including London, lends particular interest to a vigorous report just submitted by a Federal grand jury. It finds that a "vast majority" of the many people who engage in the liquor traffic violate every State law relating thereto, for the reasons that they "will not be arrested if there is danger of conviction," and if arrested, material witnesses are got out of the way. That most offenders escaped trial by reason of the congested dockets of the courts is another circumstance reported by the grand jury. As to peonage, this body found that it does not exist, but "what does exist is extortion and highway robbery." There is not more peonage because those who would practice it "have devised a system of their own far more safe and lucrative," a system of extortion backed by "the name and power of the State of Alabama." Justices of the peace and constables are reported to be usually corrupt and beyond punishment, impeachment proceedings never resulting in a conviction, however flagrant the crime. As for the victims of the fee system, who are reduced to virtual slavery by it, the grand jury reports that a very large majority are negroes, in every instance "those too poor or ignorant, too humble or frightened, to protect themselves." "Were they not negroes, but members of a more resentful race, anarchism would be prevalent." In conclusion, the grand jury bewails its inability to do anything. At least it has helped to make clear

why lawlessness prevails in Jefferson County.

Within a day or two the military archives housed in the War Department in Washington will be made accessible to students and investigators—a step which, for years, they have been endeavoring to have the Government take. Pending the issuance of the new regulations, the authorities in charge have let it be known that those desiring to consult the archives may obtain permission at the office of the Secretary of War, Mr. Stimson.—Washington Dispatch, April 1.

Those who read the letters printed in the *Nation* of February 22, know how keenly historians have felt the preposterous system of red-tape that has governed the use of these important records, under the sway of Gen. Ainsworth. It is hardly possible to imagine the state of mind of an official who would thus deliberately obstruct the patriotic as well as enlightening labors of scholars engaged in the investigation and preservation of their country's history. Now that this important step has been taken towards a rational policy, we may hope that it will be followed by others directed towards both increasing the accessibility and insuring the safety of our national archives in general.

President Madero's cheerful account of the situation in his troubled republic needs, of course, to be heavily discounted. His statement that calm prevails everywhere except in Chihuahua is unimportant even if it is true. It is in the great northern State of Chihuahua that the fate of the present war must be settled, just as Madero's own campaign against Diaz was virtually decided there. At the same time, it is well not to take too gloomy a view of the Maderist chances. Though the Federals were beaten in the fighting around Jiminez, it seems plain that the insurgent army suffered badly and is in need of recuperation; and here is where our recent proclamation of neutrality counts heavily against the revolutionists. In the person of Gen. Aubert, the Maderists seem also to have developed a leader of exceptional ability, who may yet turn the tide of insurgent victory. Torreon, where the decisive conflict is expected to take place, is still safe for the Government. A Government diversion against Juarez is apparently under way. In the capital itself there is some discontent, but nothing like the universal defection from Diaz which made the dictator's position hopeless.

Beyond question the Scott Polar expedition will bring back from the Antarctic a more substantial scientific contribution than has resulted from any previous Polar expedition, north or south. During Admiral Peary's last successful expedition, a considerable amount of scientific investigation was carried out by Professor MacMillan, but Capt. Scott has under his command no less than sixteen men, of whom the greater part seem to have been engaged in work other than that connected with the dash for the Pole. Whether that venture has been brought to a successful conclusion we shall not know definitely for months to come, but the chances are in Capt. Scott's favor. It will be noted that from November 2, when he set out from his base on MacMurdo Bay, to January 3, or roughly speaking, in sixty days, the expedition travelled six hundred miles under conditions of extraordinary difficulty. On January 3 he was 150 miles from the goal, with his men in good health and provisions for a month. Fifteen days at the rate hitherto attained should have brought him to the Pole. But, as a matter of fact, the weather and travel conditions had improved greatly as the party advanced southward, and so the goal may have been reached within a week after the departure of the last supporting party.

Mr. Winston Churchill quite plumed himself on his bluff English frankness towards Germany, in his speech in the House of Commons introducing the naval estimates. It was better to be perfectly plain, he said. The Germans might as well understand, first as last, that for every five Dreadnoughts they built England would build eight. And if Germany cut down her ship-building programme, England would do the same, and then Germany could "keep her money in her own pocket for the enjoyment of her own people and for the development of her own prosperity." This may be simply big-boy straightforwardness of speech, but it sounds uncommonly like a tone of offensive patronizing. That it would so be taken in Germany was the instant prediction of so plain-spoken a man as Admiral Lord Beresford himself. The reception of Mr. Churchill's speech by the semi-official German press showed, in fact, that the Englishman's holding out a sword in one hand and a withered olive-branch in the other had caused much irritation across the North Sea. No notice of the matter was taken by the German Government except, perhaps, by pushing forward the publication of the German naval plans, involving an increase in battleships.

Anti-vivisection has received a serious setback in England through the report of a Royal Commission which gave hearings for eighteen months and now publishes its findings after a delay of four years. Eighteen witnesses were heard in behalf of the anti-vivisection societies, but the Commission in its unanimous report found that the charges brought forward by these eighteen witnesses were trivial. In parliamentary language, the Commission declares: "After careful consideration of the above cases, we have come to the conclusion that the witnesses have either misapprehended or inaccurately described the facts of the experiments." Upon the ethical point the Commission declares that "experiments upon animals, adequately safeguarded by law faithfully administered, are morally justifiable and should not be prohibited by legislation." To the public at large the Commission addresses a word of warning:

> We desire to state that the harrowing descriptions and illustrations of operations inflicted on animals, which are freely circulated by post, advertisement, or otherwise, are in many cases calculated to mislead the public, so far as they suggest that the animals in question were not under an anæsthetic. To represent that animals subjected to experiment in this country are wantonly tortured would, in our opinion, be absolutely false.

But the most interesting, if not the most significant, feature of the vivisection report is that which deals with the benefits conferred by animal experimentation on the *animal* world. Anthrax, rinderpest, Texas cattle fever, glanders, swine erysipelas—these and other devastating diseases are better understood and better dealt with as a result of animal experimentation. Thus, man, it is asserted, is more than the arrogant lord of earth, winning immunity for himself through pain inflicted on the brute creation. He pays back to the animal world in its own coin more than he demands in the shape of animal pain and animal mortality.

THE CROOKED DEAL.

Mr. Roosevelt hits out wildly, like a man dazed by the heavy blows he has received. All sembiance of restraint or dignity he long since cast to the winds, and his violence of language, his recklessness of assertion, his apparent inability to reason coherently, make of him a spectacle distressing to his friends and mortifying to the country. All that he had done before, however, was left behind by the statement issued by him Sunday night. In it there appears the almost insane hatred of Mr. Taft which he has displayed on former occasions, but with it he this time masses together his misrepresentations of the President and his perversions of the truth in a way to lay him open to crushing refutation by a plain recital of the facts.

During Col. Roosevelt's Western trip last week, the question was raised whether an expression in his Chicago speech meant that he was making ready to bolt the Republican Convention. When this was brought to his attention, he was indignant. He declared hotly: "Any man who reads into the speeches anything I have not said is deliberately and wilfully misrepresenting." Out of his own mouth he thus stands condemned; for he has been going up and down the land reading into a speech of Mr. Taft something that Mr. Taft did not say. We refer, of course, to Mr. Roosevelt's deliberate and wilful misrepresentation of the President's speech at Toledo. In that address, Mr. Taft undertook to explain in an elementary way the working of representative government, and remarked that the actual electors were only a part of the population, while "the controlling majority of the electorate" must bear a still smaller proportion to the whole body of citizens, so that, in fact, it is "apparent" that "ours is a government of all the people by a representative part of the people." But this mere commonplace was instantly seized upon by Mr. Roosevelt, and by him distorted into the assertion that Mr. Taft did not believe in popular government, and was for control by bosses. This is thoroughly dishonest. Mr. Roosevelt cannot be deceived about what he is doing. Even in his excitement and rage his mind must work lucidly enough to make him aware that he is stooping to a mean misrepresentation which the lowest pettifogger would be ashamed of, and which the yellowest newspaper would feel to be too transparent as well as too base to attempt to impose upon the public. Of such wanton twistings of the truth one can only say, as the Prince said to Falstaff: "These lies are gross as a mountain, open, palpable."

Equally dishonorable use has been made by Mr. Roosevelt of another phrase of the President's. The latter wrote to the President of the County Committee in New York city that he was glad to note that every enrolled Republican was to be "allowed" to vote in the primary. The reference was, and was known by Mr. Roosevelt to be, to the decision not to contest the legality of any of the Roosevelt petitions procuring his candidates a place on the official ballot. Some of these petitions could have been successfully attacked in the courts. It was shown that some of the signatures were forged. More than one notary public has been called to book for witnessing spurious signatures in Roosevelt's behalf. Had such a thing been proved of his opponent, we know what cries of "infamy" and "perjury" the Colonel would have raised. But passing all this and ignoring the well-known facts, Mr. Roosevelt has pounced upon the President's word "allowed," and has ranted about the iniquity of conceding to Republican voters as a favor what was their unquestionable right! Whether this is more silly than despicable, it would be hard to say. That it is either fair or honest, no sane man with all the facts before him would for a moment admit.

Of Mr. Roosevelt's abuse of the newspapers, we are inclined to take a more charitable view. That is, we give him the benefit of the doubt whether he knows what he is talking about. As he was away last week, he may not have known what the papers of this city said about Tuesday's primary, and on his return may have been stuffed by some rash employee in the *Outlook* office. But what he permits himself to say is wide of the truth. It is not true that on Wednesday the New York newspapers "denounced the so-called election as a crime." They did correctly report that there had been confusion and delay on account of the failure of the printing contractor to deliver the ballots on time; but they also stated that the most serious trouble was in Brooklyn where there were no Roosevelt candidates; while in Manhattan but few election districts were incommoded, and the Taft voters were as much hindered as the Roosevelt voters. It is needless to add that the newspapers, never having denounced the primary as a "crime," did not "instantly stop" doing so when they "realized that they might do damage to the representatives of the combination of crooked politics and crooked business which they have been championing."

All this railing of Mr. Rooseveit's like a very drab is so without relation to the facts that there is naturally much speculation regarding his ultimate motives. He must be fully aware that, as far as the Republican nomination this year is concerned, he is a beaten man. What the Seven Governors—whose number is the only thing left to make them thought of as wise men—invited him to do was to "accept the nomination, coming as the voluntary expression of the wishes of a majority of the Republican voters, *through the action of their delegates* in the next National Convention." Well, the majority is now seen to be a minority, and the delegates in the Convention are certainly not going to nominate Roosevelt. Why, then, does he keep up his useless fight, threatening his own party with disaster as it does? Is he looking forward to rising on its ruins four years from now? Or is his mastermotive merely to feed fat his personal resentments? He is certainly treating Taft most brutally. When Mr. Roosevelt was rejected as a juryman, he protested: "Why, I would have given a square deal even to a railroad." Some one soon said: "What a pity that Mr. Taft isn't a railroad!"

DO WORDS MEAN ANYTHING?

Whether thought is possible without language is an ancient dispute, of the present status of which we have to confess our ignorance. But that when we do think in words the process must be extremely unsatisfactory unless the words are used in something like a definite ascertainable sense is a simple fact about which there has never been any dispute at all. Yet we seem, many of us, to have drifted into a state of mind in which this elementary requirement is cheerfully ignored. Examples of this habit are thick on all sides; but there lies before us a pamphlet which furnishes an unusually pretty specimen. The document is "A Special Message of

Governor Chase S. Osborn to the Forty-sixth Legislature of the State of Michigan in Extraordinary Session," and in it we find this delightful bit of political reasoning:

> Permit me to call your attention and the attention of the President of the United States to article nine of the amendment to the United States Constitution, as proposed by Congress September 25, 1791, and proclaimed in force December 15, 1791. It is as follows: "The enumeration in the Constitution of certain rights shall not be construed to deny or disparage others retained by the people." I understand from this that it is expressly provided that it is not the intention of the Constitution of the United States or within its scope to define all the rights of the people. This being true, in the light of article nine whatever is right is Constitutional.

Now in the old-fashioned days when words had a meaning, the conclusion warranted by Gov. Osborn's premises would not have been that "whatever is right is Constitutional," but simply that whatever is not prohibited by the Constitution is Constitutional; but presumably nowadays the rules of the syllogism must be regarded as subject to recall along with the rest of the antiquated rubbish that old fogies pretend still to regard as worthy of respect.

In the agitation that has been going on concerning the proposal to make judicial decisions on Constitutional questions subject to reversal by popular vote, there has been an amount of confusion of this same character which would be amazing were it not that this fashion of playing fast and loose with words has become so widespread. The great author of the scheme may in one breath speak of it as a fundamental reform which our democracy must have or perish, and in the next declare that he is asking for nothing but what we have already got and made use of a hundred years ago. That will be set down as only natural, since a contempt for trifles is one of the prerogatives of the big man who "does things." But no sooner has this feat been accomplished than a gentleman of quite a different type, a skilful handler of words and a trained lawyer, as well as a picturesque wielder of political power, outdoes the hero himself in the same line. Mayor Gaynor of New York tells us that there is nothing objectionable in the Colonel's proposal except the personal claim of originality, the real protagonist of the scheme having been none other than Mr. Gaynor himself. He, too, thinks that decisions should be recalled, and said so publicly, long ago. But then it turns out that he means by recall of decisions nothing but the passing of new statutes by the Legislature, or the adopting of new Constitutional provisions, in the ways that we are all familiar with and to which no obstacle exists except a possible indifference on the part of the people. This sort of thing makes one's head swim—now you have it, now it's gone. We are exhorted to arouse ourselves mightily and lay hold of a new weapon necessary to our freedom—and the moment we protest that the gun looks dangerous we are assured that it is nothing but what we have had in our hands all the time.

One of the curious aspects of this free and easy use of words is the way it lends itself to the perversion of the sayings handed down to us from an older time. "There is a higher law than the Constitution," said Seward, in the days of the irrepressible conflict between slavery and freedom, and when the nation was on the eve of its ordeal of blood and fire. "That is just what *we* say," is the chorus of the Osborns and the Roosevelts. But it is not at all what they say. The radical abolitionists went further than Seward; they denounced the Constitution as "an agreement with hell and a covenant with death." When a man says *that*, we know what he means. It is revolt. Right or wrong, it is manful and unmistakable. To say that there is something higher than the Constitution, to say that the time has come when the Constitution must be trampled on, in pursuance of the imperious dictates of conscience and the paramount demand of outraged humanity, is to take a position which may be condemned, but which must be respected. To say that whatever is right is Constitutional is simply to palter with words—to utter that which one does not dignify by the name of a lie only because it is inherently nonsensical. If whatever is right is Constitutional, why bother with a Constitution at all? Find out whether a thing is right or not, and any reference to the written instrument is clearly superfluous. But the psychology of the performance is simple enough. To denounce or defy the Constitution on the petty grounds which alone they could allege as their justification would be laughable; accordingly they take refuge in a mist of words without meaning.

In a field far removed from politics there has been in our day a movement presenting a curious resemblance to this looseness of language and thought. It is unlikely that pragmatism has been in any degree the direct cause of our political nebulosities; but it is not impossible that the two have a common source in some mental peculiarity of our time. However this may be, at the door of the pragmatists must be laid the charge of having done, so far as in them lay, gross injury to one word that is among the most precious possessions of mankind. Their doctrine, so far as it can be understood by the ordinary man, lays down as the test of truth that which may be a test of something—perhaps a test of something more important than truth—but is not a test of *truth* at all. Advantage to mankind may be the only thing which we men should be willing to accept as the final arbiter of belief or opinion; but why call it "truth," when it is not at all what men have been meaning by the word? However, we do not mean to suggest that the gentlemen who find out whether a thing is in the Constitution or not by looking somewhere else, or who say that a proposal is at once an innovation and a well-established institution, have been seduced from the straight path of honest speech by the study of any philosophical theory; there is no need of this hypothesis.

THE LABOR STRIKES.

After a period far longer than had at one time been hoped, but far shorter than the intensity of the struggle led many to fear might be possible, the fearfully costly strike of the British coal miners at least seems clearly drawing to a close. That strike, however, though overshadowing all others both in the range of its immediate disastrous effects and in its momentous bearings on national politics and policy, is but one of a large number of labor movements in the same general direction, in various countries, and especially in the two great English-speaking nations. Our own coal troubles are still in the formative stage; strike movements are impending in the American railways; the New England mill strikes have furnished extraordinary developments, and disputes over wages are still to the fore in that section.

The complexity of the factors that enter into the economic and social prob-

lems of modern society has perhaps never been more signally illustrated than in these manifestations. In part, they are the ordinary endeavors of working people to improve their condition. In part, they derive their origin, and still more their intensity and aggressiveness, from the socialistic ferment of the time. And in addition to these causes, there is no question that the explanation of them is to be found in large measure in the rise of the prices in recent years. It is safe to say that the future historian of the social and economic history of our time will find in the slowness and the painfulness of the necessary process of adjustment of wages to prices one potent, though purely adventitious, cause of that intensification of the "class struggle" which has characterized the early years of the twentieth century.

That the demands of labor for higher wages in coal-mining and on the railways mean an increase of prices to the consumer, some of the labor leaders have frankly acknowledged. In some quarters, this circumstance has been taken as demonstrating a vicious circle, and as sufficient to prove that the demands are unwarranted, or impossible to concede. If, we are told, wages are to be raised because prices have risen and then prices are to be raised because wages have risen, where is the process ever to end? But the matter cannot be disposed of so easily as this; the question is far too complex to be covered by any blanket decision. In a period of rising prices, the necessary adjustments are exceedingly irregular, and the things that have lagged behind must be put up to the line, even though this process may, for a time, in some slight degree accentuate the difficulty. If general prices have risen 20 per cent., and the workmen in some particular field have received only a 10 per cent. advance, they have good reason to demand an additional 10 per cent.; and the granting of this demand, while very materially affecting the condition of these workmen, and perhaps substantially increasing the price of the particular product upon which they are engaged, will have only an extremely small effect upon the general price-level. The real question is whether, relatively to wages and prices in general, the particular wages in question are below a normal level; and this question cannot be decided otherwise than by specific inquiry. Moreover, such readjustments as go beyond what is economically justifiable will tend to defeat themselves through a falling off of demand for the product affected; it is not within the possibilities of the case to keep up that rising-prices-rising-wages-rising-prices endless chain which has been imagined by the critics we have referred to.

A broader and deeper question than this of the relation between wages and prices has attained a certain prominence in the public mind during the strike movements of the past few weeks, on both sides of the water. A good deal has been heard of the notion that the workmen can get anything they want if they will only stand together. Before the chapter has been closed, there will be much clearing-up of ideas—mostly sub-conscious, to be sure—on this matter. The prodigious difficulties in the way of *all* the working people standing together will have been once more demonstrated—*have* been once more demonstrated in England; but that is not the whole, nor, we believe, the most fundamental part, of the case. We feel sure, the thinking people among the workingmen understand that the difficulty in "getting anything they want" lies far deeper. Capitalistic enterprise, capitalistic management, the stupendous mechanism and organization of production and exchange, the vitalizing and directing forces to which all this owes its efficiency and even its workableness—these are not the spontaneous gift of nature; nor can they be thrown aside and their fruits expected to remain. Even if the universal strike of workingmen might be organized, and even if it were to result in extorting, somehow or other, an immediate concession of "anything they want," how long would the victory last? The existing basis of industry and commerce—that which springs from the play of capitalistic motive as we know it—would be destroyed, and nothing would have been provided to take its place. In the schemes of rational Socialism, whatever may be the objections to which they are open, there exists no such fatal deficiency; and the hard-headed among the workingmen, whether leaders or in the rank and file, doubtless have an instinctive feeling that the age-long problem of the world is not capable of being solved by a mere wave of the hand.

EXHIBIT NO. 2—COTTON.

There is something admirable, as well as something pathetic, in the story of Mr. Taft's dealings with the tariff problem. Having pledged himself to the policy of relegating the question of revision, in its first stage, to the Tariff Board which was created by Congress upon his recommendation, he adheres to that decision with a certain judicial fidelity which, whether to be commended or not in a man confronted with the manifold perplexities of the statesman and the politician, has in it a quality the respectability of which it is impossible to deny. The wool report of the Board was disconcerting, the cotton report is more so; but the President makes no attempt to escape from these embarrassments. *J'y suis, j'y reste*, has been his motto from the beginning; and, in the face of all the difficulties into which the tariff mess has plunged him, it is his motto still.

Foremost among these difficulties is the impossibility, now twice demonstrated on a large scale, of determining that "difference in cost of production" which was so cheerfully proclaimed, a couple of years ago, as the happy and complete solution of the tariff problem. Politicians might be ignorant or corrupt, manufacturers might be grasping and deceitful, but "science" would clear away the fog that has so long surrounded the subject, and mark out the straight and narrow path along which the honest lawmaker must proceed. Well, science has done her best, and what is it? The report on wool left a margin of doubt wide enough to accommodate everybody except the standpatters; the report on cotton does the same. A single quotation from the latter report may suffice to illustrate a difficulty that runs through the whole matter:

> Taking all the mills covered by the investigation in each country, there were wider variations in the American costs secured than in the English costs, due partly to the fact that the English mills were all in the Manchester district, where wages and other conditions are well standardized, while the American costs were taken from mills covering a much wider area, with much greater differences in labor and other conditions. Another reason for the wider variation in American costs is that the English mills for which figures were secured are all of a modern and efficient type, while some of the American mills included were old and of low efficiency.

We have chosen this particular quotation because its concluding remark sug-

gests a stumbling-block of another kind, a trouble that strikes even deeper than that attending the mere arithmetic of the difference-of-cost principle. The "wider variation in American costs" which was due to the inclusion of some American mills that were "old and of low efficiency" may, from the point of view of the Tariff Board's inquiry, be a mere matter of statistical fact, of which they properly take note without comment; but from the point of view of the people's interest, it opens up a broad field of doubt and protest. How much are we all paying to support concerns, in all directions, that need the tariff crutch to keep them going? This very report tells us that in the cotton industry there are many instances in which the American labor cost per unit of product is less than the foreign, in spite of our high wages, owing to the superior efficiency of American labor and organization; just as it also shows that the incomparably lower wages of Japanese workmen result in a labor cost only slightly lower than ours. Why, then, should not the people of this country get the full benefit of superior efficiency where it exists, instead of throwing a large part of it away in the shape of high-price bounties to bolster up enterprises that are less productive?

To enter into the details and complexities of the cotton schedule is a task which only those will undertake upon whom it is laid as a special duty or to whom the rates are a matter of business interest. But from the report the broad fact stares out plainly enough that the schedule as a whole has been grossly excessive; and the public will no longer doubt that the scandalous character ascribed to it, not only by Democrats but by "insurgent" Republican leaders like the late Senator Dolliver, is borne out by the facts. The President asks Congress to act, and it will be the part of patriotic duty for the Democrats to forward the fulfilment of this recommendation without any such balancings of political debit and credit as too often come to the front in such situations. It is stated in Washington dispatches that the Democrats will hang back for fear that if anything were done to relieve the public, the President would get the credit; but such calculation is too fine by half. The people will give any party that does its share towards actual accomplishment of reform the credit it deserves; while failure on the part of the Democrats to achieve what seems attainable will be set down not only as bad in itself, but as giving a character of insincerity and unreality to those Democratic proposals the failure of which will have been due to opposition in the Senate or at the White House.

THE CRITIC'S TROUBLES.

Mr. Howells, in a recent interview, has formulated his own conception of the right conduct for critics. It may be summed up in one word—kindliness. "You cannot schoolmaster an art," says Mr. Howells, and his practice has always been faithful to his theory. Young writers have never failed of encouragement at his hands, and his praise has always been full measure. Many a young writer has been ushered by Mr. Howells to a place in the firmament which the rising star has never quite succeeded in attaining. But what is the harm? If the young man in question has the right stuff in him, eulogy is just what he needs. If he offers only false promise, the law of natural selection will attend to him sooner or later. This is a cheerful and ingratiating theory of criticism, but a great many people will always take exception to it. They cannot free themselves from the argument of etymology. Criticism, after all, does mean judgment and discrimination. Keep your critics or suppress them altogether, but if you keep them you have no right to turn them into professional eulogists. It is wrong in theory and it does not pay. Experience shows that in the end the "constructive" or incurably good-natured critic fails to satisfy those about whom he writes and those for whom he writes. If for no other reason than variety, it is good to mix the bitter with the sweet.

Once it is conceded that the critic may speak harshly, provided he does so in a good cause, it is unkind to taunt the critic with the mistakes he makes, or rather not his own mistakes, but those of his profession since the beginning of time. If the critic is inclined to take a severe view of the condition of literature in his own day, he is reminded that critics have always failed to find good in the men about them. If he ventures on the mildest form of "this will never do," he is reminded of the glorious destiny of Wordsworth. The common formula is that genius has always been misunderstood—see Richard Wagner. Too commonly the formula is changed so as to read that being misunderstood is the first sign of genius. This view finds expression even in the conservative columns of the London *Times*. The argument is that to-day there may be great writers unrecognized among us:

> There is no great poet of the present day who commands the allegiance of young readers as it was commanded by Tennyson, Browning, and Swinburne when they were at the height of their powers; but that proves nothing. Wordsworth, Shelley, and Keats did not command the allegiance of young readers when they were at the height of their powers; and there may be poets of the same excellence writing now. It is true that we cannot name them; but that also proves nothing. Hardly any one would have named Keats or Shelley in their lifetime as two of the greatest English poets; and as for Blake, he was not commonly esteemed a great poet until at least a century after his death.

Now was there ever so parlous a profession to be engaged in as this business of literary criticism? Disregarding fear and favor, honestly and after much study and reflection, I am about to say that Smith's verse is really third-rate, when an icy hand falls on the critic's shoulder and a solemn voice intones, "Think of what the world may say about Smith's verse a hundred years from now."

A Keats or a Shelley may be writing to-day—"it is true that we cannot name them; but that also proves nothing." Now this bland statement can only mean one of two things. Either it means that the present-day Shelley's verse has got into print, has been reviewed by the critic, and has failed to be recognized as the work of genius; or else it means that the new Shelley has entirely escaped the critic's attention, has not even got into print, and is destined to serve the future as a monument to the cruelty of Chance. The latter possibility may be dismissed at once, for the very reason alleged by our writer in the *Times:* it means nothing. To go about and say that there are Shakespeares, Michelangelos, and Raphaels among us, but we cannot name them, is to fall into that auto-intoxication of the modern spirit which so frequently makes the younger generation look back with pity on the entire past. How can you help pitying the past? See how comparatively little they accomplished and compare it with

the magnificent possibilities that may be going on among us! Blessed is the twentieth-century ferment, for out of it anything may come. To be sure, the young generation easily enough passes from "may come" to "is coming." The Shakespeares and Michelangelos are there, only we cannot place them. But this is very near to nonsense.

So we return to the old accusation. The critic frequently has Keats or Shelley under his eye and fails to recognize him. The charge is true. The gravamen of it is, of course, largely mitigated by various considerations. For instance, the very people who reproach the contemporaries of Keats for not recognizing him are the ones who will argue that Keats was essentially ahead of his times and could not be recognized in his own day. To blame the critic for not liking what it takes fifty years' ripening to like is somewhat unkind. But for the moment we may let that pass. Let it be admitted that it is the critic's business to have his taste so perfected that he shall discover and like what the ordinary man will discover and like half a century later. The question then rises, How can you expect this highly refined palate to be tolerant of the gross meat and drink that serve the daily purposes of one's contemporaries? In other words, How can you expect the critic to be both discerning and kindly? Does not the very business of hunting out a Shelley and championing him before the world imply the necessity of beating down the vast mass of written stuff that is not like Shelley? It is precisely by clearing the garden of literature from weeds that the perfect flower may be grown. It is unjust to accuse the gardener of being cruel both to the weeds and to the flower.

THROUGH THE OUTLOOKING GLASS

Alice had been sprinkling water on his face and fanning him with her straw hat for several minutes, and still the Red Knight lay quite motionless. He looked so wan and pale it made Alice's heart ache. But just when she had decided that a doctor must be sent for, the Red Knight opened his eyes and sighed.

"Where are we?" he said.

"We are still in North Dakota," said Alice.

"And our opponents?"

"They have gone somewhere else."

"I knew it," said the Red Knight. "They have left the field to me. I knew it would be like that. I always win. Did you see me charge?"

"I did," said Alice. "It made me so sad to see you go over your horse's head so many times."

"I did that to disconcert them," said the Red Knight. "As long as I stayed in the saddle they would keep on fighting. But as soon as I fell off they would naturally be at a loss what to do next."

"But you frightened me horribly," said Alice. "Every time you went over you landed on your head."

"Oh, that was all right," said the Red Knight. "My head has always been the strongest part of me. Besides, I always think very well on my head. It stimulates me. Some of the very best ideas I have had—like the recall of judges, for instance—came to me in that position. The thing to do is to follow up our victory."

"You must not bother about that now," said Alice. "You must really rest. Talking isn't very good for you."

"It never hurts me to talk," said the Red Knight. "It is no strain whatever. I can do it without thinking."

A tired look came into Alice's face.

"You are not discouraged, are you?" asked the Red Knight, a little wistfully. "You mustn't be, you know. If I gave up the fight who else would there be to carry it on?"

"I'm sure I don't know," said Alice.

"There *is* no one else," said the Red Knight. "I'll prove it to you." He reached into his back pocket and pulled out a collapsible foot-measure of the kind carpenters use in their business. He handed it to Alice and asked her to open it out.

"This is a very droll rule," said Alice. "I thought all these pocket-measures ran up to six feet, but this one stops short at five feet eight and a half inches."

"Exactly," said the Red Knight. "Now would you mind taking my measure, just as I lie here?"

Alice wondered, but complied.

"Why," she said, "it is just your height."

"Of course it is," said the Red Knight. "That, you see, is the rule of the people. I always carry it about with me. It is a very good rule, because it works only one way."

"Having rallied my troops," said the Red Knight, "I will now march to settle the Trust problem at the head of my convincible army."

"You mean *in*vincible, don't you?" said Alice.

"I mean *con*vincible," replied the Red Knight. "Because we always march to battle convinced that we shall be robbed of the fruits of victory."

"Then why fight at all?" said Alice.

The Red Knight looked at her in astonishment. "If we don't fight, how can we cry fraud afterwards?"

"But you don't absolutely have to cry fraud, do you?" said Alice, timidly.

For the first time since their acquaintance the Red Knight grew sarcastic. "If you can tell me any other way we can keep up our spirits, I'd be much obliged," he said.

Alice was just on the point of saying, "You might whistle," but she thought better of it, and turned the subject.

"Your army doesn't seem to be a very large one," she said.

"Yes, it is," said the Red Knight. "I have countless millions on my side. But they are of rather a retiring disposition. You'd never suspect they were there if I didn't tell you. These men you see are only my Field Marshals. I don't suppose you have ever met them before, have you?"

"I never have," said Alice. "I am only eight, you know, and Mamma says I must be seventeen before I go out in mixed company."

"Then I must introduce you," said the Red Knight. "The small man in armor on the right is the Harvester. We call him that because with him money cuts no ice. He just loves the people. He sits up half the night loving them. And he is so modest that the people don't even suspect it. A good man, the Harvester, and as true as United States Steel."

"I don't think I like him," said Alice.

"I didn't until he came out for me," said the Red Knight. "That showed how mistaken I was. The tall, thin man in green next to him is the Forester, so called because he is frequently up a tree. He is a nice fellow, but not practical enough. I sometimes wonder whether he belongs with the rest of my Field Marshals. Next to him, in sheepskin, is the Barrister. He got his title from his willingness to round up Southern delegates for any candidate, bar none. He is the most unprejudiced man I know. The last man on the left, in a uniform of colored frontispieces, is the Publisher. But sometimes we call him the Pink-Cheeked Boy, because his circulation is so good. Have you ever seen a more impressive lot of men?"

Alice couldn't honestly say that she had. So the Red Knight gave the signal and the convincible army started out. Soon they came to two finger-posts pointing in the same direction. One finger-post said: "To the House of Good Trust," and the other finger-post said: "To the House of Bad Trust."

Alice thought that was very odd, but she resolved she'd wait until they came to a crossing. But when they did the road on the left had no guide-post at all, and the two fingers continued to point down the other road.

"Do Good Trust and Bad Trust both live in the same house?" asked Alice.

"I shouldn't be surprised," said the Red Knight, and they marched on till they came to New Jersey; and there, sure enough—but what Alice saw there will be told by the Red Knight in the preceding chapter.

GERMAN BOOKS ON AMERICA.

The reader familiar with the work of Ernst Freiherr von Wolzogen is likely to be disappointed on seeing the title of his volume of American impressions, "Der Dichter in Dollarica" (Berlin: F. Fontane & Co.). But if on surveying the contents of the book one feels that the poet's and the humorist's license enters largely into its composition, this is not meant as a reproach. From the very first chapter the sympathetic reader will sense the genuine Wolzogen spirit and will gradually yield to the spell of his whimsical and graceful, and always thoroughly individual, manner. But it is not all whim. The chapters in in which he discusses the "Yankee" race, the "Yankee" as educator, and American college life, show keen insight and

a just valuation of the character and the achievements of a society which strikes him as being, above all, endowed with "youth, charming, wild, naughty, strong, indecently healthy youth." What Herr von Wolzogen says about the physical advantages of the "Yankee" race curiously coincides with and corroborates reflections which at various times and from various German sources have come to the knowledge of the reviewer, viz., that centuries of political and social repression, military coercion, and individual restraint have left their imprint upon the average German physiognomy and prevented the development of clearly and harmoniously cut features. It is interesting to learn from the chapter on private and public morality that German newspaper correspondents in the United States are forced to cater to the prejudices of ignorant German readers by sensationally colored reports on things American. Herr von Wolzogen deserves credit for his condemnation of that system and for his attempts to correct some misstatements which have widely affected public opinion in his country. He regards political corruption as an inevitable result of the expanse of the country and the four-year term. He rather admires the American's patient acceptance of petty annoyances and nuisances which in Germany, as in other European countries, would give rise to outbursts of bad temper, whether the scene be a public conveyance or a public thoroughfare. Of course, he disagrees with the system of avoiding the discussion of certain questions, however vital they may be, in our literature and the press. But he admits that American morality and American educators have provided the best possible material for future fatherhood, which is the highest compliment to be bestowed upon any nation.

Considerable space is devoted in the book to the "cultural" aspects of America, but the author's familiarity with American literature seems rather limited. Of contemporary writers he recognizes only Jack London as possessed of a strong individuality with a distinctly American coloring. He justly credits German pioneers in music with having elevated American taste to such a degree that American audiences can appreciate a performance of "Parsifal" and a programme of Beethoven and Brahms, but when he mentions as one of these pioneers Max "Friedrich," he seems to have meant the veteran of the German Lied, Heinrich. Save for the work of the New Theatre, he has a very low opinion of the American stage. The best comedy-acting he saw was by a "Yiddish" company at Miner's, on the Bowery, which he calls "The Miners." He is of the opinion that the safest way to lower the standard of a newspaper is to furnish illustrations, and sharply censures sensational headlines and other abuses. But he is mistaken in assuming that there is probably no daily in this country which is not illustrated. There is a great deal worth reading in the last two chapters, especially the one entitled Was können wir von Amerika lernen? He calls it the country of the absolute present, and a mirror in which all cultured nations may read their future.

The thoroughgoing seriousness and dignity of Wilhelm Müller's book, "Das religiöse Leben in Amerika" (Jena: Eug. Diederichs), revives the memory of the well-known, excellent work by Wilhelm von Polenz, "Das Land der Zukunft." The German author, who for many years lived and taught in this country, had incomparably greater opportunities to study its people than the other distinguished visitor, but the spirit in which he went at this task made him arrive at similar conclusions. Von Polenz called America the land of the future. Müller is inclined to call it the cradle of a religion of the future.

Herr Müller strikes the keynote of his book in the very beginning of the chapter on the Puritan pilgrims, where he quotes their Minister in Leyden and regards his words to his departing congregation not only as the consolations of a shepherd to his flock, but as the religious and political legacy of a sage with the statesman's far-reaching vision. For him these words hold the seeds of a religious toleration which, notwithstanding painful lapses into an unbending dogmatism, were at a later period to yield the rich harvest of religious freedom. He sees in the work of all the churches that gradually sprang up in the country the growing desire to give life an ethical content. Of interest to German readers is the relation which the author points out between Jonathan Edwards's conception of history and that of Schiller's famous line:

Die Weltgeschichte ist das Weltgericht.

But even more striking is his comparison of Tolstoy's method of realizing the ideal of a human brotherhood, and that of Edward Everett Hale, the former descending to the depths of the poor and lowly to be one of them, the latter lifting them to his height to make them his equals. The chapter on Transcendentalism is one of the most thoughtful in the book. Emerson as a spiritual power is compared to a rock in the high-tide of an all-uprooting materialism. In the chapter on the Catholic Church in America the author recognizes in Hecker's association with Brook Farm, the influence which molded his character, and credits Hecker and his teacher, Brownson, with the wider social activities of the church. He regrets that the histories of literature ignore men of such striking personality and literary merit as Thomas Hecker and Father Tabb. Referring to the anxiety sometimes felt in view of the stupendous growth of Catholicism in America, the author is inclined to share the opinion of Dr. Eliot, who said that the influence of American democracy upon that church is greater and deeper than the influence of the Catholic church upon the government and the society of this country.

Some paragraphs on Walt Whitman are commendable for their sane interpretation of Whitman's philosophy of acceptance, but it is to be feared that the author overrates the number of adherents of the "Whitman Cult," if such there be. When he surveys the work of the various "lay orders," like the Salvation Army, his conviction seems to grow that the chief feature of these and other religious organizations in America is the desire to supplant or at least supplement creed by deed.

The author of the book entitled "Was ich in Amerika fand," Freiherr Hans von Barnekow, has been little concerned about the spiritual problems of American life, but has pretty thoroughly studied its material sides. The book, which is imported by G. E. Stechert & Co., is written from the standpoint of the educated immigrant, preferably the German army officer or "Junker." The author seems to have known the life of the road as of the cheap lodging-house, and to have been in immediate contact with the vast army of the unemployed. He treats the many problems that confront the foreigner in this country with commendable judgment, but the order in which he presents his impressions frequently brings into prominence things that were probably not so meant. Thus, in the very first chapter he launches forth into a discussion of the unreliability of judicial practice and makes it the starting-point for a tirade about lynching, lending color to the foreign suspicion that this is a common practice in America. In dealing with the Black Hand and other outrages he is inclined to lay the blame exclusively at the doors of the police of New York, without considering the unparalleled conditions with which this commonwealth has to cope, since its stream of immigrants is endless. His criticism of the average American newspaper is in most respects justified; so is his censure of certain society fads.

Where the writer makes excursions into topics like the American woman, it is evident that he commits the common error of hasty generalizing. His amazing statement that American women among themselves discuss with appalling frankness subjects that even men shrink from touching upon in conversation, curiously contradicts the charge of prudery raised against them even in their own country. When he says that this sort of unveiled utterance appears most shamelessly in the newspapers of the

emancipated woman, one is tempted to ask the names of those papers.

A. von Ende.

SWISS NOTES.

Neuchâtel, March 7.

Like the Germans, the Swiss are often blamed for their dislike of fresh air. Churches, university lecture-rooms, tramways, and restaurants are badly ventilated. To some extent, this accounts for the prevalence of tuberculosis in this excellent climate. It is therefore satisfactory to remark that open-air schools for children have been founded near some of the larger towns. One of the best of these is situated near Zurich, on a high wooded hill, from which there is a beautiful view of the lake and mountains. Poor children in the canton can easily reach the place by tramway. The younger pupils are not obliged to follow any definite course of study. Those who are older have two hours of teaching in the morning, and they learn gardening and other out-of-doors employments. The physical results of this system are excellent.

In a Protestant country like Switzerland it was reasonable to expect that Christian Science would find many advocates. In the larger towns, especially, the doctrines of that sect have been well received. Professor Mayor of the University of Lausanne has lately written, if not a defence, at least a sympathetic appreciation, of Christian Science. It is entitled "Mrs. Eddy et la science chrétienne." The frontispiece is a portrait of the lady, whom Professor Mayor calls the prophetess of the new world, "la grande Américaine." Another Swiss writer speaks of her as "the new Messiah of Boston." Henri Cordey, another Lausanne professor, thinks, however, that Mrs. Eddy showed psychopathic symptoms. "We find in her case all the symptoms of an abnormal nervous constitution," "a morbid suggestibility, akin to an obsession favorable to the development of monomania." Notwithstanding, Professor Cordey maintains that Mrs. Eddy's influence was very beneficent, in encouraging optimism and giving a new vitality to the Christian religion. Another Swiss professor, who is better known in America than in his native country, has written for a religious journal, *L'Eglise Nationale*, a caustic criticism of Mrs. Eddy and her church. The author is Albert Schinz, now professor at Bryn Mawr, who is a native of Neuchâtel.

Dr. Bernhard Fehr of the University of Zurich has lately been lecturing on Oscar Wilde, as "Æsthete and Individualist." Without laying emphasis on Wilde's moral defects, he gave perhaps the best estimate of his place in literature which has yet appeared. Naturally, it is difficult to separate the English author's character from his work; but some of Wilde's work tempts one to forget his character.

Professor Masson of the University of Fribourg has lately read a paper before the French Academy of Moral and Political Science. It concerns a rough draft, or *brouillon*, of Rousseau's "Emile," a manuscript now in the possession of M. Favre at Geneva. The 28th of June is the two hundredth anniversary of Rousseau's birth. Of course the occasion will be widely observed in France. But Geneva is the place where Rousseau's memory is most fondly cherished. The people there still speak of him as "le grand citoyen." Neuchâtel, however, where for a time Rousseau resided, has no special reverence for the author of "Le Contrat social." While a resident in this canton, Rousseau wrote several letters about the Neuchâtelois which will never make his memory dear to the natives. But Geneva is to celebrate elaborately Rousseau's birthday. M. Fazy, a leading Radical politician, has charge of the matter; and with him is associated Professor Yung of the University. There is to be a great public meeting, with addresses concerning Rousseau's life and work. A brochure about Rousseau is to be distributed to the young people in all the schools. Then there is to be a procession of all the little Emiles and their sisters.

Imitating their French neighbors in the medical schools of Paris, students at the University of Berne have been in rebellion. "L'unique objet de leur détestation" has been Professor Kolle, who has the chair of hygiene and bacteriology. Kolle has earned a fine reputation in science; but his assistants and students complain of his severity and arbitrary methods. Besides being professor at Berne, Kolle is scientific director of the Dresden Institute of Bacteriology. It is from the Dresden laboratory that "pyocianose" is obtained. This seems to be a sort of panacea, curing everything from human influenza to the petty diseases of cats and dogs.

In a lecture delivered recently before the Historical Society of Bâle, Dr. Escher of the University there spoke of Richelieu as the Mæcenas of French literature. Of course, Richelieu's general services to literature are well known; but Dr. Escher has collected interesting and hitherto unnoticed facts concerning the Cardinal's devotion to art and letters. Dr. Escher's lecture is an important contribution to the history of a great literary period.

A. A.

NEWS FOR BIBLIOPHILES.

Although the third part of the Robert Hoe library, which will be sold by the Anderson Auction Company April 15 to 26, is of less interest than the preceding parts, yet the two catalogues, 3,412 lots, include a number of important and valuable books. Chiefest among them is the first edition of John Gower's "Confessio Amantis," printed by William Caxton in 1483. This is, perhaps, the best of the seven known perfect copies of one of the few original English books from Caxton's press. This copy, formerly Bryan Fairfax's, was sold by him to Francis Child in 1756, and when sold at auction in the Earl of Jersey sale, in May, 1885, brought £810, and was bought by Mrs. Norton Quincy Pope of Brooklyn. In 1895, after Mrs. Pope's death, the book, with many others from her library, was acquired by Mr. Hoe. One other Caxton, a fragment of his second edition of the "Golden Legende" (1483), is included in this sale. There are five books from the press of Wynken de Worde: "A Contemplacyon or medytacyon of the shedynge of the blood of our lorde Jhesu Chryste at seven tymes" (about 1500), apparently the only copy known; "The Chirche of the Evyll Men and Women, whereof Lucyfer is the heed and the members is all the players dyssolute and synners reproved" (1511), one of three known copies; "The booke of good maners" (1507), having three preliminary leaves not in any of the other described copies; "The Golden Legend" (1527), the text of Caxton's translation; and a school grammar, "Promptuarium parvulorum clericorum" (1516).

Among English books of the eighteenth century, the collection of first editions of Dryden's books is most remarkable. Among other rarities may be noted "A Poem upon the Death of His Late Highness, Oliver," and the same in "Three Poems" (both 1659); "To his Sacred Majesty, a Panegyrick on his Coronation" (1661); "The Conquest of Granada" (1672); "Absalom and Achitophel," both parts (1681-82); "Henry Purcell" (1696), and "Alexander's Feast," better known as the "Ode on St. Cecilia's Day" (1697).

The first editions of Goldsmith include "The Deserted Village" (1770), on large and thick paper, a form virtually unknown to collectors and bibliographers, though there was a copy in the Rowfant Library, and another, uncut, in a private library in London. The owner of the latter has accompanying it an uncut copy of the ordinary issue. With the two side by side all doubt as to their being two distinct forms is dispelled. Goldsmith's "Poems and Plays" (Dublin, 1777) is also on large and thick paper, and Anderson's cataloguer surmises that it is "probably unique." There are, however, at least two other copies in America (in the Morgan and Chew collections), which, as the title-pages of the two differ, were described in this column some three years ago.

The first edition of Pope's "Dunciad" (1728), an uncut copy of which brought $1,800 in the second Hoe sale; and the first edition of Prior's "Poems" (1707), a copy of which brought $350 in the preceding sale, are two rare books which Mr. Hoe owned in duplicate.

While the Hoe library is not especially rich in first editions of modern authors, this third part includes a long series of Scott and Marryatt and desirable items by Thackeray, Swinburne, Ainsworth, and others.

After the two Columbus Letters, Plannck's second edition (Rome, 1493), and the Verardus-Columbus (Basle, 1494), the most valuable early American items in this part

are two Mexican imprints. Richel's "Compendio breve que tracta d' la manera de como se han de hazer las processiones," printed in Mexico by Juan Cromberger in 1544, is the Andrade-Brinley copy, and just about the earliest American-printed book which any collector may expect to be able to procure. Vasco de Puga's "Provisiones Cedulas, Instruciones de su Majestad," printed in Mexico in 1563, is notable as being the first volume of laws printed in America, and one of the earliest American-printed books not theological in character. This also is a duplicate, Mr. Hoe's other copy having brought $610 in the preceding sale. But a later book, a compilation printed in Amsterdam in 1651 with the title "Beschryvinghe van Virginia, Nieu Nederlandt, Nieuw Engelandt," etc., may, on account of a little copper-plate engraving on page 21, be expected to bring a higher price even than the Columbus Letter of 1493. This little copper-plate bears the legend "t'Fort nieuw Amsterdam op de Manhatans," and is the earliest engraved view of the city of New York.

The books in special or *provenance* bindings include three specimens from the library of Jean Groller; Castiglione's "Libro del Cortigiano" (1528), Cicero's "Epistolæ familiares" (Aldus, 1522), and Albertus Krantz's "Wandalia" (1519). There are also books bearing the arms of Colbert, Cardinal Fleury, Count Hoym, Louis XIV, Louis XV, Louis XVI, Louis XVIII, Marie Antoinette, Madame du Barry, Madame de Pompadour, the Duchesse de Montpensier, and other notables. At the end of the Catalogue is an index of the books with Armorial bindings.

The French books include long series of the first editions of the works of François Coppée, Alphonse Daudet, Alfred de Musset, Georges Ohnet, and other modern writers, as well as eighteenth century illustrated books, a first collected edition of Molière (1666), and other rarities.

A remarkable collection of books and leaflets from the Lee-Priory Press, a series of late Eighteenth Century Jest Books, a Kelmscott Press Chaucer, bound by the Doves Bindery, and a number of Grolier Club publications, the "Life of Dante" being on vellum, are other features of this portion of the Hoe library.

Correspondence

APPEAL AND THE REFERENDUM.

To the Editor of The Nation:

Sir: In Col. Roosevelt's novel proposal, in his Columbus speech, of a popular referendum on judicial decisions, he entirely overlooks one important detail in our present judicial procedure, which, moreover, has not been commented on in any discussion of the matter which has come to my attention. His proposal relates entirely to decisions of the highest State courts of appeals, and is based upon the considerable number of decisions by these tribunals in which State statutes of a beneficent character have been nullified because in conflict with the Federal Constitution. It is true that he refers to the income tax decision, and that which declared the Federal Employers' Liability law unconstitutional, as instances where the Supreme Court of the United States has failed to reflect the public will. But his chief grievance is certainly with the State courts. In his Carnegie Hall address he says: "I am not proposing anything in connection with the Supreme Court of the United States or with the Federal Constitution." He even admits that a case reversed by such a popular vote might be carried to the Federal Supreme Court, where, presumably, the decision of the State court might be sustained and the referendum overruled.

Now the Supreme Court of the United States takes a much broader view of constitutional questions than many of the State courts, as the Colonel himself shows in discussing the Ives case. The constitutionality of a statute, similar to the New York Employers' Liability law, enacted by another State, was affirmed by the Federal Supreme Court. The reason why this statute could be passed upon by the highest court in the land, and the New York law could not be tested in the Federal courts, lies in the special provision of the judiciary act of Congress which governs the whole matter of appeals to the Federal courts from State courts. It is this detail of the Federal statute which has been overlooked in the current discussion. The law provides that appeals from State courts to the Federal courts shall only lie when the decision of the highest State court has been against the party in the case claiming a right under the Federal Constitution, statutes, or treaties. When the State court pronounces against the State statute in the case, declaring it invalid as conflicting with the Federal Constitution, statutes, or treaties, no appeal can be carried to the Federal court. The reason for this provision must be clear to any one. Congress presumed that if a State court declared a statute of its own State unconstitutional there would be no object gained in allowing the question to be carried before the Federal Supreme Court, since the latter could only be expected to affirm the decision. When, however, the decision went the other way the necessity of maintaining the supremacy of the Federal Constitution and law would be involved, and the Supreme Court of the United States must make the ultimate decision. In the case which Col. Roosevelt cites, where the Federal Supreme Court upheld the constitutionality of a State Employers' Liability act, the decision of the State court was evidently in favor of the act. In the Ives case the New York Court of Appeals took the opposite view and forestalled the possibility of an appeal to the Supreme Court of the United States and a decision on the question by that body.

The remedy in the matter appears to the writer to be a very simple one. An amendment to the Federal statute permitting appeals in *all* cases, where the question of the validity of a State statute is denied on grounds of its conflicting with the Federal Constitution, statutes, or treaties, would assure a final decision by the Supreme Court of the United States, and go far towards alleviating the difficulty of which the Colonel complains. Since he admits that the Supreme Court must have the power of ultimate decision on appeal from the popular referendum, which in effect is nothing but an intermediate instance between the highest State court and the Federal judiciary, why not make the appeal lie directly from the State court to the United States court in all cases? What possible purpose would it serve to introduce an intermediate instance, in the form of a popular referendum on State court decisions, if an appeal therefrom could in any case be taken to the Federal Supreme Court?

Walter James Shepard.

University of Missouri, March 26.

A ROMAN STRIKE.

To the Editor of The Nation:

Sir: As the public mind is now much occupied with the subject of strikes, perhaps a brief account of a notable strike that occurred in Rome in the year 309 A. C. may not be without interest.

The pipers in ancient Rome were originally a small company whose duties were to furnish solemn music at the public sacrifices and at funerals. In virtue of their quasi-religious character they dined at the public expense in the temple of Jupiter. But, in process of time, and with the growth of luxury, it became the fashion to engage their services for private entertainments. With this increasing demand their numbers greatly increased, and they began to be looked upon as mere hired musicians; so in the year mentioned the censors deprived them of their daily dinner in the temple. The touchy artists took this in high dudgeon, and to a man picked up their pipes and marched out of Rome to Tibur (now Tivoli).

The Romans were struck with consternation at this unlooked-for *coup;* not for the loss of the music, but because no sacrifice could be offered without the proper devotional tootings; and without sacrifices no campaign could be begun, no army march, no consuls be inaugurated—in a word, all public, and much private, business would be at a standstill.

The Senate, recognizing the gravity of the situation, dispatched envoys to the Tiburtines, entreating them to send the pipers back. The Tiburtines were willing to do what they could, and, assembling the strikers in the *curia,* besought them to return. The pipers said that there was nothing to arbitrate; if their temple dinners were restored they would go back; on no other condition would they budge. The Tiburtines, a superstitious generation, did not dare to use force with men who, whatever their failings, had a sort of semi-sacred character.

A council was called to discuss the matter. In the discussion one citizen remarked that pipers were notorious wine bibbers (*vini avidum genus*), and that in that weakness might lie the solution of the difficulty. The council caught the idea, and proceeded to act upon it. On the next holiday all the wealthy citizens gave *musicales,* at which they supplied the musicians with wine so liberally that they lost consciousness of sublunary things; upon which the Tiburtines loaded them on wagons, drove them that night to Rome, and left them, still fast asleep, in the Forum.

Great was the joy of the Romans the next morning to find their pipers back. They besought them never to leave them again, restored the temple dinners, and gave them and their successors for all time to come, the privilege of celebrating their victory by marching in solemn procession through Rome, every year, on the Ides of June, piping triumphantly. And this festive cel-

ebration continued, certainly for three hundred years, and possibly for six hundred.

Baltimore, March 27.

A QUESTION OF TRANSLATION.

To the Editor of The Nation:

Sir: In a notice of my translation of Sudermann's "Indian Lily" (*Nation*, March 7), your reviewer starts out, quite obviously, with an initial disapproval of my entire theory and method of translation. Instead of stating that disapproval, however, he condemns my work with a degree of absoluteness which quite misses the point at issue, and gives the reader an erroneous impression. Two of the sentences which, in his words, "are not the equivalent of the German," read as follows in the original:

(1.) . . . ersann sie einen Plan, den ersten von unzähligen, mit denen sie sich den Geliebten für's Leben zu erobern gedachte. (P. 92.)

(2.) Auch sie selber sah die Welt seit langem nur durch blaue Schleier, hörte die Stimmen der Umgebung wie aus weiter Ferne und fühlte fremde, heisse Schauer durch die erschlaffenden Glieder rinnen. (P. 99.)

These two passages are thus rendered:

(1.) . . . she thought out a plan, the first of many by which she meant to rivet her beloved for life. (P. 95.)

(2.) She herself saw the world through a blue veil, heard the voices of life across an immeasurable distance, and felt hot, alien shivers run through her enervated limbs. (P. 102.)

The only point of view from which these translations can be said not to be "the equivalent of the German" is one that regards translation as a task to be performed in the light of a grammar and a lexicon. The values of literature, however, are connotative, and its medium is one of symbols. I hold the rhythm of a given paragraph to be no less a part of the full expressiveness of serious writing than the exact sense of a single vocable. Your reviewer asserts that I show myself "unaware of the meaning of words." But I am thoroughly aware of the fact, for instance, that "zu erobern" means "to conquer." And thus I would ask students in my elementary classes to render it. I wrote deliberately "to rivet," and I am still convinced that that verb, and that alone, carries the full meaning inherent in the German context. Similarly, I have translated "aus weiter Ferne" by "immeasurable distance," not because I am ignorant of the meaning of *weit*, but because the rich emotional value of the original phrase seems to me more adequately transferred by the word I chose. In brief, then, I protest against your reviewer's saying, virtually: "This is a poor translation"; instead of saying: "This may be a very good translation, but I disapprove *in toto* of the method employed." Ludwig Lewisohn.

Columbus, O., March 24.

[My remark, "unaware of the meaning of words," was intended to apply, and seems to me unmistakably to apply, to English words; and I am of the opinion that "rivet" as a translation of "erobern" and "across an immeasurable distance" as a translation of "wie aus weiter Ferne" are false. "Rivet" may have in American slang some "connotative" value with which I am not acquainted; I should still maintain, however, that "subjugate" carries at least as well "the full meaning inherent in the German context."—The Reviewer.]

A PARALLEL FROM TROLLOPE.

To the Editor of The Nation:

Sir: Among the aspiring politicians and ambitious clergymen whom Trollope drew so conscientiously in his leisurely Chronicles, Mr. Supplehouse, in "Framley Parsonage," does not play a tremendous part, but his conception of himself and his mission makes him a striking prototype of a far cleverer, more conspicuous political character of to-day. Mr. Supplehouse was "extolled by a portion of the metropolitan daily press as the only man who could save the country," and went about mightily "swinging his tomahawk"; and the author asks: "How can a man born to save a nation and to lead a people be content to fill the chair of an under-secretary?" Again, "'Let us throw in our shells,' says Mr. Supplehouse, mindful as Juno of his despised charms. And when Mr. Supplehouse declares himself an enemy, men know how much it means. They know that that much-belabored Head of Affairs must succumb to the terrible blows which are now in store for him."

But it is Mr. Supplehouse's mental processes that interest and baffle us most. They should be of curious value for the psychologist who would write an Introduction to the Theory of Political Motive:

> Was he not the man to save the nation; and, if so, why should he not pick up the fruit himself? . . . What though the country at the present moment needed no more saving; might there not, nevertheless, be a good time coming? Were there not rumors of other wars still prevalent? . . .
>
> The public mind was now awake, and understood what it was about. When a man gets into his head an idea that the public voice calls for him, it is astonishing how great becomes his trust in the wisdom of the public. *Vox Populi vox Dei.* "Has it not been so always?" he says to himself, as he gets up and as he goes to bed.

A "WHITE COURSE."

To the Editor of The Nation:

Sir: The college yell characteristic of American institutions of higher learning has, with some degree of plausibility, been explained as a custom adopted from the savages who, before us, inhabited this country. With perhaps an equal plausibility a common undergraduate conception may be correlated to an ideal similar in its origin. Westermarck, in his "Origin and Development of the Moral Ideas" (Vol. I, p. 380), quotes from Adair's "History of the American Indians" to the following effect:

> In almost every Indian nation there are several peaceable towns, which are called "old beloved," "ancient," "holy," or "white" towns; they seem to have been formerly "towns of refuge," for it is not in the memory of their oldest people that ever human blood was shed in them; although they often force persons from thence, and put them to death elsewhere.

It was a source of some perplexity to me during my university days why a given professor or his courses should be thought "white." If there be any probability in the above conjecture might it not be said that a "white course" is really a modern version of the "town of refuge," and a "white professor" one who in the memory of the oldest undergraduate has never been known to shed human blood?

Guilmensian.

Williamstown, Mass., March 28.

DR. BOLTON AND THE MEXICAN ARCHIVES.

To the Editor of The Nation:

Sir: In a recent book, "California Under Spain and Mexico," I state that Dr. Herbert E. Bolton of the University of California, in cataloguing the Mexican archives for the Carnegie Institution of Washington, found it necessary to create his own system of reference. This statement, Dr. Bolton informs me, is too broad, as the archives are not without a system, and what he did was in the main to separate the many volumes of vice-regal correspondence into appropriate series.

The results achieved by Dr. Bolton are to be published by the Carnegie Institution itself, but it may be permitted me here to observe that his task, as he generously consented to regard it, involved the preparation and utilization of a special catalogue of some three thousand cards relating to Alta California. To this special work Dr. Bolton contributed largely of his time and scholarship, and its importance to "California Under Spain and Mexico" (be the execution of the latter what it may) was fundamental. Irving B. Richman.

Literature

A POLITICIAN OF THE EIGHTEENTH CENTURY.

Henry Fox, First Lord Holland: A Study of the Career of an Eighteenth Century Politician. By Thad W. Riker, M.A., B.Litt. Oxon. 2 vols. New York: Henry Frowde. $6.75 net.

In an illuminating letter to Henry Pelham, August 25, 1743, Robert Walpole wrote: "Fox you cannot do without." The remark remained the customary estimate of the man by successive ministry-makers from that time till 1765, when Henry Fox finally laid aside public office. Whenever the difficulties in the way of forming Ministries seemed almost insurmountable, leaders like the Duke of Newcastle and the Earl of Bute turned in despair to Fox, the one man capable of forming combinations and sufficiently clever and unscrupulous to create majorities in Parliament. This chameleon-hued politician and typical eighteenth-century public man has waited long for his biographer. A sufficient explanation of the delay may be that his fatherhood of Charles James Fox transcends in importance his other services to his country; but it may be also that no biographer has had the hardihood to attempt the chron-

icling and explanation of his many political tergiversations.

Considering the importance of the political life of the man, our sources of information are very meagre indeed. Only a few of his letters, published in various works, have been preserved, so that our view of his activities is presented to us for the most part by such men as Horace Walpole, the Duke of Newcastle, and others who were at times Fox's bitterest political enemies. Mr. Riker has used all available material with praiseworthy industry, and his statement of facts rests on a sound basis. Occasionally there appears to have been given too great weight to the gossip of Budd Dodington and too little attention to such illuminating letters as those of Lord Lyttleton to his brother, the Governor. The information which the author has found in the manuscripts of the Duke of Newcastle furnishes only another example of the importance and wealth of that mass of material which is left still unpublished in the British Museum.

There were two periods in Fox's life when he played the title rôle in British politics; and Mr. Riker, who has limited himself to depicting the politician, has justly given these two periods the greatest prominence. The first and more important begins just before the outbreak of the Seven Years' War and lasts until the formation of the Pitt-Newcastle Ministry in 1757. The second period is much shorter, embracing the few months of the autumn and winter of 1762-63, when the treaty of peace was ratified.

Of the 772 pages of the biography, 440 are devoted to the story of the years 1754 to 1757. The reader feels that the author has made himself a master of the events of this short period, and that his real contribution to the history of the political life of Great Britain depends on the correctness of his interpretation of them. What precedes is but introductory matter and the pages which follow have been added to round out the biography, but do not reveal the results of the same careful, even painstaking, study. For this reason, it might have been better had Mr. Riker not attempted so ambitious a work as the political life of Fox, but had limited himself to what is undoubtedly the main subject of his two volumes, the history of British politics in the first years of the Seven Years' War.

The period which the author has fully depicted was worthy of monographic study. It begins with the death of Henry Pelham, an event which marks the beginning of the end of the old régime. The Whig party had been firmly established in power for almost a generation, and the Tory party was virtually annihilated through its suspected leaning towards Jacobitism, so that a rivalry between the two former antagonists was no longer possible. To the Whigs belonged exclusively the pleasure of directing the government and the enjoyment of fat sinecures. Early in his political career, Henry Fox, who was by family descent and traditions a Tory, attached himself to the ruling class and swore his allegiance to Robert Walpole, the chief architect of the "Venetian party," as Disraeli loved to call the small clique of politicians, principally noblemen, who disposed of the spoils of office and rough-hewed the destinies of their heelers and opponents. The long continuance in power of the Whigs without the possibility of rivalry was bringing, by 1754, its own nemesis. The party was broken into factions whose *raison d'être* was the enjoyment of the "flesh-pot" of officeholding. The political chaos caused by the rivalry of these factions reached its climax in the years from 1754 to 1770. The few years of the ascendency of Henry Fox in the politics of Great Britain synchronizes with the opening of this period, and his career is identified with the breaking of the domination of the Whig machine.

In the year 1754 there were five main factions, with several sub-divisions developing rapidly into rival factions. Henry Fox was a member of that group which surrounded the Duke of Cumberland, the favorite son of George II. With him were associated the Dukes of Devonshire and Bedford, with their many dependents. The faction represented the former circle of Robert Walpole's friends and still nursed an enmity towards those who had intrigued to overthrow that leader. Their most formidable rivals and the ones in actual possession of the power which belonged to the Government were led by that fussy dispenser of patronage and capable politician of the lowest order, the Duke of Newcastle, upon whose word hung the destinies of most of the placemen and sinecurists. Henry Fox knew the value of political power and had been careful, in spite of the wishes of his associates, not to alienate completely this maker of fortunes, so that of the Cumberlandites, he was the least objectionable in the eyes of Newcastle and the one whom that nobleman always knew he could use.

In a third camp, but not always cordially united, were two more factions, the Pittites and the heelers of Leicester House. The Pittites were neither numerous nor powerful, but in their leader, William Pitt, they had a great asset. For the most part they were *homines novi*, who had not yet succeeded in breaking into the inner circle of the "Venetian party." Opportunity and capacity were soon to raise the "brotherhood" to the crest of the machine politics. The Leicester House faction was composed of the bodyguard of Prince George, the future George III, and his mother, the Princess Dowager. They were for the most part Whigs who, discontented with the rule of the Pelhams and anticipating the change of monarchs, preferred to trust their fate to the future reign. Among them the Earl of Bute appeared as the dispenser of favors, and he was ready at all times to unite with the willing Pittites for the overthrow of the Old Whig dynasty.

Mr. Riker frequently confuses in his narrative—a confusion that is common in the best histories of the period—the Leicester House faction with the Tories. The Tories could no longer be called a party, for they had ceased to exercise any real power in politics, and were like the other factions, a group of men acting together in the hope of picking up some of the political crumbs. Although all the factions courted them, they were most favorable to the Pittites and Leicester House, and, as a matter of fact, their recall, to a moderate political influence, was due to the action of the former.

The pages devoted by Mr. Riker to this most important period of Fox's life contain a complete chronicle of the various intrigues, conferences, and compromises of the five factions. From the literary point of view, the story is too crowded with names and incidents, and the attention of the reader becomes fatigued. In twenty-one lines on one page may be counted eleven names of men and four offices whose occupants one is expected to know. Yet such a surfeit of names only reproduces the picture of British politics in the eighteenth century, with its constant shifting of individuals, continual shuffling of places, and repetition of intrigues.

After the death of Henry Pelham, the Duke of Newcastle found himself in an anomalous and difficult position. The dominance of the Whigs for a generation had shifted the weight of influence from the House of Lords to the Commons, where had ruled successively the capable Robert Walpole and Henry Pelham. These men had built up the political machinery by the control of borough representation, places, sinecures, pensions, and bribery, until the Ministry always had a majority at its beck and call; but now the Duke had no trustworthy lieutenant in the lower house to whom might be confided the duty of buying majorities. He must, therefore, look outside for the leader. Pitt being by nature incapable of this charge, the Duke naturally turned his eyes towards Henry Fox, whose former loyal support of his brother seemed to presage a hope of continued support in spite of his adherence to the Duke of Cumberland. Fox was ready enough to accept the offer of the management of the House of Commons, provided he was made a partner in the distribution of the corruption fund. To this the Duke gave his consent at first; but, becoming

fearful of the result of thus entrusting a member of another faction with the secrets and power of management, he denied his own words. Fox pointed out that, "if he were to have the absolute direction of the House of Commons, he must know who had been 'gratified' and who had not; for how otherwise could he speak to the members without appearing ridiculous?" Still the Duke was obdurate, and Fox withdrew his consent; and, although continuing as Secretary at War, he joined Pitt in opposition.

The opportunity to break the dictatorial power of the Duke of Newcastle was shortly offered. The policy of war which the Opposition advocated was similar to that upon which Robert Walpole had been broken. The colony of Virginia was suffering opposition from the French in her attempt to extend her colonial settlements west of the Alleghanies. Col. Washington was actually attacked and forced to surrender. The Ministry was in favor of compromising with France; the Opposition naturally supported a war policy. The factions of Cumberland, Leicester House, and the Pittites united and forced a reluctant Ministry to send British troops under Gen. Braddock, a protégé of Cumberland's, to the Ohio Valley. Mr. Riker is probably correct in his belief that Fox had no real colonial policy, but that his interest was due to his opposition to Newcastle and his desire to further "his patron's martial policy." Fox's action was not without political result. "If the mutual discontent in the spring and summer of 1754 had paved the way for a Fox-Pitt alliance, the perfect agreement of the two in a strenuous military policy was quite sufficient to consummate it."

The overt act of war added to the fears of the well-scared Duke of Newcastle. He must seek a real alliance. Should it be Fox or Pitt? Owing to the dislike of the King for the latter, the former was preferred, and there began again a series of conferences, of which Mr. Riker gives us a complete record. These ended in Fox retaining his office of Secretary at War and being brought into the Cabinet council with "no separate power or confidence outside the Ministers." Although the position was similar to what he had so recently refused and did not place in his hands the corruption fund, still it was the result of negotiations which were conducted in a manner in every way honorable to Fox. Mr. Riker, believing that Fox in thus leaving Pitt prepared for himself his later loss of prestige, writes:

> Fox knew the innate rottenness of the machine of which he submitted to become a wheel. He knew also the vigor and independence of the man with whom he had been connected. Between these two he chose the former, and in that act lay the greatest political blunder in his career.

The victory seemed to rest with the faction of Cumberland, whose weight in the Cabinet was greatly increased by the accession of Fox, and their war policy became that of the Ministry; but the two principal factions could not agree on the manner of conducting operations. Cumberland preferred a sea-war; Newcastle, favoring the King's European possessions, promoted the policy of subsidizing German princes. The issue was critical and caused more intrigue, in which Leicester House played the title rôle. The Cumberlands were enticed to throw their weight against Newcastle, for his complete upset seemed possible.

In this moment of danger the Duke of Newcastle and Henry Fox followed courses that were natural to their characters. After vainly wooing Pitt and Leicester House, the Duke determined to undermine the Cumberlands by more completely winning Fox to his support. This was easy of accomplishment, for Fox was not a man to allow political alliances to interfere with his own promotion. He entered, therefore, into the ranks of the Newcastleites and became Secretary of State, bringing with him to his new alliance many of his former friends. This addition to the Ministerials was the more necessary since the failure of the conduct of the war was evident from the defeat of Gen. Braddock on the banks of the Ohio.

Fox's decision marks the crisis of his career. He had raised himself to a place of authority by the annihilation of the Cumberland faction. Through great military success alone could he justify his defection and maintain his position. Unfortunately for him, his gifts of organization were not such as could make him a great war Minister. There was need of a higher *morale* than he possessed. In a time of peace his political doctrine would have been effective, but he could not lead a nation intoxicated with the spirit of war. His philosophy was about this time thus cynically expressed: "Pitt . . . is a much better speaker than I am, but tickling the palm, not the ear, is the business now, and he that can do the first is the best orator, let him speak ever so ill." It was by "tickling the palm" that Fox carried the Newcastle Ministry successfully through the Parliament of 1755-56.

It was not the events of the war that were to break down the new coalition. The Whig political machine was rushing to its destruction under the leadership of the Duke of Newcastle and Henry Fox. The suspicious nature and autocratic character of the former could not endure such a powerful rival as Fox; and, from the moment that the latter entered upon his new office, Newcastle and his friend, Lord Hardwicke, were determined to break the new Secretary of State. Fox must either learn to be a subordinate in the camp of the Newcastleites or else his political career must be ruined. The resolution was suicidal, in view of the increasing power of Leicester House and the closer union of that faction with the Pittites; yet the Duke of Newcastle persisted in his policy until in desperation Fox determined to pull down the Ministry in his own ruin. His resignation accomplished this. With that event ended the long unlimited rule of the Whig machine. With the death of Fox's political career—for what was left for him after he had betrayed his former friends and ruined his new allies?—there was shattered that dominance in politics which had lasted since 1714.

In the kaleidoscopic intrigues, following the downfall of the Ministry, when the alliance of the Pittites and Leicester House was triumphant, Fox's one purpose was to insure for himself the rich office of paymaster. Wealth was his one hope; perhaps it had always been. The same forces which raised Pitt to that leadership which made him one of England's greatest ministers, placed Fox in that coveted and secure sinecure. The political buccaneer had his hands on the money bags.

Mr. Riker has given us in his Life of Fox a faithful chronicle of these few years. The remaining chapters of his volumes rehearse in time-worn fashion the history of the last years of George II and the opening years of his grandson, but add nothing to our knowledge of the era. The style of the work is monotonous and rather amateurish; but, on the whole, historians will find it of the greatest value as a *vade mecum* through the chaos of political intrigue which followed the death of Henry Pelham.

The last chapter of the biography is an attempt to depict the man Henry Fox. The author finds him a typical eighteenth-century politician, holding, like so many of his contemporaries, a cynical view of life. He might have gone further and said he was the typical political manager of all time. His methods and ideals are the same as those of his prototypes in Greece and Rome, as well as those of a modern chief of Tammany Hall. Fox is like these and, although the reviewer is not ready with Mr. Riker to call him "the greatest political manager his country has ever known," still Fox certainly must be placed within the first rank.

CURRENT FICTION.

Dorinda's Birthday: A Cornish Idyll. By Charles Lee. New York: E. P. Dutton & Co.

Dorinda is only a pretty, shallow, nut-brown Cornish maid. But she has a seventeenth birthday, and it falls on Midsummer Day, and that, for the folk of Nanheviock Valley, was "St. Hender Feast Day, with sports and games in the glebe-meadow and a bell-ringing con-

test in the church tower." To the feast goes Dorinda with her neighbors of Sunny Corner, a group of three cottages with a human population of nine. The short day's many adventures constitute the book. At three Dorinda's father calls to her to come downstairs from her prinking and be ready for the start. And all is ended when they return and the two grandfather clocks have made up "their totalish old minds for half-past nine." But what riches may not be packed into the story of six and a half hours when there are visiting and bell-ringing and feasting and quarrelling and snake-walking and flouting and courting to be done? Chief of all the riches is the deliciously Cornish tone of actors and play. One must not complain if in the necessity for filling two hundred and seventy-odd pages, the story sags at moments into disquisitions of a humorously amiable sort. Thus there is leisure for a little essay on simples as we walk through the garden of old Ann Coad, the "harby-woman"; for sentiments on Cornish merrymakers, reflections on story-telling, minute confidings in the reader on a score of topics, some breathing a suggestion of padding, others pure nourishment, as when we read that "it is a noteworthy, and to householders a suspicious, fact that the world is full of retired butchers." When at dewy eve we return to Sunny Corner we have learned many things of Cornish customs and made several likable, eccentric, and unforgettable acquaintances.

Chantemerle. By D. K. Broster and C. W. Taylor. New York: Brentano's.

O, Romance, Romance, how many long stories of the French Revolution have been perpetrated in thy name! In this instance we are at least spared Paris during the Terror—a mercy for which past experience impels us to render devout thanks. The scene shifts just in the nick of time: Louis-Adrien-Marie-Hyacinthe de Chantemerle, Vicomte de Saint-Ermay, is indeed incarcerated in La Force, but provincial cousin Gilbert-Octavien-Felix-Anne de Chantemerle, Comte de Château-Foix, is opportunely on hand to extricate him and conduct him home to Château Chantemerle. Lucienne d'Aucourt, having once seen the mob in the Tuileries, is promptly dispatched by her royal mistress to safety in England. So that the hazards of country travel for ill-disguised aristocrats, and the Royalist uprising in the Vendée furnish the historical framework. Private motives are provided by a conflict of affection and jealousy between the two cousins, Gilbert being the betrothed and Louis the beloved of Lucienne. Of the sterling qualities of the sternly conscientious Gilbert and the darling charms of the exquisitely gallant Louis, space forbids us to tell.

The interest of the tale by no means compensates for its length. Instead of being torn with apprehension and sympathy, one finds one's self picking holes in the historical atmosphere—wondering, for instance, whether country taverns provided toothpicks with repasts as early as the eighteenth century, and what the modern "tip" might have been in the parlance of Marie Antoinette's court.

The Man with the Black Feather. By Gaston Leroux. Boston: Small, Maynard & Co.

This is a shilling shocker from the hands of the man who wrote that excellent tale, "The Mystery of the Yellow Room." There is comparatively little mystery here, but sensation enough to satisfy the least fastidious taste. Many of our readers, for instance, have read in history of the amiable Renaissance practice of cutting off a man's ears. But how many modern readers have actually seen the thing done? It is done in M. Leroux's book, and with a wealth of detail that is quite fatal to one's appetite for supper. The main idea of the story is simple enough. The soul of Cartouche, a brigand who attained notoriety under the Regency in France, and a man of a hundred murders, finds reincarnation in the body of M. Theophrastus Longuet, retired manufacturer of rubber stamps, resident in the suburbs of Paris. M. Longuet, impelled by this metaphysical motive power within him, casts aside his green umbrella at regular intervals to reproduce under modern conditions the career of eighteenth-century Cartouche. Now and then the thoroughly consistent way in which the scheme is worked out produces its effect. But the author was evidently hard put to it to spin out a volume of atrocities, and so pads out his story with a rather silly and tedious chapter of mesmeric wonder-working, a journey in the catacombs of Paris, and a bit of detective ratiocination quite in the vein of "The Mystery of the Yellow Room."

THE INFLUENCE OF GREEK ROMANCE.

The Greek Romances in Elizabethan Prose Fiction. By Samuel Lee Wolff. New York: The Columbia University Press; Lemcke & Buechner. $2 net.

For his purposes, Mr. Wolff takes into account only the three best-known of the Greek romances—"The Æthiopica," or "Theagenes and Clariclea," by Heliodorus; "Clitophon and Leucippe," by Achilles Tatius, and "Daphnis and Chloe," attributed to Longus. These are the sole members of the extant group which "are found to have exercised any influence upon Elizabethan prose fiction." In a preliminary chapter, the Alexandrian spirit out of which the romances grew is admirably set forth. Its fondness for a series of small, loosely connected pictures—which spelled the death of the epic; for ornateness, smartness of phrase, and elaborate experiments in unrooted sentiment; its reliance upon lawless Fortune to serve as a main actuating force, are all marks of decadence which, when carried to extreme, as they were in the Greek romances, kept the reader suspended in an atmosphere far removed from real life. Delight in prettiness, surprises, and ingenious articulation of details replaced the older love of form and of consistently human motives. Yet in spite of their artificiality, these stories greatly outlived their own day. In the Renaissance, the three above mentioned went through numerous editions in several languages, and before the close of the sixteenth century were accessible in English, the first two in translations, the third in a paraphrase.

Their total influence upon the Renaissance must have been enormous, though it is far too complex to reduce to a definite statement. For some of their traits were shared by other ancient literary types, and by these, too, were passed on to later epochs. So the spirit of Alexandrian lyrics, which, like the romances, made much of elaborate decoration and sentimental introspection, got into the blood of the Renaissance lyric and combined with, if it did not partially produce, Petrarchism. In turn, Petrarchism subtly insinuated itself into nearly every form, whether poetry or prose, which was then practiced. And, *vice versa*, it is not at all improbable that certain poetic details or attitudes in the Greek romances frequently inspired similar features in the European lyric. To distinguish one of these two ancient influences in every case from the other would require omniscience. Mr. Wolff wisely limits his investigation to the English prose fiction of Elizabeth's reign, and in general ascribes indebtedness only when it can be well-nigh demonstrated. By means of excellent summaries, which he manipulates skilfully, he concludes that Sidney and Greene borrowed freely from the earlier romances; Lodge slightly; and that the central idea and method of Lyly's "Euphues" almost certainly came ultimately from them. With this positive side of his argument, most readers will agree. But his certainty that "Nash makes no use whatever of the Greek romances" is not convincing, even though it cannot be definitely controverted. Nash's fondness for gorgeous scenes, such as that of the notable Italian garden described in "Jack Wilton," and his love of quickly shifting incident, might have been fostered by Heliodorus as well as by previous picaresque literature. This is a small point, however, and only goes to show that Mr. Wolff, if anything, understates his case.

The most significant portion of the book has to do with the origins of the "Arcadia." The writer demonstrates what any one familiar with Sidney's rare union of sensitive response to contemporary tendencies and of ability to assert his own personality, might readily have suspected. More than any one else, he caught the spirit of the Greek romance, and almost domesticated it in England. Incident after incident he takes over bodily from Heliodorus and Achilles Tatius; others he fashioned completely in their manner, and in every case worked his details as nicely as they into a big framework. The framework, especially, illustrates how unslavishly he borrowed. Whereas the Greeks made much use of Fortune, their equivalent for the will of the gods, Sidney almost emancipated himself from it, while appreciating its artistic purpose. To give a similar impression of a huge presiding motive, he turned to the Renaissance conception, *virtù*, which in his day, was held to be Fortune's antithesis. At one place, Ceeropia explains: "to that passe had my husband's *vertue* (by my good helpe) within short time brought it with a plot we laide." If worked out, *virtù* would, of course, have turned the "Arcadia" into a novel of character. But Sidney kept the emphasis strongly upon incident, which from time to time we see is controlled by the other element, the *virtù*, the valiancy of individuals. One's destiny is thus made largely dependent upon one's inner nature, which in turn is projected. This method did not remove the opportunity, so beloved of the Greek romancers, for *oxymora* of situation and phrasing. The surprises and contrasts with which the older Fortune confronted human beings could still be furnished by opposing the preliminary conditions surrounding a person to those foreshadowed by his abiding aspirations.

A new light has been thrown upon Sidney's skill by Mr. Wolff's study of the old "Arcadia," or first version, three manuscript copies of which Bertram Dobell discovered in 1907. To the old "Areadia," which is in five books, Sidney made many additions, some of them so complex as to amount to a large reeasting of material. He inereased and expanded the princes' adventures, "and he added *in toto* the episodes of Argalus and Parthenia, Amphialus and Helen, Phalautus and Artesia, Pamphilus and Dido, the Paphlagonica or Galatiea, and Ceeropia or the Captivity." Besides, he compounded one character of two earlier ones. From the Eelogues accompanying the old "Arcadia," he took the episodes and the previous history of the prinees, and inserted them in the body of the new work, etc., etc. The original version was drawn largely from Heliodorus, but it was not until he reeast it that Sidney quite mastered the Greek's methods. It is significant that in the revision not a thread was dropped.

The influence of the ancient romances upon Greene was far greater than upon Sidney, in the sense that he lacked the latter's capacity to assimilate. This influence, as Mr. Wolff observes:

> . . . begins with merc transcripts from Achilles Tatius in "Arbosto" (1584), "Morando" (1587;? 1584), and "Carde of Fancie" (1587; ? 1584)—a stage of immaturity and superficiality, which, in the main, borrows non-structural ornament. "Philomela," which seems to fall in immediately after this group, shows Greene taking less from Achilles Tatius (only the trial at tho end), and more from Hcliodorus, chiefly by way of incident—not yet by way of structure. The influence of the Greek Romances reaches its height in "Pandosto" (1588), which takes a little from Achilles Tatius, but now gets structure as well as matter from the solid Heliodorus, together with incident and ornament from the decorative Longus. The influence degenerates at once in "Menaphon" (1589), which, though structurally based upon Heliodorus, is a tissue of absurdities. . . . Almost ceasing in the realistic pamphlets of Greene's last year, the influence . . . flickers up . . . in "Groatsworth" (1592) . . . in the form of a suggestion from Achilles Tatius.

Mr. Wolff suggests that Greene's fondness for feminine characters, which shows to advantage in his dramas, too, was largely inspired by Heliodorus. Finally, it should be noted of Greene that, in good ancient fashion, he installed Fortune as the mistress of his plots. Lodge's prose fiction, on the contrary, is found to be "mediæval, euphuistic, and Italianate, rather than Hellenistic," the influence of the Greek romances upon him amounting to a little more than occasional allusions to them.

If Elizabethan prose fiction had led to the founding of the modern English novel, the importance of Mr. Wolff's book could scarcely be overestimated. Unfortunately, the "Arcadia" is the only Elizabethan prose romance which seems to have had any effect upon eighteenth and nineteenth century writers: in a few instances, Richardson and Scott kept it vaguely in mind. For the rest, the type became virtually a closed book shortly after the end of the sixteenth century. Mr. Wolff's investigation clears up, nevertheless, one significant matter. To students of this period, the atmosphere of even so well-executed a romance as Sidney's has appeared to be strangely remote from the spirit of the times. For hand in hand with the Elizabethan's riot of imagination, there was usually a certain balancing sense of fact. The extreme sensuousness of the "Faërie Queene" is saved from nonsense by its rational purpose, and the bombast of "Tamburlaine" does not quite conceal the play's central idea. The reason for this difference becomes clear in the light of Mr. Wolff's study. Most of the important literary types developed gradually and took on accretions from the ages immediately preceding the Elizabethan—the drama, the lyric, the poetical romance, though quickened by a return to the classics, were yet instinct with mediæval and more modern elements. But Elizabethan prose fiction—or at least its foremost representative—transplants the Alexandrian spirit modified but little by the intervening centuries.

The Philanthropic Work of Josephine Shaw Lowell. Containing a biographical sketch of her life, together with a selection of her public papers and private letters. Collected and arranged for publication by William Rhinelander Stewart, President of the New York State Board of Charities. New York: The Macmillan Co. $2 net.

Of good New England ancestry, with traditions of stern integrity and lofty morality behind her, Josephine Shaw was brought up from infancy in a Staten Island suburb of New York. She was reared in an atmosphere of culture and refinement. But she was also trained in a school of patriots, stimulated to the utmost by the struggles to set free the slaves and to maintain the integrity of the country. At the age of twenty she married Col. Charles Russell Lowell. He was killed October 18, 1864, just as he had been commissioned brigadier-general.

Stunned at first by the shock of her husband's death, it was some little time before Mrs. Lowell began to interest herself in charitable and public works. Then she joined the Freedmen's Association, especially interesting herself in the establishment of schools for the colored people in the South. In 1872 the State Charity Aid Association of the Richmond County Committee was formed, of which Mrs. Lowell shortly became a member. Near her home, at Castleton, S. I., was the Richmond County Poor House, with which she made herself familiar by frequent visits. As a result of her observations there, it was decided, on her motion, to conduct an inquiry into poor-law conditions in general, the place chosen for special investigation being the county of Westchester. The burden of this investigation fell upon Mrs. Lowell. Her report was presented at the fourth annual meeting of the State Charities Aid Association, in 1876, and, as a result of this report, Gov. Tilden, who had been present at the meeting, appointed her to a vacant seat on the State Board of Charities. With her assumption of this official position begins her larger work, to which Mr. Stewart has devoted more than four-fifths of this volume.

One is amazed at the record of work accomplished. First, the long struggle

to reform the conditions of public institutions throughout the State, and particularly those dealing with women, resulting in the establishment of State reformatories for women at Hudson, Albion, and Bedford, and of the State Custodial Asylum for Feeble-Minded Women. This, in Mr. Stewart's judgment, was her most useful achievement; her successful "labors to rescue the erring and feeble-minded of her sex." As an outcome of her investigations of the system of administering temporary or out-of-doors relief in several counties of the State she was led to feel the necessity of the organization of charitable assistance: hence the Charity Organization Society, out of which again grew the Penny Provident Fund and the lodging house and woodyard, which latter ultimately led to the municipal lodging houses.

But Mrs. Lowell's activities were not confined to what is commonly called charitable work. In 1889, after thirteen years' service on the State Board, she refused reappointment for reasons which she thus explains in a letter to a protesting friend:

> Five hundred thousand wage-earners in this city—75,000 of those working under dreadful conditions or for starvation wages. That is more vital than the 25,000 dependents, counting the children. . . . It is better to save them before they go under than to spend your life fishing them out when they're half-drowned and taking care of them afterwards.

From this time on, while she continued her interest in all charitable and beneficent work, her essential concern was with industrial, social, and political affairs, and her papers on those subjects contained in this volume are really her best.

One practical result of Mrs. Lowell's interest in industrial problems was the Consumers' League. She believed in the coöperation of women in governmental affairs. Practically this belief found expression in the organization of the Woman's Municipal League. She believed that the participation of women in the government of the city would have an educational influence upon women themselves. But she also believed that women would contribute a positive element, of great importance in governmental matters, because possessing a more sensitive moral instinct than men as a class possess. But she did not believe in any woman undertaking public or charitable work until every home duty had been discharged, and, while organizing and systematizing charity, she was at heart opposed to institutionalism, maintaining that even a poor home was preferable to a good institution.

The book does not seem to admit us into the inner circle of Mrs. Lowell's life. It shows why she was called the "City's Saint"; but one lays the book down with the impression of having learned about Mrs. Lowell rather than of having met Mrs. Lowell herself. A friend said of her family life: "I had never before been with people who talked over the affairs of city and State exactly as they would those of their own family." Is this the reason of that impression of impersonality which one receives from this volume?

The Tailed Head-Hunters of Nigeria. By Major A. J. N. Tremearne. Philadelphia: J. B. Lippincott Co. $3.50 net.

Alone in West Africa. By Mary Gaunt. New York: Chas. Scribner's Sons. $3.75 net.

These two books have this in common that they are both written by Australians, who have learned to know, at least in part, the same African tribes, and that both writers are plucky, resourceful travellers. Mrs. Gaunt's is, however, the more interesting book, not only because the author is a woman who, skirting the Gold Coast, penetrating into Ashanti, and going up the Volta River, braved hardships and dangers to which few of her sex are equal, but because she writes directly and to the point, whereas Major Tremearne is often prolix. Partly, perhaps, because of his greater learning, he conveys relatively less information about his own doings. He is not, first and foremost, a traveller, like Mrs. Gaunt, for he was much concerned, while an administrative officer in northern Nigeria, about writing two theses for the University of Cambridge, on anthropology and the study of the Hausa language. So he frequently lugs in too much scholarly lore, on extraneous subjects, as in his chapters on customs and superstitions, and courtship and marriage. Still, he conveys much valuable anthropological information.

The tone of his book is less sensational than might be inferred from the the title. The tailed head-hunters are women, who, after their marriage, adorn themselves with a mushroom-like appendage made of a palm fibre. The men, though cannibalism is not yet entirely extinct among them, are usually quite amenable to the police measures of the British and yield to their "peaceful penetration," which, confessedly, usually ends in fighting. Punitive expeditions (sometimes undertaken because of a failure to pay the annual tribute of a few paltry pennies per head) are, however, a much more serious matter, and the administration of justice where crime is concerned is swift and rigorous. Major Tremearne, who served as a police officer, as well as in a judicial and political capacity, had absolute power over life and death. On one occasion he was, reluctantly, compelled to execute the death sentence he himself had pronounced.

Mrs. Gaunt, on the whole, judges the natives more favorably, though she, too, believes whipping to be the only corrective for the negro's incurable stubbornness. She has a dismal story to tell of the condition of Liberia. Monrovia she describes as "an outrageously ill-kept town." Throughout the book she contrasts German and British administrative methods to the disadvantage of the latter, and she pays, in particular, a glowing tribute to the German physicians in charge of the sleeping-sickness camps. She is, however, by no means blind to the brutality that sometimes goes with the success of the Germans in colonizing West Africa. Mrs. Gaunt's knowledge of natural history is not considerable, as her allusions to the native flora show. The forest trees north of the capital of Ashanti dwarf, in her opinion, "all other trees in the world." They are, of course, far inferior in size to the giant trees of the Sierra Nevada.

Notes

Gustav Pollak, who is preparing a biography of Michael Heilprin and his sons, will be glad to receive any letters by the late Prof. Angelo Heilprin. They may be sent to Mr. Pollak at No. 21 West Eighty-fifth Street, New York, and will be promptly returned to the senders.

"Among the Carpathians," by Lion Phillimore, is an account of gipsy-like travel through hitherto undescribed country. Holt will publish it the middle of this month.

Prefaced by Bonar Law and introduced by Sir Edward Carson, a book, entitled "Against Home Rule" is about to be issued by Warne & Co. of London.

In the issue of March 21 we announced the "Railway Economics," promised by the University of Chicago Press, as a "collectors' catalogue." It should be a "collective catalogue."

The American Library Association has just issued in its March Bulletin a detailed list of the important gifts and bequests to American libraries during 1911. The total cash donations amount to $3,364,822.69, which is nearly a million and a half dollars more than was given in 1910. Of this amount Andrew Carnegie gave $2,326,370, more than double the amount donated by him to libraries in the previous year. One hundred and thirty-six towns and cities in the United States and twenty-eight in Canada were recipients of his generosity. The majority of these towns are in the Middle West and the South, and in the province of Ontario, although nearly every State in the Union is represented in the list. Other gifts than money include 65,575 volumes, six sites for library buildings, and seven buildings presented for library purposes. One of the notable gifts of the year was a very remarkable collection of books, manuscripts, photographs, and other matter amounting to 33,407 items and relating to the native races of North America, Hawaii, and the Philippines, which was made to the Newberry Library of Chicago by Edward E. Ayer of that city.

It is always a pleasure to acknowledge the receipt of new volumes of the beautifully printed Scriptorum Classicorum Bibliotheca Oxoniensis. The latest additions to the series are a fascicle of Plato, containing the "Euthydemus," "Protagoras," "Gorgias," and "Meno," and "Isidori Etymologiæ," in two volumes.

"Peeps at Many Lands: Oceania" (Macmillan), by Frank Fox, is scarcely original or striking, though not without value. From varied sources, as also from personal experience, the author draws a picture of British colonial life which ought to be flattering to national self-esteem. An Australian himself, he is most enthusiastic about New Zealand, "the empire's pattern dominion." Mr. Fox is neither a geographer nor a scientist, and his account of the Maoris and the official life of New Zealand is such as any well-informed journalist can furnish at short notice. Some repetitions concerning the fauna of the regions he has visited betoken haste in the preparation of his matter. Inordinately heavy paper has swelled the rather meagre contents of the volume to the regulation thickness. As is so often the case with the tri-color process, the illustrations somehow fail to impress one with a sense of reality. The plain halftones commonly used are far more characteristic and convincing.

East and west from Sebdon to Medenine and south into the desert at Ghardaia and Tougurt went Mrs. Emma Burbank Ayer in her "Motor Flight through Algeria and Tunisia" (McClurg), and her book is a very kindly, gossipy, and intelligent record of it all. If there is much of the small beer of travel, it is all informing, and the details go to make definite pictures, assisted greatly by above a hundred and twenty excellent little photographs. Of course, the life is the outside life seen by the tourist, except when Mrs. Ayer's curio and ornament hunting led into more intimate byways. There is a good index, and the book with its readableness will be useful in the country itself.

Many things of more than mere local interest are to be found in Volume VIII of the Bostonian Society Publications. The difficulties which had to be overcome before the Church of England could have a permanent home in the Puritan town are described by the late Rev. H. W. Foote. The opposition to the theatre lasted much longer, for in an account of the first one established, W. T. W. Ball, the writer, quotes from a vigorous public protest made by Gov. Hancock before the Legislature in 1792 against theatrical exhibitions. They had just been introduced under the name of "Moral Lectures." One of the early announcements says that there "will be performed the much admired comedy written by Shakespeare called 'The School for Scandal.'" Dr. F. H. Brown gives some noteworthy facts in regard to the practice of medicine in New England in the seventeenth century. Among the receipts is one for the treatment of a "Cancer Humor," in which three frogs are a principal ingredient, or "Wee may att sartin times apply a Tode cutt in two to the wound 2 or 3 times a week."

A useful volume for historical reference is Mary L. Hinsdale's "History of the President's Cabinet" in the University of Michigan Historical Studies published under the direction of the department of history. It presents a chronological analysis of the President's Cabinet from Washington to Taft, dealing especially with the personnel, characteristics, and methods of each President's official advisers. The development of the Cabinet as an arm of the national executive is traced, together with the varying powers and duties of the Cabinet members. Of particular value is the full discussion of the reasons and influences which have determined Presidents in their selections. Nowhere else have so many facts been gathered to throw a light on the always interesting process of Cabinet-making. There is an introductory chapter on the Origin of the Cabinet, and there are three general chapters in conclusion on the Principles of Cabinet-Making, The Cabinet and Congress, and The Cabinet and the President. The author holds that the Cabinet has substantially preserved its character of "an eminently democratic body," which it attained early in our history, and that "just because it has undergone a democratizing" it has been able to fulfil with satisfaction to the country the conception of the framers of the Constitution that it should prevent the President from acting hastily or inadvisedly. "The American Cabinet is not performing any blind or unsuspected functions," concludes Miss Hinsdale. "Neither has it been the seat of any great transformation in the nature of the Government. It is not a mainspring or a pivot; but it has shown itself to be an essential attachment. It is so adjusted that the American executive is plural in deliberation while it is single in responsibility." The volume is provided with a full bibliography, instructive foot notes and references, and a good working index. In addition to its value as a work of reference, the book is noteworthy because it is the first serious contribution to the study of the growth and development of this important branch of the American Federal Government.

Words of Old English origin occupy about half the space in the single section of the Oxford English Dictionary, SEE-SENATORY, edited by Dr. Henry Bradley (Frowde). The unusual prominence of the native element is chiefly due to the presence of a half-dozen monosyllables which have developed a wide variety of senses, or have been fertile in compounds. The compounds of *self*, for example, dating from about 1550, occupy sixteen pages; yet we are informed that "only a small selection has been given from the innumerable obvious combinations found in the collected quotations." *Self*, as Mr. Peeksniff would have said, is a "moral" theme—let us improve our minds by mutual inquiry and discussion—let us contemplate self! With a little pains the compounds of this word could be so arranged as to mark like milestones the moral pilgrimage of man. A large share of the earlier forms are employed by men to whom self appears as a power to be humbled, thwarted, destroyed: in 1657 Baker commends "service to God, performed with a perfect *self-abnegation*"; in 1647 Harvey praises *"self-condemning shamefastnesse"*; in 1683 Tryon tells us that the way to health cannot be followed "without *self-denial*"; in 1647 More describes the valley of Ain in the "Song of the Soul" as *"self-nothingnesse."* Upon the teachings of Christianity a cynical philosophy supervenes, which derives all human activities from *self-interest;* though reason must still restrain, it is recognized that without *self-love* to urge we should "never get anywhere"; *self* plucks up heart, and flushes with pleasure when Pope writes, in 1733, *"self-love* forsook the path it first pursu'd, and found the private in the public good." After the cynical rationalists, come Rousseau and Goethe and the optimistic French Revolution; *self* emerges from contempt and bondage, rosy and smiling; in Emerson's "Representative Men"—the essay on Goethe—appears (1847) the first recorded example of *self-culture;* in 1837, for the first time in this sense, *self-perfection* enters in a significant sentence of Harriet Martineau's—"In the days when mutual and *self-perfection* will be the prevalent idea which the civilization of the time will express." A curious corresponding shift takes place in the sense of the word *self-respect.* The first meaning given is, "a private, personal, or selfish end"—an obsolete sense illustrated by this from Bishop Hall, 1613: "Subject to all passions, infirmities, *self-respects.*" The second meaning, also marked obsolete, is "self-love, self-conceit," illustrated by this from Hawke, 1657: "Most men are transported with a philauty or *self-respect.*" The first occurrence of the third and present use of the word is in the "Excursion" of Wordsworth, where at last it means "a proper regard for the dignity of one's person or one's position."

The Oxford editors present as usual a table showing how far they have surpassed their predecessors in the number of words and quotations. One point appears constantly in these comparisons which is perhaps worth remarking. Other dictionaries they surpass not merely in the number, but also in the proportion of quotations to the number of words illustrated. Johnson alone keeps pace with them in the proportion; he even sometimes, as in the present section, surpasses them. Thus they illustrate 2,463 words with 9,004 quotations; he illustrates 98 words with 386 quotations. In analyzing the senses and displaying the history of any given word, Dr. Bradley of course commands vastly greater resources. Turning, for instance, to the article on *self* in Johnson's folio edition of 1755, we find that he disposes of Dr. Bradley's sixteen-page theme in two pages. And yet, for all that, a "moral" man like Mr. Peecksniff would doubtless find something to say in favor of the Great Bear's handling of this topic. A moralist at the same time that he was a lexicographer, Johnson had probably given more thought to the real significance of self than any or all the Oxford compilers. In consequence of that ever-present personality which emerges in the celebrated definitions of *oats* and *pensioner*, his article has a continuous "human interest," and can be read through by a layman with pleasure and edification. In these two pages on *self* he exhibits about one hundred quotations drawn from about thirty-five authors, nearly all of excellent standing. His illustrations, furthermore, are not inconsequential snippets from the middle or ends of sentences, but complete pointed thoughts, mainly conducive to virtue, and often obviously related to the editor's convictions—one feels here as one feels in the presence of Bishop Wilson's

"Sacra Privata." Here are no less than seven pious passages from the sermons of South, an author whom he recommended to Boswell as an antidote to loose thinking. Here are four from Watts, of whom Johnson remarked on one occasion, "I shall do what I can for Dr. Watts." This, for example, might have been transcribed from Johnson's private diary: "The religion of Jesus, with all its *self-denials*, virtues, and devotions, is very practicable." Dr. Bradley cites under *self-preservation* this from Milton: "If the punishment Thou canst avoid, *self-preservation* bids." In that truncated form the precept seems dubiously related to virtue. By quoting three words more, Johnson, always concerned for conduct, brings down with one stone both the lexicographical and the moral birds:

> *Repent the sin;* but if the punishment
> Thou canst avoid, *self-preservation* bids.

By this trait Johnson seems to be distinguished from most modern philologers; he never looked for words without at the same time looking for ideas. It is a pretty question what relation the labor of compiling a dictionary in this fashion bore to the solidity of his prose style and the sententious gravity of his daily speech.

The presses continue to pour out books on Holland, which, as the great majority of them are written by tourists, are naturally much alike. Invariably are mentioned: the black-and-white cows; the horrible sound of "g's" and "sch's," together with the American's and German's way of pronouncing "Scheveningen"; the number of petticoats worn by the women of Volendam; the spic-and-spanness of Broek, reputed to be the cleanest town in the world; the nobility of Leyden in preferring a university to exemption from taxes; the cheeses of Alkmaar and Edam; the smoking capacity of Dutch infants, and the oldest bits of "Dort." All this, we must confess, remains charming, even when described by unskilled writers. Blair Jaekel's book, "Windmills and Wooden Shoes," just published by McBride, Nast & Co., goes over the usual ground, and is written in what often passes as a "snappy" style; its humor, however, is much too elaborate.

Winthrop Packard's "Literary Pilgrimages of a Naturalist" (Small, Maynard) is bounded, geographically, by Marshfield, the Isles of Shoals, and Provincetown, and chronologically, by William Bradford and Thomas Bailey Aldrich—a rather extensive range, one would think, for an octavo volume of two hundred pages printed in large type with liberal margins. Even so, we hear nothing of Whitman's beloved "Paumanok" and his Camden country, nor of the haunts of Cooper, nor of Lanier's Southern marshes, since to a true New Englander, literary or other pilgrimages are hardly conceivable outside of New England. On the other hand, one is puzzled to know what bearing the last two chapters (Vermont Maple Sugar, Nature's Memorial Day) have on American literature. A good deal of the book is either fragmentary or diffuse, journalistic in a bad sense. Too often the sentences do not stand on one leg even, but, as some one has said of Debussy's technique, with both feet in the air. This journalistic looseness, though it is more noticeable here than in Mr. Packard's earlier nature essays, is, however, offset by the spirit of the writer, a highly agreeable compound of sentiment, ingenuity, and masculinity that makes itself felt on almost every page. It is too much to say that Mr. Packard writes well; but it is not too much to say that he is as delightful a companion as one could want in making pilgrimages to "straunge strondes"; and if he tells you that it is essential to plunge with him into Walden Pond before sunrise, you will plunge, and issue as refreshed as you were on first reading "Walden." The following, the close of the chapter on Whittier's birthplace, is in Mr. Packard's least journalistic vein:

> They lighted a fire for me in Whittier's fireplace—and as the rose glow on the walls of the old living-room brought back the hearth-cheer of bygone years, as the witches, daintily making tea without under the lilac bush, brought the romance and legend of the olden time to the threshold, so the crackling draft of the fire up the deep throat of the chimney seemed to draw in to the place the free, hearty, farming, wood-loving life of the man of the earlier centuries out of which the poet drew what was best in him, to be given out in unforgettable verse to us all. If such a place was ever lonely it was that gentle and desirable loneliness which great souls love.

"The Life of Dr. D. K. Pearsons," the Chicago benefactor of small colleges, has been written by Edward F. Williams (The Pilgrim Press). Dr. Pearsons was born in Vermont, procured a meagre medical education at an institution in Woodstock, Vt., long since extinct, practiced medicine in Chicopee, Mass., at the age of forty came to Chicago with $5,000, and in thirty years in real estate business attained a fortune of at least $5,000,000. Retiring at seventy, he set about to distribute his capital. He made a few gifts to Chicago hospitals, missionary societies, and theological seminaries, but by far the largest number of his benefactions have been to small colleges. The most active period of his benevolence was contemporary with the rise and expansion of the State universities, and his encouragement and example have had much to do with the continued influence of the smaller institutions. As it is now seen that there is a field for the small college, Dr. Pearsons's influence in American education has been of real value. He did more than any one else to bring the conditional gift into vogue, as it was his usual custom to offer a gift, usually $50,000, provided three times the sum could be obtained from others. This manner of benevolence has been much criticised, but undoubtedly it has enabled many institutions to increase both their resources and their friends and to develop a permanent constituency and confidence in their own strength. That it has been adopted frequently by Mr. Carnegie, and that the General Education Board follows the plan consistently in all its benefactions to colleges, is high approval of Dr. Pearsons's judgment. The story of his life is a human document of much interest.

William Albert Finch, professor of law in Cornell University, died in Brooklyn on Sunday, after an illness of several months. He was born in 1855, graduated from Cornell in 1880, and after practicing law for some years, was admitted to the Cornell faculty in 1891. He edited several works in his subject, among them "Finch's Selected Cases on the Law of Property in Land."

We notice with regret the death of E. W. B. Nicholson, who had been Bodley's librarian for thirty years. With untiring zeal he had exerted all the powers of his strong character to make the library more widely useful, and before he died had introduced a system of shelf-classification and a subject catalogue, and had created an additional reading-room. His personal assistance to American scholars, as to others, has often been acknowledged in print.

The death is reported from Berlin of Christian Gottfried Albert Traeger, member of the Reichstag from Oldeuburg, and known as the "Father of the House"; he was born in 1830. As a writer he is remembered chiefly for his "Gedichte," a volume of poems which has passed through twenty editions. He wrote several plays, and some of his novels had a considerable vogue. From 1865 to 1883 he issued a yearbook, called "Deutsche Kunst in Bild und Lied." He also collaborated in a translation into German of Burns's poems.

The death is reported from Linden, in Westphalia, in his sixty-fifth year, of the miner poet Heinrich Kämpchen. He worked in the mines from the age of sixteen, and his poems deal for the most part with that life, showing, it is said, considerable feeling and penetration.

Geheimrat Dr. Gustav Wendt, who is dead at Karlsruhe, aged sixty-five, was director of the gymnasium of that town from 1867 to 1907, and was a distinguished teacher of the classics. "Gymnasium und öffentliche Meinung," "Didaktik und Methode des deutschen Unterrichts und der philosophischen Propädeutik," and translations of Sophocles's tragedies are among his works.

Karl May, whose death in his seventieth year is reported from Dresden, Germany, was a well-known writer of Indian tales and romances for boys. He also translated many stories from the Arabian, Turkish, Persian, and Chinese.

Science

Researches on the Evolution of the Stellar Systems. Vol. II: The Capture Theory of Cosmical Evolution. By T. J. J. See. Lynn, Mass.: T. P. Nichols & Sons.

Dr. See, who has been for many years professor of mathematics in the United States navy and in charge of the Mare Island Observatory, California, some time ago brought out a volume of researches on stellar systems, in which he first directed attention to important and previously unrecognized features of binary stars. This gave him an established name among his fellow-investigators. Quite recently he has published a second volume, finely printed and lavishly illustrated. It is a prodigious piece of work, but in large part mathematical and highly technical, and in that respect is quite unfit for extended notice here. Broadly speaking, Dr. See's work is devoted to the amplest exemplification of what he has called the capture theory of the cosmogony, and everything connected therewith: a theory to

replace every vestige of the Laplacian nebular hypothesis by one which postulates the gradual formation of stars, suns, planets, and satellites by capture of the materials composing them from a resisting medium that in the early history of the universe filled all space. Dr. See states his claims with the broad inclusiveness of a blanket policy, though with scarce a trace of that gentleness and humility which in every age have been thought to characterize the truly great. Apparently, his ambition is to force everybody to admit that everybody else, from Anaxagoras of Clazomenæ and Laplace to Lord Kelvin and Sir George Darwin of Cambridge, has been hopelessly deluded about this cosmogony business, and that the persplendid light of the cosmos has shone first, of all men, on the present author.

It is amusing to note the differing reception of this work: astronomers not too seriously offended by the author's braggadocio find it "food for thought"; others a monumental work of great importance; still others lay it aside to await the final judgment of Darwin, Poincaré, and other masters in the same field; while a literary gentleman never having heard the name of See before and examining his book for the first time must be excused for his harsh judgment that it seemed to transcend the border line between genius and—not genius. Dr. Moulton of the University of Chicago, whose "Celestial Mechanics," published eight years previously, See seems to have flattered by imitating, not to say transferring bodily without acknowledgment, some important passages, goes so far as to dub the capture theory presented by Dr. See the "captured theory." Dr. See's speculations do not end with the cosmogony proper, but are amplified to include pretty much all the moot points in present-day astronomy, such as the secular acceleration of the moon's mean motion; the rotation of Venus which he "proves" must be, not slow as the trend of current research would make it, but swifter than the earth's; a comprehensive theory of the sun's constitution; a discussion of planets ulterior to Neptune of which Dr. See says there are many; and his origin of comets, which after all turn out to be "nothing but surviving wisps of nebulosity from the outer shell of the ancient nebula which formed our system."

It is a dangerous theory that pretends to explain everything, and Dr. See's hypothesis of cosmic evolution comes perilously near that limit. Should his theories be finally accepted and adopted, they will truly form that salient epoch in the history of the cosmogony which he audaciously assigns them. Sir George Darwin, who received Dr. See's work at the conclusion of his article on the tides in the eleventh edition of the Encyclopædia Britannica, states in a note that he "does not feel convinced by the arguments adduced."

F. W. Headley's book, "The Flight of Birds," shortly to be published by Witherby & Co. of London, contains some interesting advice to the aviator.

An institute for research in chemistry, physics, and mineralogy has been founded by the Academy of Sciences in St. Petersburg. It is called the Lomonossov Institute after Michael Lomonossov, the Russian naturalist of nearly two centuries ago.

Sir J. J. Thomson has been appointed to the Order of Merit, due to his distinguished work at the Cavendish Laboratory at Cambridge, Eng.

Drama

Edward Everett Hale, jr., has brought out a sixth edition, enlarged and revised, of his "Dramatists of To-day" (Holt). Rostand, Hauptmann, Sudermann, Pinero, Shaw, Phillips, and Maeterlinck are the subjects of his discussion, which he describes modestly as informal and which might also be called impressionistic. The essays make very pleasant reading. They are written in fluent, unaffected, but never slovenly style; reflect broad and sympathetic intelligence as well as wide information, and, if they are not particularly original or incisive, are at least free from narrow dogmatism. To the amateur student of the theatre they will bring both pleasure and profit, although they sometimes presume a greater familiarity with the original text than the ordinary reader is likely to possess. The best papers, perhaps, are those on Rostand and Maeterlinck. In both the relation between the dramatic works and the peculiar genius and philosophy of the authors is plausibly and ingeniously set forth. But Mr. Hale, like many other modern critics, is sometimes inclined to seek for mysteries where none exists. In "Cyrano de Bergerac," for instance, the most poignant moral, surely, is that which lies most clearly on the surface, the cruelty and the folly of judging by appearances. A hero, well endowed with all the manly virtues, is scorned by the exquisite woman whom he loves ideally, because he has not, like his empty rival, a pretty face. There could scarcely be a better theme for satirical and tragic romance.

Elsewhere Professor Hale discourses, soundly enough, on the futility of probing too deeply for the inner meanings of the symbolism in Hauptmann's "The Sunken Bell," but he might have expressed the conclusions to which his arguments tend with greater boldness. The simple truth is that, on the stage, a symbolism which is so vague as to excite doubts as to its real significance is absolutely worthless, for the reason that it leaves the road open to the imagination, which is then at liberty to interpret it at will, possibly in a manner entirely subversive of the proposed allegory. Drama can be judged only by its face value. In an appreciative and generally judicious discussion of Sudermann Mr. Hale advances several conjectures in explanation of that author's failure to maintain or increase the reputation he enjoyed ten or fifteen years ago, but overlooks the possibility that his earlier achievements may have been somewhat over-estimated and that he is only a sufferer from the reaction which is apt to follow after extravagant enthusiasm. Many modern dramatic critics have little or no sense of proportion. In his analysis of the work of Bernard Shaw Mr. Hale, while duly recognizing the brilliant faculties of that dazzling humorist, fails to emphasize the reckless inaccuracies, gross if not wilful misrepresentations, and palpable insincerities which are as conspicuous ingredients of it as are its keenness of observation, its spectacular but ill-digested erudition, and its barbed satire. As for his observations on recent miscarriages of the poetic drama—in connection with a highly laudatory review of the literary work of Stephen Phillips—it may be pointed out that the principal reasons why poets do not succeed upon the stage to-day are two. One is that they do not know how to combine human and dramatic interest with literary charm, and the other, that there are no longer any actors capable of giving an adequate interpretation of poetry or romance.

The Poetry Society of London recently gave a performance of the "Hippolytus" of Euripides, using the rhymed English translation of Prof. Gilbert Murray. The representation took place on the steps of the Marble Hall of the University of London; very few accessories were used, and the whole was of the simplest possible character. All efforts were concentrated on dignity, simplicity, and as close an adherence as possible to the Greek spirit.

Sir Herbert Tree now announces his long-promised production of "Othello," at His Majesty's Theatre, in London, for the 10th of April. He lays stress upon the fact that, for historical reasons, he has selected the year 1480 as the period of the action. The presumption is, therefore, that the splendors of the scenery are to be supported by certificates of their archæological accuracy. It is not likely that the minds of the ordinarily intelligent playgoer will be greatly excited by this information. He will not care much about the particular year in which the Turks were drowned and the Moor's confidence so shamefully abused. He will be more concerned about the interpretation of one of the greatest tragic masterpieces in the world. Accuracy of scenic detail has its value, of course, up to a certain point. Scenery must at least be decently appropriate to the incidents of which it is the background, but in the case of Shakespeare, a too minute insistence upon it has its dangers. It may, for instance, emphasize the anachronisms and inaccuracies in which the poet himself indulged so freely. It was Charles Kean, a second-rate actor, but astute manager, who, under the pretence of scholarship and Shakespearean devotion, first tried the experiment of offering glittering spectacle as a substitute, or a screen, for inferior acting. He set a most mischievous example. But he exhibited a proper reverence for the text, and never dared to tamper with it, as Sir Herbert has habitually done.

H. B. Irving is expected in London at the end of May. He closed his New Zealand season at Christchurch with a performance of "The Bells," which caused great enthusiasm. From there he went to Sydney for

a farewell engagement. He will make his reappearance in London in the summer or the early autumn. His success at the Antipodes has been very great. There is none in sight, apparently, to dispute his leadership of the English-speaking stage, and his rapid progress makes it likely that he may equal—or even excel—the renown of his father.

Edward O'Connor Terry, who died in London on Tuesday at the ago of sixty-eight, though never a great actor, was a performer of much versatile skill. After twenty years of apprenticeship in minor Shakespearean and other parts, he opened, in 1887, Terry's Theatre, winning favor in both "The Churchwarden" and "The Woman Hater," but it was in Pinero's "Sweet Lavender" that he made his fame and fortune.

Marie Desclauzas, who was long a conspicuous figure in the theatrical life of Paris, is dead at Nougent-sur-Marne. She was born at Paris in 1840. Her first appearance was made at Reims, but she soon returned to Paris, and divided her long career among the various theatres of the capital, except for the time she spent in Russia, where she was very popular. One of her earlier successes was in "Héloïse et Abélard," and another in "La Prise de Pékin." She won favor in America in the operettas of Offenbach and Lecocq. In Brussels she created Mlle. Lange in "La Fille de Madame Angot." Afterward in Paris she was successful in "Le Petit Duc," "Sapho," "L'Abbé Constantin," "Musotte," and in "Mam'zelle Piou-piou," at the Porte St. Martin. In later life she was at the Gymnase.

Music

Six Lectures on the Recorder and Other Flutes in Relation to Literature. By Christopher Welch. New York: Henry Frowde. $3 net.

Not long ago, the bagpipe, in spite of its greatly decreased vogue, was honored by being made the subject of a monograph. Now we have a volume of 457 pages on the flute, an instrument which, though still used a good deal in orchestras, does not play a rôle in our general musical life one-tenth as important as it did half-a-century ago, and which does not now seem particularly to interest either professionals or amateurs.

Mr. Welch confesses, in the preface, that he has made no attempt to render his pages attractive "by imparting to them the graces of style, or pleasant by excluding from them what is dry, dull, and heavy." They abound, he warns us, "in notes, digressions, cross-references, and descriptions often tedious and sometimes irrelevant." But, lo! when the reader, after abandoning all hope, enters these premises and has scanned a dozen or two pages, he finds himself more and more interested, and ends by perusing everything, including the footnotes, which, as in a German professor's textbook, often take up more than half of a page. Mr. Welch's book, to say it at once, is infinitely more than a mere monograph on the flute; it is the work of an astoundingly erudite scholar (an Oxford M.A.), who incidentally throws perhaps more light on various aspects of musical life in Old England than any other writer has done.

There are doubtless hundreds of flute players who, seeing merely the back of this volume, marked "Six Lectures on the Recorder," would never suspect that it was a book brimful of interest for them. Not only has the recorder been out of use since the end of the eighteenth century, but the dictionaries do not make very clear just what kind of instrument it was. The most satisfactory definition is that given in the new Encyclopædia Britannica, which describes it as "a mediæval flute blown by means of a whistle mouthpiece and held vertically in front of the performer like a clarinet. The recorder only survives in the now almost obsolete flageolet and in the so-called penny-whistle." In works of reference in general, and in the notes of editors of old English authors, so much confusion prevails as regards this matter that Mr. Welch was moved to write a whole chapter of 127 pages entitled Literary Errors on the Subject. That so many errors were made, and that even such men as Sir John Hawkins, Dr. Burney, William Chappell, and Carl Engel could perpetrate them, was due largely to the confused nomenclature. The word recorder seems to be of English origin; Mr. Welch's researches lead him to believe that it was in use in the fourteenth century, but did not come into existence until after the Norman conquest. In Chaucer's time it was called a flute, and in the eighteenth century even such authorities as Hawkins and Burney did not know that "the flute" with which they were so familiar had once been known as the recorder.

It was early in the sixteenth century that the recorder was at the zenith of its popularity. It had been a fashionable instrument ever since the days of Chaucer. One of the daily tasks of Henry VIII was practicing on it, and he was the possessor of a collection of instruments of the flute family such as the world has never seen. They were 154 in number, and 76 were recorders. Many were of ivory, some had silver or even gold tips. In the seventeenth century there were whole bands of recorder players, up to thirty or more. The instruments were built in various sizes from the lowest bass to the highest treble. But the time came when the recorder fell from favor, and this was due not so much to the fact that the Puritans made war on it (as they did on the organ, that "squeaking abomination"), but to the competition of the German flute, which was better suited for combinations in mixed bands, and which made it possible by the action of the lips to vary the tone.

While conceding these advantages of the flute, Mr. Welch greatly regrets the disappearance of the recorder. It had a "rich, soft, cooing" tone, which made it most agreeable to the ear. Samuel Pepys declared it to be the most pleasing of all sounds in the world, and that Pepys was a good judge of music has been attested by Dr. Hueffer. Many were moved to tears by it (see the very interesting footnotes on pp. 136-7). Mr. Welch indulges in fascinating speculations as to the use of the recorder in old English plays to produce the illusion of an angelic choir. He describes the means used by Wagner in his "Lohengrin" prelude to represent the "chaste rejoicing" of an "angelic host" by the tremulous notes of the violin blended with those of the flute and oboe, and inclines to the opinion that a band of recorders would have been even more serviceable for the effect desired. It does not seem at all unlikely that Richard Strauss or some other master in search of novel colors may take Mr. Welch's hint and revive the recorder. Unlike other obsolete instruments, it is easy to play.

Handel, whose ear for instrumental coloring was as keen as Wagner's or Berlioz's, made much use of the recorder, and the author shows by numerous examples how Handel deemed it more appropriate for certain passages than the flute. Shakespeare honored the recorder and the flute as he did no other instrument. To a chapter entitled Flutes and Pipes in Shakespeare, Mr. Welch devotes 70 pages, and this is preceded by one on Hamlet and the Recorder, which hereafter no manager who stages that play can afford to ignore. The author's thesis is that Shakespeare's design has never yet been realized on the stage, and his reasoning is as convincing as it is elaborate. To Milton's allusions to instruments of the flute family another long chapter is devoted, and this is followed by two more, in one of which the marvels related of the old Greek flute players are recalled, while the last is concerned with the tomb pipers and the connection of music with mourning. This section is illustrated with numerous examples of wailing tunes among the Irish. Apart from these, there are above a hundred illustrations, many of them full-page facsimiles, which help to make this one of the most fascinating and suggestive books ever published on the art of music, its history, sociology, and psychology.

The score of Richard Strauss's new opera, "Ariadne auf Naxos," is not to be printed in Berlin, but in Paris, because the copyright there extends for fifty years after the death of the composer, which is twenty years longer than in Germany.

The correspondence of Weber, whose literary works are almost as interesting as his music, is to be printed by Breitkopf & Härtel.

The coming across the Atlantic of the London Symphony Orchestra to give a series of concerts in this country and Canada, under Arthur Nikisch, gives occasion to call attention to one great advantage which English (and American) orchestral players have over their German colleagues, namely, that their higher pay enables them to buy better instruments—a matter of great importance, as it affects the euphony of the orchestra's tone.

Art

SIR JOSHUA D'OUTRE-TOMBE.

Sir Joshua Reynolds is not precisely a leading influence in modern art criticism, yet his catholicity and supreme good sense have caused something of a revival of interest in "The Discourses." There must, then, be a considerable public that will welcome the appearance of an unpublished paper of Reynolds's on "The Adaptation of Talents," in a recent number of the *Mercure de France*. M. L. Dimier, who translates a manuscript preserved in the Fitzwilliam Museum, Cambridge, naturally presents his "find" in his own tongue. And it is one of the oddities of modern international scholarship that an English-speaking critic must perforce offer his extracts from this interesting work of Sir Joshua in a retranslation from the French.

Sir Joshua discusses with his customary clarity the conditions under which artistic genius can flourish, and arrives at the conclusion that an enlightened and aristocratic Mæcenasship is the necessary basis. It should be observed at once that this view is borne out by the whole of art history, though sharply countered by much recent criticism. It is a sub-axiom of Socialism that art shrinks and cheapens under capitalistic patronage. Tolstoy would have abolished all art which did not appeal to God-fearing fraternalistic peasants. And many who are neither Socialists nor Tolstoyans firmly believe that the social basis of modern art is far too narrow. On all these matters the testimony of Sir Joshua, old-fashioned as it may seem, is not without interest.

He departs from axioms uncongenial to the modern temper:

> The wants of man increase in society. His necessities remain the same, and moral needs, which are equally part of his nature, are added. A division of labor, which establishes itself in society, provides for the diverse requirements of his physical and rational life. . . .
>
> Education and society have set great differences between the man of science and the man who works with his hands, though nature perhaps has not; on its own side, nature has made distinctions which education cannot efface. This inequality of aptitude perfects the social system by furnishing for the various tasks which convenience and refinement impose a corresponding variety of capacities.

Here is the doctrine in its naked Toryism. Yet it is not only true, but one of those truths that outwear all evasion, denial, and sophistication. Even to the most perfervid equalitarian, life now and then brings home with stunning and demonstrative force the truth that inequality of human capacity is not a semblance or a temporary and curable disease but an eternal fact—a fact, as complacent Sir Joshua would hasten to add, upon which a perfect social system must rest.

Sir Joshua, in establishing a distinction between artists and business men of all degrees, again drives home a truth, tremendously exaggerated during the Romantic period, and now, under humanitarian sentimentalism, correspondingly obscured. The merchant's service is valued by every one. From the state he needs only protection from oppression. The artist's service is understood and valued by the few, and to those he must look for support. The rewards of commerce and of art are proportioned to this fact. "The proper reward of industry is wealth and security; the proper reward of genius is fame and independence." Yet the interests of the two careers are one. Any failure to provide for the exercise of the multiform capacities of men means in unemployment and all manner of inner and outer misery an embarrassment to the whole social body.

Since the artist provides for remoter desires and ministers to needs feebly felt by the majority or not at all, he cannot hope for support from the people. If he obtain it, it will only be at the cost of debasing his art. To the question how the dignity necessary to the artist may be procured, Sir Joshua replies squarely:

> By a Mæcenasship exercised from above and in a liberal spirit. Only the great and the cultivated are in a position to give dignity and importance to art. They must begin. Their example will teach the middle classes of society to take a just estimate of that which the elegant and enlightened classes prize so highly.

"Rankest snobbery!" we hear some one protest. Not at all; merely a frank statement of historical fact in phrases somewhat old-fashioned. Sir Joshua's simple remedy may at least have a diagnostic value. Much of the trouble with modern art has been precisely the fact that great patrons were unenlightened and correspondingly narrow or capricious in their taste. Modern society reverses the process imagined by Sir Joshua. Instead of a cultivated aristocracy extending the benefit of its taste to the middle classes, through most of the nineteenth century and still, we have had the spectacle of a small body of enthusiastic but quite uninfluential amateurs of the middle class keeping alive the generous traditions of taste and patronage in the face of the ignorance of capitalistic Mæcenases and their quasi-æsthetic parasites. If this be the disease, the specific is neither more nor less than the educating and refining of our wealthy classes—a difficult but not an impossible emprise. Already the Mæcenasship imagined by Sir Joshua exists in germ. What is still wanted is that courage and independence of taste in high quarters which are not infrequent amid humbler art patrons. There is a kind of conspiracy to prevent such education. The natural vanity of wealth and power and the interests of purveyors combine to narrow the sympathy, and, of course, to limit the knowledge. The fingers of two hands would be enough to count the very wealthy Americans who in any branch of art patronage really deserve the proud title of Amateurs.

It may be asked, Where do the people come in? They come in at precisely the most important point. It has usually been and it normally is the function of the people to produce the artist of genius. Tory Sir Joshua wishes to give him opportunity when he appears, to offer him dignity and independence, instead of the hap of eating out his heart in some uncongenial mechanic job. In this sense Sir Joshua would not quarrel with the modern formula that art needs "a broader social basis." The way to get this broader basis may well be as he suggests: the presence of a specialized and highly trained class of art patrons. On the whole, even in the humanitarian balance, his Toryism compares very favorably with most equalitarian speculations on the topic. His view has at least the merit of taking into account the facts of artistic production and of society, as they have been and still are.

"An Architect's Sketch Book," by Robert S. Peabody, which is in Houghton Mifflin's list, has to do with England, France, and Italy.

Estella Canziani is publishing, through Dana Estes & Co., "Costumes, Traditions, and Songs of Savoy," with 50 full-page illustrations in color.

"Famous London Houses," by A. St. John Adcock, and "English Secular Embroidery," by M. Jourdain, are announced by Dutton.

Heinrich Jantsch, of Delitzsch, near Leipzig, Germany, announces a second Oriental expedition, for the purpose of photographing manuscripts and papyri. He will visit Egypt, Sinai, Jerusalem, the isles of Patmos, Lesbos, Chalki, and Constantinople. Arrangements may be made with him for special commissions by directing to Delitzsch until May 20.

The dance in various periods of the past will be illustrated at an exhibition to be held this spring at the Bagatelle, Paris, by the Société Nationale des Beaux Arts.

For some time Mr. Sotiriadis, the ephor

of antiquities, has been carrying on extensive excavations in the neigbborhood of Mount Parnassus, near tbe site of the ancient city of Elatea. His efforts have now been rewarded by the discovery, upon a rising piece of ground, of an entire prebistoric village. The character of the objects uneartbed shows that tbis site was inbabited from very early times. In the lowest stratum were found finely polisbed implements of stone together with various articles of bronze, indicating tbe period represented was a transition stage from tbe Age of Stone to tbat of Bronze. The bronze articles bear a strong resemblance to those of tbe Early Minoan period in Crete. In the next stratum the deposits belonged exclusively to the Bronze Age. In this period the place had been occupied by stone buildings, and among the remains of these were found numerous fragments of vases, wbich had been decorated witb a coating of black color on wbich were painted geometrical designs in white. The uppermost stratum contained objects synchronous with the late Minoan period of Crete.

The work of Mrs. Elizabeth Stanhope Forbes, who died recently at Newlyn, Cornwall, has been somewhat oversbadowed by that of her husband, the Academician. She was born in Ottawa, Canada, in 1859, and for many years exhibited paintings at tbe London Academy and the Paris Salon.

A collection of half-tone cuts after good, bad, and indifferent pictures; a commentary making overtly for righteousness and besprinkled with literary citations, such is Henry E. Jackson's "Great Pictures as Moral Teachers" (Pbiladelphia: The John C. Winston Co.). The book is unquestionably edifying, but not to an art lover.

Finance

THE NEXT TURN IN EVENTS.

When the Stock Exchange ended last week and began the present week with another burst of rising prices—in the face not only of the beginning of the anthracite coal strike on Monday, but also of a fall in New York bank reserves on Saturday below the legal minimum—the financial position became interesting. The "million-share day" of Monday of last week, with the manifestly enormous realizing sales of that and the three succeeding days, seemed on its face to mark the end of the Stock Exchange rise. The subsequent discovery that the banks were "overloaned" added to that probability. It showed how rapidly an active stock market uses up available stores of capital; for when the recent advance began, in February, the bank position was the strongest ever reported at that date, except for 1908, in fifteen years, whereas last Saturday's deficit in reserves was the first which has occurred at the end of March since 1883.

This led to a somewhat general feeling that the more rash and excitable speculative faction was now responsible for the latest movement of the market. It was admitted that, towards last week's close, the so-called "outside public" had taken a hand in speculation. Sometimes the outside element, at such times, takes the bit in its teeth, snatches the market violently away at the moment the large manipulators think the bull movement ended, and forces prices materially higher. It certainly did so after the Taft election in November, 1908, when even Harriman, who had started the preëlection rise, warned his friends that "the situation is dangerous" and that "a halt should be called." On the other hand, there were voices raised on Wall Street this past week (as there were, indeed, in November, 1908), to reply that a further rise was warranted. A strike of hard-coal miners was no doubt beginning, but it would not continue long, and meantime the threatened soft-coal strike had been averted. There was admittedly a deficit in our bank reserves; but the same banks had at least $150,000,000 loans outstanding on Continental Europe's markets, and could convert them into cash resources whenever necessary.

Two well-known and important financiers, towards the close of the present week, expressed as follows their personal views of the situation. One said that the recent stock market movement had been well-founded, and that the fundamentals in the financial and industrial position were sound, but that the rise of stocks, in its later stages, had been entirely overdone, and would have to be followed by a severe decline. The other took the ground that the March advance in prices was only preliminary, that a steadily improving condition of financial and industrial affairs was at hand, and that whether incidental reaction occurred now or not, the rise would be resumed and would continue well into the coming months.

As between these two opinions, observant readers will no doubt be able to make their own judicious choice. But most people, in Wall Street at any rate, would probably agree that the truth as regards the underlying situation stands somewhere between the two. This consensus of opinion—in which, it is now quite manifest, the majority of outside business men agree—is interesting because of its contrast with the opinions current not very long ago. It is less than five months since we were assured, from high financial quarters, that the blackest industrial storm in sixteen years was just ahead of us. Stocks could not rise in the face of the Trust prosecutions, business could not revive in the face of a Presidential election, and neither could look forward to anything but deepening depression until some change of heart swept over the whole community.

The course of events financial often seems to play pranks with the prophets, and it has certainly done so on this occasion. The change of heart was not forthcoming; but announcement of the Steel suit, which was to be the signal for chaos in the financial and business world, was promptly followed by a 15-point rise in stocks and a sudden revival in the steel trade. Next, into the already sufficiently confused political situation was injected Mr. Roosevelt's radical campaign, into the unsettled financial situation the gathering clouds in Germany, and into the troubled business situation the English coal strike, the declaration of war by the American miners, and the threats of the locomotive engineers; whereupon a four-weeks' rise in prices on the Stock Exchange ensues, with such predictions on top of it as those already quoted. Such a sequel justifies repetition of the question, what then is actually before us?

Some things, to begin with, are already evident which the Stock Exchange instinctively foresaw when they were visible neither to the gloomy financial prophets of November and December, nor to the general public. One is, that an attempt to tie up a nation's industry by a general strike will inevitably break down, through the reaction of its effects upon its authors. Sweden learned this in 1909; England has learned it as plainly, this past month, and American workmen will probably not care to invite a similar lesson of their own. Another discovery of the financial markets is that the American people are not in any such wild and extravagant political frame of mind as despondent observers had pictured.

Between the political extremists of crusted bigotry and of shallow empiricism there has always been, as Macaulay pointed out, "a great mass which has not steadfastly adhered to either, which has sometimes remained inertly neutral, and which has sometimes oscillated to and fro," and whenever that part of the electorate has leaned in either direction, its weight has been irresistible. We frequently have to re-learn the truth that, in our own country primarily, it is this body of cautious citizenship which makes majorities, which in doing so does not hesitate to administer stern rebuke to a one-time political favorite when he presumes on the public's favor, and which is quite as ready to repudiate the extravagant agitator as to turn its back on the moss-grown conservative. Usually the lesson is taught us in November of an election year; sometimes considerably earlier, and in either case we understand why the Stock Exchange habitually looks forward with calmness to a Presidential vote.

How far the markets of the present month represent merely reaction from such previous declines as may have been caused by the action of financiers whose views of these matters were mistaken, and how far they were the foretaste of what we are presently to see in the gen-

eral movement of prosperity, are open questions. Ordinarily, a really noteworthy rise on the Stock Exchange will be followed, after a longer or shorter interval, by signs of similar industrial improvement. But that in turn will be regulated, so far as regards its continuance, by other influences not yet measurable, and meantime the stock market, when it has performed its task of immediate prophecy, must wait until it can foresee these new influences.

We are close to the season of preliminary crop uncertainties. We have drawn very heavily on our available bank resources, even in advance of a normal demand from general business. We have yet to determine just what is the trouble with Europe's continental markets, and what they will do if requirements in America were to bring back our European loans. We have not yet settled clearly the problem of profits in relation to working costs, and the labor disputes now pending do not make the question any simpler.

THE DRUNKARD

By GUY THORNE

Author of "When it Was Dark."

A powerful novel written by a man of the world for men and women of the world. To the general reader it is a strong story of deep human appeal. To those to whom drunkenness is a painful personal and social problem, it is the sympathetic revelation of the physical and mental state of the drunkard, which makes help for him possible. Probably the most startling and impressive story in any language concerned with the psychology of intemperance. In "When it Was Dark" the author proved his power of holding spell-bound a vast company of readers. (*Cloth*, 12*mo*. $1.35 *net; postpaid*, $1.47.)

THE MAKING OF WESTERN EUROPE

Being an Attempt to Trace the Fortunes of the Children of the Roman Empire

THE DARK AGES—300 A. D. to 1000 A. D.

By C. R. L. FLETCHER Price $2.50 Net

Formerly Fellow of All Souls & Magdalen Colleges, Oxford, Author of "An Introductory History of England," etc.

In this volume the author treats of the break of the Western Roman Empire; the Barbarian migrations and invasions and the rising power of Catholicism; the Goths and the partition of Italy; the gradual formation of new nations; the growth of Islam and its effect on the Christian world; Charlemagne; the snapping of the bonds and the formation of independent nationalities in Europe, foreshadowing those of the present day.

Full of enthusiasm for his subject, Mr. Fletcher makes it just as fascinating to read as was his History of England. Handled in broad masses and bold outlines, the tangle of European history during this seven hundred years of change and strife straightens out before the reader's eyes into a reasonable evolutionary process full of romance and of important lessons for the civilization of our twentieth century.

An Historical and Sociological Study

By LOUIS CAZAMIAN $1.50 Net

This volume by M. Cazamian, lectures at the Sorbonne, follows the evolution of modern England and traces the main lines of her intellectual and social development.

"Altogether Mr. Cazamian's is an admirable book."—*N. Y. Times.*

NOW READY, AUTHOR'S EDITION

SHAKESPEARE

A Critical Study of His Mind and Literature

By EDWARD DOWDEN, LL.D. $1.50 Net

A new edition of this standard work, with a new introduction by the author.

THE CULT OF INCOMPETENCE

By PROF. EMILE FAGUET (of the French Academy) $1.50 Net

A powerful and logical Criticism of the inevitable Tendencies of an unrestricted Democracy.

SYNDICALISM AND LABOR

By SIR ARTHUR CLAY $2.25 Net

A valuable book on the beginnings and rise to favor of the "General Strike" as labor's most deadly weapon, including some account of the French "Syndicats Ouvriers" which initiated it. The principal so-called "General Strikes" of the past few years in France, Sweden, Italy, and Spain are described and their results noted. A most timely and informing book, written in a temperate and judicial spirit.

THE LABYRINTH OF LIFE

By E. A. U. VALENTINE $1.25 Net

A keen and good-naturedly sarcastic study of expatriated Americans, with strongly portrayed types that will be recognized with instant appreciation by every one who has touched at any point the wide circle of our would-be literary and artistic compatriots in Paris.

Mr. Valentine's former story, "Hecla Sandwith," was widely noticed for its promise of excellent work to come.

DORINDA'S BIRTHDAY

By CHARLES LEE, Author of "The Widow Woman." In print cloth cover, $1.25 Net

An idyl of a Cornish fishing village. An exquisite light comedy of youth and romance.

"A delightful comedy of the spring-time of life, delicately told."—*N. Y. Tribune.*

Illustrations of Design

Based on Notes of Line as used by the *Craftsmen of India.*

By LOCKWOOD DE FOREST
$2.00

A carefully selected set of plates reproducing the exquisite work done by the craftsmen of India among whom the author has studied for thirty-five years. The method of working from notes of line, as used by the Indian craftsmen, is clearly developed. By beginning thus with the simplest problems the book becomes valuable for the youngest pupil as well as for the skillful workman. Issued in portfolio form in the Biflex Binder; *Illustrations of Design* is of great convenience in the classroom as it allows the different plates to be removed for individual use.

GINN AND COMPANY, 29 Beacon St., Boston

INDIAN STORIES
By MAJOR CICERO NEWELL

REAL stories about real Indians by one who lived among the Dakotas for years. This book has a rare charm, a sort of Robinson Crusoe realism which will delight boys and girls. Interestingly illustrated.

NEW BOOKS ON LIVING ISSUES

HOME UNIVERSITY LIBRARY

BY LIVING MEN AND WOMEN

OF MODERN KNOWLEDGE

GENERAL EDITORS:

Prof. GILBERT MURRAY, Prof. J. ARTHUR THOMSON, Prof. WILLIAM T. BREWSTER, H. A. L. FISHER.

Each volume complete in itself, and sold separately. Each is absolutely new, and specially written. There are no reprints.

Cloth bound 50c. per vol. net, by mail 56c

Now that two score volumes are ready, attention is called especially to this enterprise, which offers material peculiarly well adapted to use in many educational movements and institutions—libraries, extension courses, study clubs, reading circles, as well as schools and colleges—wherever interesting, low-priced books of trustworthy information are needed.

These books do tell whatever is most important and interesting about their subjects, with enough vividness and detail partly to satisfy, and still more to stimulate, the average reader's intellectual curiosity. They do not, like encyclopædia articles, convey the greatest amount of information possible in the space.

Sets of 10 volumes will be issued quarterly until the general field of knowledge is covered in outline. An order for any volume will insure receiving announcements of future issues.

SOME COMMENTS ON THE SERIES AS A WHOLE:

"Covering almost every conceivable intellectual interest from astronomy to socialism, written in a popular style by specialists, brief, clear, and readable, above all cheap, they fill one of the gravest wants of modern intelligence. . . . The editors and publishers have here performed one of the most valuable and difficult of services in producing a real 'library' of real value to everyone interested, from whatever cause, in the achievements and the progress of society."—*Yale Review.*

"Each represents a three hours' traffic with the talking-power of a good brain, operating with the ease and interesting freedom of a specialist dealing with his own subject."—*The London Times.*

"Exceedingly worth while."—*The Nation.*

"The excellence of these books."—*The Dial.*

"Useful and interesting. . . . By men of unquestioned authority. A vigor and attractiveness of style."—*N. Y. Evening Post.*

"All the volumes have been good, but some have been uncommonly good."—*Chicago Record-Herald.*

"So large a proportion with marked individuality."—*N. Y. Sun.*

"Mines of information."—*Hartford Courant.*

"This great series."—*Chicago Evening Post.*

"Excellent little books on big subjects. These are all new books on living issues by living men and women, who are vitally interested in their topics. We receive more letters asking for just such books than for any others; that is, for books that will give in brief and readable form a modern and competent treatment of some phase of science, question in economics, or period in history."—*Independent.*

Henry Holt and Company 34 WEST 33d ST. NEW YORK

New Book on Sociology and Religion

Sociological Study of the Bible

By Louis Wallis, *Author of "An Examination of Society"*
Formerly Instructor in Economics and Sociology in the Ohio State University.

This work will be both interesting and useful to all who are awake to present-day social and religious problems. It is a new and remarkable treatise on the development of the fundamental religious ideas of Christian civilization, written in a style which is clear to anyone who is genuinely interested in the subject. Strong words of commendation have been spoken by leading scholars who have examined the advance sheets of the book. While the modern school of historical criticism has been long committed to the view that the religion of the Bible is in some way the result of an evolutionary process, it has not thus far shown how this religion actually developed. Mr. Wallis puts the evolution itself before us in such a way that we can see the religious ideas of the Bible gradually taking shape in response to the pressure of social developments. Professor Henry Preserved Smith, D.D., writes: "I think your book will have great value as a contribution to a really historical understanding of the Bible."—Professor Lewis B. Paton, of Hartford Theological Seminary, writes: "I think you have guarded your position very carefully; and it seems to me a very satisfactory and convincing presentation of the subject."—Lester F. Ward, Professor of Sociology in Brown University, and Edward A. Ross, Professor of Sociology in the University of Wisconsin, write that the book conforms to our best modern knowledge of social science.—It is a new disclosure of the interweaving of higher criticism and sociology. No serious worker in the field of these problems can afford to be without it.

NEW

WAVES OF THE SEA, and Other Water Waves. By VAUGHAN CORNISH.

A fascinating book, not only for the person who desires to obtain an introductory study to physiography and wave phenomena in relation to it, but for the general reader who is an admirer of water in action. The gushing of cataracts, whirls, and eddies, every type of water structure, are explained in the author's refreshing style. The book is profusely illustrated with remarkable photographs showing to a fine degree the weirdness and fascination of many peculiar wave formations. If you are interested in any way in atmospheric disturbances, or sand and earth formations, you will find a scientific treatment of all wave action, with its relation to this phenomena, given in this book.

Lovers of water and its peculiar and fascinating action will find in Mr. Cornish's volume a wealth of interesting material of such a nature as to justify them in being particularly proud to have it in their libraries. *Cloth, $2.50 net, illustrated.*

EGYPT

The Lure of this Land of Mystery Has Never Been Portrayed so Impressively as in this New Book Entitled

EGYPTIAN AESTHETICS. By RENE FRANCIS.

It offers an attractive introduction to the study of Egyptian History and Art. Its crisp descriptions of the Egypt of to-day make interesting reading for the traveler and general reader alike. The author has employed a truly narrative style which carries the reader along in delightful fashion, as if taking a walk through an enchanted country accompanied by the keeper of the treasure house. The lure of this land of mystery, its hatefulness as well as its charm, is thoroughly known to the author of this book. *Cloth, $2.00 net.*

ON THE INHERITANCE OF ACQUIRED CHARACTERS. By EUGENIO RIGNANO.

Translated by BASIL C. H. HARVEY, U. of C.

The *Outlook* says: "The questions this volume discusses are of the gravest consequence, not only to scientists, but ultimately to us all, and upon the answers to them will depend to a very large degree the future of the race. It is a contribution to the attempt to understand the nature of living matter."—*Cloth, $3.00 net.*

ASPECTS OF DEATH IN ART. By F. P. WEBER.

A curious and interesting treatise of the mental attitude towards the idea of death as illustrated in works of art, especially medals, engraved gems, jewels, finger rings, etc.

This book makes its appeal to the collector of rare coins, to those interested in old and peculiar specimens of jewelry, and to all those who appreciate curious and peculiar forms of art. $1.50 *net.*

Single copy, 10 cents.**

THE OPEN COURT PUBLISHING COMPANY, CHICAGO, ILL.

YALE UNIVERSITY PRESS PUBLICATIONS

NOW READY

THE CHRISTIAN VIEW OF THE WORLD

By Prof. George J. Blewett, Victoria College, Toronto

A highly significant interpretation of the nature of the Christian religion from the standpoint of idealistic philosophy.

12mo. Cloth binding. Gilt top. 344 pages. Index. Price $2.00 net per copy; postage 18 cents additional.

NOW READY

THE ORIGIN of the ENGLISH CONSTITUTION

By Prof. George Burton Adams, Yale University

A very timely and important contribution to one of the most absorbing of all historical studies.

Octavo. Cloth binding. Gilt top. 378 Pages. Index. Price $2.25 net per copy; postage 15 cents additional.

IN PREPARATION FOR EARLY PUBLICATION

ENGLISH LYRICAL POETRY

From its Origins to the Present Time

By EDWARD BLISS REED, Assistant Professor of English, Yale University

A critical history of the English lyric, which discusses its relations with French and Italian poetry and gives an estimate of all the important lyrics of the various periods of our literature. There is at present no work reviewing in its entirety this important field. The publishers therefore believe that the volume will not only prove of interest to all lovers of poetry, but will also be of great practical use in advanced courses in English literature.

Octavo. Cloth binding. Gilt top. 580 Pages. Bibliography. Index. Price $2.25 net per copy. Postage 20 cents additional.

THE MEANING OF GOD IN HUMAN EXPERIENCE

A Philosophic Study of Religion

By WILLIAM ERNEST HOCKING, Assistant Professor of Philosophy, Yale University

A volume of profound thought and great value, which not only contributes largely to the psychology of religion, but goes beyond psychology to the interpretation and truth of religious experience. There is in the work a union of the methods of James and Royce, and the result is a concrete and original theory which traces religion from its sources to its fruits in personal and social life. The author's treatment of mysticism, worship and the "creativity of religion" is noteworthy.

Octavo. Cloth binding. 480 Pages. Index. Price $2.50 net per copy. Postage 20 cents additional.

RECENT VOLUMES OF IMPORTANCE

THE PRESIDENT'S CABINET

Studies in the Origin, Formation and Structure of an American Institution

By HENRY BARRETT LEARNED

"The work is already one of high value to readers interested in American Constitutional History and will prove instructive wherever modern political institutions are made a subject of special study."—*The Scotsman, Edinburgh. Octavo. Cloth binding. 471 Pages. Index. Price $2.50 net per copy; postage 20 cents additional.*

THE REFORM OF LEGAL PROCEDURE

(Second printing within six months of publication)

By MOORFIELD STOREY, Ex-President of the American Bar Association

"The work is so authoritative, clear, and popular in style as to be the most useful book on the subject yet published."—*American Library Association Book List.*

12mo. Cloth binding. 263 Pages. Index. Price $1.35 net per copy. Postage 10 cents additional.

INTERNATIONAL ARBITRATION AND PROCEDURE

By ROBERT C. MORRIS, D.C.L., United States Counsel before the Venezuela Arbitration of 1903

"Especially timely. It is an extremely valuable historical review, as well as a present-day survey of importance. . . . A reading of it is quite essential to any one who would keep in touch with the movements of the time."—*Utica Observer.*

12mo. Cloth binding. 238 Pages. Index. Price $1.35 net per copy. Postage 10 cents additional.

THE CONSTRUCTION OF LOMBARD AND GOTHIC VAULTS

By ARTHUR KINGSLEY PORTER, Author of "Medieval Architecture"

"The most important contribution to the topic of mediaeval construction which has been published for many years. It is no small thing to have discovered the origin of the Gothic rib vault and this is what Mr. Porter has done. Since the works of Viollet-le-Duc and Choisy, no contribution of the same significance, to the general topic of mediaeval construction, has appeared. The discovery in question is a supplement and an addition to the results of these distinguished authorities, of which no student of mediaeval architecture can afford to be ignorant."—*The American Architect.*

Quarto Boards. Paper label. 100 pages. 63 illustrations. Price $2.00 net per copy. Postage 20 cents additional.

THE YALE UNIVERSITY PRESS

books are bought with confidence by general readers, scholars and librarians everywhere because of the fact that no volume can be published under the imprint of the Press until it has received the endorsement of the Council's Committee on Publications of Yale University. A copy of our catalogue will be sent postpaid on request.

THE YALE UNIVERSITY PRESS

invites authors who appreciate the prestige of an endorsement by the Council's Committee on Publications of Yale University to submit their manuscripts for consideration. Publicity is thus given this announcement in order to correct a somewhat general but wholly erroneous idea that the Press seeks to publish only works by those connected with Yale University.

New Small-Maynard Books for Spring

TRIPOLI THE MYSTERIOUS — **By Mabel Loomis Todd**

The only book in the English language on Tripoli as it is, charmingly informative. *By the author of "A Cycle of Sunsets," etc. Profusely illustrated. Large 12mo. Probable price, $2.00 net; by mail, $2.15.*

A CHAUTAUQUA BOY IN '61 AND AFTERWARD — **Reminiscences of David B. Parker**

Edited by TORRANCE PARKER. With an Introduction by ALBERT BUSHNELL HART.

"There are many volumes of reminiscences in the same period, but hardly any of them," says Prof. Hart, in his Introduction, "reveal so much of the inner workings of the army, of soldier life and of the public service during the critical period of the Civil War, and the years immediately following. From the first chapter to the last the book holds its ease and vivacity." *Illustrated from rare photographs and documents. 8vo. $3.00 net; by mail, $3.25.*

THE CAMPAIGN OF GETTYSBURG — **By "Miles"**

A book carefully written from original sources by an English army officer who preserves his anonymity under the pseudonym of "Miles." "It is a good analytical narrative describing events, but at the same time explaining motives and objects and discussing causes of success and failure, with the skill of a master."—*Army and Navy Gazette. 8vo. 3 colored maps. $2.00 net; by mail, $2.15.*

THE LAST EPISODE OF THE FRENCH REVOLUTION — **By E. Belfort Bax**

The "Conspiracy of the Equals," animated by "Gracchus" Babeuf—the subject of this significant volume—is a movement of very considerable interest to students of modern socialism. The theme was suggested to Mr. Bax by the late William Morris. $1.50 *net; by mail, $1.62.*

WHITE MOUNTAIN TRAILS — **By Winthrop Packard**

A survey of the White Mountains of New Hampshire from a naturalist's standpoint, useful alike to the tourist, the "tramper" and the nature lover. *By the author of "Florida Trails," "Wild Pastures," etc. Profusely illustrated. 8vo. Boxed. $3.00 net; by mail, $3.15.*

LITERARY PILGRIMAGES OF A NATURALIST — **By Winthrop Packard**

A naturalist's rambles among the haunts and homes of Emerson, Thoreau, Webster, Hawthorne, etc. *Profusely illustrated. 8vo. Boxed. $2.00 net; by mail, $2.15.*

THE SONNETS AND BALLATE OF GUIDO CAVALCANTI Rendered into English Verse **By Ezra Pound**

A significant volume, by the author of "Provenca." $2.00 net; by mail, $2.15.

FORTHCOMING FICTION

GEORGETTE — **By Marion Hill**

The irresistible story of an irresistible American actress, told with a spontaneous, mirth-provoking humor that should put Mrs. Hill high in the list of American humorists—perhaps the only woman with a place among the first. *By the author of "Harmony Hall," "The Pettison Twins," etc. $1.25 net; by mail, $1.37.*

THE ISLE OF STRIFE — **By George C. Shedd**

A rattling good story of adventure and mystery, completely and satisfying care-dispelling. *By the author of "The Incorrigible Dukane," etc. Illustrated, $1.25 net; by mail, $1.37.*

THE SECRET OF FRONTELLAC — **By Frank K. Scribner**

An absorbing mystery of two Americans in an old French chateau. *Frontispiece. $1.25 net; by mail, $1.37.*

UNQUENCHED FIRE — **By Alice Gerstenberg**

A remarkable "first" novel, dealing with Chicago society and the struggles of a charming girl to succeed as an actress. *$1.25 net; by mail, $1.37.*

THE MYSTERIOUS CARD — **By Cleveland Moffett**

At last this amazingly successful "Black Cat" story is to be published in book form. The fact that thousands of people have asked for it eagerly for years and that the surprising explanation of the mystery is set forth in the sequel, included in the same volume by a clever device, insures enormous popularity for the book. *50 cents net; by mail, 56 cents.*

THE TEN-THOUSAND-DOLLAR ARM — **By Charles E. Van Loan**

Another series of baseball stories by the author of "The Big League," even better than the tales in that popular book. *Illustrated by Wallace Goldsmith. $1.25 net; by mail, $1.37.*

TOBY—A Novel of Kentucky — **By Credo Harris**

A powerful story of life in the Kentucky hill country, depicting a man's regeneration through the influence of a true and tender love. *$1.25 net; by mail, $1.37.*

WILHELMINA CHANGES HER MIND — **By Florence Morse Kingsley**

A delightfully merry tale in Mrs. Kingsley's best vein. *Probable price, 75 cents net; by mail, 85 cents.*

SELLING STEADILY THROUGHOUT THE COUNTRY

THE GUARDIAN — **By Frederick Orin Bartlett**

Second printing. Frontispiece in color. $1.35 net; by mail, $1.47.

THE BREAKING-POINT — **By Fred Lewis Pattee**

$1.25 net; by mail, $1.37.

THE MAN WITH THE BLACK FEATHER — **By Gaston Leroux**

Illustrated, $1.25 net; by mail, $1.37.

THE ONE AND THE OTHER — **By Hewes Lancaster**

$1.00 net; by mail, $1.10.

THE MARRIAGE PORTION — **By H. A. Mitchell Keays**

$1.35 net; by mail, $1.48.

THE KNIGHT-ERRANT — **By Robert Alexander Wason**

Illustrated, $1.25 net; by mail, $1.37.

HER HUSBAND — **By Julia Magruder**

Illustrated. $1.35 net; by mail, $1.47.

THE INCORRIGIBLE DUKANE — **By George C. Shedd**

Illustrated, $1.25 net; by mail, $1.37.

SMALL, MAYNARD & COMPANY, Publishers, BOSTON

IMPORTANT NEW SPRING BOOKS

The Spell of France

By CAROLINE ATWATER MASON

A new volume in the popular SPELL SERIES, devoted to the French themselves, their pursuits and characteristics, which, together with an entertaining account of the author's personal experiences while travelling in the land of the fleur-de-lis, combine to make a book that will equal, if not excel, the remarkable demand of THE SPELL OF ITALY, by the same writer, the initial volume of the series now selling in its fifth edition.

Illustrated from rare old prints and photographs, in a box, net, $2.50 (postpaid, $2.70).

Three Wonderlands of the American West

Being the Notes of a Traveler concerning the Yellowstone Park, the Yosemite National Park, and the Grand Canyon of the Colorado River, with a chapter on other wonders of the great American West.

By Thomas D. Murphy

"The author has caught the atmosphere of the 'Wonderlands' and has the rare gift of being able to make the reader see with *his* eyes; to produce pen pictures second only to the marvelous illustrations themselves," writes *Mr. Charles L. Bowman, president of the Union Library Association.*

With 16 reproductions in full color from paintings by Thomas Moran and 32 duogravure plates. *In a box, net* $3.00 (*carriage* 30c. *extra*).

Chile and Her People of Today

By Nevin O. Winter

A new volume in the *SERIES OF THE LATIN-AMERICAN REPUBLICS.*

"A comprehensive narrative covering every phase of life and history which one would wish to know about this country."—*Boston Herald.* *Profusely illustrated, in a box,* $3.00.

The Art of the Berlin Galleries

By David C. Preyer

A new volume in the *ART GALLERIES OF EUROPE SERIES*, devoted to the art treasures of the Kaiser Friedrich Museum and the Royal National Gallery. It is one of the most entertaining of this author's productions and is literally a description of the works of the old masters, since it contains few biographical incidents. *With 48 full page duogravure plates, in a box, net* $2.00 (*carriage* 20c. *extra*).

New Revised Editions in the Series of the Latin-American Republics

Forbes Lindsay's *authoritative volume*

Panama and the Canal Today

"A story about the country, its people and the vast undertaking in which all Americans are so interested."—*Boston Globe.*

Nevin O. Winter's *account of*

Mexico and Her People of Today

"A thoroughly up-to-date description of Mexico, territorially, politically, economically, and racially," says the *Review of Reviews.*

Each, profusely illustrated, in a box, $3.00

Special editions of Grant Allen's popular works on the principal cities of the Old World

Previously published in two volume sets at $3.00 each.

PARIS
VENICE
FLORENCE
BELGIUM: ITS CITIES
CITIES OF NORTHERN ITALY

Now issued each one volume with 65 plates. In a box, net $1.75 (*postpaid* $1.95).

New Fiction

The Dominant Chord

By Edward Kimball

"Not since Jules Verne has there been such a story. With this one before you, there is no need to lament the dearth of imaginative stories, for it contains enough exciting and unparalleled adventure to make up for months of blasé reading."—*Bookseller, Newsdealer & Stationer.*

From Page's List

Naomi of the Island

By Lucy Thurston Abbott

"A well written and delightfully told romance. The potent power of love and the generous denial of self is depicted in such a tender and sympathetic manner that it will hold the attention of even the veteran novel reader to the end."

Each, with color frontispiece, net $1.25 (*postpaid* $1.40).

Published by **L. C. PAGE & COMPANY** *53 Beacon St. Boston, Mass.*

Noteworthy New Publications

INTIMACIES OF COURT AND SOCIETY

An Unconventional Narrative of Unofficial Days

By the Widow of an American Diplomat

"One of the most entertaining books of its class yet published in this country."—*New York Tribune.*

"Not for many moons has there appeared a book of court and society gossip that could match this one in excellence of matter, style, and spirit."—*Chicago Record-Herald.*

"The anonymous writer of 'INTIMACIES OF COURT AND SOCIETY' is endowed with that indefinable extra sense, which is supposed to be the gift of the especially brilliant reporter."—*Newark Call.*

With numerous illustrations. 8vo. $2.50 *net. Postpaid* $2.79.

DEATH

By Maurice Maeterlinck

Translated by ALEXANDER TEIXEIRA DE MATTOS

Death as a beginning, not Death as an end, has kindled the imagination of the great mystic philosopher. What the foremost figure in contemporary literature has to say upon Death and Immortality cannot fail to impress profoundly all thoughtful readers. *Small* 12mo. $1.00 *net. Postpaid* $1.10.

A HISTORY OF ENGLISH CRITICISM

By George Saintsbury

Professor of Rhetoric and English Literature in the University of Edinburgh

This book is an indispensable complement to any history of English literature.

8vo. $2.75 *net. Postpaid* $3.00.

CHILDREN OF THE RESURRECTION

By John Watson, D. D.

(IAN MACLAREN)

Author of "The Bonnie Brier Bush," etc.

This is a book for Easter, written with the deep devotional feeling which characterized "The Mind of the Master." Although completed several years ago, plans for publication were interrupted by the author's death, and not until the present time has it been possible to present this inspiring Easter-Day book to the public.

16mo. $1.00 *net. Postpaid* $1.10.

MONA *A Drama.*

By Brian Hooker

This beautiful and dignified poem forms the libretto of the American Opera, already famous, which was produced for the first time this March by the Metropolitan Opera Company.

"It is one of the things which intelligent people will feel bound to know something about."—*Brooklyn Eagle.*

12mo. $1.25 *net. Postpaid* $1.36.

HOW TO VISIT EUROPE ON NEXT TO NOTHING

By E. P. Prentys

This clever little book shows how one American girl made a trip abroad, lasting ten weeks. She not only tells how she did it, but how it can be done comfortably and pleasantly for $300.

Handy Pocket Size. $1.00 *net. Postpaid* $1.10.

HOW TO VISIT THE ENGLISH CATHEDRALS

By Esther Singleton

The author, who combines great facility and long practice in the preparation of such a book, has made, it is safe to say, the most up-to-date, clearest and best arranged guide to the cathedrals of England that has yet been published.

Illustrated. Handy Pocket Size. $2.00 *net. Postpaid* $2.14.

THE TOURISTS' RUSSIA

By Ruth Kedzie Wood

Being the only Tourists' Guide to Russia published in English.

As there is no English guide-book to Russia, English and American tourists to that country are compelled to do the best they can with German, French, and Russian books. Yet Russia is an extremely interesting country to visit, has the merit of not being crowded with tourists, and is reached far more easily than most people imagine. The new Russian steamship line from New York to Libau carries its passengers in commodious and luxurious boats direct to Russia; the difficulties of transportation, passports, etc., can be smoothed by an intelligent guide-book like "The Tourists' Russia;" and Russia, a new country for the American tourist, is thus made accessible.

With list of Tourist Cities in Russia, hotels, banks, consulates, routes, many illustrations, and a map. 12mo. $1.25 *net. Postpaid* $1.37.

Publishers **DODD, MEAD & COMPANY** **New York**

The Nation

NEW YORK, THURSDAY, APRIL 11, 1912.

The Week

The President's message sent to Congress last Thursday shows in detail how the statutory changes he recommends, in pursuance of the conclusions reached by the Efficiency Commission, would result in saving about $12,000,000 annually to the Government. Of these changes a number take the form of abolition of unnecessary offices, consolidation of needlessly separated services, improved methods of work, etc.; but by far the largest part of the gain would arise from the transfer of offices that are under the "political" appointment system to the classified service. In urging this transfer, to cover all "the local officers under the Departments of the Treasury, of the Post Office, of Justice, of the Interior, and of Commerce and Labor," Mr. Taft is but renewing a recommendation which he had repeatedly made before with great earnestness.

It is possible to explain, but it is impossible to explain away, the voting in the Illinois Presidential primary on Tuesday. The Roosevelt triumph was sweeping, exceeding even the predictions of his managers. It was expected that he would get a large vote, and probably win a majority of the delegates, but that he would have a plurality of 100,000 over Taft and procure all the Presidential delegates, as he appears to have done, entered into no political reckoning. That the b'ow to the President is severe, no friend of his will think of denying. His campaign managers have long admitted that they regarded Illinois as their "weakest spot," but they could not have imagined that the ground there would so completely fall from beneath their feet. That Mr. Taft should have been so badly beaten in a traditionally Republican State will be seized upon as conclusive proof that his hold upon the affections of his party is but slight. The cry that he cannot be elected will be redoubled. And the Roosevelt campaign, though it remains hopeless, will take on a still noisier tone as a result of the Illinois primary, his followers acquiring new hope, not that they can possibly nominate the Colonel himself, but that they may be able to force the choice of a compromise candidate.

Champ Clark's victory in Illinois ought to rouse every Democrat who believes in sane and effective leadership. As a Presidential candidate the Speaker would be one of the most absurd figures ever seen on the stump. Success would be impossible for his party. His alliance with Hearst, which he cordially acknowledged the next morning, would alone be sufficient to ruin his chances. Competent politicians inform us that, in their judgment, his campaign would collapse in eight weeks after the Convention. With Clark as its spokesman, the Democracy would again be the butt of the country, because of its propensity for inexcusable blundering.

This La Follette business is getting to be past all endurance. Left for dead on the field a few weeks ago, he not only captures State after State, but literally adds insult to injury. In declaring the reason for his refusal to withdraw, he takes occasion to characterize the candidacy of the Colonel in terms which must be more exasperating to him than anything that the hireling capitalist press can say. "I have always contended," says the Wisconsin man, "that progressive Republican principles represent moral issues admitting of no compromise. I have therefore steadfastly refused to compromise or combine with any compromise candidate." What, the Colonel a compromise candidate? Roosevelt not a moral issue? This is too bad.

Mr. Bryan is quite open-minded about all the Democratic candidates except Gov. Harmon. He is as certain that Ohio's Executive is a reactionary as if it had been revealed to him on Mount Sinai. His hat is in the ring on this issue, and he will fight to the bitter end to prevent Harmon's nomination—and then remain regular, doubtless, and work for the success of the ticket. Here again the resemblance between Roosevelt and Bryan is striking enough. But waiving that, the Nebraska statesman would apparently be quite satisfied with either Champ Clark the blundering and cheap politician, or Woodrow Wilson, the scholarly, high-minded Executive. He will fight for them in whatever district each "seems to be strongest." Thus we see anew that Providence and Bryan are on the side of the largest battalions. As for the initiative, referendum, and recall, Mr. Bryan is sure that the National Convention will not insist upon planks concerning them. They are State issues only. Finally, Mr. Bryan is certain that there is no prospect of a permanent third party. He knows Roosevelt too well to believe that he will cut loose definitely from the party to which he owes everything.

By a vote of 173 to 17, the House of Representatives has passed the Borah-Peters bill creating a children's bureau in the Department of Commerce and Labor. The bill had already been passed by the Senate, and its approval by the President may be taken for granted. The contrast between the extremely slight opposition to this bill designed to promote child welfare, and the determined resistance encountered a few years ago by the Beveridge proposal having the same general purpose, is instructive and gratifying. The Beveridge scheme was an attempt to stretch the powers of the Federal Government under the interstate commerce clause of the Constitution, so as virtually to destroy the jurisdiction of the States in a matter of strictly home concern. The present measure, on the other hand, while adding something to the activities of the central Government, does so merely in the direction of the ascertainment of facts and the dissemination of information. Without exercising any coercion or constraint, the children's bureau will be sure to exert a potent influence upon State action through the force of enlightenment and through moral pressure.

Last week the Senate passed without a division the bill to prevent the manufacture and use of phosphorus-matches, so deadly to workers engaged in that industry. It is expected that the workmen's compensation bill will also soon be made a law by Congress. At Albany the Constitutional amendment was pass-

ed making legal an employers' liability act, such as the Court of Appeals recently held invalid, together with several of the bills to safeguard the health and lives of employees in factories. The list of measures of this kind might be lengthened. It is well coolly to consider the proof they yield that our Legislatures and our Congress are not wickedly callous to the wrongs and hardships of the men and women who labor, and are not corruptly held back from granting relief. These things also show that it is not necessary to turn our institutions upside down and inside out in order to obtain "social justice"—provided social justice be defined as a definite remedy for a specific evil, and not merely a vague protest of indefinite discontent.

The debate over Senator Heyburn's proposal to reduce the price for the *Congressional Record* to two dollars for the long session and one dollar for the short session is as good a reply as one could wish to his contention that the *Record* is "the only safeguard to the people." It may speak the truth, and nothing but the truth, but what repels readers is the interminable way in which it utters it. The omission from the newspapers of the great mass of what is spoken in Congress is not the result of a conspiracy against Senate and House. It is only by leaving out nine-tenths of it that newspapers can induce their subscribers to pay attention to the other tenth.

Resolved, That the Chamber of Commerce of the State of New York favors a change in the navigation laws of the United States that will permit its citizens to purchase tonnage in the cheapest market, own it in their own names, sail it under the flag of the United States, and operate it on a competitive basis of cost with the tonnage of other nations.

The adoption of this resolution by the Chamber of Commerce last Thursday is not only interesting in itself, but has additional importance from the character of some of the statements made in the discussion preceding that action. One member declared that he had given up all hope of anything being done for American shipping through discriminating duties or subsidies because of the great opposition in Congress, and that he was in favor of free ships as the only thing that the country could hope to get. The author of the resolution, Mr. Welding, chairman of the Committee on Foreign Commerce, put the case for free ships very strongly in his closing argument. He pointed out that England's subsidies, of which we hear so much, apply to only about 9 per cent. of her enormous tonnage, a large part even of this being given for the right to take over the ships in case of war; and that the Hamburg-American Line, the largest shipping company in the world, has always refused to accept any subsidies whatever. He expressed the confident expectation that when American shipowning ceased to be penalized by our protectionist navigation laws, our merchant marine would speedily revive.

Two hundred cities have now adopted the commission form of government, of which nearly one-half began the experiment last year. Despite their distribution over thirty-four of the forty-eight States, more than one-fourth of them are in the two States of Texas and Kansas, and more than half of them in these States and Oklahoma, Illinois, California, and North Dakota. The *Engineering News*, which prints a comprehensive table of these cities, points out one or two weaknesses in the commission plan. All that is accomplished by the division of municipal activities into a few departments and the placing of a single commissioner in charge of each, is to fix responsibility. "A man cannot be made into an expert by giving him a title, not even when it is bestowed by popular vote." Accordingly, a city of this sort gets its expert service through sub-department chiefs only, a method that does not tend to procure a high type of administrator. The case is made worse by the common failure of commission charters to provide a civil service system. Neither of these objections will have much weight with advocates of this form of government, since neither of them is directed against any inherent weakness. Commission-governed cities can get expert service just as any other cities can, nor is it necessary for these experts to be titular heads of departments. The real danger is rather in the acceptance of the new plan as a simple and final cure for all municipal ills.

The disclosures of political and corporation rottenness of which Abraham Ruef has given a foretaste in the San Francisco *Evening Bulletin* may be expected to prove among the most extraordinary revelations of public corruption that have ever seen the light. Upon the recommendation that is reported to have been made by District Attorney Fickert, that the indictments still hanging over Ruef be dismissed, there would seem to be little room for difference of opinion. We have had no sympathy with any sentimental move for the pardon or release of Ruef on the ground that he is repentant. But it is an entirely different matter to free him from the threat of additional punishment upon charges remaining untried, in consideration of his making a detailed confession which would be of incalculable value to the State. If some of the corporation heads that were quite as responsible for these iniquities should receive their dues in the shape of long terms in the penitentiary, not only the State of California, but the whole country, would receive signal benefit.

The conviction of the Prohibition candidate for Governor of Pennsylvania in 1906 on a charge of conspiring to defraud, turns one's notions of human nature topsy-turvy. It is true that the crime had no connection with politics. But where shall virtue be found if not in a Prohibition candidate for Governor of Pennsylvania? The most ardent delegate who voted for him in the Convention could have had no hope of his winning the election. The only reasons for nominating him must have been his devotion to the principles of the party, and his high personal character. Third parties always plume themselves almost as much upon the good repute of their nominees as upon their fine political ideas. And now one of their mightiest has fallen. The incident, however, may prove an advantage to the party. Nothing could so completely shatter the common accusation that Prohibitionists are not practical men. If the party has one man within its ranks able to cheat his fellow men, it is most unreasonable to suppose that it does not have scores who could serve them in public office.

The director of the New York Aquarium is a man of courage. He has published in a recent number of *Science* a protest against "the misuse of lantern illustrations by museum lecturers." He finds that the present tendency in popu-

lar lectures on scientific subjects is not to illustrate the lecture, but to lecture about the illustrations. The lantern-slide, with its younger and still more popular sister, the moving-picture film, is in danger of driving the good lecturer from the platform. It certainly has made the bad lecturer possible. Since the hour's exercise in scientific exposition reduces itself to a parade of prettily colored pictures with more or less perfunctory comment, it does not matter from the point of view of the audience just how indifferent may be the verbal comment, how ill-prepared the speaker, how slipshod the processes of his thought and his grammar. Even Demosthenes, with a pointer in hand, could hardly hope to hold his own against a colored film. As between the shallow amateur with good pictures and the expert with inferior pictures there is little doubt as to who will get closer to the great, popular heart.

All meat-eaters must be rejoiced, and vegetarians correspondingly depressed, by the announcement of the results of the great rat contest at Leland Stanford, Jr., University. What possible explanation can be offered by devotees of a vegetable diet for the immense discrepancy between the more than five thousand miles covered by the meat-eating female rat and the less than five hundred miles travelled by her vegetable-eating sister, or between the fourteen hundred miles credited to the meat-eating male and the two hundred made by the vegetarian? Was there fraud in this primary? Until somebody catches four more rats, or, better, takes the four that have just performed this service to science and humanity, and by means of them reverses these proportions, everybody who cares for the truth and likes meat will eat it with the peculiar satisfaction that goes with doing an agreeable duty. Those who get along better without meat will make what shame-faced excuse for not eating it they can persuade their consciences to accept.

The filing of the late Lord Lister's will for probate brings out the fact that he left several generous bequests for hospitals and universities, each one accompanied by the direction: "I don't wish that my name should be in any way associated with these sums in the future." That is to say, there will be no Lister fund or Lister scholarships, specifically so called. This is undoubtedly a sincere expression of the modesty which was characteristic of the eminent surgeon. Yet in this age of *réclame*, a man whose shrinking from it was less securely established might be accused of taking the very surest way to cause his name to be remembered. No name attached to the gift might make the more people ask who the giver was. There is admittedly such a thing as an overdoing of humility which is equivalent to the most extreme ostentation. In the cathedral at Toledo, for example, in the place where the archbishops lie buried, one comes upon a stone bearing only this inscription: "Hic jacet pulvis et cinis et nihil." What form of self-effacement could seem more complete, yet what could more infallibly set generations of visitors inquiring who this particular archbishop could have been?

The revived flurry in Congress over the alleged designs of Japan upon Magdalena Bay, illustrates one of the greatest difficulties the modern world has in keeping the peace among nations. This particular uneasiness seems to be in a way to be promptly allayed. Indeed, it is plainly intimated that the chief motive of the Administration in consenting to a resolution in the Senate calling for official information, was to furnish a complete refutation of the rumors. But this special instance is an example of the kind of thing that insidiously disturbs international relations. It is not open insults, unconcealed menaces, or a direct clashing of rival interests, but, rather, a subtle form of suspicion. Now, this usually arises from ignorance. We do not know other nations well enough, they do not understand us well enough, to prevent the currency of vague notions respecting hostile intentions, which we could all see, if we had the eye to look the matter through and through, to be wholly unfounded.

There is no duty more obvious for statesmen at the present day than that of seeking to preserve peace by means of understanding what other nations really are and what their governments intend to do. This was the theme of Viscount Haldane, British Secretary for War, in his address last year before the University of Oxford—an address so able, sane, and civilized that the American Association for International Conciliation has done well to reprint and circulate it. Viscount Haldane applied himself to the problem of the relations of Germany and Great Britain from the side of a student in national characteristics. He held that the great peace-maker would be he who should truthfully interpret one nation to the other. England is much misunderstood in Germany, but Germany, frankly argued Haldane, is even more misunderstood in England. He himself, having a thorough knowledge of the German language, being deeply read in German literature, and fully in touch with the whole modern movement in Germany, was precisely the kind of man to warn his countrymen of the folly of creating an unreal Germany out of their own imagination wherewith to affright themselves and goad themselves into passion. Viscount Haldane, we may add, was also precisely the kind of man to send on a conciliatory embassy to Berlin. In him the German Government knew that it had an Englishman who understood Germany, and could treat with him on that basis.

Germany's increased military expenditures, as proposed by the Government, have led to the resignation of Herr Wermuth, Secretary of the Treasury. He does not disapprove of the new outlay on the army and navy, but simply insists that the added charges on the Treasury must be met by fresh taxes. The principle for which he stands is: No outgo without income. Pay as you go is the motto of this finance minister; and as the Government would not consent to his plans for levying taxes to foot the bills for increased armaments, he threw up his portfolio on that issue. As a result, it is expected that German public finance will go back for a time to the plan which it followed for some years, of borrowing money to balance the budget and so carrying along annual deficits. Herr Wermuth's position is undoubtedly correct, his policy being the only sound one in the long run, but it must be said that it sounds very English, and rather old-fashioned at that. The new and approved method, as witness our own chronic Treasury deficits for the past three years, is to pay out whatever is demanded and to trust to luck to get the money to do it with.

IS THE CONVENTION SYSTEM DOOMED?

Two opposing views of the existing method of nominating Presidents by National Conventions have recently been put before the country. Speaking in Illinois last week, Gov. Wilson predicted that by four years from now every State would have a Presidential primary. He had in mind the model which was given by Wisconsin, and which New Jersey was the first of the Eastern States to adopt. That the movement in this direction is pronounced, no one will dispute. It led to the hurried enactment of a Presidential primary in Illinois. Doubtless the effect there and events elsewhere will tend to heighten the demand for a direct expression of Presidential preferences; so that Gov. Wilson's prophecy may not prove to be so very wide of the mark.

On the other hand, we have a fervid defence of the Convention system from the great Constitutional authority and luminary of politics in Albany, William Barnes, jr. He objects to removing ancient landmarks. Deeply versed in political history, and suspected of knowing something about political manipulation, he points back to the long and glorious history of the National Convention, and asks plaintively why we should be called upon to abandon a form of nominating machinery which has given us Lincoln and Cleveland and McKinley? The great purpose of it is to still warring candidacies in such a way as to sacrifice no principle. In the Convention the party first defines its beliefs and makes its pledges, and then decides what leader is best fitted to embody those doctrines and carry out those promises. Devised, says Mr. Barnes, by the common sense of the people, the National Convention has been successful for eighty years, and is "just as useful and workable to-day as when it came into existence."

For such a master of history and of logic as Mr. Barnes, this position seems to have been taken a trifle unguardedly. The original devising of the National Convention was due to the desire to base party action more broadly upon the popular will. The Congressional Caucus, which the Convention superseded, had fallen, or was believed to have fallen, into the hands of small cliques. True, they were able to point back as confidently as Barnes does now to the successful working of their plan for nearly fifty years. Could a system be so bad that had given the country Washington and Jefferson? But to raise that question was, as everybody knows, of no avail against the tide of democracy which swept in with Jackson. Good or bad, the old method was dropped because it was not sufficiently representative. And as even Mr. Barnes must be able to see, the present movement is one to make the nominating system still more representative. It has already had its effect. The rules of the National Convention, at least in the Republican party, have steadily been liberalized. For example, the unit rule has been abolished. It is no longer possible for the chairman of a State delegation to rise and cast its vote entire for a given candidate, despite the fact that a minority, large or small, prefers some other man. By allowing each Congressional district to elect its own delegates to a National Convention, and to instruct them how to vote, a step was taken to check the tyranny of the machine and to prevent a State boss from wielding undue power in the Convention.

Now, it is plainly conceivable that this process might be extended without actually destroying the Convention. Even the delegates selected by a direct Presidential primary are delegates to the National Convention. All the process of conferring prayerfully on party policy, which Barnes so movingly describes, can be gone through by them as well as by men named in the old way. The difference would be that, when it came to the nomination of a candidate, the delegates elected by a direct primary would be able to say that there was a real demand for the man of their choice, because he had received such and such a number of votes when his name had gone directly before the people in a primary. Indeed, the Presidential primary does not necessarily imply the abolition of the National Convention. That might virtually come about in the end, as the delegates might be so bound in advance by popular instructions that they would be merely clerks to record a vote, the result of which was already known. Even in such a case, however, it is probable that the National Convention would persist for a long time, just as the State Convention persists in those commonwealths that have adopted the direct primary. At present, at all events, it is not a question of a sharp alternative—either the National Convention or a Presidential primary. The two can be made to function together, and, in fact, that is distinctly contemplated by all who, up till now, have gone in for the new movement.

Barnes may be quite right in protesting against expecting a political millennium at once to follow the Presidential primary. That is only a piece of political machinery, and the general rule is that political machinery of any kind can be more skilfully worked by professional political machinists than by volunteers. At the same time, the people may demand the direct primary, for the nomination of Presidents and other public officers, as a ready weapon for use at times when they desire mightily and speedily to use it. It is, in fact, the Presidential primary considered in that light which is now urged for adoption, and which bids fair to verify Gov. Wilson's prediction.

TWO TYPES OF LAWMAKER.

In the debate on the White Phosphorus bill, in the Senate last week, there came into curious contrast two Senators who represent diametrically opposite types of mind. Senator Bailey's argument was that of the firm and keen logician, not to be swerved from the clean-cut line of his thesis by any irrelevant considerations; and he was immediately followed by Senator Heyburn, whose talk was equally characteristic of the inconclusive, loose-jointed, ramshackle type of Congressional disputant. He was disporting himself very comfortably, when Senator Gallinger suddenly brought him up with a sharp turn. Mr. Heyburn had been saying that the result sought by the bill could be reached in some other and Constitutional way, and Mr. Gallinger simply asked him to be "a little more specific" and reveal "just how that can be done." Whereupon the Idaho Senator, though pleading that "it is not always an easy thing to draw a bill while on your feet addressing the Senate," went on to state that he would nevertheless "give some ideas." He made a mess of the "ideas," and finally confessed that he had not been as successful as he had hoped in outlining to the Senate any tenable method of accomplishing the purpose.

Of the other kind of thing—the close intellectual grasp which makes issues definite and insists on subjecting controversies to exact tests of reason or of fact—there is little enough in the political field nowadays, and it is a pity that in Mr. Bailey's career it should have been obscured by certain other characteristics. For, right or wrong, such an argument as he made on the Phosphorus bill is a tonic influence in parliamentary debate. It was not squarely met by his opponents, and perhaps was hardly capable of being effectively repulsed by a frontal attack. Probably the nearest approach to a successful rejoinder would have been in the direction of the legal maxim *de minimis*. This maxim may be dangerous to apply to questions of Constitutional interpretation; yet there are limits beyond which, in all human affairs, we take refuge in the view that extreme cases may be treated as matters of exception—that every doctrine must sometimes bend lest it break. As a matter of abstract legal principle, Senator Bailey was quite right in the assertion that the power of taxation invoked by the bill to destroy a particular form of manufacture might be equally used for the destruction of any industry, in any State, which a Congressional majority might desire to extirpate; the only thing that can be said in reply is that the precedent will not in practice be so understood. It will be said—and justly said—that here was a case not of crushing an industry but of cutting short a grossly inhuman practice, the abandonment of which entails no sacrifice worth mentioning upon anybody. The violence that was perhaps done to the Constitution in this minimal affair may be overlooked; and, on the other hand, the harm that would have been done to it by placing it in the light of a barrier to an act so necessary, and in itself so harmless, might be most serious. We are pretty good friends of the Constitution ourselves; but we have a feeling that if the Senate erred in passing the Phosphorus bill, its sin, like Uncle Toby's oath, will be blotted out by the Recording Angel.

It is not only in Congress, of course, that these extremes are to be met with; and between them every possible gradation has its exemplars. Each of us, no doubt, flatters himself that he strikes the golden mean—the just balance between academic rigor and the irresponsible looseness of "the man in the street." In reality, the striking of this happy mean is the great problem of practical judgment in the affairs of any time, and especially of our time. It will not do, for example, to reject every proposal in which may be discovered some tendency towards collectivism, upon the ground that we must fight Socialism; but on the other hand, it would be still greater folly to look at every specific economic proposal simply upon its immediate merits, and without reference to the overshadowing question of Socialism, if that be logically involved. In the present temper of a large section of the public, there is far more danger that questions of vital principle may be overlooked in the pursuit of immediate benefits than the reverse. But just where to draw the line is a question of wisdom; and for the exercise of wisdom it is impossible to lay down any mechanical formula.

There is, however, one kind of manifestation of the loose-jointed mental type which it is easy enough to characterize. When agitators go up and down the land declaring that they propose to make everybody happy, and offering no substantial indication of the means by which they expect to accomplish that result, they are engaged in one of the most mischievous possible forms of human activity. They stir up vague discontent and indefinite expectations; they lead the people to believe themselves the victims of wanton and remediable wrong, without pointing out any method of removing the wrong. If one of these orators, instead of addressing a miscellaneous crowd on the hustings, were to speak where he could be brought to book as Heyburn was brought to book by Gallinger, he would fare far worse in his grand pretensions as a regenerator of society than did the Idaho Senator in regard to the little matter upon which he had somewhat thoughtlessly committed himself. "I should like the Senator," said Mr. Gallinger, "to be a little more specific in revealing to us just how that can be done." If this demand could be peremptorily made upon some of our eloquent saviors of society, what a comical lowering of the note would instantly result!

THE MILWAUKEE ELECTION.

The defeat of the Socialist municipal ticket in Milwaukee comes as a surprise to no one. The Socialists themselves profess to have been prepared for the event. Even when taken in conjunction with the setback the party has received in Montana and elsewhere, the Socialist reverse in Milwaukee is merely accepted as one of those fluctuations of fortune to which every political party must resign itself, and especially a new party whose advent into office is bound to raise expectations which in the nature of things are bound to be disappointed. The Socialist *Call* cites Congressman Berger as saying after the victory of two years ago that the Socialists did not claim to control a majority of all the voters in Milwaukee, and that a combination of all other parties against them was inevitable. This combination has now taken place, and in this fact the *Call* finds great satisfaction. Having succeeded in wiping out all other party lines than those between Socialists and Anti-Socialists, there only remains the simple task of wiping out the old parties themselves.

It is doubtful, however, whether the Socialists in Milwaukee have really much reason to congratulate themselves on bringing about a coalition of the "bourgeois" parties. As a testimonial to their own growing strength and the wholesome fear in which they are held by their opponents, the result is gratifying enough. But these same opponents —and among them we may classify all sincere friends of decent government who do not accept Socialism as the only cure for the ills of municipal government—are also entitled to regard the situation with equanimity. In forcing an alignment of citizens on a non-partisan basis, the Socialists have shown a way to remedy municipal misgovernment which does not at all lie along the road towards Socialism. The alliance of Democrats and Republicans in Milwaukee was not a temporary expedient. It is a state of affairs which is to be perpetuated in Wisconsin by means of legislation that will prohibit the use of national party designations in municipal elections. It is possible that all party names will be suppressed and that voters henceforth will vote for candidates on their personal record entirely and on the basis of such local issues as

the candidates may identify themselves with.

But that precisely is what the best elements in our citizenship, the country over, have been working for. It has long been recognized that at the bottom of municipal misrule is the susceptibility of the average voter to the influence of party shibboleths. The power of the boss rests to a considerable degree on machine organization and the spoils system. But not even in Tammany Hall does the bulk of the party consist of grafting office holders or of hungry public contractors. The great mass of Democratic votes in New York city, like the great bulk of Republican votes in Philadelphia, is swayed by considerations of party regularity. This sentiment is only too often reinforced by the specious argument that party unity in the city is necessary to the triumph of party principles in the State and the nation. And, unfortunately, Presidential and gubernatorial elections occur with sufficient frequency to breathe new life into many a decrepit local party organization. Anything that the Socialists can do to break up this mistaken tradition of party loyalty is tantamount to reducing their own party ammunition. Socialism's victories in the municipalities have been largely conditioned by the general disgust with misgovernment based on the old party system.

To the extent, therefore, that the fear of Socialist control becomes an impelling force towards the reorganization of municipal politics along rational lines and a consequent improvement in our standards of municipal government, the situation is far from alarming. Good citizens will rejoice in the immediate gain without falling into undue trepidation over the rising spectre of Socialism. For that matter, if it were a choice between remaining content with municipal misrule and inefficiency and accepting honest and efficient government in the cities at the risk of encouraging the Socialist ideal, we venture to say few good citizens would hesitate. But the choice is by no means that. What the results will be fifty years from now we are not in the position to foretell, nor is it incumbent on one to worry overmuch about the subject. That the immediate results will be to deprive Socialism, which is preëminently a party of protest, of much material that nowadays lies so plentifully to hand in our highways and byways, is apparent. It is not work that can be done in a day, but it is work which must be begun without delay. The Socialist movement is young and aggressive. It can stand temporary defeat. Though beaten in Milwaukee, the fact remains that the Socialists polled above 40 per cent. of the total vote. Failure on the part of the newly elected non-partisan government to redeem its pledges may easily turn that 40 per cent. into an absolute majority.

On the other hand, a creditable record of achievement by the new régime in Milwaukee may do something more than merely check the Socialist advance. Complete non-partisanship is bound to react on the Socialist party in local affairs. When the city electorate has been fully educated to the view of deciding local elections on local issues, the test will necessarily be applied to Socialists as well as non-Socialists. The latter will be estopped from appealing to the dread of economic revolution. The Socialist party will come before the voters of the city with a programme adapted to that city. Under such conditions it is highly probable that the Red Flag will count less than such unrevolutionary issues as the schools, the markets, baths, traction, housing, parks, and playgrounds.

AN APOSTLE OF GREEK.

Mr. Gilbert Murray, who comes from Oxford to teach Greek for a while at Amherst and to lecture in various other places, must feel somewhat like a bishop *in partibus*. Oxford may be the home of lost causes, Greek among them, but it has a wonderful way of making lost things comfortable; whereas in this country Professor Murray will find any number of people ready to talk about reviving Greek, but in practice he will see diminishing classes and despairing teachers. He will find great States where only one or two, if any, high schools teach the language at all; and even at Amherst, whose class of '85 has made so bold a stand for the classics, he will scarcely find the faculty flinging quotations from Aristophanes at one another across the table.

Mr. Murray is hopeful. He reports in England a great awakening, and expects to see the same thing here. At the Court Theatre of London his own translations of Euripides have been more popular than the plays of G. B. Shaw, the most modern of moderns. Still more extraordinary is his report of the interest of the English workingman in Greek. This, according to Mr. Murray's view, is due to the seriousness of the Socialistic movement. Plato is sitting on the same platform with Karl Marx; laborers are studying Greek at Oxford and Cambridge in the long vacation, and are demanding instruction in that tongue for their children in the board schools.

These are pretty pictures, which we should like to believe true. In part we do. There is a craving in the human heart for tragedy, which even the best modern drama leaves unsatisfied. The old idea of Nemesis, of a jealous goddess in nature looking out at the doings of men, and ironically punishing them for extravagances into which she has herself allured them—that fear of the divine jealousy which strikes down insolent prosperity—still haunts us as a vague superstition or a glimpse of some inexplicable truth. Goethe gave the finest modern expression to the feeling in his famous stanzas to the *himmlische Mächte*, ending with the sombre paradox:

> Forth into life you bid us go,
> And into guilt you let us fall,
> Then leave us to endure the woe
> It brings unfailingly to all.

That, we take it, is the very substance of tragedy. Shakespeare knew it when he drew the picture of Macbeth lured by the weird sisters into crime and paying the penalty with his own blood. But it has almost disappeared from recent literature, and we can well believe that many a play-goer will turn with relief from the artificial problems that now vex the stage to a drama that deals with this fundamental question of human destiny. This may partly explain the extraordinary success of Sophocles and Euripides in Berlin and London.

But that other story of the British workman giving laborious nights to the study of the Greek language, and of the British Socialist calling Plato his master, seems a bit fantastic. We can imagine the shock of the workingman when his instructor strikes into one of those passages in which Plato dwells on the benumbing and degrading effect of manual labor on the soul, or in which he portrays the awful results to the state of the tinker in politics. We can imagine the cheerful submissiveness

of a Socialistic gathering to which some honest and tactful lecturer should expound Plato's ideal Republic, with its division of the people into three hard castes—those who do all the work, those who do the fighting and get the highest rewards, and the philosophers whose only business it is to talk logic and manage the government. Such a gathering of Socialists would be even more deeply edified when they heard that this caste system was to be maintained by deliberately keeping the lower estate in a condition of ignorance or illusion, in very much the same manner as was proposed by the British Hobbes, that father of all Tories. They would listen with keen relish to Plato's elaborate comparison of "the people" to a wild beast, or to his likening of democratic government to a ship at sea without a pilot.

As a matter of fact there has been a deal of loose talk about the democratic spirit of classical literature. Liberty, to be sure, has been nobly extolled by the orators of Athens and Rome, and the history of those cities is full of examples of devotion to its cause. It is easy to understand how the patriots of Italy in the time of the *Risorgimento* could nourish their hatred of tyranny by reciting the deed of Harmodius and Aristogiton, or face Austrian bullets with the words of some Roman hero on their lips. But liberty is the least thing desired by the democratic spirit of to-day. What it craves is equality, and of equality there is precious little praise in the philosophers and poets of Greece. The truth of Hellenic civilization has been finely expressed by Mr. G. Lowes Dickinson, who is at once a Socialist and a regretful lover of the far past:

> Harmony between the individual and his environment was perhaps more nearly achieved by and for the aristocracy of ancient Greece than by any society of any other age. But such a harmony, even at the best, is fleeting and precarious; and no perfection of life delivers from death.
>
> And, in the second place, to secure even this imperfect realization, it was necessary to restrict the universal application of the ideal. Excellence, in Greece, was made the end for some, not for all. But this limitation was felt, in the development of consciousness, to be self-contradictory; and the next great system of ethics that succeeded to that of Aristotle, postulated an end of action that should be at once independent of the aids of fortune and open alike to all classes of mankind. The ethics of a privileged class were thus expanded into the ethics of humanity; but this expansion was fatal to its essence, which had depended on the very limitations by which it was destroyed.

It is easy to see how a democratic lover of classic literature may for his own delight overlook these aspects of Greek life, but any propaganda based on such forgetfulness is sure to founder. Greek tragedy may be revived because it appeals to one of the deepest emotions of the human heart, but the Socialistic democracy of to-day is not going back to Plato for its ideas and inspiration. The value of Greek literature depends rather on its corrective contrast with many of our modern views.

PRESSING FORWARD INTO SPACE.

Reader, if chance or native courage brings you into the presence of a young artist who has painted a picture of a fragmentary, dark-blue baby on the bridge of a pink battleship, or a composer who has written a symphony dealing with the high cost of living, be warned and refrain from asking the young painter or the young musician what is the purpose of his art. You will thereby expose yourself as a fossil and bring down on you the contempt of all the young ladies there present with a copy of Henri Bergson in their hands. For the young maestro will turn languidly upon you and explain in elementary terms adapted to your intellectual level that, as a modern artist, he has no purpose and no end in view, but that he is simply a point pressing forward into space. The phrase, we believe, comes from Bergson, but it is to-day widely current wherever youth congregates, in the Latin Quarter, in the meeting halls of the I. W. W., and in the Chicago art galleries. Life, you must learn, is the policeman of the universe, whose function it is to make men keep on moving. Whither one is moving is an entirely unimportant consideration, so long as you do it very fast. The necessity of speed is dictated by something more than the life-urge. There is competition. Other points are pressing forward into space directly behind you. After the Impressionist comes the Post-Impressionist; after the Post-Impressionist comes the Cubist; after the Cubist comes the Futurist who paints anything that comes into his mind; after the Futurist comes the Intentionist whose blank canvases reproduce the things that have not yet come into his mind. It is all very stirring.

The immemorial battle between crabbed old age and youth rages to-day more fiercely than ever; and the advantage as always is on the side of the young man. For the older generation has nothing but the Past and the Present to base itself on, whereas youth can always rally to its support the inexhaustible resources of the Future. "I paint things," says the young man, "as the world will see them fifty years from now." "I reproduce sounds," says the young man, "as the world will hear them fifty years from now." "I expound morals," says the young man, "as the world will live them fifty years from now." What can the middle-aged plaintiff say in rejoinder? He is cited before a court where he must lose his case by default because circumstances beyond his control will compel his non-appearance. To be dead is always a disadvantage. It invests one with a purely academic interest which no jury of practical men will allow to stand in the way of living, breathing interests. And the situation is even harder than that. Suppose that the plaintiff makes up his mind to be alive fifty years hence, like a rich uncle spiting his heirs; what will it avail him? Fifty years hence, if youth still finds its case too weak, it will ask for another adjournment of fifty years. The supply of space into which the points are always pressing is large, and the Future can always enjoin, stay, mandamus, and certiorari the Present into the grave.

Far be it from us to defend the Present against the Future. Like all lawyers, we detest a losing cause. There is one plea, however, that must be made in behalf of the defendant. In the indictment framed by the Future against the Present there is an apparent flaw. In that document the Present is always described as an unreal thing, as mummified Tradition, as Convention with the soul gone out of it, as the slave of meaningless formulæ. By implication the Future is the opposite of all those things. But what are the facts? It is the Future that bristles with formulæ and manifestoes and platforms and philosophies. It is Youth that has gone mad with theory. The Present paints its pictures and writes its music by rule of thumb; it does it in that way because that is the way nearly everybody does it. But the Future writes its music on the basis of the pragmatic philosophy and paints its pictures in accordance with the principles of the New Psychol-

ogy of the Abnormal as formulated by Professor Märzhasen of Gotha. Your old-fashioned, academic painter, when asked why he paints tall, slim, smiling women in directoire gowns and furs, says: "I saw a woman like that on the car the other day." And if you ask him why his painted babies have blue eyes and pink toes, he says, "I have one just like that at home." But when the Futurist paints a baby it is a metaphysical baby, born in the Bergsonian philosophy and bred in revolt. And he represents the baby as visualized by an anxious mother with a headache, her arms full of bundles, clinging to a strap between two fat men in the Subway at 5:30. Which is reality and life and which is convention and theory, may be left for any unprejudiced jury to decide.

But, after all, what use is there in carrying this apology for the Present any further? Where will these lines be fifty years from now? It is for the Present to cling to its limited horizon, to suffer and endure. The vast realms of space are for the Future. To paint sounds, to dance colors, to reproduce odors on the graphophone, to set the binomial theorem to music—that is not for timid souls and palsied hands. O Youth! O Valiance! O Bourgeoning Life! O crimson vest of Théophile Gautier! O Make Believe!

POPULAR LITERARY JUDGMENTS.

It is natural that so good a poet as Mr. William Watson should feel aggrieved at the scant appreciation of contemporary verse. "Your novelist, as a rule," he says in a paper on "The Muse in Exile" in the current *Century*, "gets his due rewards in this life, your poet, as a rule, does not." He might have added that some novelists get more than their due. In Mr. Watson's estimation, England has had, during the last quarter of a century, "some very real poets," whose names "would add lustre to any age or nation." He is no doubt right in believing that the novel has badly upset the balance of literary power and that our obsession by it is due to its comparative newness, the type, in anything like its present form, being not yet two centuries old. Thus the poet, looking back upon traditions which start with the day-spring of the world, prefers with some dignity the charge of *nouveau riche*. But what interests us more in his paper is his arraignment of present-day criticism of poetry. Briefly, it is this: Critics are of five sorts. The first has "a bee in his bonnet" and will not release it. By such a critic all verse is subjected to the test of some blatant idiosyncrasy. The second "sets an inordinate value" on factitious simplicity. The third is forever comparing one poet with another. There is, fourthly, the impressionistic critic who is impatient of solid workmanship, and croons over every neurotic "find." And finally, many critics think poetry is nothing if it is not progressive. "Is it surprising," asks Mr. Watson, "that the great, serious, clear-headed, and single-minded public, who can enjoy Shakespeare and the Bible, imagine that contemporary poetry has nothing to give them which can in any way illustrate or clarify life—nothing which in any way says to them an intimate and helpful word?"

Whether or not we accept these five unlovely categories, it is a commonplace that criticism to-day lacks proper standards. We had supposed, however, that contemporary verse was fostered rather than hindered by the confusion. For certainly verse receives far more praise, however unintelligent, than censure, and those who notice it in print are seldom technical scholars given, in the way that Mr. Watson supposes, to comparing every new lyric with Sappho or Herrick. Both in England and this country the tendency has been strong to accept a thing as it is or to exalt it much above its real worth. Precisely what Mr. Watson would have a critic be he does not say, though there is a pragmatical flavor to his remarks. In effect his reasoning is as follows: In the great stream of life to which the pragmatist willingly commits himself, are a large number of poets, perhaps more than ever before, in any one age, and this in itself proves that in the natural course of events poetry has grown to be a mighty element. Nor would the public fail to realize this if it were not for the critic's backward tugging. What is the use of always gazing idealistically and romantically upon the giants of the past, and why not admit that there are plenty of good poets all about us? Instantly upon that admission the readers of verse would vastly increase, and literature would be properly balanced again.

In a way which suggests that he was somewhat infected by our politics during his recent visit, Mr. Watson then turns in despair from the critics to the public. "This nameless judiciary, sitting in permanent session, undistracted by the babble of coteries, is our nearest approach to that ultimate court of literary appeal which we call posterity." It would be interesting to examine the instances where, in the eyes of posterity, the leading critics of an age have been wrong and the majority of the people right. Probably they are not so numerous as is often supposed. Besides, Mr. Watson is not consistent. Else why should he try to discredit contemporary fiction, which is so much read even by those "who can enjoy Shakespeare and the Bible"? Novels, too, have to combat the critical blight. The only possible advantage which we can see in such an appeal to the people is the chance of its quickening their sense of responsibility towards literature. If they could be led to thresh out the merits of a novel or poem with the earnestness which they often bring to political problems, every one would rejoice—even the critic. But as things stand, popular judgment of literature is haphazard and unmeaning, and therefore no proper court of final appeal. Even granting it were, how could it be registered? The mere buying of a book signifies little; caring enough to steal it might mean more!

Leaders to crystallize public opinion there must always be, and if not professional critics, who then? In this respect literature is worse off than the other arts, which retain a remnant of the older patronage. A painter or a sculptor receives special commissions, and his work, if liked, gets an influential recommendation from the fact that the patron has a personal interest in it. But books, by their accessibility to all classes, prevent the truly critical readers from fathering them. With the fact staring them in the face that 600,000 copies of a novel have been sold, or that the second edition of a book is necessary before the first edition has appeared, approval or condemnation from a select few is forestalled. And it must be added that even with these such a formidable sale has considerable weight; the book has made a far-reaching impression, they say; there must be something in it. Perhaps the people will some day take literature more seriously and will see that in self-defence their taste

must be instructed, if they are to have any literary sense left. If that day ever comes, they may be glad to defer somewhat to minds representative of their best. In that case, "the great, serious, clear-headed, and simple-minded public," in whom Mr. Watson trusts, will have the opportunity and the duty to assert themselves. Whether those who pass as critics to-day will be among their number remains to be seen.

THROUGH THE OUTLOOKING GLASS

The Comic Editor suggested that they should go uptown by the subway. It was the rush hour, so there was plenty of room for everybody, and naturally there was no blockade. The Red Knight lay back in his seat and looked thoughtfully at Alice.

"Now that I have got Oklahoma and there is no doubt about the way the rest of the country is going, I feel the need of a little recreation," he said.

"Wreckreation, you know," said the Comic Editor, and nudged Alice in the side as he spelled out the joke for her. But neither of the others paid any attention to him.

"Do you like puzzle pictures?" said the Red Knight.

"I just love them," said Alice.

The Red Knight took out a large document printed on heavy parchment. At the top was an eagle with outstretched wings, and Alice could read the first line. "We, the people of the United States, in order ——" Borrowing Alice's scissors he snipped the paper up in little bands and squares. These he first threw up into the air. Then he ran them through his fingers. Then he crumpled them up, threw them on the floor, and jumped upon them.

"Change and exercise are good for the Constitution, you know," said the Comic Editor.

Alice looked calmly at the Comic Editor and set to work at arranging the fragments. But the task was quite beyond her. "I'm afraid you'll have to do it yourself," she said.

"It's very simple," said the Red Knight. He took the pieces and deftly put them together, putting clause XII first and clause VII next, and so on. "Now, here's a sample of the way it should look," he said, and Alice noticed that the typography had changed very oddly. She read as follows:

We the people of the UnIted States, In order to form a more perfect unIon, establIsh justIce, Insure domestIc tranquIlIty, provIde for the common defence, promote the general welfare, and secure the blessIngs of lIberty to ourselves and our posterIty, do ordaIn and establIsh thIs ConstItutIon for the UnIted States of AmerIca.

"But you can hardly see anything except the letter I," said Alice.

"That is the letter of the Constitution," said the Red Knight. "I have always been faithful to it, and I always will be."

"But you can't make a Constitution out of a single letter," insisted Alice.

"Yes you can," said the Red Knight, "provided it is big enough."

But Alice was firm. "I don't see how language can be made up of one letter. You need twenty-six at least."

"I don't think so," said the Red Knight, "and besides where am I to get the other letters from?"

"You might advertise," said the Comic Editor; "Help Wanted—Mail, you know."

All at once the Red Knight sat straight up and his face grew bright. "Why, of course, we need more letters. There is e for 'me' and o for 'our' and u for 'us' and a for 'am' and y for 'my.' My dear Alice, that really was a bright idea of yours."

"Whatever is bright is Constitutional, you know," said the Comic Editor.

The Red Knight picked up the pieces of parchment. "With a little practice," he said, "you will be very good at taking this apart and putting it together again. It helps to pass the time, and when you are tired of the game you can throw the pieces out of the window."

"Interrupt it and constrew it, you know," said the Comic Editor.

"Oh, don't be a fool," said Alice, quite losing her temper. She looked so angry that the Comic Editor burst out crying and would not be comforted. And he was still sobbing dreadfully when they came to the door of the Outlooking Glass office.

So now the time had come to say good-by. Alice and the Red Knight stood at the door of the Outlooking Glass office just as the edition was going to press. From the press-room on the top floor to the editorial rooms in the sub-cellar all was activity. The chief-editor was shooting copy up the tubes as fast as the office boys could write it. The copy was immediately put into electroplates and rushed to the proof-room where it was divided into "takes" and distributed among the compositors. The latest advertisements were coming in over the wire. The desk men were waiting for the editorial writers to finish their comments on the week's news before setting down the facts.

Alice turned to shake hands with the Red Knight. It had been an exciting series of adventures, and she had a headache and was very anxious to be at home with mamma. But she had grown fond of her comrade in the Outlooking Glass. When she was back again at her stupid lessons, studying that 2 and 2 make 4, and that "yes" is affirmative, and "no" is negative, and that black is black and white is white; oh, how she would miss the Red Knight.

But she was very brave, and stretching out her hand, said, "Good-by."

The Red Knight pressed her hand affectionately: "How do you do?" he said.

"I don't suppose we shall ever meet again," said Alice.

"Well, there's 1916," said the Red Knight. "Shall we say four years from now, on Lincoln's birthday?"

"But there would be no use in trying," said Alice.

"You could help me a great deal, you know," said the Red Knight. "By that time women will be voting. On the one hand there will be woman's new duties to discuss, and on the other hand there will be her new responsibilities. My hat is still good for something."

"No, no, no," said Alice. "I don't want you to go campaigning any more. The fact is you are not as strong as you used to be."

"Suppose it *is* a fact; what difference does that make?" said the Red Knight.

But Alice would not listen. "Why must you keep on fighting? Why not leave that for other people, and let everybody remember you only at your best?"

"A man must do *something* exciting," said the Red Knight.

"Of course he must," said Alice. "I hope, and I'm sure we all hope, that you will go on Contributing for years and years and years. Good-by."

Her eyes were still wet with tears as she sprang through the Outlooking Glass. The Red Knight vanished. She was home again, home in the dear old room with the big reading lamp on the table, and mamma busy with the baby's things, and papa asleep over a copy of the Aldrich Monetary Report.

"Oh, mamma," she cried.

"What is it, Alice?" said her mother.

"I have *such* a headache, mamma. I have been in politics."

THE NATURE CULT TO-DAY.

Talking with a sober farmer of Concord, one day, I asked him about the location of Thoreau's famous bean-field. "Bean-field?"—the man was honestly puzzled—"I didn't know he ever did anything. Thoreau was a loafer."

I was as much refreshed and pleased as I suspect Thoreau himself would have been had he returned incognito to twentieth century Concord. Every one else—save this honest farmer and his kind—would have told him that Thoreau was the great poet of Nature, the American Wordsworth, the famous hermit who communed with the god of the Open Air at Walden, the misanthrope who taught us how to fall at the feet of Nature worshipfully—to see the Compelling Vision and know the Great Secret—or, perchance, how to be accepted "nature-lovers." And if he turned away sadly, with the loneliness of the great spirit, it would have been to suffer the same sort of reception wherever he went. He would have heard of "the Godful woods," of "the forest-cathedral," of "tree-thoughts," of "Nature's old love-song" (I quote from one or two of the Nature Books of the past year); he would have been told that the meadow-lark surpasses any opera, that the orchid of the fields is, like man, fashioned from the earth, but is "a fairer and lovelier product," that birds are the best of friends, for they bring no "misunderstandings and disappointments" and never grow old and they sometimes have "so much to express, so much temperament"—at least if you can assume "the viewpoint of the bird." The follower of the trail would have told him of "the splendid, untamed, savage West," where one may slip off one's perplexing personality as if it were a waistcoat and become admirably like the horse that bears one on to "broad vistas and silence." The wanderer returned from the Sierras would have told him of "the mountain-joy," of "a passionate ecstatic pleasure-glow not explainable," of fine

views that make one shout and gesticulate "in a wild burst of ecstacy," and of dreaming by night that one is "rushing through the air above a glorious avalanche of water and rocks." Forgetting that Thoreau himself had fished in Walden Pond, they would have told him of terribly wicked people who actually fished in the Yosemite: "Sport they called it. Should church-goers try to pass the time fishing in baptismal fonts while dull sermons were being preached, the so-called sport might not have been so bad; but to play in the Yosemite temple, seeking pleasure in the pain of fishes struggling for their lives, while God himself is preaching his sublimest water and stone sermons!" "Ah, Henry," the female enthusiast would have added, "we are fallen upon evil times. Our wild flowers are fast disappearing. The few people who do go to the country always come back with huge wilted bouquets—if only *everybody* went to the country and cut a *few!*" Had Thoreau's acute sense of logic caused him to remark that the result would be pretty much the same, the good woman would doubtless not have heard him in her enthusiasm over "a lifetime to live in the forest, inexhaustible plates, indestructible cameras, wells of ink, and pens of magic." And after all this, and much more besides, Thoreau would have been driven, weary, stifled, and very melancholy, to seek the comfort of the hills—only to find that our scenery has been well-nigh destroyed as a result of the facilities for seeing it. In his note-book he would then have copied a sentence from his Journal (March 13, 1841): "I like better the surliness with which the woodchopper speaks of his woods, handling them as indifferently as his axe, than the mealy-mouthed enthusiasm of the lover of nature."

"Walden" is doubtless one of the great books of American literature. But between "Walden" and the "Nature Books" of the present day there is not so much a difference of degree as of kind, and this important difference of kind Thoreau would have observed instantly. Had he had an opportunity to watch the influence of his work until now, it is highly probable, I think, that he would have scornfully repudiated most of his readers and imitators on the ground that they almost totally misunderstood him. The emphasis in Thoreau is not on nature, not on men, but on man—on character. With his acceptation of the idea of natural goodness and of the idea that man and nature are akin, he combined the Puritan moral earnestness that lived its second life in the decades of American Transcendentalism. This Puritan strain predominated in Thoreau, and had two noteworthy results. In the first place, "the sober and solemn mystery of nature" evoked in him awe rather than the latter-day curiosity and somewhat cheap desire for intimacy. To-day nature is commonly wooed as if she were a coquette or a mistress, prettily or with shallow "mealy-mouthed" abandon; nature is a creature whose blandishments cause her lovers to be at once very silly and very garrulous—and if books result, as they ordinarily do, they prove very remunerative. Thoreau, on the other hand, found that his "truest, serenest moments are too still for emotion; they have woollen feet"; and it is unfair to assert that he was posing when he said that he wrote his books "to purchase silence with." In the second place, the Puritan earnestness of Thoreau manifested itself in an esteem for character and will. "Only character can command our reverent love. It is all mysteries in itself." It may be that "All's right with the world," as most of our nature-lovers are echoing every day; but it certainly was not so in Thoreau's world. A thousand nameless sins hovered over him wherever he went, and made him yearn more eagerly every day for an erectness and innocence, towards which he must strive unceasingly, but which in the end could come only if he were one of the elect—"no man knoweth in what hour his life may come." His life was thus an endless quest for character. He yearned to attain serene purity and wisdom; he did not yearn for indestructible cameras and wells of ink.

The difference in kind, then, between Thoreau and the nature-lover of to-day seems to me to lie in the fact that Thoreau's view of life was genuinely imaginative, sincerely idealistic, whereas the view of life that one finds in the typical nature-writing of the twentieth century is absurdly shallow and sentimental. "This hypethral temple," I read in one of the recent books, ". . . is the only temple on earth where there is no cant, no twaddle, no hypocrisy, and no croaking about our sins." What is this if it is not cant and twaddle? Few will deny that religion has ceased to be fashionable, and that cant is to be found well-nigh everywhere; but the worshippers of nature have not yet convinced us that they are themselves free from the ills that beset the more orthodox sects. As for "No croaking about our sins," this is palpably not good Thoreau doctrine, either in phrasing or meaning; it is, rather, a pale and sickly reflection from the brightly-shining optimism of Browning and Whitman. If we croak at all, they tell us to-day, let it be as the frogs croak, carelessly, jubilantly, with an appreciative eye on the opal sunset. Let us be as frogs, or if frogs are not lovely enough, let us "assume all that is shy and bird-like" or any other-like that is not manlike.

Of course all this is beside the question. What the nature-lover really desires is not to be a part of nature, but to be a part of himself. He would cast away "worldly cares" and city life with its difficulties, as well as farm life with *its* difficulties, so that he may be, like the inhabitants of the Garden of Eden, "free to roam and to reminisce under the pines." In other words, he would abandon his right to be a rational animal, together with his right to have what life in any human community demands—character; and having given over these unpleasant rights of thinking and being a moral creature, he would find freedom and happiness in a community of song sparrows and fern fronds. That is, after all, what one of the most estimable of our nature writers means when he remarks, "Only spread a fern frond over a man's head and worldly cares are cast out, and freedom and beauty and peace come in." One is tempted to amend: "Only spread a fern frond over a man's head and he ceases to be a man."

In practice, the hypethral temple of nature, where one may find diviner company than the town affords, becomes the scene either of placid lotos-eating—loafing and inviting the soul in vain—or of an intoxicated sensuousness. If the worshipper of nature is of a dreamy disposition that leads him to the kindly hills of Massachusetts, he is prone to dream—and usually dreams prone. If he has the "dynamic" temper that leads him to the higher Sierras, he experiences the exuberant sensuous joys of the eagle and the mountain goat. One of our dreamy women nature-lovers tells us soberly that she "worships" certain moths. One of our vibrant men nature-lovers explains a part of his Bacchanal ritual as follows: "I drink the blue of gentians and the red of cardinal lobelias and scarlet buglers; I plunge into the golden fields of bæria and bathe in the yellow flood of poppies." But whether the nature-lover is dreamy or "dynamic," his joys are dominantly sensuous without being spiritually sensuous. In the manner of the sentimentalist, he would place himself in a position that will yield sensation in variety and abundance. He seeks the delights of shimmering water, of olive-green velvety shadows, of the resinous incense in pine groves, of insect murmur and ethereal bird-song, of bracing wine-like air; delights, indeed, that are not to be spurned. White of Selborne enjoyed the grace of the *hirundines* and of English beeches with gentlemanly candor; Wordsworth, with the poet's vision, derived spiritual manna from the grandeur of Helvellyn; Thoreau, who also had the poet's vision, profited by the goodly fellowship of the Concord River and the chill, leaden November days that fanned into flame his "deep, inward fires." The senses may indeed be inlets of spirituality. But in the typical nature-lover of the present day one observes a great deal of sensuousness and a negligible degree of spirituality. He

is akin, not to the Thoreaus and Wordsworths that he apes, but rather to the "week-ender," and the amateur naturalist who lives in the city. What to these is recreation is to him a mode of life.

FRENCH BOOK NOTES.

PARIS, March 29.

In the literary output of France, the chronicler has often to give ear to murmurs of troublous times. This is due to the intestine revolution which is still going on in French society after a hundred years, without ever working itself out. Certain universal questions are disputed with an animosity amazing in countries where division of minds does not lead to civil dissensions. To-day's notes deal with one line of such questions and they are not directly political. Most of the books to be noticed—and some of them are universally noteworthy—are of French Protestant derivation.

All the books here noted concern the traditional religion of the French people and the substitutes now urged on them; the official efforts that are being made to change the principles underlying popular morality, which has hitherto been mainly derived from that religion; and state education as an accepted means to work both moral and religious changes. For the state's power is supposed to cover all associated activities of its citizens and. through official teaching, to send its youth spinning down all grooves of change. It is true the grooves have first to be dug by those who hold political power in the state.

"L'Orientation religieuse de la France" (Armand Colin—320 pages, 3.50 francs) may be considered the leading exposition of those who still hope to remake the moral and religious unity of France by detaching French Roman Catholics from the religion of Rome. It appears in an important series on the "contemporary social movement." Its author, Paul Sabatier, is a Protestant clergyman who became widely known by his sympathetic studies of the Roman Catholic saint Francis of Assisi. He has since then taken up the defence of "Modernists" against the Pope and, against Cardinal Gibbons, of the government of the French Republic for its measures repressive of Roman Catholic religion. This new book is bound to startle even his old admirers. There is no longer question in it of any halfway Modernism which French Roman Catholics would not, if they could, and French Protestants cannot achieve for the revival of religion in their country. Paul Sabatier has taken a new stand, apparently for reasons which led his *confrère*, Wilfred Monod, to write in his recent remarkable book, "Aux Croyants et aux Athées":

> To Christians with their eyes open, it is evident, first, that Humanity is de-Christianizing; second, that it is marching towards Atheism.

Wilfred Monod, heir of a great Protestant name, keeps the title of Christian, but, in his theory of a limited God, lands indistinguishably near to the late theism of John Stuart Mill, who was coming the other way from his father's atheism. Paul Sabatier, while formulating no theory, passes in practice beyond Christianism and beyond Atheism. He finds the church of the future in the state school; and the new moral religion for the French people is to be taught them by the state schoolmaster, who, he says, "in spite of himself, has been made to take up a work of spiritual (*idéale*) direction such as he has in no other country." In working out his idea, he goes further than Ferdinand Buisson, a freethinker of Protestant origin, who has had more than any other one man to do with organizing and directing state primary schools in France. But he, too, entitles the book in which he has collected his public utterances from 1878 to 1911, "La Foi laïque" (Hachette — 3.50 francs) — a title which by itself proclaims that a positive religious or moral faith, and not a mere negative neutrality, is the position taken by the French Republic in its teaching body. Neither of these authors—perhaps no Frenchman—is satisfied simply with Emerson's republic, where

> Each honest man shall have his vote,
> Each child shall have his school.

Paul Sabatier dismisses the uncertain *laïcité* of the United States as due to "pragmatist" views (p. 254).

A political platform, as well as a religious programme, is contained in this French use of the word "lay." It does not, as in English, distinguish simply laymen from clergy in the same church. Its meaning reaches far beyond our "secular." It has come to be used in direct contra-distinction from denominational religion altogether. All thinking in conformity with a professedly revealed religion and in accord with an organized church is contrary to the "lay" spirit, or, at least, outside it; for the word expresses positively that which is signified negatively by "anti-clericalism." This is clearly laid down, in the present instance, by Paul Sabatier (chapter xiv):

> [In France] the majority of public opinion, on the one hand, expects and demands from the school solid and efficacious moral teaching; and, on the other, it will no longer allow the "lay" school to take its starting point in teaching which finds the proper object of its mission in a notion of revelation borrowed from church dogma. It is a whole religious and moral revolution that is being realized around us.

Along the way of his minute and evidently regretful controversy with those who, he feels, have forced France into this revolutionary religious stand, he cites samples of formulas used in the state schools which are thus taking the place of the churches. This is the teaching as to what the Westminster catechism calls "the chief end of man" (p. 220, note):

> To become a voluntary agent of the Unknowable Energy in process of evolution towards a consciousness and spiritual life more and more intense and higher and higher and more and more universal, this is our destiny; and our happiness shall be in proportion to our efforts to realize it fully ("Cours de Morale," by Jules Payot, University rector).

Immortality seems to be no element of either destiny or happiness. God is an "hypothesis"; but prayer remains, and is defined "the resolution firmly taken to be an agent of voluntary evolution." President Eliot of Harvard, who has also had a vision of the world newmade religiously, has foreseen that the new religion will not be as consoling as the old. It is improbable that any great number of primary school-teachers in France make much of similar formulas, which also do not fulfil the condition *sine qua non* for the spread of any religion among a people as laid down by our English classic, "Thorndale, or the Conflict of Opinions"—it has not yet been taught by mothers to their little children.

Only a few years since, in his Geneva conferences ("La Religion, la Morale, et la Science," third edition, pages 94-95), Ferdinand Buisson himself had something pertinent to say of this connection of moral teaching, which is now made the prime work of the state school, with essential religious teaching:

> It is nevertheless true that the moral law, duty, goodness, have neither the same meaning nor the same value objectively, nor consequently the same authority over us, according as the world has an end or has not, has one supreme thought conducting it or is given up to an eternal becoming from which what may shall come, in a word, according as the last reason of all is in a wise and clear-seeing will or in the blind force of things. . . . If the individual be a durable reality, his least acts have their importance; if he passes, a fugitive phenomenon, the accidental combination of a day, his works follow him into nothingness, and it is foolish to apply to them the rigor of a morality which supposes the Absolute.

Paul Sabatier is obviously right in abandoning all hope of French Roman Catholics accepting the state school as their authentic teacher of religious morals. Roman Catholics have taken none too kindly to American public schools, but this has not been from any fear that some other religion would be taught in them. In France it is doubtful whether

the claims thus put forward for the state school can be reconciled with any of the old religions, whose faith is based on the direct teaching of God revealing through church or Bible—*auctoritate Dei revelantis*. It should not astonish either M. Sabatier or M. Buisson that even English Protestants, to whom their positive faith is dearer than their negative protest, should judge such schools harshly as "making France pagan." It is plain to any attentive observer that, with all the anxiety expressed by M. Buisson lest state school-teachers should hurt the religious feeling of the least of their children, the "emancipation" which he preaches as the state school's essential task can, in practice, only mean emancipation from the parental religion.

To Americans there is yet another preoccupation in this controversy which has rent France as a nation asunder. It is more vital than the question of religion—for religions have a habit of taking care of themselves. "Religious liberty," as distinct from its counterfeit "toleration," has stood the test of time in the United States. A Government that has the power to tolerate has the power not to tolerate also, whereas liberty puts the matter outside the limits of government altogether. One of Lord Acton's most accurate epigrams strikes, now as then, at this "defect of knowledge which became a fact of importance at a turning-point in the [French] Revolution. . . . For religious liberty is composed of the properties both of religion and of liberty, and one of its factors never became an object of disinterested observation among actual leaders of opinion."

"L'Inquiétude religieuse du temps présent" (Fischbacher) is a series of ten essays ranging from Euripides, the Jesuits and Pascal, to Pragmatism and prayer, all with timely applications. Their author, Paul Stapfer, is the honorary dean of the State University of Bordeaux (faculty of letters). In his own person and family, he represents a century's evolution of Protestant thought in Switzerland and France, without reaching so far as Paul Sabatier. Writing before the latter, he has many weighty things to say of questions raised by him and now starting up everywhere among *intellectuels*, notably on "the logic and conscience of a sincere thinker" (Taine), of "divers forms of religious sincerity," and Pragmatism. To this should be added the little book which has now become generally known on William James (Armand Colin—3 francs), by Emile Boutroux, the most leading of French University professors of philosophy until Bergson's siren voice began calling away—whither does not yet appear. There is also a book, uncondensed nebula in doctrine, but characteristic in practice, by Pastor Charles Wagner—"Ce qu'il faudra toujours" (A. Colin—3.50 francs). An important volume, if only because it is announced as the last, is by the heir of many Huguenot generations. It is Pierre Loti's "Un Pèlerin d'Angkor" (Calmann-Lévy—3.50 francs). It, too, is religious—reflections in language of enchantment before the gigantic monuments of Khmer piety, forgotten a thousand years since. "In our day, it is true, the lees of half-understandings and the quarter-learned are brought to the surface by the present social régime and, in the name of Science, rush into the most foolish materialism. . . . But there must exist the Supreme Pity." S. D.

Correspondence

THE NEED OF CHINA.

To the Editor of The Nation:

Sir: Last autumn I began a letter designed to set forth in your columns a most quixotic proposal in aid of the evolution of China. The closing paragraph was still unwritten when the ordinary course of evolution, with what dramatic suddenness and swiftness all the world knows, gave place to revolution, and condemned my communication, now even more preposterous than before, to the waste-basket. To-day we hear that Yuan Shi-Kai has published the long-awaited Edict of Abdication; which, as an accomplished fact, leads every foreign observer into renewed speculation and myself into renewed desire to divert such of your readers as take more than a casual interest in Asiatic affairs. Responsible in part for this wish is your editorial, issue of January 4, on the "Changing Orient," to every word of which I earnestly say Amen.

Here, then, is my proposal, so plainly the absurdest ever traced by the pen of man that I fear no one will bother himself with the matters of fact appended to it. It is "merely" that representatives of the Powers be "somehow" got together—Russia, Japan, England, Germany, France, the United States, perhaps, also, Austria, Holland, and Belgium—to be led to declare solemnly in the face of the conscience of the world that absolute respect should henceforth be paid to the boundaries of United China (including the old "dependencies" and her title to foreign "leaseholds" and grabholds); that rights of extra territoriality and other foreigners' privileges inconsistent with Chinese sovereignty should be given up just so soon as Chinese judicial and legal procedure have been developed far enough to bear comparison with the ways of bench and bar in, say, the United States; and that the participating Governments do all that Governments may to promote—not in chattel-mortgage fashion or on pawnshop terms—the immense loans needed at once by China and her provinces for internal improvement and reform. If the Powers can be convened to-day to devise ways and means how to sell sugar and how not to sell opium—who knows?—perhaps to-morrow they can be got together, not only in our dreams, to consider the plight of the roc-chick struggling gallantly to break out of its tenacious and encrusted shell.

Before the revolution, it was famine and flood that prompted me into such vagaries. The need was appalling. The revolution multiplied, and, at the same time, obscured, the need. On the heels of last year's famine came the floods of September, so that now we are witnessing the most cruel winter central China has borne since Tai-ping days; only, even here in Shanghai, next door to the stricken regions, we have been distracted from giving due heed to the situation by the more spectacular interests centring at Wu-chang, Nanking, and Peking.

As famine has followed famine, Europe and America have responded less and less willingly to appeals for help. The foreigners, chiefly missionaries, engaged in the distribution of relief, are firmly convinced that the charity of the past ought not be continued. It is hardly too much to say that not one cent of the millions so freely given in the past has gone to prevent the recurrence of famine; and yet, in view of the lavish endowments of nature, there is less excuse in China for widespread starvation than in any other important quarter of the globe. This is now so well recognized locally, and likewise the pauperizing that surely results from the dole system, that the present excellent Famine Relief Committee—made up of both foreigners and Chinese—is resolutely spending all its funds according to a work system formerly attempted only on a very small scale. Nothing is given outright except to those who are too sick or too feeble to work on the dikes and drainage canals. Against a far greater need this Committee is handling far smaller funds than were given to any of its predecessors, but every dollar is being made not only to save a life now, but also to count towards saving ten lives in the near future. Dikes, canals, roads. Food for China's millions is simply a problem—a series of stupendous problems—in engineering.

Two mighty river systems must be brought under control, besides certain smaller ones. Competent engineers expect the Yellow River to make in a few years—some say before 1920—another change of course as far-reaching as any it has ever made in the past. Even the faithful Yang-tse last year might have borrowed the name of China's sorrow. Midway between them, the less-known River Hwai was responsible for last winter's famine and for much of this winter's. What else can be expected of streams that have come to run normally above instead of below the level of their basins? This tendency to run amuck seems to be bound up inseparably with the age-long deforestation of hillsides. Supplementary to these conditions are the lack of railways and the criminally neglected Grand Canal, that one-time magnificent artery between North and South; for with transportation dependent upon junks and wheelbarrows, a Chinese province may starve next door to plenty.

Reafforestation, river control, railway building, the very words are sonorous with suggestions of vast sums of money. The money must be borrowed. The Chinese Empire for excellent reasons was wary about going heavily into debt; it was too much like putting your head into the lion's mouth. The republic will doubtless borrow with similar misgivings, and only because of the extreme need occasioned by unusual current expenses and by the pres-

ent dislocation of revenue. And in spite of poverty, the republic will presumably feel compelled by the example—and the greed—of the Powers to sink millions of taels into the means of war. Partitions and the loss of territory were the bogies of the Empire, and still stare the Republic in the face. The Powers could, if they would, exorcise these bogies, but only by concerted action. (The action of the United States is good as far as it goes, but has not hindered the underground intrusion of Russia and Japan into Manchuria.) These fears banished, China might conceivably be persuaded of the wisdom of curtailing army and navy—along with the aeroplane and other expensive fads—and of putting all she could raise into internal improvements and educational reform. And if she were once convinced that the military Powers were disinterested, she would gladly make use of our experts so long as they did not play the superior too loudly, and of our money if only the strings attached were not too offensive.

Does it not seem to be the fitting moment to—well, to wish that this proposal for an international agreement to assure the territorial integrity of China and to further her adjustment to new-world conditions were not so ludicrously visionary? But the Chinese themselves: they are proud, they might resent being made the subject of a convention. Very likely; especially as the West has never been distinguished for tact. Wherefore I, for one, am more inclined than ever to write "Christian" nations so, with inverted commas.

TRACY R. KELLY.

NIETZSCHE'S INDIVIDUALISM.

TO THE EDITOR OF THE NATION:

SIR: Will you allow me to question the accuracy, or at least adequacy, of the view expressed in one of your recent issues, that Nietzsche denied "the validity of any check within ourselves contrary to the primitive instincts and impulses of nature"? In the last *Nation* you speak of his "delirious individualism" (with which may possibly be compared the "eleutheromania," which Professor Babbitt ascribes to Nietzsche in his remarkable book, "The New Laokoon"). There must be some foundation for this view; else two writers of judgment and discrimination would not advance it. Moreover, it is the more or less common view. Yet I believe that a careful study of Nietzsche's writings will result in the conviction that it is one-sided and in the main unsound. Let me give a few (out of many possible) citations.

More than once Nietzsche uses the image of a gardener in speaking of man and his impulses. Man, he says, can deal with his impulses as the gardener does with his plants, either controlling them, their manner of growth and disposition in the garden, or leaving them free, as he likes ("Dawn of Day," §560); and woe to the thinker who is not the gardener, but only the soil in which his plants grow (*Ibid.*, §382). Elsewhere he speaks of taking from our passions their fearful character and preventing them from becoming devastating streams ("The Wanderer and his Shadow," §37). The man who has overcome his passions comes, he declares, into possession of the fruitfullest kind of soil, like the colonist who becomes master of woods and swamps (*Ibid.*, §53); on the other hand, one without the will to master his anger, melancholy, vengefulness, sensuality, who yet attempts to rule somewhere else, is as stupid as a farmer who lays out a field along a turbulent stream and neglects to protect himself against it (*Ibid.*, §65). He calls the day ill-used in which we do not deny ourselves something; for, with lack of lesser self-control, capacity for the greater crumbles (*Ibid.*, §305). Nietzsche admires the strong, power-loving natures who bring their character under a law and give it a style, just as he likes to see external nature subdued, made serviceable, "stilisirt"; it is the weak who hate the restrictions of a style, who want to be "natural," "free" ("Gay Science," §290). Every morality (and here he uses the term in no disparaging sense) is, in contrast with *laisser-aller* (something he almost uniformly disapproves, whether in politics, economics, or morals—or, I might add, *pace* Professor Babbitt, art), a piece of tyranny against "nature." In his latest work (or rather in fragments that might have become a work, if Nietzsche had lived to weld them) the idea of high or even stern self-control stands out as clear as ever.

There are, indeed, two passages in which Nietzsche might be understood to favor giving the impulses a loose rein. In one he tells us that a man must be able to lose himself at times ("Gay Science," § 305); in the other, that there is so little superiority (*Vornehmheit*) among men because they do not trust their impulses (*Ibid.*, §294). It is true, too, that to Nietzsche the will is itself in a sense an impulse or passion (*Affekt*), though with the differentiating mark from all mere craving or desire that it is a "Commando" (hence the criticism of Schopenhauer's view of the will). Unquestionably, the will is not, to Nietzsche, *supra naturam*, however above all which it puts beneath it and makes subject, *i. e.*, the whole range of what we ordinarily call our impulsive life. But all this is not really inconsistent with the general view as to self-control already explained.

The truth is, Nietzsche is a moralist, not of instinct and impulse, but of culture and discipline all along the line. His view appears in what he says of art, the primary aim of which is to make us endurable, if possible agreeable, to one another, to this end moderating us and holding us in check, creating forms of intercourse, binding the untrained by the laws of decency, of purity, of courtesy, of speech and silence at the right time ("Mixed Opinions and Sayings," §174). But I must not go on. Enough that in the light of what I have said or cited, the assertion that Nietzsche denied "the validity of any check within ourselves contrary to the primitive instincts and impulses of nature" becomes (pardon my saying it) somewhat curious.

WM. MACKINTIRE SALTER.

Cambridge, Mass., April 3.

[We agree in part with our correspondent. The specific ideas of Nietzsche are often sound, but they are sound only by virtue of contradicting his central philosophical thesis. That thesis seems to us best expressed in "Beyond Good and Evil," §36, to this effect: Nothing is real "but our world of desires and passions," and we "cannot sink or rise to any other 'reality' save just the reality of our impulses—for thinking itself is only a relation of these impulses to one another."—ED. NATION.]

HEGEL ON RESPECT FOR LAW.

TO THE EDITOR OF THE NATION:

SIR: Your editorial on "Social Justice" (*Nation*, March 14) suggests that it might be a service to this generation to call its attention to the following words:

> In point of fact, the pretentious utterances of recent philosophy regarding the state have been enough to justify any one who cared to meddle with the question, in the conviction that he could prove himself a philosopher by weaving a philosophy out of his own brain. . . . The truth with regard to ethical ideas, the state, the government, and the Constitution ascends, so it declares, out of each man's heart, feeling, and enthusiasm. . . . One of the leaders of this shallow-minded host of philosophers . . . has not hesitated to give utterance to the following notion of the state and Constitution: "When a nation is ruled by a common spirit, then from below, out of the people, will come life sufficient for the discharge of all public business. Living associations, united indissolubly by the holy bond of friendship, will devote themselves to every side of national service, and every means for educating the people." This is the last degree of shallowness, because in it science is looked upon as developing, not out of thought or conception, but out of direct perception and random fancy. . . . By this old wives' decoction, which consists in founding upon the feelings what has been for many centuries the labor of reason and understanding, we no longer need the guidance of any ruling conception of thought. . . .
>
> The particular kind of evil consciousness developed by the wishy-washy eloquence already alluded to, may be detected in the following way. It is most unspiritual, when it speaks most of the spirit. It is the most dead and leathern, when it talks of the scope of life. When it is exhibiting the greatest self-seeking and vanity, it has most on its tongue the words "people" and "nation." But its peculiar mark, bound on its very forehead, is its hatred of law. Right and ethical principle, the actual world of right and ethical life, are apprehended in thought, and by thought are given definite, general, and rational form, and this reasoned right finds expression in law. But feeling, which seeks its own pleasure, and conscience, which finds right in private conviction, regard the law as their most bitter foe. The right, which takes the shape of law and duty, is by feeling looked upon as a shackle or dead cold letter. . . . Hence the law . . . is the shibboleth, by means of which are detected the false brethren and friends of the so-called people. (Hegel, "The Philosophy of Right," in Dyde's translation.)

RUSSIAN DIMINUTIVES.

TO THE EDITOR OF THE NATION:

SIR: In reply to Mr. M.'s letter (*Nation*, March 28), I should say that the regular diminutive of Aleksándr in Russian is Sásha. The form Sáshka implies contempt, unless an approximation to peasants' language has been effected of late years. I never heard the form Sashók, but on the analogy of *glazók* (little eye) or *druzhók* (little friend), it would indicate tenderness.

The fact that the Russian child calls his father *papásha*, and his mother

mamásha, shows that words ending in *a* are not necessarily of the feminine gender. The less general rules about a little-known subject the better! The female name Aleksándra is not familiar to me, but I suppose a girl of such a name would be called Sásha. An Irish boy and an American girl need not quarrel if they bear the same name—Florence.

JOSEPH DE PEROTT.

Worcester, Mass., March 30.

TENNYSON'S "CHARACTER."

TO THE EDITOR OF THE NATION:

SIR: I have just seen your review (February 29) of Lord Tennyson's volume entitled "Tennyson and his Friends." May I, as one greatly interested in the memory of that "splendid" scholar, the late Master of Trinity, Dr. W. H. Thompson, whom I much admired, venture to say that the poem which your reviewer quotes, entitled "A Character," has nothing whatever to do with Dr. Thompson and does not refer to him at all. It is, as your reviewer justly says, a "caustic portrait," and it is a very striking poem to have been produced by so young a man. It was first published in 1830 and was a description of an undergraduate contemporary with Tennyson himself, a Mr. Sunderland, "a plausible Parliament-like speaker" at the Cambridge Union. There is no doubt about this. It is now generally well known, though perhaps not generally stated. The late Master of Trinity was one of Tennyson's best friends and it would have been quite impossible that Tennyson should have written of him as he wrote in the "Character." The *Nation* has such a high literary reputation in this country that I have thought I might venture to offer this small correction. A full description of Mr. Sunderland will be found in Sir T. Wemyss Reid's "Life of Lord Houghton."

T. HERBERT WARREN,
President of Magdalen and Professor of Poetry in the University of Oxford.

Oxford, March 23.

THE BEGGARS' AND VAGRANTS' LITANY.

TO THE EDITOR OF THE NATION:

SIR: Can any reader of the *Nation* locate in print "The Beggars' and Vagrants' Litany"? It is an elusive title occasionally referred to, but is not mentioned in Chandler's "Literature of Roguery," his "Romances of Roguery," Ribton-Turner's "Vagrants and Vagrancy," nor in any of the bibliographies of the subject that the writer has seen. Two of our largest university libraries and two of the largest public libraries have searched for it without success.

JOHN B. KAISER.

University of Illinois, April 2.

CONSULAR SERVICE.

TO THE EDITOR OF THE NATION:

SIR: In a letter to the *Nation* of February 29, F. W. K. comments upon the examination of candidates for the Diplomatic and Consular Service. I have prepared several candidates for these examinations, one or two of whom were successful, at a time when college men who were severely trained in languages and economics were refused. Seasoned men often pass. Men of good address, who are otherwise average, stand a chance of getting through. F. W. K. makes two or three wild assumptions. The examination is not under the civil service. The questions as to income are proper, from the standpoint (1) of indicating standards of living; (2) whether or not the applicant is a commercial traveller in disguise, and (3) that the candidate is not disposed to abuse his franking privileges, credit, etc. The "Information" issued by the department is as fair as can be expected, when the needs and personnel of the department are subject to constant change.

CHARLES WHITNEY BABCOCK.

Literature

WILLIAM JAMES.

Memories and Studies. By William James. New York: Longmans, Green & Co. $1.75 net.

William James. By Emile Boutroux. The same. $1 net.

William James and Other Essays. By Josiah Royce. New York: The Macmillan Co. $1.50 net.

"Memories and Studies" is somewhat different in tissue from any other volume from William James's hand. That is, it has an almost even literary texture throughout. Although a collection of scattered addresses, articles, fragments, it gives us the author, by good fortune, always in his literary, imaginative, and less metaphysical vein. It takes its place at once amongst our best American essay-volumes, full of the taste of a personal quality. That personal quality is now well-known. No spirit in our literature shines with a warmer and ruddier glow. Like well-nigh everything that William James wrote, it is not only full of the personality of its author, but is about personality. It is the most popular expression of his attitude towards life. That was an attitude of sympathy with free and striving individuals, of the love of peace, of rooted belief in the scholar and his social value, but of an equally rooted distrust of even the highest influences when turned into regulation and institution:

> The memory of Davidson will always strengthen my faith in personal freedom and its spontaneities, and make me less unqualifiedly respectful than ever of "Civilization," with its herding and branding, licensing and degree-giving, authorizing and appointing, and in general regulating and administering by system the lives of human beings. Surely the individual, the person in the singular number, is the more fundamental phenomenon, and the social institution, of whatever grade, is but secondary and ministerial. Many as are the interests which social systems satisfy, always unsatisfied interests remain over, and among them are interests to which system, as such, does violence whenever it lays its hand upon us. The best Commonwealth will always be the one that most cherishes the men who represent the residual interests, the one that leaves the largest scope to their peculiarities.

The volume contains commemorative pieces on Louis Agassiz, Emerson, Robert Gould Shaw, Francis Boott, Thomas Davidson, Herbert Spencer, and Frederick W. H. Myers. The paper on the last-named and the "Final Impressions of a Psychical Researcher" join themselves in the reader's mind as giving us the last word of perhaps the only eminent psychologist who ventured with perfect freedom and unconcern into the region of the "supernormal," so remote from scientific respectability. Then we have a most sympathetic rendering of that "trumpet-blast of oracular mysticism," the philosophy of Mr. Benjamin Paul Blood of Amsterdam, N. Y., "a city otherwise, I imagine, quite unvisited by the Muses"; four addresses on university ideals; two pieces on war and a "moral substitute" therefor; a paper that might be called "A Moral Psychologist at the California Earthquake"; and, finally, the most fruitful deliverance in a book rich in suggestion, "The Energies of Men":

> The best claim that a college education can possibly make on your respect . . . is this, that it should help you to know a good man when you see him. . . . Mankind does nothing save through initiative on the part of the inventors, great or small, and imitation by the rest of us—these are the sole factors active in human progress. Individuals of genius show the way and set the patterns, which common people then adopt and follow. *The rivalry of the patterns is the history of the world.* Our democratic problem thus is stated in ultra-simple terms: Who are the kind of men from whom our majorities shall take their cue? Whom shall they treat as rightful leaders? We and our leaders are the *x* and the *y* of the equation here; all other historic circumstances, be they economical, political or intellectual, are only the background of occasion on which the living drama works itself out between us.

But, to abbreviate Mr. James's thesis, we may not try to tell the superior man by Ph.D. examinations. According to the entertaining article on The Ph.D. Octopus, universities and colleges should "give up their unspeakably silly ambition to bespangle their lists of officers with these doctorial titles. Let them look more to substance and less to vanity and sham." Let them give the doctorate just as they give the bachelor's degree for a due amount of time spent in patient labor in a special department of learning, whether the man be a brilliantly gifted individual or not. "Every man of native power who might take a higher degree and refuses to do so, because examinations interfere with the free following out of his more immediate intellectual aims, deserves well of his country." The nobility of these educational addresses is worthy of Emerson, but theirs is a ruddier fire. Still,

there are other elements in a university besides periods of patient labor on the one hand and the unchartered freedom of gifted individuals on the other. The bones of the ambitious and defeated dullards, for whom Mr. James has such a characteristic sympathy, would hardly whiten the road to the doctor's degree were there always early, full, and frank conference with the professor in charge. That professor should be, and on the whole is, able to judge whether or not the aspirant is able to "make a contribution to science" on the subject in question. Such a contribution by no means depends on brilliant gifts. Conscientious research, coupled with good sense, often carries farther. It does not fully appear why graduate study alone of all human occupations should be counted on to keep its full industry and effort in the absence of responsibilities. Nor have we ever known a man fit for university teaching who could not take the Ph.D. degree.

James's attitude towards psychic research was, of course, of a piece with the fearless freedom from conventionality, the respect for personal testimony, and the interest in the unusual, that played so great a part in making all his work valuable. His final position is that psychical phenomena, despite all fraud and fancy, contain a residuum of unexplained reality. Nothing could be more judicial than his attitude, so far as impartiality goes. But the value he attached to personal impressions of truth seems greater than he allows to the dull impersonal sifting of evidence and wary counting of the chances of deception. Psychic research has certainly been fruitful enough in observation to be pushed with all ardor and perseverance. Still, the question suggests itself whether there has ever been a subject in which high aims and the spirit of scientific impartiality have availed so little for want of the resolute and desperate methods of cautious shrewdness. As the problem stands now, probably James's last word of encouragement to research is the best that could be spoken.

In laying out work for the future, however, the most valuable thing in the volume is the paper on Human Energy. Pointing out the striking evidence that as a rule men habitually live below the level of their own capacities, he sets for the future two chief problems: First, what are the limits of human faculty in various directions; secondly, by what diversity of means in the differing types of human beings may the faculties be stimulated to their best results? He offers this as a methodical programme of scientific inquiry, and proceeds to give remarkable cases by way of answer to the second. The problem was one calculated to fascinate James, whose own reserves of vitality must have been immense. But, for application, it is the first question that imperatively demands reply. In bringing stimulus to bear, where does over-stimulation begin? We recall how two of the most eminent physicians of the country heard this address and the impression of power that it made upon them. The very reading of it is "dynamogenic." Its author could have left no legacy more fully charged with his manful spirit, his sense of the richness of human nature, his unflagging interest in practical results.

M. Boutroux's small volume is a simplified and charmingly sympathetic account of James's thought in its chief philosophical departments. We are reminded of James's striking article on M. Boutroux's work, published in the *Nation* at the time of the latter's visit to this country. For the student the book offers two or three bits of aid through skilful interpretation of points in pragmatism. For the popular reader the presentment is not untrue or unhelpful. But the reading of any one of James's own works would be better. On the whole, it makes the subject somewhat too easy, and we feel afresh that where the German is in danger of over-thoroughness and over-persistence, the temptation that besets the Frenchman's literary tact is to leave his subject with a few elegant and superficially lucid remarks. We feel that Mr. James's own vein was as different from the French quality, which he relished, as from the German quality, which he so often half-sympathetically satirized. He had too much sense of reality either for cumbrous and artificial system or urbane and superficial ease.

Professor Royce's Phi Beta Kappa address, another noble commemorative essay of a friend, turns to the field of philosophical history, which always fascinates the author. He asks what was James's relation to American history. By way of answer he places him with Jonathan Edwards and with Emerson, as one of our three nationally representative philosophers. This stretches the meaning of philosophy not a little to include Emerson, who after all was a perceiver and not a thinker, and who was neither grounded in technical philosophy nor capable of understanding it. Strictly speaking, James and Jonathan Edwards stand as the foremost here, and curious is the contrast between them: Edwards, the most sustained and pertinacious of thinkers; James, a man of flashes and magnificent glimpses—"philosophizing in spots," as he himself expressed it. If we are to consider truth, light shed upon life, we cannot hesitate to pronounce James the most considerable contributor to philosophy that this country has produced. Professor Royce describes him as "the interpreter of the ethical spirit of his time and of his people—the interpreter who has pointed the way beyond the trivialities which he so well understood and transcended towards that 'Rule of Reason' which the prophetic maxim of our supreme court has just brought afresh to the attention of our people." That Professor James pointed us to the "Rule of Reason" is a singularly unexpected comment. True it is that he has many ties of kinship with the youthful, unconventional, aspiring, reckless, manful American spirit. But American life, especially since the Civil War—that is, in the period to which Professor Royce refers, has had something else in it, a powerful march towards organization; towards the efficiency and security that come of order, and this element finds little reflection in James's work. To reflect it was not his function. He was a force of expansion, not a force of concentration. He "opens doors and windows," shakes out a mind that has long lain in the creases of prejudice. He is the most vital and gifted exemplar of intellectual sympathy. And it would be very easy to exaggerate the influence of his American environment upon his thought. The decisive force was not environment but temperament.

CURRENT FICTION.

The Matador of the Five Towns. By Arnold Bennett. New York: George H. Doran Co.

It is not the Mr. Bennett of "Clayhanger" and "The Old Wives' Tale" who has written these short stories, but the Mr. Bennett of "Helen with the High Hand" and "Buried Alive." In two or three of them, notably "The Idiot" and "Beginning the New Year," he employs the grim realism of his more serious work; but for the most part he is content with the recognized tools of the popular short-story writer. He is animated and whimsical, epigrammatic and brusque—not always clear of jauntiness. He is fond of leading up to an impossible situation, and leaving it to the reader to picture the scene for himself—retiring, for his part, with some such ejaculation as "Oh, the meal!" or "What a night!" He departs from his usual habit of telling a story straight from his own shoulder by making the interlocutor, in a number of instances, a curator of the British Museum, sent to the Five Towns in his capacity of expert in ceramics. The impression of Knype and Bursley is therefore that of an outsider; and certain local traits are brought out in a relief which, writing as an initiate, Mr. Bennett is wont to keep in their natural perspective. The longest tale of this group, "The Death of Simon Fuge," is somewhat suggestive of "Buried Alive." Fuge is a painter famous everywhere but in his own country, where he is recalled as a boy who "ran away from home once, didn't he, and his mother had a port-wine stain on her left cheek." There is a single unfin-

ished sketch of Fuge's, unfavorably hung and little valued, in the brand-new museum of Bursley's pride; and the London expert is consoled by the reflection that this little picture is bound in the end to get the better of the Five Towns—to be recognized as the chief jewel among its possessions. The Mrs. Brindley of this story (the lady who remembers Fuge by his mother's left cheek) is almost worthy to be compared with the incomparable Alice of "Buried Alive."

The Mystery of the Boule Cabinet: A Detective Story. By Burton E. Stevenson. New York: Dodd, Mead & Co.

Mr. Stevenson was wise to stick to the well-known formula of the professional detective pitted against the amateur. Conan Doyle saw its advantage, and Gaston Leroux employed it in the best thing he ever wrote. The device, by setting up an open rivalry, gives the ratiocination intense interest and spurs on the reader similarly to his best efforts. The mystery centres in a house on lower Fifth Avenue, occupied by Philip Vantine, a bachelor, who has just brought from Europe an antique cabinet. Oddly enough, the Paris dealers have delivered, in place of the one he bought, what he, as a connoisseur, recognizes to be the original cabinet made by Boule for Madame de Montespan and presented to her by Louis XIV. While Vantine is talking over the matter upstairs with his lawyer, a Frenchman, unknown to either of them, sends up his card, and is bidden to wait below in a room adjoining that which contains the cabinet. A few minutes later he is found dead from a snake-like bite on his right hand. That evening Vantine succumbs on the same spot in the same mysterious way, with apparently no witnesses present to tell how it happened. Grady, the chief of the Detective Bureau, is called in, and Godfrey, the *Record* man assigned to detective cases, sets to, realizing that he has a chance to make the "scoop" of a life-time. To the duel between the two men, and more especially to that carried on by Godfrey with "L'Invincible" of the Parisian criminal world, we must give high praise. The story is absorbing and has a real climax. Its only weakness concerns the Paris dealers—we leave the reader to discover it.

Jacquine of the Hut. By E. Gallienne Robin. New York: G. P. Putnam's Sons.

The Channel Islands furnish the background and the local color for this story; the time (we should never guess it unless the author had told us) is the latter part of the eighteenth century. The style is of the modern romance-and-water variety. There is a motto chosen rather significantly from Charlotte Brontë: for the hero is an inferior specimen of the Rochester type beloved of women novelists. Jacquine herself is a marvellous combination of beauty, audacity, and virtue. Her devotion to the hero survives shocks which we believe would have chilled the passion of a Jane Eyre. When Ricart gives a dinner in honor of his engagement to Oriane, her rich rival, he orders Jacquine to be forcibly put out of his house. However, he is really in love with Jacquine throughout the story; he marries the rich Oriane only because he needs her money to pay his gambling debts. After Oriane has been providentially removed by ill-treatment and smallpox, Jacquine is rewarded by succeeding to her place. The proposal scene gives to the artist who is responsible for the frontispiece in colors an opportunity to represent the raven-haired and Amazonian heroine as a delicate little blonde.

To M. L. G., or He Who Passed. New York: Frederick A. Stokes Co.

This is an eminently advertisable novel, nicely designed to please those who would naturally turn to the "personal column" for help in a personal crisis. For the benefit of the lover whom she has dismissed with assumed coldness, the actress with a past tells all—anonymously—and publishes the resulting autobiographical confession in a volume tagged with His initials. Truly a discreet and delicate method of enlightening the banished one, inviting his return, of unburdening the lady's mind of its dark secret, while at the same time saving the lady's face. What the unfortunate fair one is timidly resolved to divulge, under the cover of publicity, consists primarily of a crudely detailed account of a neglected childhood and girlhood which led to the stage as the natural and indeed only possible career, and opened to her inexperience the deplorable "easiest way." This history is followed briefly by a vague rhapsodical chronicle of soul expansion under the elevating influences of an extended sojourn abroad. It was a Parisian theatrical performance that awakened her moral sense; it was a cypress tree in Venice that convinced her there was a God. Under Italian skies, Browning and Ruskin became her literary fare; she developed a taste for Shakespeare's plays. Then London and He were added to the full measure of her experience—He, an "intellectual Englishman" with an "Oxford voice" and "eyebrows like Galahad's," romantically dignified, too, by the experiences of a "soldiering life."

The plain vulgarity of the earlier views of American theatrical life is, on the whole, preferable to the stilted sentimentality of the close. As to the retarded mental development of the woman who is credited with years of eminent success on the American stage before she acquires the rudiments of culture, one may be permitted to doubt as to whether immorality is, after all, the prime requisite to theatrical distinction—even in the United States.

The Recording Angel. By Corra Harris. New York: Doubleday, Page & Co.

There is no actual town in the South more real than the Ruckersville (near Atlanta, Ga.), which Mrs. Harris has evoked as the scene of this amusing extravaganza. Into the somnolent atmosphere that has settled over this place since the war, suddenly reënters Ruckersville's most disreputable but most lively son, who has been West and made a fortune—how, it matters not. Naturally, he falls in love with the disreputable, but gorgeously beautiful, daughter of Ruckersville—and there you have all the plot that is necessary for this chronicle of small things.

The heroine of the tale, however, is really a blind woman, who has her husband, a drunkard of sadly broken gentility, write down her meditations on the vanities of life about her. She is the Angel whose record her spouse, after interpolating his own sulphurous comments, publishes anonymously in a magazine. What scandal is caused thereby in the high society of Ruckersville, and how the hero from the West uses the idea to galvanize the reluctant citizens into strange activity—these things are the delightful substance of the book.

Mrs. Harris writes of nature and men with a knowledge of their hidden moods that has a touch of genius. Her abundance of epigram is so extraordinary that she might well spare a number of those which drag the sex-instinct into undue prominence, a few of those which are just in bad taste. With a little more restraint, a little pruning here and there, she would please the most fastidious reader without losing her interest for the many.

JOHN CAM HOBHOUSE.

Recollections of a Long Life. By Lord Broughton (John Cam Hobhouse). With additional extracts from his Private Diaries. Edited by His Daughter, Lady Dorchester. Vols. V and VI. New York: Charles Scribner's Sons.

These concluding volumes of one of the most important of recent memoirs take up the story of Hobhouse's life in 1834 and carry it down to 1852. The last entry, dated April 22, is the brief and fitting record of an honor won by long years of service in Parliament and by peculiar devotion to the Queen:

I was invested with the Order of the Bath at Buckingham Palace. H. M. smiled when

she gave me her hand to kiss for the third time in the ceremony: a very unusual honor, as I was told!

He had just retired finally from office, on the resignation of Lord John Russell in February, 1852. His death came suddenly June 3, 1869, in his eighty-third year.

Though interesting in itself, this third instalment of the Diary and Recollections has neither the romantic attraction of the first volumes in which Byron and Napoleon played their thunderous parts nor the political value of the succeeding volumes which gave the story of the Reform bill. We find Hobhouse now in a kind of backwater. Peel resigned April 8, 1835, and the second Melbourne Cabinet came in with the feeling that sufficient had been accomplished in the way of reform and that things should be kept for the most part in a state of rest. They had against them, as Hobhouse acknowledges, the King, the court, the Lords, the army, the navy, the church, the law, the squires, and the magistracy. William IV was particularly bitter towards Lord John Russell. "Lord Palmerston told me," Hobhouse records, "that, at table the other day, two bishops being present, some one talked of Lord John Russell's health, on which H. M. said, 'If you will answer for his death, I will answer for his damnation.'" The humor of the remark, we may observe, lies partly in the curious inversion of rôles between bishops and crown. Hobhouse, it may be added, was quite as bitter on his side and decidedly less witty. He never misses an opportunity of flinging a nasty epithet at Peel, as a man disagreeable in private manners, awkward and shy, tricky with the Queen, and a "shabby fellow" generally. Brougham is represented as a monster of insane egotism. Grey is merely contemptible:

> Lord Grey was in high dudgeon, and though surrounded by old friends and late colleagues and connections, hardly spoke a word, and never asked a man to take a glass of wine with him. Lansdowne told me, amongst other proofs of his intractable temper and foolish pettiness, that he had complained of not being asked to speak on the Irish bill. Lord Lansdowne added that he was angry at not being what he might have been, Prime Minister, and could not forgive Lord Melbourne his success. If Melbourne had failed he would have been his strenuous supporter. Now he does nothing but grumble and growl. For my own part, I must say that the more I see, the less I think of him; and am surprised how, by mere fluency of speech and arrogance of manner, this really inferior man has contrived to lead a great party, and to connect his name imperishably with the most splendid triumphs of British legislation.

As a matter of fact, the second Melbourne Cabinet was in an impossible position and was much of the time in a state of panic which did not conduce to good temper—except in the imperturbable Prime Minister himself. We see Hobhouse, an ardent supporter of the Reform bill, now withstanding the Ballot because, as he says, following Peel in this, "it would take away that influence over the vote which preserves the representative system, in our country, from being of too democratic a character." We find him also against the repeal of the Corn laws, and the most dramatic pages of these new volumes are those that relate the struggles of the Cabinet in the summer and autumn of 1841 to hold back the repeal and to retain office. Particularly vivid is the account of the Cabinet meeting at Lansdowne House on May 19th.

The bulk of the present volumes is a disconnected and rather commonplace journal of dinners and other social events, which does not lend itself to easy consecutive reading. A charming portrait of the young Queen might be evoked by patching together paragraphs scattered through the pages. There are no careful character studies, but here and there a good *mot* is set down or an amusing story recorded. We may quote a few of these without comment:

> Lord Holland told me some profligate sayings of George Selwyn's, whom he knew when a boy, a formal man in a bag-wig and sword; he hated the Whigs, but liked Charles Fox. He had a house at Marston, where Charles I had escaped. George III came to visit it; and Selwyn, although a most abject flatterer of that King, said, "It is curious my house has been visited by two Kings, and both lost their heads." George III had recently been mad.
>
> Mr. Coke told me that he hardly ever heard Mr. Fox speak harshly of any man. Some one happening to say to him, "You must allow Sir John Lade was a stupid man," Fox replied: "I allow no such thing; he was a d—d clever fellow, the best driver of a four-in-hand in England, and a man who does what he attempts very well cannot be called stupid."
>
> Mr. Standish, who had just arrived from Paris, told us that Lord Brougham, on coming to Paris the other day, ordered the postilions to drive him to the Tuileries, that he might report his arrival to the King. It was half-past eleven, and his Majesty had gone to bed.
>
> Sydney Smith told me in the drawing-room that he called Macaulay "a book in breeches," and that the Queen, hearing of it, said that was just what he was.

THREE ASPECTS OF LABRADOR.

Through Trackless Labrador. By H. Hesketh Prichard. New York: Sturgis & Walton Co. $4 net.

Among the Eskimos of Labrador. By Dr. S. K. Hutton. Philadelphia: J. B. Lippincott Co. $3.50 net.

In Northern Labrador. By William Brooks Cabot. Boston: Richard G. Badger. $2.50 net.

The layman is hard put to it to appreciate the lure which attracts so many men of more than common parts to "the Labrador," that bleak and barren waste, held during the long winter in the paralyzing grip of the ice-king, and scourged during the short summer by myriads of bloodthirsty mosquitoes. Men like Dr. Grenfell and Father Browne went there, of course, to minister to the material and spiritual welfare of the natives, especially those of white blood, fishermen and the descendants of fishermen attracted thither by the fish-abounding coasts, far from which they never venture. Then there are the explorers and geographers, Hind, McLean, Lacasse, Cary, Cole, Low, and the rest. Lastly, come the journalists and sportsmen, actuated by the spirit of adventure or the desire to obtain a good "story." Perhaps as good an explanation as any of Labrador's fascination is contained in one of Mr. Cabot's sentences: "The invitation of the country to a traveller with a taste for unworn places is unusual." Unworn the Labrador certainly is. Inland more than a few miles from the coast its vast map has been but scratched here and there by the geographer, and Mr. Cabot's book-title is far truer and less misleading than such a one as "Through Trackless Labrador." No white man has as yet gone really through Labrador, though some have traversed considerable portions of it.

Of the three books here reviewed, that of Mr. Prichard is the record of a sportsman; that of Dr. Hutton the narrative of life near to, if not actually among, the Eskimos; while Mr. Cabot's relates the experiences of a sportsman-explorer, whose ethnological talents, patience, and endurance have made him the one great authority on the Indians of Labrador.

In Mr. Prichard's book that well-known cricketer and big-game hunter describes accurately and often vividly a "little exploring trip from the Atlantic Coast (Nain) to the George River over an unknown route"; he adds much information, more or less second-hand, about the country, its inhabitants, and its fauna. The importance of his beautifully made volume will be found to lie in the narrative of the hunting and angling experiences of himself and his companion, as well as in his excellent advice regarding outfit, seasons, and localities. He does, indeed, furnish us with a sketch-map of the route taken, which was, as alleged, hitherto unexplored, and his own personal observations are valuable. He hoped to find Indians on his way, and, had he explored Indian House Lake, his farthest west, before turning back towards the coast, he would have discovered a large encampment of them on its very banks, for they were there, waiting for the caribou migration, at that time. Mr. Prichard's dictum in regard to Labrador sport is to the effect that, while the fishing for salmon, trout, and sea-trout is very fine,

and the hunting often good, nevertheless none but the toughest and keenest of sportsmen should go there, for it is a land of real hardship, and the mosquitoes and flies are quite indescribable in their ferocity. It is a pity that this handsome volume contains no index.

Dr. Hutton's "Among the Eskimos of Labrador," as he says in his opening paragraph, "presents a plain picture of the Eskimos, . . . a people among whom I have lived for somo years past, and with whom I have come into the closest contact." And though he did not live with the Eskimos in the intimate seuse that Mr. Cabot did with the Indians, he has approached his task with enthusiasm, and succeeded in giving us a very interesting and accurate picture of Eskimo life and character. Mr. Cabot, an admirer rather of the Indian than the Eskimo, remarks that "one's first-time approach to a really unmodified Eskimo in a warm day is apt to be a staggeriug experience." Dr. Hutton, while not holding up the Eskimos as a cleanly race, explains their condition from their mode of life. "In the north, where no trees grow, and seal-oil lamps provide light and a meagre tinge of warmth for the huts, the people look dirty. The huts are small, and all the work of skinning and dressing the seals must be done in them, because out-of-doors everything freezes as hard as stone." In the summer time they do wash their clothes, the women and girls trampling upon them in the shallow brooks, smoking their pipes the while! Smoking is essentially an Indian habit, and Dr. Hutton wonders where the Eskimo learned it. "Was it the 'pipe of peace,' after one of their old quarrels, that started the craving? Or did they first get it from passing vessels? Perhaps so; but who can tell? Eskimos and Indians are hereditary foes; even in my time I have seen Eskimos scared at the mention of 'Indian,' and when I travelled southward my drivers once asked me in awestruck voices, 'Shall we see the Allat (Indians)?'" But, "though the Eskimo is just a big child in his outlook on the wider world, . . . in the things of his own daily life he is a full-grown man. In the grim task of wresting a living from his stern surroundings, the Eskimo excels." In spite of superstitions and uncleanliness, and a certain denseness of comprehension, he possesses qualities of endurance and fortitude that will lead to his advancement in civilization. Dr. Hutton's book is better illustrated than bound, and contains an index.

Mr. Cabot, after resisting for some years the entreaties of his friends, has now set down for us the record of many of his wanderings. He visited Labrador before the beginning of this century, and since then has made five expeditions thither, having many objects in view—adventure, sport, exploration, but chiefly the study of the Indians. He evidently has a "happy hand" with the aborigines, who have given him their confidence to a degree denied to other white men. It is significant that this quiet, patient, sympathetic, and courageous Bostonian, pushing on and on farther out upon the barrens, not only came in contact with both Montagnais and Naskapis (Nascaupees), but lived long with them in their lodges. The finding of his Indian friends, the winning of them, and his life with them, hunting, fishing, playing, and enduring hardships, form one of the most fascinating narratives we have ever read. It deals with wilder Labrador as authoritatively as does that of Dr. Grenfell with the more civilized coast country. Unfortunately, the book, though well printed and illustrated with photographs by the author, lacks an index and an adequate map.

The American Transportation Question. By Samuel O. Dunn. New York: D. Appleton & Co. $1.50 net.

In this interesting volume the editor of the *Railway Age Gazette* has presented his view of the present-day railway problem and his method of solution. Notwithstanding his professional affiliations, he has given an eminently fair treatment of the questions at issue. While one may at many points disagree with his conclusions, one can hardly question the sincerity with which he has handled his material or the deliberation and care with which he has reached his final judgment.

Two introductory chapters are devoted to principles of rate-making as a necessary introduction to the later problems. These chapters are clear, logical, and well-balanced. Due recognition is given to the principle of cost in the fixing of rates and at the same time the limitations of the cost element are clearly indicated. Successive chapters deal with discrimination, valuation, efficiency, relation of railways to waterways, and Government regulation. Upon all these questions the author throws light, and adds to the clearness and interest of his exposition by abundance of apt illustration drawn from actual railway controversies.

His remedies for discrimination, frequently advocated by students of transportation, are pooling under Government control and power on the part of the Commission to prescribe a minimum rate. Mr. Dunn finds little to be accomplished from any universal physical valuation of railways. It would not aid in any way in determining the reasonableness of a specific rate, and could be but a minor aid in establishing the justice of an entire schedule of rates.

The discussion of efficiency helps the reader to adjust his mind to the extravagant claims of the modern apostle of "scientific efficiency." Tho author does not spare the feelings of the railway operating officer, and points out clearly the many extravagances in competitive service, and the enormous cost of reckless management as revealed in the accident record. Yet the real obstacle to a thoroughgoing application of economy in railway operation is shown to be the conflict between economy in operation and efficiency in service. In fact, it is the author's belief that as population becomes denser there will be a steadily increased demand for more frequent service of a less-than-carload character, which works against the effort to furnish service at lower cost. It means an increase in the cost of distribution, already a serious factor in our present high cost of living.

Waterways, in the opinion of the author, should not be constructed merely as potential agencies of traffic for the purpose of keeping rail rates down. Direct regulation of railway rates is a less costly method of protecting the public, and water routes should be constructed only when the traffic demand has been clearly demonstrated in advance. The effectiveness of Government regulation would be promoted, in Mr. Dunn's opinion, by a separation of the powers now exercised by the Interstate Commerce Commission which should confine this body largely to its judicial functions. Control over capitalization is desirable not to prevent high rates, to which capitalization has but little relation, but to insure a proper investment of the proceeds of security issues.

Although the treatment of the various topics is generally acceptable, a few points of disagreement may be noted. The author's defence of the imposition of a low rate for the long haul by a circuitous route in competition with a direct route is hardly convincing. Such a low competitive rate is only justified if it *creates* its own traffic, not if it divides existing traffic. To the "Commodities Clause," incorrectly called the "Carmack Amendment," is given a narrower application than it probably will have when the Supreme Court gets the opportunity to pass upon cases other than those involving coal mines. Hearty endorsement of the huge expenditures for railway terminals in the cities seems hardly warranted; much of this expenditure is sheer waste. Mr. Dunn's pessimism concerning the development of water traffic appears to be more profound than the situation warrants, and there is much economic and social defence, notwithstanding his statement to the contrary, for the construction by the Government of trunk-line waterways. Only in his opinion as to the expertness and impartiality of the Commission and in his attitude towards organized railway labor does the author betray a prejudiced attitude, and here the position taken is not pronounced. It is

unfortunate that in this stimulating book no reference is made to the question of Government ownership, which is coming to have an increasing interest and importance. Yet as the present-day problem is the subject of consideration, the question of nationalization may very properly have been reserved for later treatment.

Lollardy and the Reformation in England: An Historical Survey. By James Gairdner, C.B. Vol. III. New York: The Macmillan Co. $3.50 net.

This third volume of Dr. Gairdner's great work on the English Reformation continues the process so clearly outlined in the two previous ones (see *Nation*, May 27, 1909). His object is to assign to the thing he calls "Lollardy" (so far as we can understand him, the principle of independent thought in religion) the place it properly occupied in the change from papal to royal supremacy. The former volumes have been abundantly criticised, as was to have been expected, from the most opposite quarters. They could satisfy neither the Romanist nor the Dissenter, nor even the moderate Anglican, and we predict the same fate for the volume before us. The most interesting part of it is the somewhat long introduction in which the venerable author tries to set himself right with his critics. He describes himself here as a "mere retired archivist" in distinction from a "real historian," and avows his incapacity for a "full treatment of this vast subject." He further frankly disclaims historic impartiality and calls the attempt at it a going back to paganism. He devotes several pages to defence of his use of the word "heretic" as applied to persons who were declared heretics by their contemporaries. The controversy is not very important, but we incline to think he has rather the better of it. Just what his mental attitude towards authority in belief is we may well see from this:

> I do not reject absolutely even the doctrine of transubstantiation, if it can be shown to be reasonable. But as yet I cannot say that I see it in that light; and if I am asked to subject my own reason to the Church, I am ready to do so—to a Church that is really universal.

This, we confess, seems to us mere words. Such a universal church never existed and never will exist. Dr. Gairdner balks at certain dictations of mediæval philosophy, but he has no patience with other persons whose thought carries them beyond his own limits. He approves many consequences of the English Reformation, but he abhors every manifestation of that spirit of independent inquiry and every appeal to that principle of individual reason which supplied the spiritual forces that made the permanent establishment of the English Church possible. We can readily imagine how a learned scholar with a mental equipment of this sort would approach the reign of Edward VI. Dr. Gairdner's narrative, which he fairly warns us is not even an attempt at "an exhaustive history" of that reign, is colored throughout by his contempt for everything that shows us the free working of individual minds. All such evidence belongs either to "aristocratic Lollardy," which was a sort of sport, or to "the fervid Scriptural Lollardy of half-instructed men." All the literary product of the former class is dismissed in a couple of pages as wholly contemptible. As to the second class: "fervor" and "Scripture" are red rags to Dr. Gairdner. They seem to him the chief expressions of that unwillingness to accept the powers that were which is to him the worst of vices, easily turned into the most dangerous crime. The reader desiring to gain an idea of the constructive processes by which the English Church under Edward VI was laying the foundations of its future greatness and gaining its permanent hold on the loyalty of the English people, will be greatly disappointed. We sincerely hope that Dr. Gairdner may be spared to complete his plan and give us a fourth volume on the happy restoration of good Queen Mary. We shall then be able to judge even more accurately where his sympathies lie.

Notes

The Historical Guides of the late Grant Allen are appearing from the press of Holt, in a new, revised form.

The attitude of the Australian aborigines towards the white man's religion is the subject of James Francis Dwyer's "The White Waterfall"; it is in the press of Doubleday, Page & Co.

D. Appleton & Co. announce the following recent or forthcoming publications: "The American Year Book for 1911"; "The Founders of Modern Psychology," by G. Stanley Hall; "Lafcadio Hearn," by Nina H. Kennard; "The Life and Letters of Laurence Sterne," by Lewis Melville; "The American Transportation Question," by Samuel O. Dunn; "The Initiative, Referendum, and Recall," edited by William Bennett Munro; "The Regulation of Municipal Utilities," by Clyde L. King; "The Coming Generation," by William Byron Forbush.—Fiction: "Japonette," by Robert W. Chambers; "The Sins of the Father," by Thomas Dixon; "Sharrow," by Bettina von Hutten; "The Price She Paid," by David Graham Phillips; "The Postmaster," by Joseph C. Lincoln; "The Maker of Opportunities," by George Gibbs; "The Charioteers," by Mary Tappan Wright; "Halcyone," by Elinor Glyn; "Carnival," by Compton Mackenzie; "The Favor of Kings," by Mary Hastings Bradley; "The Department Store," by Margaret Bohme, translated from the German by Ethel Colburn Mayne; "Faith Brandon," by Henrietta Dana Skinner; "The Mystery of the Second Shot," by Rufus Gilmore; "The Trevor Case," by Natalie S. Lincoln, and "The Nameless Thing," by Melville Davisson Post.—Juveniles: "Bucking the Line," by William Heyliger, and "The Border Watch," by Joseph A. Altsheler.

George W. Jacobs & Co. are bringing out this spring: "The One-Way Trail," a story of the cattle country by Ridgwell Cullum; "The Stake," a novel by Jay Cady; "The Development of Worship in the Rites and Ceremonies of the Church," by Alfred G. Mortimer; "The Cock, the Mouse, and the Little Red Hen," an old tale retold by Felicite Lefevre, new edition, and "I Ask of God," by Harriet Hobson.

This season's books published by Richard G. Badger include, in history: "Favorites of Louis XIV," by Le Petit Homme Rouge; "Life of Jonathan Trumbull," by his great-grandson, and "History of the New York Nautical School," by Capt. N. S. Osbon.—Sociology and philosophy: "The Anarchist Ideal," by R. M. Wenley; "The Present-Day Problem of Crime," by Albert H. Currier; "Vibration and Life," by D. T. Smith; "Thought and Religion," by James William Loeber, and "The Mechanism and Interpretation of Dreams," by Morton Prince.—General literature: "Cupid en Route," by Ralph Henry Barbour, illustrated; "The Village Green," by Eugene Wood, illustrated; "English Balladry and Other Papers," by Frank E. Bryant; "World Epics," by Helen A. Clarke; "Shakespeare Studies," by William A. Rader; "Shakespeare Study Programmes," by Charlotte Porter; and "Rambles with John Burroughs," by R. J. H. De Loach.

Among the Century Co.'s forthcoming books are "The Strangling of Persia," by W. Morgan Shuster; "The Social Drift, Studies in Contemporary Society," by Prof. Edward Alsworth Ross, and new novels by Samuel Merwin and David Gray.

Joseph King Goodrich, in "Africa of To-day," to be published by McClurg, treats the missionary problem of that country historically, and shows, in particular, the part played by England and America.

Prominent among the spring books of the A. S. Barnes Co. is Mrs. Jennette E. C. Lincoln's "The Festival Book," which describes May Day pastimes and the Maypole.

"The Autobiography of Thomas DeWitt Talmage"; "What Is and What Might Be," by Edward G. A. Holmes, for many years chief inspector of elementary schools in Great Britain; "The Flaw in the Crystal," by May Sinclair, and "The Permanent Uncle," by Douglas Goldring are in preparation by Dutton.

Included in the spring and summer announcements of the Dodge Publishing Co. are twelve volumes of the Poetry and Life series, edited by William Henry Hudson; "Every Boy's Book of Hobbies," by Cecil H. Bullivant; "A Song of Life," by Albert J. Atkins; "Baby's Happy Days," by Alice Goss; "Bergson," a new volume by Joseph Solomon in Philosophies Ancient and Modern series; The Pilgrim Books, designed for travellers and including "William Shakespeare," "Charles Lamb," "William Wordsworth," "Charles Dickens," "William Morris," "Alfred Tennyson," and "John Ruskin"; "The Reflections of a Mean Man," by

Walter Pulitzer, and "Stories of the Hudson," by Washington Irving, illustrated by Clifton Johnson.

Houghton Mifflin Co. publishes April 20: "The Promised Land," by Mary Antin; "Alexander's Bride," by Willa S. Cather; "The Jonathan Papers," by Elisabeth Woodbridge; "Scum o' the Earth and Other Poems," by Robert Haven Schauffler; "The Life and Work of William Pryor Letchworth," by J. N. Larned, and "The Riverside Fourth Reader."

Prof. Arthur H. R. Fairchild is preparing a volume on "The Making of Poetry." It is promised by Putnams for May.

Fiction is the main item in Little, Brown & Co.'s spring announcements. It includes: "The Bandbox," by Louis Joseph Vance; "Young Beck," by McDonnell Bodkin; "The Lighted Way," by E. Phillips Oppenheim; "Peter Ruff and the Double-Four," the same; "The Mountain Girl," by Payne Erskine; "The Saintsbury Affair," by Roman Doubleday; "Her Word of Honor," by Edith Macvane; "The Mainspring," by Charles Agnew MacLean; "My Demon Motor Boat," by George Fitch; "The Sunken Submarine," by Capt. Danrit; "Sanna of the Island Town," by Mary E. Waller; "Lonesome Land," by B. M. Bower; "The Big Fish," by H. B. Marriott Watson; "The Under Trail," by Anna A. Chapin.—Miscellaneous: "The British West Indies," by Algernon E. Aspinall; "Pin-Money Suggestions," by Lilian W. Babcock; "A Handbook of Home Economics," by Etta Proctor Flagg; "The Anomalies of the English Law," by S. Beach Chester, and "The Young Crusaders," by George P. Atwater.

The following are Oxford books announced by Frowde: History and biography: "Lord Durham's Report," by Sir Charles Lucas; "The Exchequer in the Twelfth Century," by R. L. Poole; "Companion to Roman History," by H. Stuart Jones; "Oxford Studies in Social and Legal History," Vol. III, edited by Prof. Paul Vinogradoff; "The English Factories in India, 1642-45," by W. Foster; "Mill's Liberty, Representative Government," and the same author's "The Subjection of Women," introduction by Mrs. Henry Fawcett.—Theology and philosophy: "Eusebiana," by H. J. Lawlor; "Hegel's Formal Logic," translated by H. S. Macran, and "The Book of Enoch," edited by R. H. Charles, new edition.—Classics: "The Greek Genius and Its Meaning to Us," by R. W. Livingstone; "A Commentary on Herodotus," by W. W. How and J. Wells: "Homer, Hymns, etc.," edited by T. W. Allen; "Horace," edited by E. C. Wickham, revised by H. W. Garrod; "Philostratus's Apollonius of Tyana," translated by J. S. Phillimore, two volumes; "Tacitus's Histories," translated by W. Hamilton Fyfe, two volumes, and "Demosthenes's Public Speeches," translated by A. W. Pickard-Cambridge, two volumes.—Miscellaneous: "The Poems and Masks of Aurelian Townsend," edited by E. K. Chambers; "The Science of Etymology," by W. W. Skeat; Oxford English Dictionary, Vol. IX, Th—Thy; "Spenser," edited by J. C. Smith and E. de Sélincourt; "Blackmore's Lorna Doone," introduction by T. Herbert Warren; "A Book of English Essays, 1600-1900," by S. V. Makower and B. H. Blackwell; "Problems of the Roman Criminal Law," by J. L. Strachan-Davidson; "John of Gaddesden and the Rosa Medicinæ," by H. P. Cholmeley, and "A Concordance to Dante's Latin Works," by E. K. Rand and E. H. Wilkins.

The Chinese frontiers of India are described in the *Geographical Journal* for March by Archibald Rose, who as British consul in Yunnan has come into close touch with the frontier problems of China. He gives much valuable information in regard to the turbulent border tribes and explains how they are gradually losing their predatory habits and are coming under control by the extension of orderly government and honest administration. He emphasizes the intense vitality of the Chinese and their hearty friendship for the English. Abundant evidence is also given that in these parts of Asia hundreds of thousands of square miles of interesting and unknown territory are still waiting to be explored. Prof. Norman Collie tells of some explorations in a part of the Canadian Rockies which for the wonderful beauty of the scenery and especially of the numerous lakes bids fair to become the "playground of all America." A preliminary report of the recent Yale Peruvian expedition is given by the director, Prof. H. Bingham. The ruins of a number of Inca or pre-Inca cities were discovered, and some 3,000 specimens of plants and insects were collected. Of much scientific interest, judging from the long and animated discussion at a meeting of the Royal Geographical Society, are Dr. John S. Owens's experiments on the settlement of sand in running water.

Under a needlessly uninforming title, "The Vicissitudes of a Lady-in-Waiting" (by Eugène Welvert, translated by Lilian O'Neill: John Lane Co.), we have a gossipy relation of the private life of Louis de Narbonne and his mother. The former is familiar to students of the French Revolution as the War Minister of Louis XVI in the spring of 1792. He became "suspect" after the 10th of August, but thanks to a fortunate friendship with Madame de Staël he lay safely concealed in her house during the fatal domiciliary visits, and finally escaped to England where he joined the circle of clever conversationalists around Fanny Burney and Talleyrand. Later he returned to France, and in spite of Talleyrand's apparent ill-will he became an aide-de-camp of Napoleon and lived through the suffering of the Russian campaign. The author has constructed the story of this chequered career by copious clippings from well-known memoirs, and also by some serious researches in the French archives. That he is impartial and objective it would be rash to maintain. Narbonne's mother was a faithful uninteresting lady-in-waiting to Louis XVI's royal aunts, Adélaïde and Victoire. Her son's extravagance and her consequent financial bankruptcy reflect in miniature what was happening to the old monarchy of the Ancien Régime on a grand scale. After the adoption of the Civil Constitution of the Clergy and the emigration of the old nobility, the royal aunts decided that they preferred to hear mass in Rome rather than Paris. They set out for the frontier on the night of the 19th of February, 1791, with Madame Narbonne as lady-in-waiting, and Louis de Narbonne as escort. The author's detailed account of their flight (the preparations for their secret departure were so hasty that when detained on their journey by the suspicious patriots of Arnay-le-Duc these scions of royalty had to stay in bed while their scanty linen was washed), is the most valuable part of the book. It is drawn directly from the sources, and is especially interesting when compared with the King and Queen's similar flight to Varennes, just four months later.

The present condition of the Turkish defences of the western entrance of the Dardanelles is described in *Petermann's Mitteilungen* for March, by Gen. A. Janke. The article is accompanied by a colored map showing the exact position of each of the numerous forts and batteries, as well as the depth of the water. A brief sketch of the principal events in the French conquest of Wadai, a country in north central Africa, is given by Dr. H. Moeser, and Dr. F. Nölke discusses the question whether or not the Glacial Period was due to the lowering of temperature.

A welcome little outdoor book, fit for the pocket, is "The Rolling Earth: Outdoor Scenes and Thoughts from the Writings of Walt Whitman" (Houghton Mifflin). The selections are from the journals and poems, and show Whitman keenly observant of and exultant in his surroundings. "To my mind," says John Burroughs in the preface, "Whitman was the poet of the earth considered as an orb in the heavens . . . [He] revelled in thoughts of the whole scheme of things." This aspect of Whitman is fully shown in the book, but we see him also as the lover of birds and butterflies, of weeds and bees.

The key-note of the two volumes on "An Imperial Victim: Marie Louise" (Brentano's), by Mrs. Edith E. Cuthell, is struck in the dedication: "To the memory of a tender heart, a ruler beloved, a devoted daughter, a faithful friend, a wronged woman, as sinned against as sinning." We have thus before us another compilation of sentimental memoirs closely resembling its many predecessors during the past year or two. There is a fatal sameness about all of them. Not a touch of originality, not a single clever remark, not a graphic description or characterization, rises above the dead level of dull mediocrity. Still, Mrs. Cuthell knows how to copy, diligently and not without discrimination, from good sources, mainly French (though she hardly mentions a single book), and her volumes have at least the negative merit of being almost wholly free from scandalous gossip, slippery as the ground is on which she necessarily moves. Although mainly concerned with the wrongs done to her heroine, she is not wholly oblivious of her weaknesses, and if any confirmation were needed of Marie Louise's heartless behavior towards Napoleon these pages would clearly furnish them. Entirely aside from the pressure exercised by her father, the Emperor Francis, and her lover, Count Neipperg, Marie Louise had not a particle of feeling for her husband as soon as he left France. She now cuts a sorry figure even in the eyes of Austrian historiographers, the older of whom had attempted the whitewashing process with much more learning and ability than Mrs. Cuthell has at her command. Her volumes show a carelessness in proofreading unusual even in

books of this class. The German *Umlaut* is throughout withheld or bestowed in a purely arbitrary fashion. "Frankfürt," "Schönbrünn," "Wölkersdorf," "Innsbrück," alternate with spellings like "Furstenberg." But there are many worse blemishes. Sometimes only the initiated will recognize the places aimed at in such wretched misprints (or are they ignorant transliterations?) as "Kaschaaw" (for Kaschau), "Hintzendorf" (for Hetzendorf), "Kalemberg" (for Kahlenberg), etc., etc.

"The Modern Woman's Rights Movement," by Dr. Kaethe Schirmacher, translated from the German by Dr. Carl C. Eckhardt (Macmillan), is a veritable cyclopædia of information, carefully gathered from authoritative sources, regarding the status and progress of the woman's rights movement throughout the world. Dr. Schirmacher writes as an advocate, and is at times pretty caustic in her treatment of conservatives and opponents: as witness the statement, uncomfortably near the truth in some places, that the chief supporters of the "Association Opposed to Woman Suffrage" in this country "are found among the saloon-keepers, the habitual drunkards, and the women of the upper classes." Where she chiefly errs is in the assumption, easily made by champions of reform, that the creation of societies or committees, the presentation of petitions, or the working up of public demonstrations is an accurate indication of the extent of popular interest in the subject. On the state of the woman movement in continental Europe, the volume presents the most comprehensive account yet available in English. Dr. Eckhardt has added notes, and brought the statistics up to date. A few slips in the American portion might properly have been corrected. The salaries of women professors in American universities are not always equal to those of men; nor do the students of women's colleges commonly "play football in male costume, the public being excluded."

One of the most famous legendary historical scenes which Voltaire's cleverness invented and endowed with persistent life is that in which the beautiful young Empress-Queen, Maria Theresa, fleeing from Vienna to Presburg with her infant in her arms, appears in the Hungarian Diet and appeals for aid against her perfidious enemies; whereupon her loyal Hungarian subjects cry out: "Moriamur pro rege nostro Maria Theresa." From a careful study of the daily register of the legislative proceedings and contemporary letters, Mary Maxwell Moffat ("Maria Theresa," E. P. Dutton & Co.) shows that Voltaire quite overlooked the long struggle which the young ruler had to go through before she overcame the suspicions which her Hapsburg ancestors and their German ministers had implanted in the Magyar people. As the author tells the story, it is dramatic enough without Voltaire's embellishments. Her clear scholarly biography of Maria Theresa, based on solid material and furnished with some twenty illustrations, portrays excellently the personal life and character of a remarkable woman and her numerous family. Miss Moffatt makes no attempt to discuss, except incidentally, the kaleidoscopic events of Maria Theresa's foreign policy; but she gives good brief accounts of the improvements which took place under her in education, medicine, music, and morals, and in the various branches of the domestic administration of the Austrian Monarchy.

Disgusted with the insistent adulation and the goody-goody praise which the biographer usually bestows upon the Queen, Clare Jerrold, in "The Early Court of Queen Victoria" (Putnam), seeks to give a true account of the far from perfect environment and the unpleasant relatives who surrounded the youthful princess in the decade of her accession. By mixing a mass of second-hand anecdotes with the effervescent froth of court gossip and the author's own moralizings a volume is produced which is neither dull nor mendacious. The most unlovely figure in it is the Duchess of Kent, who had kept such an unremitting surveillance on her daughter, Victoria, that it was said she had never let the princess out of her sight by day or night for more than ten minutes at a time. People feared that the Duchess, not the Princess, would rule England when the Princess became the Queen. Their minds were soon relieved. When Victoria returned to her apartments after the trying ceremonies of receiving the oaths of allegiance, her first regal words to her mother were the pathetic request: "I wish, my dear mamma, to be left alone for two hours!"

The New Mediæval Library (Duffield) could hardly have done without a volume representing the songs of the troubadours, for those songs, as the ultimate source of the later mediæval and the Petrarchan lyric, deserve the filial reverence of every lover of poetry, and there are among them many of rare beauty and a few of stirring vigor. Miss Barbara Smythe, in "Trobador Poets," has undertaken to translate for the English reader some sixty poems of the best-known troubadours. Her task was one of extreme difficulty. The Provençal text is full of pitfalls for the unwary, the troubadours rather sought than shunned obscurity, their phrases are distorted by the exigencies of intricate stanzaic structure, and many of the words which recur most frequently, as *joi, joven,* and *domneiar,* have technical courtly values that are beyond the connotation of any brief equivalents. Miss Smythe's translations, some in prose, some in imitative verse, are remarkably accurate. She is thoroughly familiar with the language and the thought of the troubadours, and she has contrived to make her rendering literal as well as clear. Unfortunately, her prose and verse are both pedestrian; the phrasing is that of common conversation, the lines are too light to carry real substance, and there is no richness in the rhymes. Interesting her versions are, but they convey to the reader very little of the original poetry. One may mention as more than usually successful the verse rendering of the resonant song in praise of war attributed to Bertran de Born, and the translation, also in verse, of the first of the love poems of Guilhem de Cabestanh. Miss Smythe's choice of poems is notably good. The book offers much that will be new and valuable to those whose knowledge of the Provençal lyric is derived only from the anthologies of Appel and Crescini.

"The American Government" (Lippincott), by Frederic J. Haskin, shows all the familiar skill of the practiced syndicate writer in marshalling facts for the hurrying commuter; and the publishers have done their part by making the book light enough to hold easily for a full thirty-minute run. As a description of the surface operations of Government, the work has substantial merits. It contains a truly vast amount of information, its plan is orderly, it avoids theoretical discussions, and it is extremely readable. A novel feature is the advertised approval of the several chapters by the heads or high officials of the departments or bureaus described. In the presence of a list of names, ranging from President Taft to John Barrett, the most hardened critic would hardly dare withhold commendation. Fortunately, the volume has the virtue of an intelligent compilation, and will deserve all the popularity which it may attain.

Many books have been written to commemorate a smaller event than a visit to the North Pole. Matthew A. Henson, author of "A Negro Explorer at the North Pole" (Stokes), had been Rear-Admiral Peary's body-servant for twenty-one years and his companion in every Arctic venture since 1891, before he attained the distinction of being with Peary the only man from civilization to reach the Pole. Mr. Henson's little book is a narrative of personal impressions, told for the most part in straightforward style, but marred here and there by bits of passionate prose which one imagines was inserted by another hand than the author's. There was no particular necessity for the brief introduction by Booker T. Washington, in which is pointed out with almost Teutonic scholarship how the negro has been the white man's companion in the history of discovery since the earliest voyages of the sixteenth century. We could have spared the elaboration of the same truth in the author's own words:

> From the building of the Pyramids and the journey to the Cross, to the discovery of the New World and the discovery of the North Pole, the negro has been the faithful companion of the Caucasian, and I felt all that it was possible for me to feel, that it was I, a lowly member of my race, who had been chosen by fate to represent it in this almost the last of the world's great *work*.

Mr. Henson makes no attempt to give a full and consecutive account of the dash for the Pole. Completeness in such a story means the inclusion of a great deal of astronomical and other scientific data based on fuller records than Mr. Henson, in the nature of the case, was able to compile. Yet it is a story that will bear repetition, and Mr. Henson has told it in a form that will propably have its appeal to many people who would hesitate before the formidable bulk of Peary's own authoritative account.

Brig.-Gen. Joseph Pearson Farley, U. S. A., retired, who died in Charleston, S. C., on Saturday, aged seventy-three, had served, after distinguished conduct in the Civil War, at the Military Academy at West Point, and on various ordnance boards. He was also an author, among his books being: "West Point in the Early 60's" and "Three Rivers: A Retrospect of War and Peace."

The death is reported from Bologna, Italy, of Giovanni Pascoli, the Italian poet, and the successor, at the university of that town, of Giosue Carducci in the chair of Italian literature.

Science

THE THEORY OF RELATIVITY.

The recent joint meeting of the American Physical Society and Section B of the American Association for the Advancement of Science, held at Washington in the Christmas holidays, was distinguished chiefly by the attention given to certain novel theories of physics. The presidential address of Prof. W. F. Magie, "On the Primary Concepts of Physics," is significant of a reaction against the domination of these new ideas; and the symposium which followed showed very clearly a sharp line of cleavage between the classical and modern schools of mechanics. The address has been printed in *Science* for February 23, and is worthy of careful study.

The science of physics seems to be suffering, these latter days, from an attack of intellectual indigestion. While physicists feel that their subject has always shown a healthy growth, yet, as a rule, new discoveries have been made slowly enough to be fitted into theory without causing serious trouble. But now phenomena connected with Roentgen rays, radioactivity, and the discharge of electricity in rarefied gases have compelled us to adopt new methods of experimentation, and the resulting discoveries have been so rapid as to upset our theories, and even to shake our ideas concerning the primary concepts of science. Since the beginning of modern physics, from the days, that is, of Galileo and Newton, physicists have been building their laws and their theories on the same primary mechanical concepts of space, time, and mass. Through all this time, the first two have evoked little discussion, and differences of opinion about the concept of matter have been, for the most part, merely a question of precedence regarding mass, force, and energy. As Professor Magie points out in his presidential address, this unanimity of thought existed because we believed that "the universe has a real existence apart from our perceptions of it, and that through its relations to our minds it imposes upon us certain common elementary notions which are true and shared by everybody."

Now, in the past, as new phenomena were discovered, theories were advanced to explain them in terms of these primary mechanical concepts, and if discrepancies remained between the theory and the phenomena, the theory was abandoned or allowed to lie dormant, but the concepts were not questioned. This may be called the classic attitude; but a new scientific method, which may be called the school of transcendental symbolism, has been lately evolved by German physicists. As examples of this method, two notable theories may be cited: the Theory of Quanta by Prof. Max Planck of Berlin, and the Principle of Relativity by Prof. Albert Einstein of Zurich. Both of these are abstruse and technical in their development, but their underlying principles are simple enough.

Professor Planck, from experiments on the heat radiation of bodies, derives a formula to express its distribution in the spectrum, and comes to the opinion that all the radiant energy given out by a body is discontinuous. As a result, we shall have to abandon our invariable method of expressing physical laws by the mathematical analysis of the calculus, since that is based on the laws of continuous action. Furthermore, since the Theory of Quanta holds that bodies move by interrupted jumps instead of continuously, the resulting system of mechanics would have no relation to our normal experience which feels time and space to be continuous.

Professor Einstein takes, as his starting point, the fact that certain experiments (especially one by Professors Michelson and Morley), to determine the mutual action of matter and the æther on the velocity of light, fail to give any positive results. He therefore accepts this nugatory result; assumes, as a postulate, that the velocity of light in space is an absolute constant unaffected by the motion of matter, in conformity with the experiment, and denies the existence of the æther. From thence, by steps we need not here follow, he also draws the conclusion that we must radically alter our concepts of space and time, and abandon our concept of mass. In this new Theory of Relativity, as it is called, the dimensions and the inertia of a body, and the measurement of time, are not stationary quantities, but vary in accordance with the velocity of the body as it moves. Furthermore this relativity of mass and time to motion depends on a mathematical formula purely abstract in source and character. This really amounts to saying that experience is not a criterion of truth and that we must rely on an inward sentiment of knowledge as revealed in subjective formulæ.

Both Professor Einstein's theory of Relativity and Professor Planck's theory of Quanta are proclaimed somewhat noisily to be the greatest revolutions in scientific method since the time of Newton. That they are revolutionary there can be no doubt, in so far as they substitute mathematical symbols as the basis of science and deny that any concrete experience underlies these symbols, thus replacing an objective by a subjective universe. The question remains whether this change is a step forward or backward, into light or into obscurity. It is held, and apparently rightly, that the revolution effected by Galileo and Newton was to replace the metaphysical methods of the schoolman by the experimental methods of the scientist. Now the new methods might seem to be just the reversal of that step, so that, if there is here any revolution in thought, it is in reality a return to the scholastic methods of the Middle Ages.

Undoubtedly the German mind is prone to carry a theory to its logical conclusion, even if it leads into unfathomable depths. On the other hand, Anglo-Saxons are apt to demand a practical result, even at the expense of logic. As Professor Duhem once remarked, they wish to construct a tangible model of sticks and strings to illustrate their most profound ideas. And it is apparent that they are beginning to grow restive under the domination of this new transcendental method, and to question where all this metaphysical speculation is hurrying them. For this reason, the address of Professor Magie on the primary concepts of physics is significant.

In a very scholarly way, Professor Magie reviews the opinions of the masters of the classical mechanics on the concepts of matter, space, and time. For the first of these, he shows that such men as Galileo, Newton, Lagrange, and Lord Kelvin have all agreed in taking the direct sense of muscular force as the source of our primary concept of matter, and in holding this sense as an adequate base for a rigorous science like physics. And he might have added to this list the name of Sir Joseph Larmor, who displays in his treatise on "Æther and Matter" the most philosophical spirit of any living physicist. Professor Magie allies himself emphatically with this view. But when it becomes necessary to provide a unit by which to measure forces, he finds authority to be either contradictory or, at least, vague. In his own opinion, force is the primary concept and mass is a concept derived from it. But, because of the permanency of masses of matter, we find it convenient to construct our system of measurement with mass as one of the fundamental units. This we are able to do without directly measuring forces, since the accelerations of two mutually acting bodies are inversely proportional to their masses, so that we may use these masses and their accelerations to measure forces. Thus, while force is primary in order of thought, it becomes secondary to mass in order of measurement.

When Professor Magie undertakes the consideration of the other two primary concepts, space and time, one notices a symptom of uncertainty and restlessness. Past writers discussed these concepts very briefly, whereas those who are now advocating the Principle of Relativity do so with such an air of assurance and finality that a modest man may hesitate to express his doubts. They may stagger us when they require us to believe that the length of a body becomes less if it is put in motion, and

that clocks run slower when they move than when they are at rest; but, on the other hand, they offer the most alluring seduction to the mind, when, by the simplest kind of mathematics, they appear to subdue the whole universe to their ideas. Professor Magie points out that the chief incentive to the development of the theory of relativity is the desire to express all natural phenomena by a set of simple equations; and he is right when he objects to making the demand for simplicity the chief purpose of a scientific theory. It is better to keep science in homely contact with our sensations at the expense of unity than to build a universe on a simplified scheme of abstract equations. The main question, however, is whether or not the principle will explain natural phenomena in a satisfactory manner as they appear to us. Professor Magie evidently thinks it will not, and that we had better keep to the concrete models of atoms and the æther, which are imaginable even if they are quite artificial. And in the last analysis, a solution of our problems must be intelligible to the man of general intelligence as well as to the trained specialist. From the contradictory statements of the specialists themselves he might also include them in the class which finds the Principle of Relativity of dubious clarity. L. T. M.

"Social Life in the Insect World," announced by the Century Company, is by the French naturalist, J. H. Fabre.

Walter P. Wright is bringing out, through Stokes, "Roses and Rose Gardens."

"First Year in Number," by Franklin S. Hoyt and Harriet E. Peet, is in Houghton Mifflin Company's list.

Science books in the spring list of Longmans, Green & Co. include: "Primary Malignant Growths of the Lungs and Bronchi: A Pathological and Clinical Study," by Dr. I. Adler; "The Mechanics of the Aeroplane: A Text-Book," by Capt. Duchêne, translated by John H. Ledeboer and T. O'B. Hubbard; "Monographs on Biochemistry," edited by R. H. Aders Plimmer and F. G. Hopkins.

Recent additions to Cassell & Co.'s list are: "The Complete Gardener," by H. H. Thomas; the same author's "The Garden at Home," and Cassell's "Cyclopedia of Photography."

"Heredity and Eugenics," a book in preparation by the University of Chicago press, is made up of lectures given at the University by John M. Coulter, William Ernest Castle, Edward Murray East, William Lawrence Tower, and Charles Benedict Davenport.

Science books in the list of George W. Jacobs & Co. include: "365 Chafing-Dish Recipes," new edition, and "Jacobs' Friend to Friend Cable Code."

Emma Paddock Telford has placed with Cupples & Leon her "Standard Paper-Bag Cookery."

The first number of *Bedrock*, a new quarterly review of scientific thought, just published by Constable & Co. of London, opens with an article on the "Value of a Logic of Method," by J. Welton, professor of education in the University of Leeds; G. Archdall Reid discusses "Recent Researches on Alcoholism"; E. W. Poulton, Hope professor of zoölogy in the University of Oxford, writes on "Darwin and Bergson as Interpreters of Evolution"; A. H. Gibson, professor of engineering in the University of Dundee, has an article on "The Inter-Action of Passing Ships." The number also includes papers on "The Stars in Their Courses" (being substantially the Halley lecture for 1911), by H. H. Turner, Savilian professor of astronomy in the University of Oxford, and on "Social and Sexual Evolution," by The Hermit of Prague, as well as "Notes on Current Research."

We are glad to note the publication of Candace Wheeler's popular and entirely charming "Content in a Garden" (Houghton Mifflin), in an attractive pocket edition that will recommend the book to those who read most pleasurably beside the hollyhocks and under the willows.

To their series of House and Garden Making Books, McBride, Nast & Co. have added "Making a Rose Garden," by Henry H. Saylor. There are other and more formidable—or disheartening—books on the difficult art of rose-growing; but this little handbook of fifty pages, by virtue of its brevity, simplicity, and conciseness, is as good a guide as the novice can find. The book is equipped with a glossary and with lists of "dependable" roses.

Prof. Vernon L. Kellogg, who has already, besides his technical work, done good service in giving wider general currency to scientific theories, has now applied himself to the moral aspects of evolution. The title of his new book is "Beyond War: A Chapter in the Natural History of Man" (Holt), and this, with a few words from the last page, will indicate sufficiently the scope and tendency of the volume (the Latin is Professor Kellogg's):

> Man has a uniform motion in a straight line toward a revolutionary goal, of which War is an absolutely impossible part. The motion of Man is toward mutual aid, altruism. War is all that these are not. These are life conditions that oppose all War. The inertia of the evolutionary movement of Man will overcome the inertia of the lessening resistance to this movement. War is already an anachronism in the life of *Homo sapiens*. The evolutionary mode of the Blond race has moved beyond it. The leaders will fall into the mode or fall out of their places. *Homo superioris* will be, whatever else he is, BEYOND WAR.

Dr. John Herr Musser, one of the widely known physicians in the country, died last week in Philadelphia. He was especially noted as a diagnostician. Dr. Musser was fifty-five years old. Several works on medical subjects bear his name.

Prof. Abbott Lawrence Rotch, founder of the Blue Hill Meteorological Observatory, died on Friday in Boston. He was born in 1861, and, after a youth spent in Europe, took a course in mechanical engineering at the Massachusetts Institute of Technology, graduating in 1884. The following year he established his observatory, which soon achieved distinction for the accuracy of the observations recorded, and especially for the experiments made with kites. Professor Rotch observed for meteorological purposes the three solar eclipses of 1887, 1889, and 1893—the first in Russia with Kreppen and Upton; that of 1889 with Upton in California, and that of 1893 with the Harvard Observatory expedition in Chili. He was a member of several international commissions and congresses, and received various insignia of honor from foreign learned societies and governments. In 1906 Harvard made him professor of meteorology. Besides numerous articles, he wrote the more elaborate treatises: "Sounding the Ocean of the Air" and "The Conquest of the Air."

Perry L. Hobbs, professor of chemistry in Western Reserve University, whose death is reported in his fiftieth year, became well known through his experiments in the manufacture of concrete. He was a frequent contributor to scientific periodicals.

Drama

Maurice Maeterlinck. By Edward Thomas. New York: Dodd, Mead & Co. $1.60 net.

Aglavaine and Selysette. By Maurice Maeterlinck. Translated by Alfred Sutro. The same. $1.25 net.

Edward Thomas's marked gift for criticism in general is supplemented by specific aptitudes in the case of Maeterlinck. He has a fine sense and a fine memory for literary flavors, and his allusion and comparison roam widely in the search for pleasing and unsuspected kinships. The critic's intuitions are safeguarded, however, by a wise distrust of unverified intuition, and his specifications are as punctual as his insights. He has, in short, the prime requisite for weighing Maeterlinck: he can be charmed without being hoodwinked.

Mr. Thomas wisely collects the few biographical particulars in the opening chapter and avoids those spatters of narration which have the effect of an interruption, almost an impertinence, in a predominantly critical work. The literary evolution of Maeterlinck is then solicitously traced. Mr. Thomas emphasizes the transition in his works from somnambulism to actuality, from the Oriental sense of man's prostration before the power of a hostile mystery to the robust European consciousness of man's strength in himself and the efficacy of resistance, from despair based on lethargy to the optimism of endeavor. Space and care are bestowed upon the dramas, but the author seems to find the great appeal and ultimate test of Maeterlinck in the essays. Are these beautiful works only another form of the "Blue Bird," a sublimation of the fairy tale, in which the wonder and the prettiness constitute in the last analysis nothing more than the latest and most ethereal phase in the subtilization of pleasure? Mr. Thomas's adhesion to this view seems clear from his declaration that Maeterlinck is "more a rhetorician than a mystic, though he deals in mystical ideas." At the end of the

book one divines in the author a conviction, the weight of which is reinforced by his capacity for sympathetic response to the finest and airiest of Maeterlinck's versatile appeals, that we are here in the presence of an exquisite literary gift unsupported by that measure of personality, vitality, and character which gives supremacy and perpetuity to literature.

Mr. Thomas's English is correct and readable, though scarcely on the plane of the expectation induced by the sensitiveness of his mind and taste in other matters. He lacks the narrative gift, and to this—in a critic—pardonable defect he gives a quite needless prominence by his habit of reciting plots not only circumstantially, but sometimes twice over. Mr. Thomas is a phrase-maker, and the product ranges in merit from rare felicities of precise characterization to fortuities in which the words merely jostle. There are instances where the phrases seem extraneous, not to the matter, but to the style, and we feel that the dignity of plainness is lost without a compensating gain in beauty.

Alfred Sutro's revised translation of "Aglavaine and Selysette" is preceded by a sugared preface which a vein of interesting personal reminiscence saves from dulness, though not from insubstantiality. In the new version Mr. Sutro has allowed himself the widest latitude in retrenching the French text; he thinks nothing of cutting out five lines, eight lines, ten lines, and in one place has sacrificed an entire page of the Lacomblez text of the French original (see pages 68, 73, 75, 77, 79, 90, translation). Neither wisdom nor poetry nor dramatic force avails to protect a passage from these unintelligible proscriptions. In other respects the variations from the old version are not important, though they show a praiseworthy leaning toward idiom and simplicity. Mr. Sutro translates what he consents to translate with a deference to the original which keeps well on this side of slavishness; the use of paraphrase, within fairly conservative limits, is abundant. But the author exceeds his privilege when he turns straightforwardness into indirection or plainness into ornament. For instance, the simple French, "Plus je t'embrasserai et plus je serai sûre de ne pas me tromper" is poeticized thus: "every kiss will whisper to me that I am not wrong." The lovely words of Meligrane in relation to Aglavaine: "Elle n'a jamais dormi sur mes genoux, ma Sélysette," which relinquish none of their charm in a word-for-word translation, are attenuated into: "I have never lulled her to sleep on my knee, Sélysette." Credit must be given for contrary instances in which Mr. Sutro's version betters the original without falsifying it. Thus the anæmic French phrase, "Il ne faut pleurer que le plus tard possible," is rendered into warm and moving English: "But we do well to keep back our tears as long as we can."

Viewed as a piece of English, the translation hardly comes up to Mr. Sutro's admirable renderings of the essays—versions which almost gave the art of translation a new dignity; but it is not unworthy of such a sisterhood or of such a parentage. The English is invariably clear, usually correct, exempt from Gallicisms and from awkwardness, availing itself skilfully of the sincerity and poignancy of Anglo-Saxon monosyllables.

Houghton Mifflin will bring out this month "The Gray Stocking, and Other Plays," by Maurice Baring, and "Children's Classics in Dramatic Form, Book V," by Augusta Stevenson.

Richard Badger publishes this season the following dramas: "For Happiness," by Stanislav Pshibishevsky; "By Ourselves," by Ludwig Fulda; "Twilight," by Ernest Rosner; "The Forest Warden," by Otto Ludwig; "Fortune Favors Fools," by Ivan Narody; "Judith," by Friedrich Hebbel; "The Dear Saint Elizabeth," by Elizabeth O'B. Lummis; "Plays," by Daniel Bedinger Lucas, and "Pocahontas: A Pageant," by Margaret Ullmann.

Prof. M. Lyle Spencer of Lawrence College has put much labor and research into his book on the "Corpus Christi Pageants in England" (Baker & Taylor), and has collected a mass of minute and curious information concerning the cost and the methods of the representations of those ancient peripatetic religious dramas. His work will be of value to the general reader having neither time nor inclination for a laborious study of the original authorities, but does not add much to the sum of common information on the subject. He makes diligent use of the existent records, but these are so fragmentary, and often so vague or contradictory, that it is difficult to get very definite impressions from them. After all, the minor details of the performances are not of much present importance except to the ardent antiquarian. The nature of the plays we know—from such copies of them as have been preserved. As connecting links between the modern stage and the ancient church, they have a valid literary and historical status, and, in their best estate, they doubtless were a powerful agent in the hands of the elergy, and exerted a wholesome moral influence, but on the dramatic and literary side, they must nearly always have been exceedingly crude affairs. It is certain that in their later days they consisted largely of grotesque buffoonery. Much space in this book is devoted to a discussion of the question whether or not the actors ever used—in addition to their proper movable stage—the permanent platforms which, in certain cities, were erected at the places of exhibition. The evidence on this point is not clear, and a decision one way or the other is not vital. It is not unreasonable, however, to suppose that the players might have been ready to avail themselves of special opportunities when these were offered. The fact that players were fined if they did not act their parts satisfactorily is more to the point. It is a hint by which the moderns might profit.

Charles Frohman's declaration of his intention to have a high-grade stock company in New York, next season, is interesting, but it may be pointed out that it will not fulfil the true functions of a stock company if it has a star at the head of it, to play all the leading parts, whether it be William Gillette or anybody else. If it be true that Mr. Gillette has expressed his readiness to play small as well as important parts, he exhibits a much shrewder comprehension than Mr. Frohman of the intents and possibilities of such an organization. It is the essence of the stock-company idea that every member of it—so far as possible—should play the part for which he may happen to be best fitted, and no other. Mr. Frohman promises frequent changes of bill—which, of course, would be a natural consequence of the scheme—and "plays from any source." This last phrase is somewhat elastic, and might be interpreted in a good many ways, but presumably it is meant to imply judicious selection as well as infinite variety. That is the spirit in which an enterprise of that sort should be conducted, and would insure success, but any attempt to hitch the company to a star would be to court disaster.

A new play is being prepared for Arthur Bourchier and his company at the London Garrick Theatre. It is an adaptation by F. Kinsey Peile of M. Frappa's success in Paris, "Baron de Batz."

Messrs. Vedrenne and Eadie have procured for their special matinées in London the performing rights in the play "Thompson," which, left uncompleted by the late St. John Hankin, has been finished by George Calderon.

Granville Barker and Lillah McCarthy began their special performances at the London Kingsway Theatre with a production of Prof. Gilbert Murray's translation of the "Iphigenia in Tauris" of Euripides.

"Proud Maisie," by Edward G. Hemmerde, K. C., which has just been produced in London, is a romance of the young Pretender. The heroine wears the kilt, primarily because it is a serviceable dress for fencing, in which she is an adept, and, later, because it is a good disguise at a masked ball. For they are holding high revel at Pitcour Castle, to further the cause of Prince Charlie, and the Prince is on the spot. He interrupts a reel to deliver an impassioned address to his faithful followers. When he retires, amid acclamation, there is only one dissentient voice, that of Neil MacAlpine, faithful servant of King George, who is incontinently denounced by young Guy, the son of the house, as a Hanoverian spy. Blows follow, and, of course, a challenge to a duel to the death. But old Pitcour forbids his son to fight, for Neil is a deadly swordsman. Moreover, Neil is true love to Lady Maisie, so that the issue of the combat must be to leave her either brotherless or loverless. In this dilemma, "her only refuge is to die" herself. She still wears the kilt, and by moonlight is the very image of her brother; so she crosses swords with Neil, and is slain. Thereupon, in horror, Neil kills himself. It is not a cheerful story, but is said to have useful theatrical qualities.

Dr. Karl Mantzius, the Danish author and actor, has decided to retire from the stage, but he will continue in his position of director of the Theatre Royal in Copenhagen.

Music

Johannes Brahms: Handbook to his Vocal Works. By Edwin Evans. New York: Chas. Scribner's Sons. $3.50 net.

The literature relating to Brahms is growing apace, in England as fast as in Germany, if not faster. Judged by the number and the tone of the English books on this composer, he must be as popular in Great Britain as Handel and Mendelssohn were in the last century. Appearances in this case are, however, somewhat deceptive. The Handel and Mendelssohn cult permeated the whole nation, whereas the adoration of Brahms is largely a specialty of professionals and of a certain limited part of the public which takes its cue from them. During the last two decades of the nineteenth century the composers, also, were much influenced by Brahms; but the men of to-day hearken much more to Richard Strauss, Debussy, and other contemporary Germans and Frenchmen.

The English have more good choirs than any other people. It has been said of them that they take their musical pleasures sadly—two reasons, maybe, why Brahms's choral works particularly appeal to them. Mr. Evans, after calling attention to the immensity of Brahms's choral output, dwells on the "general mournfulness" of his subjects. With the exception of the "Triumphlied," there is not one of the larger works which is based upon a theme of any cheerfulness. Everywhere else we are confronted with the ideas of Fate and Death, even though Brahms did not intend these works, as a rule, for ecclesiastic use. There is reason in Mr. Evans's explanation that "large masses of voices are best directed to themes of serious and noble import." Other composers have, however, also *vertont*, as the Germans say, their cheerful moods, and as Brahms, though not affable and genial, was tolerably prosperous and not morose, it seems odd that he did not relax in some of these multitudinous and varied works for more than one voice. They include 60 quartets with piano, 38 for mixed choir without accompaniment, 28 for female choir, 5 for male choir, and so on.

The present volume is the first of three in which all the compositions of Brahms are to be described in detail. The second is to be concerned with the pianoforte and organ pieces, the third with the chamber and orchestral works. It is not likely that the second and third volumes will be quite so voluminous as the first (which has 599 pages), the productions being fewer; but if the thoroughness of part i is maintained, these three volumes will form a monument of industry no less than of enthusiasm. Mr. Evans's attitude, in his introductory chapters, is a bit amusing. He tries hard to be impartial, to be fair to foe as well as to friend. But he aims a lance at only one of the detractors, Mr. Runciman, ignoring the serious charges of Mr. Newman and others, and of the Herzogenbergs, for instance, who, though intimate friends of Brahms, did not hesitate to chide him for so often putting forth baser metals when he was capable of creating gold. In Mr. Evans's pages there is little or no evidence that all is not gold in the vast output. Brahms achieved "uniform excellence"; he is absolutely perfect; he did *not* write, as his opponents have said, "musicians' music"; his rhythms are *not* over-complex, his orchestration is *not* "muddy," and so on. The lack of sensuous charm is accounted for by the usual argument: "It would be extremely difficult to name another composer as indifferent as Brahms to the propitiation of the majority afforded by sensuous appeal."

The author's lack of discrimination makes it, unfortunately, difficult to find in his book a guide to what is best in Brahms. In all other respects it is a most useful volume, the equal of which even Germany has not produced, so far as this composer is concerned. The works are not analyzed in groups, but according to the opus numbers. The solo songs are the most numerous class; on these the present popularity of Brahms is chiefly based. There are no fewer than 196 for a single voice and they are printed in 32 opus numbers, each comprising from 2 to 15. In these songs there is much more emotional variety than in the choral works. In addition to the detailed descriptions, the author has an introductory chapter of eight pages in which he gives interesting information regarding Brahms's ideas on song-composing, etc. There is also a brief sketch of his life, besides a table of chronology, a classification of works, and alphabetical and analytical indexes.

"Practical Reflections on the Figurative Art of Singing," by Mancini, translated from the Italian by Pietro Buzzi, is announced by Richard G. Badger.

The Thomasschule of Leipzig, the oldest of the kind in Germany, will celebrate this year the seven hundredth anniversary of its foundation. It was there that Johann Sebastian Bach was cantor and conductor of the chorister boys.

Victor Herbert's "Natoma" is to be produced next autumn, with an open-air setting in the scene of the story, at Santa Barbara, California. The cost—about $50,000—will be met by the wife of an oil king, and efforts are being made to get Mary Garden to sing the leading rôle, as she did in New York and elsewhere. The Philharmonic Society played in February the introduction to the third act. Schirmer has just issued a "Natoma" suite, consisting of four numbers.

An interesting concert will be given in the Hotel Astor on Sunday afternoon, April 14, by the Pierian Sodality of Harvard, the oldest of all college orchestras in the country. It is not connected with the musical department of the university, but is an association of students, beginning more than a century ago.

Emmy Destinn has arranged to give a concert at the Waldorf-Astoria on Monday evening, April 15, the proceeds of which will be devoted to the Scientific Research Fund of the Treptow-Berlin Observatory, of which Dr. Frederick S. Archenhold is director. Dr. Archenhold arrived in this country recently, having come as delegate from the Treptow Berlin Observatory to attend the 125th annivesary of the Pittsburgh University.

Thanks to Caruso (whose voice has remained in good condition), "I Pagliacci" leads in the number of performances (9) given at the Metropolitan Opera House during the season which ends this week. "La Bohême" follows, with eight. "Aïda" and "Madama Butterfly" had seven each, and so did two German operas, both by Humperdinck: ""Hänsel and Gretel" and "Königskinder." "Lohengrin," "Cavalleria," and "La Gioconda" were sung six times each. Five performances each were given of "Walküre," "Tristan," "Lobetanz," "Girl of the Golden West," "Tosca," "Orfeo," "Donne Curiose," "Rigoletto"; four of "Tannhäuser," "Versiegelt," "Trovatore," "Otello," "Mona," "Armide"; three of "Lucia," "Parsifal," "Götterdämmerung," "Siegfried," "Meistersinger," "Ariane," "Faust," "Manon"; two of "Bartered Bride," "Traviata"; one of "Rheingold." Wagner, as usual, leads, with 33 performances, followed by Puccini (25), Verdi (22), Humperdinck (14), etc. There were 76 performances of operas by Italians, 65 by Germans (including Gluck), and nine by French composers. The profits of the season are said to amount to $40,000.

Art

On the Laws of Japanese Painting. By Henry P. Bowie. Illustrated. San Francisco: Paul Elder & Co. $3.50 net.

For nine years Mr. Bowie worked under the best modern painters of Japan. He enjoyed as well the company of collectors and men of letters. Thus his book, though in bulk hardly more than a long essay, gives an intimate view of the traditions and procedures actually alive to-day in Japanese studios. There is less that is new than a reader of the preface would imagine, yet it would require the reading of a score of books to bring together an equivalent amount of information, and our author contributes vividness quite his own.

The training of a Japanese painter begins with the hand. There are years

of tracing, copying, arranging, and condensing standard drawings before the aspirant is encouraged to create on his own account. In short, the training is not unlike that which a painter's apprentice received in the Renaissance. Mastery is attained through humble discipleship. But the training of the soul is even more characteristic. Choice feeling is especially required. To attain this, memory of all sorts, with literary and poetical associations, is freely evoked. Every picture must obey the fundamental rule of containing a primary and secondary interest, a positive and negative motive. At every point there must be clear thinking and feeling, which, however, must not impair the spontaneity of the inspiration nor the power of the brush stroke. In making certain angular strokes by which armor or stiff brocades are represented, the painter is bidden to feel as if he were engraving with a point on metal.

Into the complicated matter of the standard strokes, which, despite Mr. Bowie's rather technical disclaimer, borders on calligraphy, we cannot enter. So far as these strokes exact a resolute and consistent handling of the brush, they clearly are a valuable means of education. In Western painting we sadly need some equivalent for this gymnastic of mind and hand. Whether these traditional recipes are working well in Japan to-day may be doubted. Certainly, the Japanese painting of the last generation gives evident signs of overtraining and consequent staleness. It has been disciplined into an over-refined academism, while our painting has been lurching into a restless and still rather feeble anarchy. Of the two spectacles Japan presents the more agreeable, the West possibly the more hopeful.

Mr. Bowie, by describing so clearly this delicate Alexandrian phase of Far Eastern painting, has done a real service to art lovers. His book is well provided with illustrations comprising not merely the doctrine of strokes and of composition, but also the repertory of standard subjects for the months of the year. When once the warning has been given that the Japanese painting of the nineteenth century is relatively decadent, no exception can be taken to this charming book. Nothing else in English gives the Japanese point of view towards art at once so clearly and compactly.

A forthcoming book by Esther Willard Bates and William Orr, "Pageants and Pageantry" (Ginn), furnishes suggestions for the producer of pageants, together with material drawn from past records.

Oxford books on art and archæology in Frowde's list include: "Christian Antiquities in the Nile Valley," by Somers Clarke; "Bronze Age Pottery of Great Britain and Ireland," by J. Abercromby; "European Arms and Armour in the University of Oxford," catalogued by C. Ffoulkes; "Catalogue of Oxford Portraits, I," by Mrs. R. L. Poole, and "English Architecture Explained from Oxford Buildings," by E. A. Greening-Lamborn.

"The Art of the Berlin Galleries," by David C. Preyer (L. C. Page & Co.), may be described as an odd gallimaufry of discursive scholarship, vigorous taste, and cheap and inaccurate English. It contains most of the facts that a tourist would need, and with all its defects has a personal tang unusual in such compilations. But it is full of small errors and misleading statements, and has had no proper revision either from the author or the proofreader. Fra Angelico is a *piagnone*. Art history learns for the first time that "Masaccio was murdered in a Roman street." Ridolfi's absurd story that Giorgione died of lovesick jealousy receives credence. There is no mention of the general belief among critics that the altarpiece of the Virgin, ascribed to Van der Weyden, is merely an old copy, nor yet that only two of the Berlin Botticellis are generally accepted. The Raphael tapestries are called carpets, a cathedral is a Dom. The critic Thoré appears as Thoreau, a reminder that the book is made in Boston.

In a communication sent to the Egyptian Research Students' Association, Prof. Flinders Petrie gives a short report regarding his latest excavations at Memphis and Heliopolis in Egypt. The first discovery made this year was a Roman fort at Shurafa, now identified as Scenas Mandras. The work was carried on there for a month, and then extended up to Atfieh. Here work had to be abandoned after a while, as it appeared that this site was outside the limit conceded to the department; the camp was moved to Kafr Ammar. Excavations here proved of great interest; but the archæological results will not appear until all the tomb cards are carefully worked up at home.

Details of the excavations carried on by the Italian Archæological Mission in Crete during the last season have now come out. The work was continued at two points, at Agia Triada and Gortys. In Agia Triada there was brought to light a prehistoric town, in the middle of which is situated the Lesser Palace, which was discovered some years ago. The most ancient portion of the town was found to be in the western part of the area, where the buildings had been erected very closely together. In these houses many domestic utensils were unearthed. Of great interest was the discovery of a small temple, the front of which was supported by three columns similar to those represented upon the panels of Knossos. At Gortys, which it will be remembered became the capital of the island in Roman times, several discoveries of interest were made. During excavations made upon the site of the citadel and amphitheatre a statue of heroic proportions was unearthed. The most important discovery was made in the circular building of the Agora, which seems to have been a theatre built by the Romans upon the foundations of a Greek building of earlier date. Attached to the walls of the older building were found tablets containing the ancient Codex, of which the great Gortyna inscription discovered at this spot by Professor Halbherr in 1884 was a mere extract.

A number of talents have been combined to produce the volume of "Historical Portraits, 1600-1700," published by the Oxford University Press. The portraits for reproduction have been chosen by Emery Walker; brief lives have been contributed by H. B. Butler and C. R. L. Fletcher, while C. F. Bell has furnished the introduction. The result is interesting and instructive. The great men and women of the age parade before the eye in counterfeit presentment, from his Gracious Majesty James I, who indeed under the hands of an unknown German artist looks more a Calvinistic divine than a monarch, to Bolingbroke and Harley, who really belong to a period beyond the limit set on the title-page of our book. To turn these pages is a study of historic character as well as of art. Unfortunately the latter somewhat detracts from the former. For as portraiture in England (largely, of course, the work of foreigners) became more and more under the influence of Italian art and French fashion, the sharp outlines of character became less and less observable. We cannot quite imagine Bolingbroke, for instance, looking as he is presented by Rigaud, or Harley as he is presented by Kneller. Occasionally even the courtliest of these painters faced the reality honestly, and the result is correspondingly interesting. Thus, the second Duke of Buckingham on Lely's canvas stands before us as he no doubt stood in the flesh, gross and cruel, but with some relics of wit on his insolent features.

Finance

PAST, PRESENT, AND FUTURE.

Continuance of the advance on the Stock Exchange, despite the beginning of the anthracite coal strike, the deficit in bank reserves at the opening of April, the rise in Stock Exchange call money rates to 5 per cent. (the highest since the first week of last December), and despite, also, the strong consensus of opinion in professional Wall Street circles that a substantial reaction was in order—this sequence of events calls for further explanation. That evidences should have multiplied last week of the presence of an "outside public" in the market, did not detract from its interesting aspects. For although the sudden activity of outside speculators has often (as in December, 1904, and November, 1908) been speedily followed by the overdoing of the advance in prices and by a sharp reaction, nevertheless their enthusiasm, even on such occasions, has had something of prophecy for the future.

It is not unreasonable to associate the Stock Exchange excitement of 1904 with the later business prosperity of 1905 and 1906, and the market of 1908 with the "trade boom" of six months later. What unprejudiced and conservative observers are beginning to say of the American outlook may be judged from last week's remark of the Chancellor of the British Exchequer, when reciting to Parliament,

in his budget speech, the factors of encouragement:

> Conditions in the United States are stronger than they have been for years, and instead of the devastating cyclone we had a few years ago from across the Atlantic, we are likely now to have a steady trade wind. There is only one disturbing factor, the Presidential election, but I do not think that is going to have a very serious effect on the trade of the United States.

Perhaps this fairly expressed the present ideas of financial and industrial America.

There is an odd sort of inverted resemblance between the financial markets of 1907 and those of the past few weeks. Nobody can have forgotten how the Stock Exchange, five years ago, was first ridiculed by the community at large, then scolded, and finally denounced, for presenting a spectacle of demoralized markets and collapsing prices at a moment when general trade was on a scale of unheard-of activity and prosperity. When actual panic came in October, it was simply impossible for the man in the street to explain it. Some people sturdily asserted that it was not a panic at all, because it could not be one. Others called it a foolish "bank flurry," which would never succeed in touching trade. Certain Congressional philosophers ascribed the market's movement wholly to the wicked machinations of the Money Power. All agreed that there was no excuse for such a stock market or for such a money market, in the circumstances of the day.

Now the point of resemblance between that year and 1912 (so far as the history of the later year has been unfolded) is that the present season's rise on the Stock Exchange has inspired exactly similar outside criticism, save that all the surrounding circumstances, like the movement of the market itself, are reversed as compared with 1907. The market has been distrusted for rising rapidly when trade was discouraged, profits small, and the news unfavorable. General sentiment has been to the effect that stocks had no business to go up; that the rise was essentially absurd; in short (as was said of the panicky break in 1907), that there was nothing real about it and that it could not be taken seriously.

No doubt, it still remains for the market, through its own longer action and through the progress of outside events, to show whether such judgment is right or wrong. We had to wait some time for similar evidence after October, 1907; for the conclusive demonstration we had to wait three years. We shall probably have severe reactions to vary even the present trend of things. But in the meantime there is yet another fact regarding the present situation which equally suggests historical comparisons.

Nothing is more self-centred, so to speak, than a financial market. Current events are interpreted with an eye to their probable influence on that one market. Sometimes this habit of judging things causes absolute blindness to what is happening in other financial communities than one's own. It led Wall Street, in 1907, to imagine that nothing unpleasant was happening anywhere else than in America—to which idea the natural corollary was that the whole strain of panic had been caused either by American politics or by the American currency system, and had no relation to any great economic movement elsewhere. The case of the present market is very similar; for although the dramatic nature of the labor uprising in Great Britain attracted Wall Street's attention momentarily to the fact that the London stock market had advanced in the face of that industrial crisis, nevertheless the New York market was assumed to hold the centre of the stage.

Yet, as a matter of fact, events in the stock markets of the past five weeks have been as uniform throughout the financial world as they were in the stock and money markets of 1907. There were four other continents than North America in which stock markets went to wreck that year and panic came, in the teeth of booming trade; and it is at least a coincidence that, in the present season, almost every great financial market of the world, whether in curiosity or in bewilderment or in outright skepticism, has been asking how it happens that prices on that market's particular Stock Exchange can be rising as they are in the face of existing unfavorable circumstances. London and Paris have been discussing the movement on their own stock exchanges, and in their own home stocks, in exactly the spirit which has characterized New York's discussion.

As to why all these markets should have united in this illogical advance, there will be various theories. La Follette will probably have his own suspicions; he was careful, in his Senate speech of 1908, to say that his hundred selected millionaires created booms as well as panics. There are those who will say later on, if not to-day, that in some mysterious way, American politics did the whole of it; whichever party wins the November election, expectation of its victory will infallibly have caused the April rise in stocks. But perhaps some slow-minded philosophers will be left to suggest that the world at large has been conducting a prolonged economic liquidation since 1907; that the process was nearly completed eight or nine months ago; that normal recovery was then legitimately at hand; that it was arrested and replaced by fresh relapse, because of two prevalent ideas which later turned out to be entirely baseless—the general ruin which was to follow dissolution of a Trust, and the war which was about to begin between England, France, and Germany.

If this is a reasonable interpretation of the history of the past few years, and if we had at this year's opening not only a good economic outlook ahead of us, but an unreasonable decline in prices to be retraced, there need be left no great perplexity about the markets of the world at large, thus far in 1912.

MEMOIRS OF THE DUC DE LAUZUN

(*Court Series of French Memoirs.*)

A translation of the memoirs of "the brave Lauzun," reputed lover of Marie Antoinette, who, with his polished manners, easy morals and dashing gallantry, was the very incarnation of the elegant, corrupt society that circled about Louis XV and Madame de Pompadour. Covering a period from 1747-1783, this book records the author's experiences with Rochambeau in America.

12*mo. Illus.* $1.50 *net; postpaid* $1.63.

RECOLLECTIONS of AN OFFICER OF NAPOLEON'S ARMY

By CAPTAIN E. BLAZE

(*Court Series of French Memoirs.*)

The simple, straightforward narrative of the field experiences of one of Napoleon's soldiers. Supplements more pretentious memoirs of marshals and generals. Rich in racy anecdote and graphic description.

12*mo. Illus.* $1.50 *net; postpaid* $1.63.

STURGIS & WALTON CO.
31-33 East 27th Street, New York

Life of George Borrow

Compiled from Unpublished Official Documents, His Works, Correspondence, etc.

By Herbert Jenkins

With a Frontispicce in Photogravurc and 12 *Other Illustrations.* 8*vo.* $3.50 *net. By mail,* $3.75.

"To-day, however, no one doubts that 'Lavengro' and 'Romany Rye' are two of the greatest books of the Mediæval Victorian era and even two of the finest autobiographic revelations in our literature. The intense curiosity they excite to know all that can be known of so notable a genius, Mr. Jenkins has satisfied in this extraordinarily interesting biography." *London Truth.*

G. P. Putnam's Sons

SHOULD BE ON THE SHELVES OF EVERY LIBRARY

A new Music Students Library volume

Sound and Its Relation to Music

CLARENCE G. HAMILTON, A.M.

Price, postpaid, bound in cloth, $1.25.

Students of music greatly need a handbook of acoustics as relating to music, one that has been brought in line with the latest discoveries and theories. The books now in the market are no longer dependable, the result being that this element in a course of music study is generally lacking. The author has presented the essential facts together with many interesting experiments and helpful figures and diagrams to make the principles clear. A good text-book for schools and colleges.

The book is an ideal class book. The illustrations are fine. I will suggest its use as a text-book. JAMES T. SLEEPER, Beloit College.

Your orders are solicited for musical supplies of all kinds.

We offer our services as advisers to libraries with music departments.

Our superb facilities and extensive stock are yours to command. SPECIAL RATES TO LIBRARIES.

Modern Dramatists

By ASHLEY DUKES

CONTEMPORARY playwrights have been written about to satiety, and some of them have written much about themselves, their ideas and methods, so that the interpreter hasn't much left to do or say, as a rule. It is all the more remarkable, therefore, that so much that is interesting, fresh, illuminating, should be found within the covers of "Modern Dramatists," a new volume by an English critic, Ashley Dukes. This book is truly critical, and yet sympathetic and progressive. It is inspired by love of good dramatic work, and has little respect for schools or labels. * * * *

The author covers all contemporary Europe, dealing only with first-rate writers. He begins with Ibsen, naturally, and explains the service rendered by the Norwegian to our drama. He deals with the master's technique, his style, as well as his thought and substance. Chapters follow on Bjornson and Strindberg, the German drama as represented by Sudermann, Hauptmann and Wedekind, the English playwrights of the first rank—Shaw, Barker, and Galsworthy; the Austrian, Russian, French, Italian, Belgian and Dutch exponents of modernity in the theatre. * * * *

His style is fresh and his whole manner vigorous and stimulating. A book which will give pleasure and impart understanding is Mr. Dukes'.—*Chicago Record-Herald.*

12mo, Cloth, Gilt Top. $1.50 *net.*

CHARLES H. SERGEL & COMPANY

542 S. DEARBORN ST., CHICAGO

RUDRA

BY ARTHUR J. WESTERMAYR

A thrilling Romance of Ancient India, with foot notes and glossary. A fascinatingly attractive exposition of the cults, quaint and curious customs, religions and philosophies.

It combines the art of the storyteller with the trustworthiness of the historian.

Reincarnation, the great Buddhistic Tenet, is used in the evolution of a stirring drmatic plot.

It tells in moving chapters of a dreadful crime and its unusual and unexpected expiation.

12mo, cloth. With Jacket and Frontispiece of the Durbar in color, $2.00 net. By mail $2.15.

Letters and Memorials

OF

Wendell Phillips Garrison

Editor of The Nation, 1865-1906

In one volume, crown 8vo, 300 pages, with photogravure portrait.

During the forty-one years in which he edited the *Nation*, with a thoroughness, ability, and conscientious devotion unsurpassed in the records of American journalism, Mr. Garrison was an indefatigable correspondent, never employing an amanuensis, but writing tens of thousands of letters with his own hand to his contributors, who embraced practically all the leading American scholars and critics of the period. From a dozen groups of these, which have been kindly loaned by the recipients, a sufficient number of selections has been made to illustrate the relations between Mr. Garrison and his great corps of contributors, the frankness and tact which he exercised towards them, and the wide range of his interests, tastes, and sympathies. The volume also contains a brief sketch of his life, a dozen of his best poems, and several of his characteristic editorials, reviews, and essays, besides a fine photogravure portrait.

JOHN BROWN: A BIOGRAPHY FIFTY YEARS AFTER

By OSWALD GARRISON VILLARD

Some Tributes to this Remarkable Historical Work

Philadelphia PUBLIC LEDGER. "A tremendous book; more thrilling than any book of fiction, powerful in its appeal, and which, while it is written soberly, as befits history, by the very nature of the narrative, often rises to the highest dramatic level."

THOMAS WENTWORTH HIGGINSON. "I can only say after reading from first to last its more than 700 pages that I have never encountered anything this side of Gibbon's 'Rome' which has made me feel more the personal power of a single work."

JOHN T. MORSE, Editor American Statesmen Series, in ATLANTIC MONTHLY. "Perhaps in thus dramatically fashioning his volume, Mr. Villard obeyed an instinct rather than acted upon a preconceived plan; that is often the case with great work, where a writer's feelings are deeply enlisted. Be this as it may, the merit and charm are none the less; he has seized well s splendid opportunity and has written one of the great biographies of our literature."

HORACE WHITE. "In my judgment a contribution to American literature to take rank with the very best historical writing of our time or any time. The only impartial history of the Kansas war."

ST. CLAIR McKELWAY in the Brooklyn EAGLE. "A biography replete with facts and marked by courage and candor, learning and justice."

Portland OREGONIAN. "The most valuable and comprehensive biography issued this season, and the best and most candid estimate of John Brown."

W. E. CONNELLEY in the Topeka CAPITAL. "The unprejudiced student and seeker for truth will herald the book as a great contribution to American history."

Des Moines CAPITAL. "More powerful in its appeal, more dramatic than any book of fiction, is this wonderful biography of John Brown."

The North Carolina REVIEW. "In this biography Mr. Villard has touched high-water mark. The book is a delight to the reader for many reasons. Full of life and movement, . . . written in an attractive and scholarly style, full of sympathy and yet without any loss in accurate presentation, it sets a new standard for biographical efforts."

Baltimore AMERICAN. "While the book has popular features in that it is entrancingly interesting, its scholarship is of the highest order and its style reminds one a little of Anthony Froude. . . . Mr. Villard has illustrated in this book the finest ideals of literary conception and execution."

London TIMES. "It is scarcely likely that any later writer will be able either to add anything of importance to Mr. Villard's collection of material or to better his interpretation of the whole story. . . . It at once becomes the standard, and probably the final authority on its theme"

Washington (D. C.) STAR. "Mr. Villard draws a compact, vivid, historic picture of the terrible focussing of this period upon our Civil War. Straight and clear in its literary way, this biography is a marvel of research and fair-mindedness."

HENRY WATTERSON in Louisville COURIER-JOURNAL. "No fault may justly be found with Mr. Villard's telling of the story. It is minute and lucid, altogether fair and unvarnished."

Burlington (Iowa) HAWKEYE. "It is a book which will take a place in the library of every well established home in this part of the country."

THIRD EDITION

Fully illustrated with portroits ond othe r illustrotions. With copious notes and bibliography. $5.00 *net. Postage* 26 *cents.*

Boston **HOUGHTON MIFFLIN COMPANY** **New York**

ESTES
IMPORTANT NEW BOOKS

OLIVER'S KIND WOMEN. By Philip Gibbs, author of "The Street of Adventure," etc.

The patient, careful dissection of a literary impostor is performed with evident relish.—*Sun.*

NEW POEMS. *Cloth,* $1.50 *net. Half-morocco,* $5.00 *net. Postage* 12 *cents.*

JOHN LANE CO. NEW YORK

The Historicity of Jesus

A criticism of the contention that Jesus never lived, a statement of the evidence for his existence, an estimate of his relation to Christianity

By SHIRLEY JACKSON CASE

Assistant Professor of New Testament Interpretation in The University of Chicago.

DID Jesus ever live, or is he a mythical personage like the deities of Greece and Rome? To some this may be a startling question. But in recent years his actual existence has been vigorously questioned, and the subject is being given wide notice and discussion. The negative opinion has found supporters in America, England, Holland, France, and Germany. To present a complete and unprejudiced statement of the evidence for Jesus' actual existence is the aim of the author of *The Historicity of Jesus.*

360 *pages, 12mo, cloth. Postpaid* $1.62.

Small, Maynard & Co., Publishers, Boston.

"What Is Worth Doing At All Is Worth Doing Well"

This saying applies with equal force to everything.

How often we find small matters slighted for the benefit of the larger or more important one! But what a mistake! You can not make a success of any business unless the many small matters are given the careful attention they deserve.

One of these matters which rarely receives the thought that its importance entitles it to is—

E. P. DUTTON & COMPANY
31 West 23rd St., New York

Every American should read Haskin's American Government

The American Government

By FREDERIC J. HASKIN. The book that shows Uncle Sam at work, endorsed by the President, the cabinet, the heads of departments, and prominent educators. With 24 full-page Original Illustrations. 8vo. Popular Edition $1.00 net. Postpaid, $1.15.

To fill a book with a great mass of facts about the Federal Government, having them so accurate that highest officials of the land can vouch for them, and at the same time weaving them into a story that compels the closest attention of the readers, is conceded to be a difficult undertaking. The author has demonstrated that this can be done.

Current Educational Activities

A Report Upon Current Educational Movements Throughout the World

Being Vol. II. of the Annals of Educational Progress. By JOHN PALMER GARBER, Associate Supt. of Public Schools of Philadelphia. In Lippincott's Educational Series, edited by MARTIN G. BRUMBAUGH. 12mo. Cloth. $1.25 net.

A report upon current educational activities throughout the world, dealing with such problems as vocational and agricultural education development affecting the public schools and higher institutions of learning, social problems, foreign educational institutions, meetings, etc. A unique year book. Very serviceable.

Haskin's American Government shows Uncle Sam at Work

An Account of an Official's Seven Years' Experiences in the Pagan Belt of Northern Nigeria, and a Description of the Manners, Habits, and Customs of Some of the Native Tribes.

Through Timbuctu and Across the Great Sahara

By CAPTAIN A. H. W. HAYWOOD, F.R.G.S. With 45 illustrations and a map. Demy 8vo. $3.50 net.

An Account of an Adventurous Journey of Exploration from Sierra Leone to the Source of the Niger, following its Course to the Bend at Gao and Thence Across the Great Sahara to Algiers.

Among the Eskimos of Labrador

By S. K. HUTTON, M.B., Ch.B. VICT. With 47 illustrations and a map. 8vo. Cloth, gilt top. $3.50 net.

A Record of Five Years' Close Intercourse with the Eskimo Tribes of Labrador.

The Youngest Readers can understand Haskin's Book.

The Wit and Humor of Colonial Days

By PROFESSOR CARL HOLLIDAY. Crown 8vo. Cloth, gilt top, $1.50 net. Postpaid, $1.65.

If there is any branch of literature in which America has excelled other modern nations, it is Humor.

In the present work the author traces the course of our wit and humor from the days of the first settlement up to the opening of the nineteenth century.

J. B. Lippincott Company's Spring Books 1912

A Manual of Heraldry

By GALE, PEDRICK F. R. Hist. S. Illustrated. Crown 8vo. $1.75 net.

This is a popular introduction to the Origin, Significance and Uses of Armorial Bearings; a Guide to the Forms and Regulations of the Art-Science of Blazonry; and a Prelude to the Influence of Heraldry, upon Poetry, Art, Architecture, and Literature.

The Business Man needs Haskin's Book for ready reference

FICTION

From the Car Behind

By ELEANOR M. INGRAM. Colored illustrations by James Montgomery Flagg. Cloth, $1.25 net. Postpaid $1.37.

A brilliant automobile story with plenty of go and vim. The speed never slackens from start to finish, and one turns the pages breathlessly.

The Last Try

By JOHN REED SCOTT. Author of "The Colonel of the Red Huzzars," etc. Colored illustrations by Clarence F. Underwood. Cloth, $1.25 net. Postpaid, $1.37.

A sparkling romance—this new story is told in the author's most vivid and dashing style. Love, intrigue, danger and a thrilling climax are a few of the elements which go to make this Mr. Scott's best romance.

The Mystery of Mary

By GRACE L. H. LUTZ. Author of "Marcia Schuyler," etc. Colored frontispiece by Anna W. Speakman. Cloth, $1.00 net. Postpaid, $1.10.

One of the author's most entertaining novels. In addition to a sweet love story there is a mystery which results in a number of unusual situations.

Hidden House

By AMÉLIE RIVES. Author of "The Quick or the Dead," etc. Colored frontispiece by Gayle Hoskins. Decorated lining papers. Cloth, $1.20 net. Postpaid, $1.32.

A remarkable study of dual personality, which for sheer power and fascination of interest holds the reader breathless until the unusual ending.

Haskin's American Government is invaluable to Teachers

MISCELLANEOUS

The Students' Hymnal

Edited by CHARLES H. LEVERMORE

50 cents

The two hundred and fifty hymns in this collection are those which have been best known and beloved through many generations. They have been chosen with especial reference to their sincerity in the expression of religious experience, depth of feeling, and poetic merit; and because they possess dignity, strength, and musical beauty. The collection is rich in morning and evening songs, in processional music, and in hymns appropriate to the festivals of the Christian year.

10 WEEKS IN EUROPE FOR $300
FOR BOOK ABOUT IT, WRITE
DODD, MEAD & COMPANY
FOURTH AVE. & 30TH STREET, NEW YORK.

Reading Case for the Nation,

To receive the current numbers in a convenient (temporary) form. Substantially made, bound in cloth, with *The Nation* stamped on the side in gold. Holds about one volume. Papers easily and neatly adjusted. Sent, postpaid, on receipt of 75c.

A Concordance to the Poems of William Wordsworth

By LANE COOPER

Assistant Professor of the English Language and Literature in Cornell University.

4to, 1136 *pages, gilt top*, $12.50 *net.*

A large and important work furthered by the American Concordance Society, which must he indispensable to Students of English Literature, as a guide not merely to Wordsworth's language, but to the thoughts expressed in his language.

E. P. DUTTON & COMPANY
31 West 23rd St., New York

NINETEENTH CENTURY ENGLISH CERAMIC ART

By J. F. BLACKER

Over 1,200 *illustrations*, 534 *pages*, $3.50 *net.*

A practical guide for collectors of old English pottery and china, combined with a history in pictures of the work of the old English master potters.

LITTLE, BROWN & CO., Publishers, Boston

"It seems likely that Hauptmann's
THE FOOL IN CHRIST
will ultimately take its place among the masterpieces of contemporary literature," says *Current Literature*. (*Price* $1.50 *net.*)
B. W. HUEBSCH, 225 Fifth ave., New York.

THE MOST FASCINATING STORY SINCE JULES VERNE
THE DOMINANT CHORD
By EDWARD KIMBALL
Net, $1.25

THE APRIL ISSUE
OF THE
HARVARD THEOLOGICAL REVIEW

Contains the following articles:

RECENT DISCUSSIONS OF MORAL EVOLUTION *Jamcs Hayden Tufts*
ZOROASTRIANISM *George Foot Moore*
TWO BIOGRAPHIES OF MARTIN LUTHER *John Winthrop Platner*
LUTHER AND OTHERS *Francis A. Christie*

NEW MACMILLAN BOOKS

FICTION

Julia France and Her Times **By Gertrude Atherton**

A study of modern womankind, in the usual brilliant style of the author of "The Conqueror," "Tower of Ivory," etc. *Cloth*, $1.35 *net; postpaid*, $1.48.

White Ashes **By Kennedy-Noble**

"Altogether, a clever book, readable throughout, and unvaryingly attractive. . . . The reader chuckles over it with delight."—*New York Tribune.* *Decorated covers.* $1.25 *net; postpaid*, $1.37.

Almayer's Folly **By Joseph Conrad**

A re-issue of this famous novel, which the versatile sailor-author has admitted to be his favorite story. *Cloth*, $1.25 *net; postpaid*, $1.36.

MISCELLANEOUS

A New Conscience and an Ancient Evil **By Jane Addams**

A work to be seriously pondered by every serious man and woman. Actual experiences of those who have investigated the "white-slave" traffic, and often the stories of girls who have been drawn into the net—are the things of which Miss Addams's book is made. Absolutely frank in its treatment of the social evil, startling in its revelations, judicious in its suggestions, and sympathetic in its viewpoint. *Cloth*, 12*mo*, $1.00 *net; postpaid*, $1.10.

Marcus Alonzo Hanna. His Life and Work **By Herbert Croly**

Author of "The Promise of American Life."

Mr. Croly tells the complete story of Hanna's life, and analyzes the conditions which made possible the exercise of his tremendous power. *Illustrated. Cloth, gilt top*, $2.50 *net; postpaid*, $2.70.

The Wisconsin Idea **By Charles McCarthy**

Professor of Political Science in the University of Wisconsin.

Of vital interest to all concerned in State regulation of railroads, public utilities, the referendum, the recall, primaries, etc., by an expert who has been closely identified with the "Wisconsin" development of these great questions of the day. *Cloth*, $1.50 *net; postpaid*, $1.62.

The New Democracy **By Walter E. Weyl**

Political, Social, and Economic Tendencies in the United States

"A masterly, scathing, and absolutely fearless arraignment of things that ought not to be in a republic, and of tendencies that no democracy ought to tolerate."—*Boston Journal.* *Cloth*, $2.00 *net; postpaid*, $2.12.

The Tariff in Our Times **By Miss Ida M. Tarbell**

So ably, simply written that it should be read by every business man, whatever his views. *Cloth*, $1.50 *net; postpaid*, $1.62.

Democratic England **By Percy Alden, M.P.**

A brilliant study of the humanistic movement and the important social problems which have partly bridged the gulf between British political parties and classes to the advantage of the entire community. *Cloth*, $1.50 *net; postpaid*, $1.62.

All the Children of All the People **By W. H. Smith**

Author of "The Evolution of Dodd."

"A book to set one thinking—that rare thing, a book that is really alive."

Analyzes the national attempt to educate "all the children of all the people," and describes the present status of the complex problem. *Cloth*, 12*mo*, $1.50 *net; postpaid*, $1.61.

Education. A First Book **By E. L. Thorndike**

Professor of Educational Psychology in Teachers College, Columbia University.

A notable book with a broad, scholarly view of the general trend of education; searching, clear and practical. *Cloth*, 12*mo*, $1.25 *net; postpaid*, $1.35.

Socialism As It Is **By William English Walling**

A survey of the world-wide revolutionary movement. *Cloth*, 8*vo*, $2.00 *net; postpaid*, $2.14. *Ready April* 17.

Published by **THE MACMILLAN COMPANY** 64-66 Fifth Ave. N. Y.

The Nation

NEW YORK, THURSDAY, APRIL 18, 1912.

The Week

Rarely has an ocean tragedy so appalled the imagination as has the disaster to the Titanic. But let us put away the horror of the event and think of the vital lesson it enforces. Those 1,300 lives were flung away because the White Star Line, like the other steamship companies, has persistently refused, with the connivance of the steamboat authorities in this country, to carry sufficient life-boats and rafts to accommodate those whose passage money they took, to say nothing of the crews they employed. The sea was smooth enough off Cape Race to get every boat away from the Titanic and to transfer the women and children, after perhaps eight hours spent in the boats, to the Carpathia. This, the largest of modern leviathans of the sea, is said to have carried but *twenty boats!* Yet the need of a number of boats sufficient to carry passengers and crew has been much before the public.

We are familiar with the opposing arguments on behalf of the steamships. If a ship were to go down, she would probably sink like the Elbe, before more than one or two boats could be properly launched; in a very high sea no small boat could live; not sufficient boats could be carried on the davits in any event; moreover, the strength of the modern ship, the use of the wireless, all made for the safety of the new vessels, etc., etc., etc. Not one of these arguments goes to the point. If an accident occurs in a bad storm at sea no boats, it is true, avail; if a ship sinks quickly, boats "nested" on an upper deck, like the dories of a Gloucester fisherman, will probably go down unused. But in three great accidents that quickly come to mind—the sinking of the Oregon, the Republic, and the Titanic—there was time to save all. There were no lives lost on the Oregon and Republic, because rescuing ships arrived in time; had they not come, hundreds must have perished then as they did on the Titanic. Yet none of these disasters carried a single lesson to the builders and owners of these steamships. And our country has connived at their neglect. Nor is there any question of the ability of a ship to carry boats enough, even when she takes four thousand people to sea. If it is a matter of weights, then let the companies take out the elevators, the swimming tanks, the gymnasiums, some of the other hundred and one luxuries. The terrible and unnecessary sacrifice of human beings on the Titanic should put an end to a negligence which hereafter could only be called criminal. And this sentiment should be enforced by adequate legal prescription.

A new political maxim was invented by the Colonel on his flight through Pennsylvania last week. Facing the uproarious crowds, he cried out that he wanted them to vote as they shouted. We have had various historic injunctions to the electorate in this country, such as, "Vote as you pray"; but we have never before had the command hurled at us: "Vote as you shout." Even our great demagogues have usually had the grace to say that they wanted the people to think quietly about what they had been told, to talk it over with their neighbors and wives and children, and then register at the polls the free and mature opinion of thoughtful citizens. But the Colonel would change all that. Get up factitious issues and work up an artificial excitement, set the throngs to howling, and then try to bring it about that they vote before they have time to cool off. This is the modern substitute for the deliberate expression of the will of freemen. Fortunately, the American people have not been given to that sort of thing, and there is no reason to fear that they now will be.

Gov. Harmon has committed another unpardonable offence. He has gone straight into the State of Nebraska and denied point blank the charge that he is a tool of Wall Street; that he took part in a sale of Government bonds when in office, and that he neglected his duty as Attorney-General. But that will not avail him with William J. Bryan. Once that great statesman makes up his mind as to men, it is not to be changed, however often he may find a paramount issue upon which our liberties depend—and then drop it. Certainly, Mr. Harmon is not to be criticised for his record as Attorney-General under Mr. Cleveland. He did all the work in procuring from the Supreme Court the first decisions upholding the Sherman Anti-Trust law; that some of them were rendered in the McKinley Administration, which promptly appropriated the renown thereof, was no fault of Mr. Harmon's. Nor will the fact that he has been a good enough Democrat to carry Ohio twice weigh with Autocrat Bryan. His thumbs are down.

It is possible to expend too much sympathy on the defeat that has come to Senator Shelby M. Cullom after sixty years of public service. Mr. Cullom will be in his eighty-fourth year when he vacates his seat in the Senate, and that is an age when the vicissitudes of this life ought to be borne with fair equanimity. That the Senator from Illinois had already come to look upon his own political career as closed may be inferred from the fact that he has recently published a volume of Memoirs, which is nearly always a fatal sign in the career of a statesman. Neither is it necessary to be carried away by the pathetic plea that Mr. Cullom leaves political life poorer in material goods than when he went in. We have always held that the spectacle of a public servant retiring to honorable poverty exercises an excellent tonic effect on the spirit of democratic government. If the people, as happened in Illinois, occasionally show failure to appreciate self-sacrifice in their elected representatives and an inclination to overlook in moments of passion the claims of a long career, that, too, is one of the inevitable incidents of democracy.

Indiana has her eye on 1916, not because of any secret political ambition, but because that is the year of her centennial as a State, and she must do something worthy of herself to commemorate the event. The State University has begun by planning a three-volume history of the commonwealth. Then there is to be a biographical dictionary of the State, a "Who's Who" containing the most important information concerning every man and woman in Indiana with a State

reputation. First estimates are that this book will have two thousand names. But there is a feeling among Hoosiers that more than this is necessary to do justice to the occasion, and consequently a member of the faculty of the State University proposes an adequate State library building. With tears in his voice, if not in his eyes, he points out that the State Historical Library building of Wisconsin houses more material relating to Indiana than the State itself possesses. Probably the inhabitants of Indiana have been so busy writing books that they have not had time to look after the forming of a great library.

Senator Swanson may exaggerate when, in urging a liberal appropriation for the printing of Government documents, he says that such publications are the only means which 92,000,000 people have of becoming acquainted "with the vast transactions here in Washington, covering vast expenditures and vast endeavors in governmental effort"; but there is no denying the range of interests to which they appeal. The other day Senator Smoot enumerated the following as examples: "Diseases of the Horse," "Hinds's Precedents," "Tariff Hearings," "Jefferson's Bible," "Memorial Addresses on Lincoln, Garfield, and McKinley," "Moore's Digest of International Law," "Charters and Constitutions," and the "Conference of Governors." This is an impressive list, and not exactly the sort of which one first thinks when he hears or sees the phrase "Government document." The problem of distributing these publications is twofold. The demand for the more readable of them often far outruns the supply, although people in general cannot be said to know that they exist. Meanwhile, tons of printed matter come from the Government presses for which there is so little request that they are piled up to the number of millions of pages in Washington. It is to be hoped that the recent debates in the Senate will result in the finding of a way to print less of what the public does not want and more of what it would appreciate, and in addition the devising of a plan for keeping it better informed of the appearance of desirable matter.

One trait of contemporary public oratory and political eloquence is the rediscovery of the Bible as a treasure-house of argument and invective. The Golden Rule as formulated in Kansas and popularized elsewhere by Mr. Roosevelt is of almost daily occurrence in the public press. The Sherman law has been described by one Federal District Attorney as being in essence a reënactment of the Ten Commandments. We have recently come across several Judas Iscariots, and only the other day somebody said that the Colonel is worse than Pontius Pilate. It will not be long, presumably, before we shall have with us more than one Moses to lead the Democratic party out of captivity, reactionary Joshuas who would bid the Presidential primary sun stand still, Wall Street Delilahs striving to rob progressive Samsons of their locks—Samsons, however, who will not pull the temple down on their own heads but content themselves with slugging the Philistines through the ropes.

Last Friday's decision of the Court of Appeals at Albany maintaining the liability of promoters for fraudulent or misleading representations made to investors, should help to straighten out a matter which has long been in vexing uncertainty in this country. The English law has been notoriously stringent in holding promoters liable, and the British courts have enforced it with wholesome severity. That fact has not, of course, prevented gullible people from making foolish investments, nor has it done away with reckless speculation. But it is at least a protection to innocent investors, necessarily ignorant of details, to know that they are not without legal redress when deceived into parting with their money by the lies of unscrupulous promoters or their agents. One of the strong points in the Court of Appeals decision is the holding that, where there are a number of promoters, all of them "are liable for damages for the fraud of an agent employed by them to effect the sale of corporation securities, without reference to their moral guilt or innocence."

A Western juryman has been excused from further jury service because he fell asleep twice during the argument of cases. "These lawyers' arguments," he explained, "seem to give me the sleeping sickness." It may well be asked whether he did not in these words present the best possible reason for his retention as a juryman. If lawyers knew that their arguments were in danger of going unheard unless they had enough life in them to be worth attention, would not this single fact make mightily for reform? If judges formed the habit of nodding, not to show assent but indifference, would not calendars begin to be cleared? Nor is this a revolutionary suggestion. One of the prerogatives of justices of the Supreme Court at Washington, and by no means the least of the things for which they are to be admired, is their unhesitating slumber when arguments grow dull. Recently, finding that this hint, although often given, was not enough for all who came before them, they set a limit upon the time during which they would even pretend to listen to argument. This is all in the right direction.

Although the rural population, which includes the entire population outside of incorporated places with 2,500 or more inhabitants, increased only 11.2 per cent. between 1900 and 1910, the total value of farm property more than doubled. This was in the face of an increase of but 4.8 per cent. in the total farm acreage, and of a reported increase of 15.4 per cent. in the acreage of improved land, part of which, the Census Bureau points out, may be due to difference of interpretation of what constitutes improved land. Nor is this doubling of the total value due to improvements alone. The value of these has, indeed, gone up above 70 per cent., partly owing to the higher prices of commodities in general. But the actual land has shown an increase in value of 118 per cent., and as the average price per acre was $32.40 in 1910, as compared with $15.57 in 1900, the advance is accordingly attributable only in part to the increase in acreage of improved land. Nor is it to be explained by such improvements as fences and drains. It is due chiefly to the higher prices of farm products and other causes that make the land as land more valuable. In spite of a 5.5 per cent. decrease in the average size of farms, therefore, the average value of all farm property per farm has increased nearly 90 per cent., from $3,563 to $6,444. There are at present more than 6,000,000 farms, with a total of nearly 900,000,000 acres, which is 46 per cent. of the total land area of the country. Half of this farm acreage is improved.

The total value of farm property reaches the enormous sum of $40,000,000,000, of which above two-thirds represents the valuo of the land.

Surely, in all fields relating to the philanthropic side of life, the nineteenth century produced no finer figures than Florence Nightingale and Clara Barton. Both were, in their prime, great executives. They knew how to set to work to remedy evils before which statesmen seemed helpless when not indifferent. Their visions benefited not one nation, but several, if not the world. They thought in terms of all humanity—to win the simple title of angel of mercy. Their contributions to mankind remain of a permanent character, even though they left their mark on no great canvases and chiselled their names on no stirring monuments. Both rose from the ranks, coming from middle-class surroundings to prove that if any soldier may have a field-marshal's bâton in his knapsack, any woman may have within her the spirit to make the whole world kin again by her touch of compassion. How many monuments have been erected to men the world over whose sole claim was that they laid waste and killed where Clara Barton and Florence Nightingale and their followers built up and brought surcease of pain to uncounted thousands!

The strong protest lodged by our Ambassador in Mexico City, both with the Maderist Government and with the commander of the insurrectionary forces in Chihuahua, is not the ultimatum that some would make it out to be. Our Ambassador declares that the killing of American citizens taken as prisoners of war will be regarded by this Government as murder simply. It is yet to be shown that such acts have been perpetrated by the Maderist forces. Nor is it conceivable that Madero or his officers would resort to such suicidal tactics. The acts complained of have so far come from the side of Gen. Orozco, whose obvious intention is to bring about complications with this country now that the chances of a rebel victory in Mexico seem to be steadily waning. How, in fairness, the Mexican Government can be held sufficiently responsible for atrocities perpetrated by men engaged in armed insurrection against the Government, to be threatened with an ultimatum, does not quite appear, unless the authorities at Washington are convinced that Madero has demonstrated his inability to cope with the situation. That, however, is far from being the case. If, when the troubles are over, the Mexican Government is called upon to indemnify the victims of the insurrection, that is another matter.

In Eugène Henri Brisson, once president of the Cabinet and for many years president of the Chamber of Deputies, the French nation loses one of its stern old Roman citizens whose number and influence have steadily been dwindling in contemporary politics. M. Brisson was one of the young men who won their spurs in the Liberal uprising against the third Napoleon in the last two years of the Empire. He was anti-clerical almost from the beginning of his career, and naturally came by his position as Gambetta's lieutenant against *l'ennemi*. His anti-clerical views inevitably took firmer root and wider extension during the Dreyfus crisis, and they were a part of his creed to the last, in spite of the fact that the spirit of religious animosity has somewhat abated of late in French public life. This does not mean that anti-clericalism is dead. It is the issue upon which the present Radical Republican majority came into power a dozen years ago, and it is still a perfectly good issue for future electoral campaigns. Nevertheless, the campaign against the Church has of late become of interest secondary to the great social issues that have been thrust upon the French people by the rise of a militant Labor and Socialist party. Clericalism has also been thrust into the background by the course of foreign politics since 1905. The succession of crises in Franco-German relations has served to solidify patriotic sentiment, and thus to a very considerable extent cut across religious party lines.

For the second time within the course of a month, the official German press is called upon to make denial of embarrassing statements supposed to have been made by the Kaiser in private conversation. After the Goethals incident comes an Italian incident. To a member of the Italian Chamber, William II is said to have expressed the wish that his own German subjects were as patriotic and as efficient as the Italian nation has shown itself in the present crisis. Whatever be the facts in the case, one must sincerely sympathize with the difficult position the Kaiser finds himself in as a man of strong feelings and endowed with a gift for forcible expression. Every statesman and politician says impulsive things in private, but it is one of the primary ethical laws of journalism that a public man shall not be quoted against his will. The difficulty is that in the case of a figure of such transcendent importance as the Kaiser the temptation to let the world in on his latest piquant remark is tremendous; and once cast abroad, it assumes a meaning far beyond its intrinsic merit. Suppose the Kaiser, in a moment of enthusiastic commendation of the way the Italian people has rallied to the support of the throne, did say, "How I wish my own German Socialists were like that!" It would be a very human thing to do, and to put it into the newspapers is both cruel and unjust.

When Stolypin, the Czar's Prime Minister, was assassinated in the presence of his Imperial master at Kiev last September, there were rumors that the Premier was the victim of a conspiracy among police officials. Incredible though it seemed that men high in the employ of the Government should resort to murder in order to subserve their own ends, the charges then brought forward are now virtually confirmed by the official report of the investigators appointed to look into the affair. Four officials of the secret police, including the Assistant Minister of the Interior, are found to have been guilty of embezzlement, and the implication is conveyed that their fear of exposure at the hands of the Prime Minister led to his assassination. Thus the history of Russian police methods remains consistent. The revelations of the police agent Azeff have already shown how the police authorities at St. Petersburg virtually consented to the assassination of Grand Duke Sergius at Moscow in 1905, so long as it did not interfere with their own plans and ambitions. One wonders what Nicholas II's sensations must be among such "guardians." Men who have not hesitated to strike at the second man in the Empire may in the hour of dire need take the chance of striking higher yet.

THE REPUBLICAN CONFUSION.

Pennsylvania's primary vote on Saturday brings President Taft's renomination into grave doubt. This is not saying that Roosevelt can be nominated. On his own showing, he still needs more than 350 delegates, and where they are to be got even his facile arithmeticians are unable to say. Nor is it denied that a majority in the Chicago Convention can yet be procured for Mr. Taft. It is easy enough to prove this by the figures from the States that have already voted and are yet to vote. But it has become not a question of figures so much as of feeling. Pennsylvania's adverse vote, following that of Illinois, has terribly impaired the President's political prestige. If with all the time and work and money expended in his behalf, if with the organization and the Federal patronage on his side, he could save only a handful of delegates from so immovably Republican a State as Pennsylvania, members of the party all over the country will be asking what it must do in order to have the ghost of a chance next November. The psychology of the campaign has turned against the President. That is a fact which cannot be blinked.

There are, of course, explanations of the result in Pennsylvania, just as there were in Illinois, but they do not help Mr. Taft. In both States there was a tremendous revolt against the party machine and its leaders. Penrose had made himself almost as much hated and despised as Lorimer, yet the blow aimed at the Pennsylvania boss could not fail to hit the President also. In this matter the voters did not make nice discriminations. They did not stop to recall the fact that Roosevelt, when President, had flattered and fed Penrose—and used him—without a scruple. Nor were they deterred by the spectacle of Flinn, the rich contractor-politician of Pittsburgh and would-be boss of Pennsylvania, now in alliance with Roosevelt. They simply rose up to smash the old Republican ring, and if Taft was hit by the flying débris they did not greatly care. The effect was virtually the same as if they had been striking at the President with full purpose.

Now, the law of self-preservation is as strong with political parties as it is with human beings. All that a party hath will it give for its life. And no thoughtful Republican can look at what is now going on in his party without feeling that its very existence is endangered? Present tendencies followed, present passions and animosities made more bitter, mean nothing else but disruption. If Roosevelt were to force his way to a nomination at Chicago, everybody knows what would happen. Republicans by the hundred thousand would fall away from him. He is inviting Republicans to a form of party suicide, and their certain knowledge of that fact is one good reason why they will not be disposed to accept the invitation. But on the other hand, their fear will be heightened that President Taft is not the man either to make head against Roosevelt or to unite his party and lead it to success, in case he is nominated. And here comes in that ancient plague of the Republican party—the Southern delegates. They are nearly all arrayed for the President, but could the party managers view without qualms a nomination procured by dependence chiefly upon these ciphers from States where the Republican vote is scarcely more than a cipher? Harrison won his renomination in 1892 by means of the Southern delegates, and the party will not have forgotten what happened to him.

In the face of such a party situation as we have outlined—with ferocious enmities engendered, with revolutionary proposals filling the air, with bitter quarrels and an open split at Chicago distinctly foreshadowed — it is not strange that sober and influential Republicans are saying to each other that a compromise candidate is not only desirable but necessary. The one name in every mouth is, of course, that of Judge Hughes. If any man could appeal to both factions by which the Republican party is now rent, he could. In fact, no other is seriously mentioned for the work. It is of Hughes that all the talk is. It was so at the New York Convention. It crops up everywhere. Since the Pennsylvania primary it has redoubled in Washington. We are bound to hear more of it. The party plight as it stands to-day calls loudly for a compromise, and the record and qualifications of Charles E. Hughes are such as to make all eyes turn to him if there is to be a Republican candidate able to unite his party. His own position is well understood. He will allow no politician to use his name. He will make no public utterance, except to say that he is on the bench and out of politics. It is known, too, that he at least has so great a regard for obligations of loyalty that he will consent to no move in his behalf so long as President Taft is in the field. Yet if a strong conciliatory and unifying movement were to set in, and the weightiest men were to call upon Hughes and offer him a unanimous nomination, he might resign from the Supreme Court and take the lead. It is too soon to affirm that anything of this sort will surely be attempted; but it is plainly an event well within the bounds of probability.

There is just one thing which could prevent it by making it unnecessary. This is a virile and aggressive campaign by President Taft from this day on. It is said in Washington that his fighting blood is up. Certainly it was high time. He has been very magnanimous and patient under the venomous assaults of Roosevelt, but there is a limit to the exercise of such virtues in politics. And if Mr. Taft is to save the situation for himself, he must now go out and fight Roosevelt—openly and directly, as the latter is fighting him. If he has any ammunition in reserve, let him use it at once. It has got beyond being a battle about political doctrines, however dangerous they may be, and it is now incumbent upon Mr. Taft to take the offensive against Roosevelt. The President doubtless has it in his power to make a destructive exposure of Roosevelt's record—not his words, but his deeds. If the President will do that fearlessly, he may yet turn the tide of battle in his favor.

GOV. WILSON'S VETOES.

When the Legislature of New Jersey reconvened, after its recess, it received from Gov. Wilson vetoes of some forty of the bills which it had passed and sent to him for his action. That he would refuse to approve certain measures was expected. It was for the avowed purpose of passing them over his veto that the Legislature adjourned to meet again. Under the Constitution of New Jersey the Governor has only a suspensive veto. Despite his refusal to sign a bill, it can be passed over his veto by a majority of the members elected in either house. Accordingly, we are to look to this series of vetoes by Gov. Wil-

son, less for a list of bills that will be prevented from becoming law, than as an indication of the kind of legislation he would keep off the statute-books if he had full power.

Many of the bills vetoed by him are comparatively unimportant. They relate to local government, and are disapproved by the Governor either because they are carelessly drawn or are an invasion of home rule or invite to a reckless incurring of debt. Several bills to increase salaries or to create new offices are vetoed. Certain proposed amendments of the election law Gov. Wilson would not sign for the reason that they either gave too much power to party managers or put a handicap upon the independent voter. But the one great measure of which the Governor's veto will provoke wide discussion, and which is most significant of his attitude, is that for the compulsory abolition of grade crossings by the railways. There is a dispute as to the technical validity of this veto. The contention is that it was sent to the Senate when it should have gone to the Assembly. Thus, irrespective of the desire or ability of the Legislature to pass the bill over Gov. Wilson's veto, the assertion is made that it has already the force of law. This question will doubtless be taken into the courts; but whatever the result there, and no matter what the Legislature may do, the Governor's disapproval of this bill shows that he is as ready as Gov. Hughes was when he vetoed the two-cent fare bill, to stand up for the rights of the railways when they are threatened with oppressive or confiscatory legislation.

The question of grade-crossings has long been a pressing public issue in New Jersey. Both parties were pledged on the subject. The Republican platform favored "the elimination of grade crossings at railroad expense," the work to proceed "as rapidly as the expense involved will permit." What the Democrats proposed was an act giving the Public Utilities Commission "power to compel the railroads to eliminate grade crossings where, in the judgment of the Commission, such crossings are a menace to life." The bill itself did, in fact, empower the Public Utilities Commission to proceed to arrange with railways and municipalities for the doing away of grade crossings, but it added the arbitrary provision that "every company which operates a railroad in this State shall within three months, and within the same period yearly thereafter, remove or apply for the removal of one grade crossing for every thirty miles or fraction thereof of road operated by it in this State." It is this last provision to which Gov. Wilson objects. Admitting to the full the strong public demand for the removal of railway crossings at grade, he asserts that there is no public demand in New Jersey for legislation which is "unjust and impracticable."

No one could find much difficulty in showing that such is the nature of the bill vetoed. It puts all the railways of the State into the same category, grouping the Pennsylvania with the Rahway Valley. The latter is a struggling line but a few miles long, of which the gross receipts last year were only about $32,000; yet this bill would compel it at once to eliminate grade crossings at a cost much greater than its whole income! On the Jersey Central a careful estimate has been made that compliance with the terms of the bill would mean the elimination of twenty-three crossings the first year at a cost of $3,150,000. It would obviously be necessary for the management to recoup such an outlay by raising the rates for passenger and freight traffic. It is pointed out, moreover, that the vetoed bill is directly in the teeth of the recommendations of the Public Utilities Commission. That body would attack the problem in a gradual and rational manner. It would bring about such amicable agreements as have led to the great improvements in Newark, for example, where the Lackawanna spent several millions in sinking its tracks and the city paid about $1,000,000 as its fair share. But the bill would put an end to such friendly and mutually beneficial arrangements, and force the arbitrary plan upon the railways. This may fairly be called, as Gov. Wilson does call it, "unjust and inequitable." It is highly probable that it would be held to be unconstitutional also, as being a confiscatory measure. The very authors of the bill seem to be afraid of this, since they included the proviso: "If any portion or portions of this act shall be declared unconstitutional, the remainder shall not be affected thereby."

Gov. Wilson's veto will expose him, no doubt, to much misrepresentation and even abuse. He will be accused of seeking to thwart the will of the people, and to curry favor with the railways. But he has at least shown that he does not shrink from doing what he thinks to be his duty, though at the risk of obloquy. And those who have been so lightly charging him with being a wild radical, would do well to note his firm stand for justice even to the owners of large property. His veto may fail of legal effect, but its moral and political effect is unmistakable.

ANOTHER APPEAL FOR FREE SHIPS

The recent action of the New York Chamber of Commerce in demanding the abolition of the antiquated navigation laws which prevent our development of a merchant marine, lends especial interest to a vigorous utterance of Rear-Admiral French E. Chadwick, in reply to a query from the Navy League. That organization had inquired his views as to the restoration of our merchant fleet. He struck out with the vigor to be expected of the captain of Rear-Admiral Sampson's flagship and his chief of staff in 1898:

> I would say that I am not in favor of subsidies of any kind. I think that all that is necessary to restore our shipping is to abolish the Cromwellian laws which now stand in our statutes and thus give our ship owners a chance. Our over-sea carrying trade has been protected to death, literally.

This was not, we believe, the answer the Navy League wanted. The Navy League believes in forced-draught battleships—paid for by forced draughts upon the taxpayers—and in a merchant fleet nursed into being and kept alive by artificial food. But Rear-Admiral Chadwick knows by experience the evil that protection can do. He remembers "our building four large wooden side-wheel steamers for the Pacific Mail (about 1869), when the rest of the world was building iron screw ships, of which the White Star Britannic was a sample. Had we not had protection, these preposterous ships would have been of the Britannic type, and would have lasted and made money." And he adds, vigorously enough: "All the subsidizing, nursing, and coddling in the world can't avail against our present brutally ignorant and unbusinesslike system. I have had these opinions now many years, and to-day am as strong in the opinions I here express as ever."

Rear-Admiral Chadwick then takes up the cases of Great Britain and Germany, pointing out that the former in 1848 abrogated laws of about the same tenor as ours. The English Government, as he declares, does not subsidize at all in the sense in which our shipbuilders would have us in this country. They do pay, of course, a compensation for mail services, but he naturally objects to counting in to the amount paid by England the cost of the Royal Naval Reserves and the Canadian fishing bounties, as was done under the head of subsidies in our Commissioner of Navigation's Report for 1909. Leaving out England's colonies, the total of subsidies, apart from Admiralty retainers for certain large ships, is only about $3,200,000, "a very moderate compensation for the world-wide mail service rendered." Naturally, Rear-Admiral Chadwick calls it absurd to maintain that England's vast fleet is kept up by subsidies. He quotes the Secretary-General of the Hamburg-American Line, Herr Huldemann, as citing the experience of England and Germany to show that with virtually no subsidies—the smallest per ton of merchant fleet of any in Europe—England and Germany could "immensely increase their fleets" in the decade prior to 1909, England by almost 5,000,000 tons, and Germany by more than 2,000,000 tons. Herr Huldemann sees clearly that the lack of growth in other countries must in part be ascribed to the "false educational influence the system of subsidies is exercising, by the fact that it makes the receiver of the subsidy a Government pensioner and spares him the trouble of earning his bread by his own efforts."

Our first step, Rear-Admiral Chadwick, like Grover Cleveland and many another student of the subject, declares must be to have free ships. And he also touches upon a point which is not dwelt upon often enough: We have right along been sacrificing the ship owners to the ship builders. The would-be owner is forced into other lines of business because he has not the right to buy his ships where he may as cheaply, at least, as the man who is competing with him. As soon as it is urged that we buy our merchant ships abroad, as foreigners used to buy of us when we could build better and faster ships than they, the cry of "spare the shipbuilder" is heard—the shipbuilder, whose American protected labor is beginning to bear something of the aspect of the protected labor of the American Woollen Company in Lawrence: in one shipyard of which Rear-Admiral Chadwick knows, all the riveters are Syrians. The powerful, vested shipyard interests that have been kept alive artificially all these years by Government contracts and the navigation laws, are not to be compelled to readjust their yards, enter into a fair and free competition with the rest of the world, and, in homely American language, "get out and hustle for the business." They are to fall back upon the Government and live under its protecting shadow.

Certainly no one can defend the present effect of our laws. That the Democratic minority has not seen its opportunity at this session of Congress to deal with this question is one of the disappointments of Mr. Underwood's leadership. No one can deny that, as Rear-Admiral Chadwick points out, this country has taken no part in the gigantic development of ocean transportation; "that the changes from wood to iron, from iron to steel, in construction; from the paddle to the screw; from the screw to the multiple screw; from the simple engine to the compound, from the compound to multiple expansion, from the reciprocating to the turbine engine, have been none of our initiative. We have been but followers in this great change—and at a sadly long distance." What else is to be expected so long as protection with its exclusion of foreign-built ships holds sway?

THE NEW HOME RULE BILL.

The bill for the government of Ireland, introduced in the House of Commons on Thursday of last week, conforms to general expectations. It is a sort of composite of the bills of 1886 and 1893. Some features it takes from the one, some from the other, and adds provisions and makes modifications suggested by the long discussion of the problem, now running over twenty-six years, and by the conferences of the statesmen both in England and Ireland who are responsible for the measure. As it stands, it is confessed by even its opponents to be a moderate bill. There is no setting up of a separate Ireland. She is to remain an integral part of the British Empire. It is merely a large part of her local government that is to be turned over to her. Imperial control in all Imperial affairs is to remain where it is now. None but purely Irish affairs—and not all of those as yet—are to be committed to the new Irish Legislature.

There have always been three great difficulties in the drafting of bills for Irish Home Rule. One has to do with the necessary safeguards for the Protestant minority; the other lies in the question of the financial relations between self-governed Ireland and the British Exchequer; the third is the stumbling-block of the retention or exclusion of Irish members of the House of Commons. To take the last matter first, Mr. Gladstone proposed in 1886 to cause Irish representation at Westminster to cease entirely. An Ireland self-governed, so ran the argument, had no more reason to send members to the Commons than had self-governed Canada. But by 1893 it was found that the cases were not parallel. Irish members were needed for at least certain purposes. So we got the famous "in-and-out" clause of the Home Rule of 1893, which would have given Ireland eighty representatives in the Commons, who should, however, have the right to vote only on Imperial or Irish business—not on what could be roughly classified as non-Irish business. This plan of Irish representation in reduced numbers and for limited purposes was criticised as unworkable; and Mr. Asquith's scheme is that of retaining forty-two Irish members, apparently with a vote on all questions. Under the Union, Ireland is entitled to 103 members; on the strict basis of population, she ought to have about seventy; so that the drop to forty-two obviously represents a compromise, and is one measure of the concession which Ireland is ready to make in order to obtain a freer hand in her local government. On the other hand, English Conservatives might well reflect that the getting rid of sixty-one trouble-making Irish would be not only a good thing in itself, but would prove a party advantage to them, in the long run.

In the other critical points the bill seems to have been carefully studied. The rights of the Ulster minority are protected in a variety of ways. In the very charter of the new Irish government are written down prohibitions of those acts of tyrannous oppression or re-

ligious proscription by the alleged danger of which Belfast has been inflamed. The "safeguards" in Mr. Asquith's bill are, indeed, more numerous and more explicit than they were in either of Mr. Gladstone's. As for the thorny questions of finance, they are grappled with in all their difficult details. In view of the fact that economists and royal commissions have long since established the fact that Ireland is over-taxed, relatively to England, Scotland, and Wales, there cannot be very serious objection to the proposal to hand over to the Irish Exchequer from the British $2,500,000 the first year and then gradually lessened sums until the payment of $1,000,000 is reached.

All these matters will be vigorously debated in the Commons during the next few weeks, and the attempt will be made to rouse the old Unionist spirit in England which in 1886 defeated Gladstone and again in 1893 frustrated the effort to give Ireland Home Rule. But it is doubtful if this attempt will succeed. The whole situation is different. In 1886, Irish Home Rule was as a sword thrust into the vitals of the Liberal Party. To-day it is united on the Irish issue, and has the hearty support of the Labor Party. There is thus a majority for Home Rule independent of the Irish members. Moreover, under the working of the Parliament act, by which the veto of the Lords can be swept aside after three sessions, the motive for party cohesion and tenacity of purpose is greatly strengthened. The Conservatives can have no hope of preventing the passage of the bill through the Commons. And their recent endeavors to excite the country on the subject of Home Rule have not been conspicuously successful. A whole new generation has come in since the rancors of the Gladstone controversy. To rekindle the old fires will not be easy. With the aspect of parties, public feeling has greatly changed.

One thing that has plainly helped to change it is the great extension of self-government to Australia and to South Africa, which has been made since the first failures to obtain Home Rule for Ireland. Whether these self-governing English colonies have been an unqualified success or not does not go to the point. The large experiment has been tried; and it is no longer possible to assert so confidently that dire evils will follow self-government for Ireland. Australia and South Africa rise up to refute the argument. As long ago as 1886 Joseph Chamberlain said that if Ireland were 3,000 miles away, and if the Irish were not the Irish, they would have had Home Rule before that time. But such an absurdity cannot forever be persisted in. The fear that Dublin will desire to ruin Belfast is really as preposterous as a dread that Cape Town might desire to blot Johannesburg off the map. On this point of fair treatment for the Protestant minority, Mr. John Redmond spoke eloquently at Dublin, on the eve of the introduction of the Home Rule bill. He said to the great gathering of hopeful Irishmen:

> There is one gap in our ranks, one body of our fellow-countrymen are absent to-day. They are men who themselves and their ancestors have stood aloof for over one hundred years from the great body of their fellow-countrymen. What have I to say to them to-day? I say that for them in this hour of triumph for Ireland as a nation we have not one word of reproach or one trace of bitter feeling. We have one feeling only in our hearts, and that is an earnest longing for the arrival of the day of reconciliation. I say to these fellow-countrymen of ours that while they may repudiate Ireland, Ireland will never repudiate them, and we to-day look forward with absolute confidence to the certainty of the near approach of that day when they will form a powerful and respected portion of a self-governed Irish nation, and will have an opportunity of reviving once more the glories of their own ancestors, the Protestant patriots of Grattan's Parliament.

WESTERN HISTORY IN THE EAST.

That Harvard, an Eastern university, should desire to make itself supreme in its collections of Western history will, we fancy, stun for a moment the teachers and historians in the newer sections of this country. The State universities in Wisconsin and Illinois have so long been looked to as the inevitable repositories of the great masses of material from which Western history is to be written that it will seem at first thought as though this ambition of an Atlantic Coast university were reversing the natural order of events. The truth is that there is plenty of room for all three institutions, and probably for at least another on the Pacific Coast, to specialize in this field. But Harvard is already rich in material of this kind, as well as in books, manuscripts, and historical publications relating to other periods in American history. Moreover, New England has a special interest in the West, because it was from that section that the pioneers went forth to settle Ohio and the Middle West, to blaze the trail to Oregon, to free Kansas, and later to furnish the material resources to develop the new territories and to bind them with iron railway bands to the Union.

If we may judge by the make-up of the Commission appointed to collect the material, this latter fact was particularly in the minds of those who have planned the venture. Thus, Gen. Grenville M. Dodge, the constructing chief engineer of the Union Pacific, President F. A. Delano of the Wabash Railroad, and President Howard Elliott of the Northern Pacific are members of the Commission. Moreover, the funds for the purchase of books are to come from Mrs. William Hooper, the daughter of the late Charles E. Perkins, president of the Chicago, Burlington & Quincy, to whose memory the collection is to be dedicated. Mr. Pearson's recent life of John Murray Forbes, who preceded Mr. Perkins as head of the Burlington Railroad, has proved clearly the need of recording at length the story of Eastern achievement in developing the railways of the West. Particularly at this time when the acute modern problems of railway operation and management and the political questions involved have obscured the actual accomplishments of the great railway pioneers in the face of apparently insuperable natural obstacles, is it fitting that there should be an effort to preserve the materials by means of which this romantic and stirring chapter in our Western development may properly be told for the profit of future generations.

But there are many other reasons why the collection of Western material should promptly be undertaken. Much of value is daily being lost because of a failure to understand its worth. Again, some of the State historical departments, and many of the historical societies, are in the hands of untrained workers in the field who clog their shelves with worthless material and publish reams of improperly edited or wholly unedited narratives of more than questionable utility. Particularly has this been true of the Kansas Historical Society, whose treasures, only just now being arranged in a fireproof library, will henceforth, doubtless, come in for better treatment. One outgrowth of this new Harvard undertaking may be an emphasizing everywhere of the need of

better preserving the records of the past. Surely, the destruction of the New York and Missouri Capitols furnishes arguments enough to point the moral.

Here, however, we touch upon the one weak point in the Harvard proposal. With its utterly inadequate library, its lack of proper fireproof vaults, Harvard is scarcely in the position to ask outsiders to deposit in her hands the priceless collections she desires. We have repeatedly called attention to this, Harvard's greatest need. The University has obtained large sums for the Medical School, the Scientific School, for professorships and scholarships of all kinds. Each class now contributes $100,000 to the general endowment fund on the twenty-fifth anniversary of its graduation. But by some freak of fate no one gives or leaves money for a new library. Not even Mr. Carnegie is interested. Fully $300,000 and more has been spent upon the football stadium; a similar amount would make possible a splendid beginning of a new library according to the excellent plan that has been drawn to permit building by instalments. Still no one has appeared to end a situation which is almost a scandal.

BRITISH NOVELISTS IN AMERICA.

An interesting development of the last two or three years in the fiction market has been the introduction to the American public of English novelists who in their own country can point to a long career behind them. The pioneer in this latest British invasion was probably Mr. W. J. Locke, with his pleasant blend of sentimentality, whimsy, and not too erudite erudition. The man who at the present moment represents the crest and climax of the movement is, of course, Arnold Bennett. Running parallel with him or close in his wake have come a number of men of smaller pretensions but of sufficient merit to justify the venturesome trip across the Atlantic. There is Leonard Merrick, whose fine artistry offers a form of delight that Arnold Bennett can never hope, as he probably never wishes, to rival. There is E. Temple Thurston, who mingles contemplation with sentiment, just as Merrick mingles realism with sentiment. There is V. L. Whitechurch, a clergyman who has written in a tone of subdued pessimism concerning the daily history of quiet souls. There is G. A. Birmingham, also a clergyman, who revives, in the age of Synge and Yeats and the new Ireland, the older Ireland of Charles Lever and Samuel Lover. There is Mr. Richard Pryce, whose recent novel in this country is closely followed by the intimation of more to come. There is Mr. Basil King, and in all probability there will very soon be others.

The notable feature about nearly every one of the men we have mentioned is that their reputation and their works come to us in bulk. They are men who have toiled for years to win a public and are now coming into their own. In England it seems possible for an author to do what is almost impossible in this country—to go on writing novels that are not popular successes, without starving. When success does arrive it means that an author stands equipped with a full storehouse of ammunition to cast at the head of fleeting fortune. Hence the phenomenon of Arnold Bennett with a dozen books—or is it two dozen books?—advertised as all new to the American public. The same is true of Locke and Thurston. The same is true of Leonard Merrick. The reader who has sharpened his appetite on the delicious caviare of "Conrad in Quest of his Youth," need not stave off his hunger for a year or two till Mr. Merrick has written another novel. He can have his pick out of a dozen of these books all written and waiting to be bought. Or is it two dozen?

The book world has its ebbs and floods. Regularly recurrent waves of foreign influence beat upon our shores. Whenever the foreign tide recedes, patriotism makes it a cause for rejoicing. The desire to be self-sufficient is a healthy sign in a young nation. More than in the book world, the desire for emancipation has been felt in the theatre. It is half-a-dozen years, perhaps, since we have begun to take pride in the fact that the American playwright has at last come into his own. The formidable competition from England and Paris seemed at one time destined to disappear. The watchword became "American plays on American problems," and of these we have had a great plenty. Yet here, too, reaction seems bound to ensue. The foreigner this last season has made an excellent showing, and if the American dramatist thought he had the game won, he now knows better. And so with the novel writers. Our best sellers continue to be mainly of domestic manufacture. But of the books that carry significance to smaller and more fastidious publics, we do not produce an overplus. Very probably the present eruption of British writers is a good deal of a fad. The mimetic instinct is not wanting in the publisher's trade. One rousing success for a British importation is bound to open a market for the large output of English novels which, without being great books, are books well written and qualified to amuse.

But it may be that certain causes are also working from within. It is possible that we are growing a bit tired of the novel with a purpose. The American novelist, like the American playwright, has listened to the counsel which urged him to look for his material in problems of the nation and the day. Sometimes the problem has been a specific one—our cities, our politics, our children, our women, our doctors, our social maladjustments. Just as often the problem has been of a general nature—the chanting of the gospel of optimism and of strenuous effort which we have been told by foreign observers is the keynote of American life. Even the novel of adventure, as, let us say, Mr. Jack London cultivates it, instead of being accepted for what it is—a good story intended to amuse—has been regarded as an interpretation of the spirit of America. But of problems and pleadings the public is sure to grow weary at regular intervals. There is a reassertion of the normal appetite, not for Life or interpretations of Life, but for living people.

Now it is in depicting people who are alive that most of these younger men among the British novelists are quite expert. Some of them sentimentalize too much, prettify too much, and indulge too much in gentle melancholies. The method of James M. Barrie requires careful handling. Nevertheless there is a certain consistency of character development that makes for the impression of reality. The same person does not very often with them run the entire scale from burlesque, through farce, comedy, drama, tragedy, and back through melodrama to farce again. They count not by individual paragraph hits, but by total effects. We may put it another way. These Britishers have the sense of form. And form, in spite of

what the revolutionaries will say, has always been of the essence of art.

GEORGE MOORE.

It is now about thirty-five years since George Moore, not content with the sole priestly auditor provided by his Church, abandoned the private confessional and began to pour along the town the secret flood of his ideas and emotions. How could he have done otherwise? Ireland taught his tongue not to cleave to the roof of his mouth; Roman Catholicism taught him to confess his sins; Jean Jacques, his Delphian Apollo, taught him to dulcify and ventilate them. He has held our attention by the subtle alternation of nakedness and filmy sophistication in his garb, by the dreamy femininity of his gesture, by the soft, almost unaccented rhythmical movement of his voice. In this alluring manner, always dulcet, always fluent, he has laid bare a soul compacted of nearly everything that is detestable to the mind of a plain citizen going about his business in the marketplace. He has confessed consuming egotism, quivering sensibility, fastidiousness, vanity, timidity coupled with calculating shamelessness, sensuality, a streak of feline cruelty, and absolute spiritual incontinence. Manet's portrait of him, the weird, wide-eyed face veiled under wispy hair, answers to his own unflattering self-portraiture: an elderly Irish satyr fluting among the reeds to a decadent Irish naiad, and, in the pauses of the fluting, mingling reminiscences of his adventures, artistic and amatory, with notes of the impressions made by the fading sunlight upon his soul. Mr. Moore, like the Ancient Mariner, has penance done and penance more will do. His latest volume of confessions is but the first of a trilogy at the conclusion of which he is to say farewell.*

Though this personality possesses a certain acrid *bouquet* of its own, it challenges our attention less by its uniqueness than by its representativeness. Clearly enough, he was cast—if anything so essentially fluid can be said to have been cast—in that temperamental mould which Rousseau idly intimated was broken up after his own creation. That temperament at work in contemporary art and morals, persisting unaltered under many manifestations, he represents with remarkable consistency and completeness. Purely intellectual initiative he has none. All his life he has lurked in the purlieus of schools and insinuated himself into movements, soliciting, like the barren Calpurnia, the fructifying touch of some fleet cleareyed runner. His literary *liaisons* have been as facile and as frequent as the infatuations of George Sand. He has succumbed in turn, not to enter into particulars, to three widely different movements; he has been wooed, won, and lost by æstheticism realism and the symbolism of the Irish Renaissance.

I.

The first step in the æsthetic novitiate is the preparation of the self for its own independent activity by detaching it from the complex organic network of domestic, social, racial, national, and religious relationships in which it has been placed by the irrelevant accident of birth. In the "Confessions of a Young Man" Mr. Moore dismissed in a page or two the Ireland of his childhood. The reason was obvious: it had nothing to do with the first phase of his literary career. From the day when he read the "Sensitive Plant" of Shelley "by the shores of a pale green Irish lake," he was destined to shake from his feet the dust of Ireland, he was devoted to art and letters, and dedicated to the continuation of Shelley's terrible mission—the emancipation of the human spirit.

An impressionable Irishman who had severed all natural ties could easily enough, in the 'seventies of the last century, have become a perfect æsthete in England. The spring had come slowly up that way, but at last it had definitely announced itself. Rossetti, having struck the note of intensity in painting and poetry, had gone on to the collection of blue china and Japanese bric-à-brac. In 1870 William Morris completed "The Earthly Paradise." Ruskin in the same year began to lecture on art at Oxford, teaching—to be sure, from his own high ethical standpoint—the pregnant doctrine that taste is morality. In 1873 Pater put forth his seductive studies in the art and poetry of the Renaissance, setting up the æsthetic ideal in Mona Lisa, committing to posterity the æsthetic testament in the famous Conclusion. Before the end of the decade Moore's fellow-countryman Wilde was delighting his circle, shocking the burgesses, and achieving notoriety by brilliant paradoxes and the hard gem-like beauties of strange verse. In ten years the æsthetic movement had run its swift course through beauty to intensity and thence to perverseness; and it had produced an effective school for the transformation of English youths into sunflowered Corinthian dandies.

Of this Oxford æstheticism Mr. Moore felt the influence in due season, but he somewhat anticipated its effects by crossing the Channel to France, and at once immersing his divested soul in the Lethe of an alien art. There he was gradually born again in the Ptolemaic world of the Latin Quarter, in the free society of the temporarily or permanently untied, in an atmosphere of smoke bounded by an horizon of canvas. There the deracinated Irishman assumed the language and the pleasures of the Parisian without assuming his responsibilities, lived in bachelor apartments surrounded with rare books, old furniture, and fantastic curios; rose at noon and retired at daybreak, and maintained a model and a python—the latter daily propitiated with guinea-pigs. Mistresses and pythons, cameos and sphinxes—these were the themes of his favorite poets and romancers, representatives of an older than the English æstheticism and potent contributors to it—Gautier and Baudelaire, Banville and Verlaine. In the unreal world of the studios which he haunted, Bohemian dreamers were painting dancing girls borrowed from the unreal world of the stage, Aphrodites rising from the sea, Harlequins and Columbines. In this little eccentric planet where the problems of good and evil resolved themselves into questions of green and gold, light and shadow, line and mass, pleasure and pain, Mr. Moore seems to have learned all the morality that he has ever practiced or advocated.

After a sojourn in Paris so long that he almost forgot the idiomatic use of English, he returned to England, an appetent and ambitious ego, in time to catch the æsthetic movement of the late 'seventies. In 1877, synchronizing with Oscar Wilde's arrival as a poet, he published his first book, of which the title, "Flowers of Passion," sufficiently indicates the character and the literary inspiration. He followed this up in 1881 with "Pagan Poems," and for several years to come diverted himself as journalist, critic, small poet, clever realistic novelist, and fop, rounding out his æsthetic period by the publication in 1888 of the "Confessions of a Young Man." As there was nothing novel in the processes by which Mr. Moore was turned out an æsthete, so there was nothing novel in the product. Listen, for example, to his Young Man unfolding the compact gospel of æsthetic egotism which France had received from Gautier in 1835 and from Baudelaire in 1857:

> What care I that some millions of wretched Israelites died under Pharaoh's lash or Egypt's sun? It was well that they died that I might have the pyramids to look on, or to fill a musing hour with wonderment.
>
> I am ashamed of nothing I have done, especially my sins, and I boldly confess that I then desired notoriety.
>
> Humanity is a pigsty, where liars, hypocrites, and the obscene in spirit congregate; it has been so since the great Jew conceived it, and it will be so till the end. Far better the blithe modern pagan in his white tie and evening clothes, and his facile philosophy. He says: "I don't care how the poor live; my only regret is that they live at all," and he gives the beggar a shilling.

In this year of grace these glowing Neronics no longer make us shudder;

Hail and Farewell: Ave. By George Moore. New York: D. Appleton & Co.

they are beginning to make us yawn. If anything is dead, the æsthetic movement that took shape in the 'seventies is dead. The sphinxes and the green carnations, the flowers of passion and the ballads in blue china, already associate themselves in memory with the stucco and stuffed birds of an elder decorative scheme. To burn always with a hard, gem-like flame before a masterpiece of the Italian Renaissance no longer epitomizes for the younger generation "success in life." Where are the æsthetes of yesteryear? Where are our Oscar Wildes and Ernest Dowsons and Aubrey Beardsleys? Where are the authors and illustrators of the "Yellow Book" and the "Savoy"? Early death made havoc in their ranks, Socialism distracted the younger generation, fresh pastures invited them. They have left the banks of their Dead Sea desolate. Somewhat in advance of the general exodus, Mr. Moore's prescient nostril perceived a fetid odor rising from the waters, and he took refuge among the realists, from whom, for our purposes, it is not essential to distinguish the naturalists.

II.

It may appear at first thought a far cry from feeding guinea-pigs to pythons, and indulging in Neronic musings on the Egyptian pyramids, to writing a realistic novel of life in the slums of London. As æsthete, Mr. Moore had declared in 1888 that he did not care how the poor lived. In 1894, as realistic novelist, he brought out "Esther Waters," the intimate life history of an illiterate servant-girl who in the course of her squalid existence spent some time in the poor-house. If the author's confessions did not belie the suggestion, we might infer that a great change had come over him. Knowing him as we do, we are not permitted to conjecture that his contempt for the lower classes has dissolved in compassion for the poor. We must seek for the point of view from which an English scullery maid can be made to yield artistic satisfaction equivalent to that formerly yielded by the perfumed lady of romance.

We may approach the question by remarking that this point of view had been discovered by several of Mr. Moore's masters in fiction—by Balzac, Maupassant, and, notably, Flaubert. That relentless lover of *le mot unique* occupies in French literature a position closely corresponding to that occupied by Mr. Moore in English; he is the link between the romanticists and the realists. Frenchman and Irishman were temperamentally akin: open the "Education Sentimentale," and through page after page you will feel as if you were in the presence of an earlier version of Mr. Moore's memoirs. Formed in the intensely æsthetic school of Hugo, Gautier, and Baudelaire, Flaubert, like the Young Man, held that the only virtue is perfection of form. Fundamentally engrossed in sex, he, too, craved refinement in the seduction of the senses—the intoxication of perfumes, the allurement of lace, religious veilings, Oriental coloring, barbaric splendors. Finally, he, too, abhorred and despised the Philistine and all his virtues. "Salammbô," "La Tentation de Saint Antoine," "Hérodias"—such are the works you would expect from a man of his romantic origins. Why, then, does this great romantic artist bend all his talents to the portrayal of the bourgeois life of Madame Bovary, depraved wife of a stupid country doctor? Why, then, does this despiser of the vulgar herd cause to be bound up in the same volume with "Hérodias" the tale of an ignorant, sensual, long-suffering servant-girl ("Un Cœur Simple"), obviously related to Esther Waters?

Upon this peculiar transition from romanticism to realism Mr. Moore throws a luminous beam in several passages of his works commenting upon an artistic innovation of Degas. To this original painter, a man of penetrating intellect, belongs, according to our author, the credit for discovering that the nude was becoming well-nigh incapable of artistic treatment. To him also belongs the credit for the discovery of a method for rehabilitating the nude. The formula is novelty through cynicism. Having asked the rhetorical question, "Who in sheer beauty has a new word to say?" Degas sent for a butcher's fat wife, and requested her to pose for him. Following the clue of ugliness, Degas escaped from the tedious palace of romantic art into a new world of vivid sensations. Mr. Moore's delight with the results he has reiterated in his latest volume, but let us see how he tastes the flavor of this new æstheticism in his "Impressions and Opinions" of 1891:

> These coarse women, middle-aged and deformed by toil, are perhaps the most wonderful. One sponges herself in a tin bath; another passes a rough nightdress over her lumpy shoulders, and the touching ugliness of this poor human creature goes straight to the heart. A woman who has stepped out of a bath examines her arm. Degas says, *La bête humaine qui s'occupe d'elle-même; une chatte qui se lêche.* Yes, it is the portrayal of the animal life of the human being, the animal conscious of nothing but itself.

How superbly these figures stand forth in the hard clear light of contempt! George Eliot digressed in a familiar passage in "Adam Bede" to protest against the exclusion from art of Dutch subjects—"old women scraping carrots with their work-worn hands, . . . rounded backs and stupid, weather-beaten faces that have bent over the spade and done the rough work of the world." But George Eliot did not find it necessary to strip her old women or peep at them through a keyhole; it was not their essential animality but their essential humanity that attracted her; and the kindly light which fills her pictures is that light of moral sympathy and love which irradiates the bowed head of Wordsworth's leech-gatherer. A man detached from his species like Mr. Moore defends the ugly in art on entirely different grounds. Æsthetically very piquant indeed! That, so far as he is concerned, is a sufficient justification of naturalism.

Mr. Moore has profited by the lessons of Degas. How he probed into the animal life of his laundress when he was writing "Esther Waters," he has related with gusto. How in that novel he opened the door upon the physical terrors of birth the reader may determine for himself. His æsthetic zest in the repellant he carries over into the sentimentalities of his memoirs, employing a dash of the disgusting as a *sauce piquante* to heighten the sweetness of his reveries.

The kinship with Degas extends below the surface. Mr. Moore's work is conceived in cynicism and contempt for humanity. All his characters are considered as essentially animals propelled by the instincts of reproduction and self-preservation. The desire to sing, to paint, to pray—all are but transitory phases of sexual emotion, an idea elaborately drawn out through "Evelyn Innes" and its sequel, "Sister Teresa." The notion of self-determination, of an intelligible destiny guiding man like a star to ideal ends—this is an illusion. We—that is, the artists and women with whom Mr. Moore is most familiar—can do nothing but what is predetermined by the blind push in the darkness below and behind us of that vital energy which we share with the beasts of the field. To surrender ourselves wholly to the current of our natural impulses, to relish the undirected streaming of our sensations, to ask not whither we are drifting—this is the whole duty of man. This is the philosophy of naturalism.

III.

In 1894, three years after the date which Lady Gregory regards as marking the definitive awakening of the Irish imagination, Mr. Moore still thought of Ireland as a wretched realm by him happily abandoned, where no one did anything "except bring turf from the bogs and say prayers." He was still writing realistic English novels, explaining Ingres and Manet to the British public, and enriching his midnights by the exchange of impressions and sensations with Mr. Arthur Symons in the Temple. He had begun, however, to hear with increasing interest rumors that a mysterious angel was troubling the waters of the pale green Irish lake. In Kiltartan Lady Gregory was collecting folklore and by humble hearthsides learning the quaint old songs of the peasants. In Dublin a pale, thin poet

was dreaming his way backward into the dim legendary days of Cuchullin and Diarmuid. One momentous night his fellow Templar, Edward Martyn, Roman Catholic, celibate, amateur in letters, hinted in his presence a desire for the ability to compose his plays in Irish. Piquant suggestion! As at the touch of an enchanted wand the closed cavern of Mr. Moore's youth opened, and through his consciousness drifted vague Irish memories faintly pungent like the smoke of a peat fire trailing over a low roof of thatch. Along his nerves he felt a premonitory tingling prophetic of a literary movement. He recalled an ancient saw of Turgenieff's, "Russia can do without any one of us, but none of us can do without Russia." What if he should go to Ireland and look into the matter?

Behold him now in Dublin with bosom bared to every wanton breeze, whiffing and sniffing the exciting air, and eagerly wooing to be wooed. A little chilled by the want of salvos greeting the return of the distinguished prodigal and literary elder brother, he duly casts a superior eye over the undertakings of the Celtic enthusiasts, inspects the theatre, revises plays, passes judgment on poems, and even delivers an occasional speech at a meeting of the Gaelic League. But something present in them or lacking in him prevented their working in perfect unity of spirit. Lady Gregory feared that he would break up the mould of Yeats's mind. He feared that Yeats would break up the mould of his. A suspicion on their side that he was not quite one of them and a tinge of jealousy on his side, reinforced by a conviction that they were "subalterns," widened the rift between them. The fact is that in their divers fashions they loved Ireland as their venerable mother. He, an international philanderer, despised Ireland, hoped that she would make love to him, tell him her secrets, "enwomb" his thoughts, and let him go. It were tedious to detail the long-drawn-out æsthetic coquetry which terminated in his final rupture with England and the formation of the Irish *liaison*.

Perhaps the most interesting fruits of this amour were the volume of sketches entitled "The Untilled Field" and the symbolistic novel called "The Lake." The first of these books is comparable in many ways with the justly celebrated work which seems to have inspired it, Turgenieff's "Memoirs of a Sportsman." The second is Mr. Moore's own very contemporaneous version of the unbinding of Prometheus—a piece of symbolism which summarizes whatever there has been of "Messianic" character in the author's career. The protagonist of this strange fiction is Father Oliver, a Roman Catholic priest, who dwells in a little cottage by a pale green Irish lake. He is fettered there by accident, custom, tradition; the vulture that consumes his liver is the ordinary routine of life. Through more than three hundred pages Father Oliver hovers about this lake, as vague, indeterminate, and purposeless as the mist that gathers and dissolves upon its bosom. At last an imperative instinct quickens in his blood like that which directs the mating and seasonal migrations of wild geese; he steals down to the bank, strips to the skin, hesitates for a moment, then plunges into the deep, swims to the other shore, and flees away. Thus the naturalistic philosophy of "Esther Waters," "Evelyn Innes," and "Sister Teresa" is "enwombed" in Ireland. Father Oliver is the spirit of man in modern times; he is the spirit of the Irish Renaissance; he is, in short, the perfectly emancipated spirit of George Moore.

IV.

We owe the same debt of attention to Mr. Moore that we should owe to a man who should push his boat into the river above Niagara Falls, ship his oars, and submit to the will of the waters; he would demonstrate the force and consequences of the current. Mr. Moore has shot the falls of naturalism. We were acquainted with its clear spring in the high mountain home, where Wordsworth, drinking, vowed himself "well pleased to recognize in nature and the language of the sense, the author of his purest thoughts, the nurse, the guide, the guardian of his heart, and soul of all his moral being." We had seen Wordsworth's pleasant faith in the concurrence of nature with the moral ends of man elaborately clothed in the fiction of George Meredith's "Richard Feverel," appearing ominously in the year of the publication of the "Origin of Species." We had seen in the work of Thomas Hardy the sweet pantheistic illusion give way to tragic insight into the actual relationship existing between nature and society. He, too, recognized in nature the power that moulds the characters and sways the destinies of men. But it was not clear to him that an impulse from a vernal wood would always send a Peter Bell to church or an errant father to his child; it seemed quite as likely that it would send a Jude to an Arabella or a Tess to an Alec. It appeared, in brief, to his vision that this blind power which moves through all things, though occasionally coincident with human law, urges men on to the fulfilment of its own tendencies, irrespective of the disasters which may consequently befall them in that social order established and regulated by reason and foresight. Because, however, he is fully aware of the resolute power perpetually conflicting with the incessant pressure of instinct, naturalism attains in him to tragedy. His grim symbol of the relationship between the impulse of nature and the morality of society is Tess of the D'Urbervilles swinging on the gallows. After Hardy, to speak of the concurrence of nature in the moral ends of man becomes impossible. We have reached the fork in the road; we must turn to the right with reason to guide us into the walled and steepled cities and the civil life of our kind, or turn to the left and trust to instinct. Mr. Moore turned to the left. In a few strides he passed beyond good and evil into that wilderness where birds and cantatrices sing, where wild creatures conceive and æsthetes confess, where every creeping thing brings forth its young, and the simple servant girl, having given to the world a natural son, lives happy ever after in the consciousness that she has accomplished that whereunto she was sent. In this Arcadian world there is neither comedy nor tragedy; for there is neither passion nor joy, conflict nor climax, reconciliation nor catastrophe: there are only the flush and fading of sensual excitement, the vicissitudes of wind and weather, the progress of the seasons, and the cyclic changes of birth and death. Mr. Moore is right in regarding his life as more significant than any of his works. When a man of great talent has made his mind a courtesan to nature, the only tragedy that he can write is his confession. When a man has shaken off all the bonds that united him with civil society, the only confession that he can make of significance to civil readers is that such emancipation is exile. What, then, does George Moore mean by telling us that beneath his frivolous mask is concealed a tragic actor?

A FOOT-NOTE OF 1779.

To the Editor of The Nation:

Sir: In editing a manuscript of 1779 recently, I found buried in a foot-note a constitutional opinion on the relation of the nation to the States at that interesting date that reminded me of other famous foot-notes. The late Charles R. Hildeburn, when editing the statutes-at-large of his State, one day showed me a page or so of foot-note with references giving the complete history of an important statute, and pointing to it with pride, exclaimed: "That is my masterpiece!" Another foot-note—the longest probably in existence—is acknowledged by every lawyer in the same State to be an undoubted masterpiece, namely, that on the history of land law in Pennsylvania in "Smith's Laws." Whether this constitutional foot-note of 1779 which came to light recently, was thought a masterpiece or not, either by its author, James Wilson, or by those for whom it was written, namely, the French Minister, M. Gérard, and the Government of France, can only be conjectured; but a foo -note that pro-

posed an amendment to the fundamental law of the United States at that date, in order to establish a consular system satisfactory to the French Government, whose Advocate-General Wilson then was, is certainly worth recording.

This particular foot-note was on a misplaced sheet, and passed for some legal opinion, because its first sentences argued for provision that commercial causes should be allowed an appeal to a court established by Congress, for cases between citizens of the United States and of other nations. But it might be asked why appeal could not be taken to the higher State courts. Thus follow his constitutional comments (italics are mine):

It may be likewise alleged that this is an encroachment upon the Sovereignty which each State has reserved to itself. This last objection is of a very delicate nature; and deserves to be seriously and maturely weighed. I shall, therefore, consider it with all the attention of which I am capable; and, if what I am to offer shall be thought insufficient to remove it, I am far from wishing that any steps should be taken to elude its Force.—It is true that, by the second Article of the Confederation, "each State retains its Sovereignty, Freedom, and Independence, and every Power, Jurisdiction, and Right, which is not by this Confederation, expressly delegated to the United States, in Congress assembled." It is also true that the only Courts which Congress are, by the Confederation, expressly empowered to appoint, are "Courts for the Trial of Piracies and Felonies committed on the high Seas, and for receiving and determining finally Appeals in all Cases of Captures." When we compare these two clauses together, it must be admitted that Congress have no express Power to give the Court of Appeals the Jurisdiction here proposed: And it must be further admitted that in interpreting Acts of such high Consequence and Solemnity, *it is dangerous to depart from the Letter, and introduce a construction according to the Spirit.* If, therefore, the Matter rested only on these two Clauses, the foregoing Objection would be insurmountable. But the Articles of Confederation themselves do not order the Door to remain absolutely shut against all Future Alterations and Improvements; tho', indeed, they direct Caution and judicious Reserve to be used in opening it. They conclude in this Manner: "The Articles of this Confederation shall be inviolably observed by every State, and the Union shall be perpetual; nor shall any Alteration at any Time hereafter be made in any of them; unless such Alteration be agreed to in a Congress of the United States, and be afterwards confirmed by the Legislatures of every State."—It is proposed that all this system concerning the Jurisdiction and Proceedings of Courts in foreign commercial Causes "should originate in Congress, and be recommended by that Body to the different States." This is precisely the Mode prescribed by the Articles of Confederation with Regard to "any Alteration at any Time hereafter to be made in any of them."

After thus showing that, if the States failed to adopt it, that ended the matter, the writer proceeds:

Though in considering the Question, whether this particular Regulation is already comprehended within the Powers delegated to Congress by the several States, *it would have been improper to depart from the Letter of the Articles of Confederation and interpret them according to their spirit;* it is highly proper to enter into such a deduction of this kind in order to shew that the Regulation is a fit object of an Alteration to be made in the Manner which those Articles prescribe. . . . In some Respects, the United States are consolidated into one political Body, of which Congress is the Agent and Representative. In other Respects, they remain separate, distinct and independent Republics. They are to be considered in the former Point of View in all their Engagements and Transactions and Connexions with other Powers. For between them and each particular State no channel of communication is permitted to be opened, without the Intervention of Congress.

He then shows that unless this power was given to Congress no foreign Government could get redress from either state or nation, if aggrieved, and the United States would be in an awkward condition to ask redress in its own cases. He argues the case at length from many points of view, ending this part of the argument with the following: "The foregoing Reflexions, I hope, will be sufficient to show, that while I argue for the Appeal to the Courts established by Congress, I argue in the spirit of the Articles of Confederation."

BURTON ALVA KONKLE.

Swarthmore, Pa., April 10.

AN OPINION OF ROOSEVELT FROM MANILA.

TO THE EDITOR OF THE NATION:

SIR: There are a vast number of sober-minded and honest American citizens whose conception of morality is limited to the equation of personal integrity. Men incapable of a shady business transaction, they, nevertheless, not only refuse to denounce Mr. Roosevelt's immoral theft of the Canal Zone as such, but rather extol it as the most moral, patriotic, and American act of his career! Worse yet, this body is largely recruited from the ranks of non-partisans in politics—to whom the words "patriotism" and "Americanism" appeal more forcibly than the words "Republican" or "Democrat." This body of voters added to the "Old Guard" makes a staggering combination. Now add to it the great multitude of the noisy, shouting "Teddy" group, and you have an aggregation that must overwhelm all opposition.

To be still moro pessimistic, let me aver there is still a very large minority of citizens of a high enough order of intelligence to be independent in politics, and who flatly refuse to concede that patriotism, Americanism, and gross national dishonesty are coördinate terms, and who will not only refuse to support the chief exponent of dishonesty and hypocrisy, but who, realizing the hopelessness of their minority, will, in sheer disgust, keep from the polls and still largely enhance his triumph.

Manila, P. I., February 28.

"WHITE."

TO THE EDITOR OF THE NATION:

SIR: In the absence of full information for which we must wait until the New English Dictionary reaches the letter *w*, permit me to remind "Guilmensian" (*Nation*, April 4) that *white* was a common term of endearment or affection in the time of Queen Elizabeth and King James. Several instances are noted by the late Churton Collins, in "The Plays and Poems of Robert Greene," Vol I, p. 299. Collins repeats from Warton, "History of English Poetry," IV, 394, that Dr. Busby of Winchester "used to call his favorite scholars his 'white boys.'" Our *white*, as an epithet of commendation, is apparently derived from this seventeenth century usage. An earlier stage may be seen in *white* in the sense of *beautiful* in Layamon's "Brut," about 1205, lines 31,086-7:

nis nan feirure [fairer] wifmon
tha whit sunne scineth on.

"THE BEGGARS' AND VAGRANTS' LITANY."

TO THE EDITOR OF THE NATION:

SIR: This is the Beggars' Litany (as given in Carter's "History of English Legal Institutions," 3d ed., p. 289, note):

At Hallifax, the Law so sharpe doth deale,
That whoso more than thirteen pence doth steale;
They have a Thynge that wondrous, quicke and well
Sends Thieves all headlesse unto Heav'n or Hell.

Further details are in Encyclopædia Britannica, 9th ed., XI, 344, under Halifax, and in all the books on Yorkshire I have seen, *e. g.*, Roth's "Yorkshire Coiners," pp. 192-206, and Fletcher's "Book about Yorkshire," p. 295.

Boston, April 13.

DOUBTFUL POEMS OF MEREDITH.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* for March 28 it is pointed out by Mr. L. S. Livingston, in "News for Bibliophiles," that Mr. Esdaile's "Chronological List" of Meredith's works (in the Memorial edition) does not include a "private reprint, 'Twenty Poems of George Meredith,' being a collection of pieces contributed by him to *Household Words* between 1850 and 1856, issued in an edition of twenty-five copies only, in 1909." "The authenticity of these poems," writes Mr. Livingston, "is proved by the office record of the magazine. Two other poems published in the same magazine in 1850 were, with some alterations, reprinted by Meredith himself in his first volume, published the next year, 1851." I have not seen the volume mentioned by Mr. Livingston; but I presume the poems included to be twenty of the twenty-three poems listed by B. W. Matz (in *T. P.'s Weekly*, February 17, 1911) as poems ascribed to George Meredith in the contributors' book of *Household Words*. If this is so, it should be noted that Mr. W. M. Meredith (in the London *Times* weekly edition, February 24, 1911) denies that his father is the author of any of these poems except the three printed as Meredith's in authorized editions of his works (*i. e.*, the two referred to by Mr. Livingston, "Sorrows and Joys" and "The Two Blackbirds," first reprinted in the 1851 "Poems"; and "Monmouth," first reprinted in the final volume of the Memorial edition). "During my father's lifetime," writes Mr. Meredith, "Mr. Matz brought these poems . . . to his notice and was informed that with certain exceptions [*i. e.*, the three poems mentioned] the poems attributed to him by Mr. Matz on the authority of the ledger were not written by him." The *Times* prints also Mr. Matz's reply, in which, however, no proof is given that the poems were written by George Meredith. In the case of the poems entitled "New Year's Eve," "The Congress of Nations," and "The Linnet Hawker," Mr. Matz shows, the author's name is entered as "Meredith," and the post

office order indicates the places at which Meredith was residing with his wife. But in the absence of anything more demonstrative than this, are we not bound to accept Mr. Meredith's explanation that the poems were written by George Meredith's wife? Apart from Mr. Meredith's assurance, the character of the poems, as far as indicated by Mr. Matz's quotations, would make this probable. "Meredith" was not in those years a name specially appropriated to a particular poet. It was doubtless with these facts in mind that the publishers of the Memorial edition did not include the twenty poems in question, and that Mr. Esdaile (if indeed he knew of its existence) did not include in his list the volume in which they were reprinted. Students of Meredith, however, should find this volume of the greatest interest for what light it may throw on the talented daughter of Peacock and first wife of Meredith. Anything that serves to elucidate her character serves to illustrate a somewhat obscure passage in the life of Meredith. In bringing to light these poems of Mrs. Meredith, Mr. Matz has perhaps made as valuable a discovery as if they had proved to be by Meredith himself.

SOURCES OF GREEK RELIGION.

Greece and Babylon: A Comparative Sketch of Mesopotamian, Anatolian, and Hellenic Religions. By Lewis R. Farnell, Fellow of Exeter College, Oxford. New York: Chas. Scribner's Sons. $3 net.

Though the impulse to the modern historical study of religions was given by an Oxford man (F. Max Müller, in his lectures on the "Science of Religion," 1870), and English writers like Tylor, Robertson Smith, and Frazer have laid the foundations of the new science, English universities have hitherto not given it official recognition. University chairs of general religious history were established in Holland in 1876 and in France in 1880, and their example has been followed to some extent in this country and in Japan. The endowment of Dr. Henry Wilde has now given Oxford University a lectureship in "natural and comparative religion," and the choice of the first Wilde lecturer has happily fallen on a scholar whose distinguished services to the history of Greek religion are recognized everywhere. Dr. Wilde's wish limits the investigation of this lectureship to the ideas and forms of the more advanced religions; it is to be hoped that its field will be widened so as to embrace the lower cults.

Dr. Farnell has chosen as the theme of his first course (his term of service extends over three years) the religious influence of the East on the West; in the East he includes Babylonia, Assyria, and Asia Minor (the Hittite and Phrygian cults), and in the West the Greek and the Ægean or Minoan-Mycenæan, thus for the first time embracing in a general view all the great ancient systems that constituted the world of the Euphrates and the Eastern Mediterranean. He omits India, Persia, and Egypt, probably as being more remotely connected with this early world, though the Ægean seems to have been affected by the Egyptian. As his purpose is to discover what is indigenous in the several regions, he confines his inquiry to the second millennium B. C.—in the later period, especially in the Græco-Roman time, the interchanges of ideas and usages between East and West were numerous and important. And, as our knowledge of the Hittite and Ægean religions, notwithstanding recent explorations, is as yet far from satisfactory, his comparison deals largely with Babylonia and Greece. He subjects current opinions as to supposed loans on one side or the other to a critical examination, illumined by wide and exact learning, and conducted with admirable impartiality and sanity.

For borrowing social contact is necessary, and in the present case, as is remarked above, the comparison is confined to the earliest known period, in which intimate association is in general not proved. Farnell mentions various resemblances in the Eastern and Western cults that do not suggest influence in either direction. In both regions there are well-formed anthropomorphic deities (as also in Asia Minor and the Ægean), but such figures abound everywhere (even, it might be added, in savage cults). The similarity between the cults of the East and the West extends to "nature deities," deities, that is, whose physical relations are obvious. Such divine figures arise naturally in various parts of the world, and there is, therefore, no need to suppose that a Hittite or a Hebrew or a Greek storm-god was derived from Babylonia. But the particular phenomena divinized are determined by climatic and meteorological conditions; thus, Farnell calls attention to the fact that astral gods, prominent in Mesopotamia, were of little importance in Greece—Helios was not so great a god as Shamash—while, on the other hand, Earth played a great rôle in Greece, but had no cult in Babylonia.

These early deities, Farnell further notes, are in general of a kindly disposition, subject, indeed, to fits of anger; but also inclined to be merciful. The close relation between the king and the god is a natural and common fact. The general morality, whether of the family or international, was about the same in the East and the West. Certain cultic features are common to the two regions, such as sacred stones and pillars, idols, temples, priests, and bloody and unbloody sacrifices. Such instances of resemblance call for no remark. A point of special interest is the much-discussed figure of the "virgin-mother." The term is not appropriate—there are virgin-goddesses and mother-goddesses, but, though savage thought is familiar with the idea of birth without the union of the sexes, neither in Babylonian nor in Greek mythology is there an example of such birth except in the late story of Athene issuing from the cleft head of Zeus. The phrase seems to have been suggested by the fact that certain deities, such as Artemis and Ishtar, are called sometimes virgin and sometimes mother. Farnell gives the right interpretation: Ishtar, as patroness of fertility, was at one time thought of, like Kore, as a maid; but having become a great goddess, she was regarded as the producer of all things and, as such, received the affectionate title of "mother." A similar explanation holds in the case of Artemis; in neither case is there ground for supposing influences of East on West or of West on East. Farnell follows Evans in holding that Aphrodite came to Greece not from the Semitic East, but from the great early Ægean cult. It is true that no Greek or Semitic explanation of her name has been discovered, and that already in the Iliad (possibly before there was social intercourse between Babylonia and Greece) she is one of the Olympians; but the solution of the question of her origin must await further information about the cults involved. Probably, however, we must agree with our author in his view that the Babylonian Tammuz did not come to Greece in pre-Homeric days. The mourning for Tammuz in Babylon was an official temple lamentation over the disappearance of vegetation. Orgiastic mourning was a product of Phrygia or of a pre-Phrygian Asia Minor population, not derived from Mesopotamia, and the old Hellenic agrarian cults of Linos and other such figures may well have been independent of the East. Farnell seeks to find in Ægean religion hints of the death and resurrection of a god, but the evidence is meagre.

Thus, of a vast Babylonian influence on Greece in early times our author finds no proof, and, on the other hand, he points out many differences between the two cults, of which only the most striking can be mentioned here. The Babylonian mythology, he notes, is purer than the Greek—it contains no such gross details as disfigure the latter. It is to be observed, however, that, with the exception of a couple of episodes in the Gilgamesh poems, we have records only of the formal official worship in Mesopotamia, and the old Greek official temple worship also appears to have been solemn and dignified; all through religious history popular ceremonies and stories have fallen below the level of worship proper. Still, it is true that the

Semites had the minimum of mythology —their deities stood socially aloof from men, and did not have human adventures. A deeper-lying difference between the two communities, on which Farnell lays stress, is that of temperament. Babylonia was more ecstatic and sentimental, its liturgy was sorrowful (having confession, and lamentation for sins), its attitude towards the deity was one of humility and fear (so in the hymns to the gods and the penitential psalms). Greece was freer in bearing, its gods were companions, its liturgy was cheerful. It is in accordance with this difference that the Babylonians, so far as appears, had no family worship and no mysteries such as are found in Greece. Magic was dominant in Babylonia—the Babylonians, says Farnell, lived in an atmosphere of magic, surrounded by hosts of daimonic powers, against which exorcisms had to be employed and taboos to be observed; the Greeks were comparatively free from this obsession. Sacrifice was more highly elaborated in Greece; it seems to be true, as our author remarks, that the conception of communion with the deity in sacrifice is not found in Babylonia. So far as the eschatological ideas of the two regions are concerned, there is not much to choose between them; but Greece had a somewhat less gloomy hades, with perhaps a germinal conception of retribution after death. The position of women in the old Mesopotamian temple ritual is discussed at length by Farnell, who distinguishes three classes of women: the "votaries" of the Hammurabi code, highly respected ministrants in the temples; courtesans such as appear in the Gilgamesh epic; and the women who come under the provision described by Herodotus, that every Babylonian woman, before she could be married, had to sit in the court of the temple of Mylitta and give herself to the first stranger who cast a piece of money into her lap. For the proposed explanations of this curious custom, in which the "stranger" makes a great difficulty for recent writers, the reader must be referred to Farnell's discussion, which, if not wholly satisfactory, will at least set forth the problems to be solved.

It is regrettable that this volume, admirable in method and spirit, and abounding in instructive remarks in addition to the points mentioned above, should be marred by inaccurate proofreading, mainly in the spelling of proper names.

CURRENT FICTION.

Vistas of New York. By Brander Matthews. New York: Harper & Bros.

A dozen impressions, sketches, and stories have gone to the making of a companion volume to the "Vignettes of Manhattan" and "Outlines in Local Color," in which Professor Matthews has before this attempted to catch the fugitive aspects of Babylon. The earliest of the selections in the present volume was written more than twenty-five years ago, and the latest are dated 1910. To each chapter the author has affixed the year of its origin, in order that the reader may judge for himself whether the picture squares with the original. It was rather needless labor. The reader would have been willing to take it on faith that "bob-tail" cars traversed New York and that ladies in leg-of-mutton sleeves rode on bicycles as the story describes them. What he misses is the higher realities, that touch of soul or manners that distinguished the New York of Cleveland's first Administration from the city of to-day, and more than that, the touch that distinguishes New York from any other large city. Take away proper names like Central Park and Madison Square and it nearly all could have happened elsewhere, with the exception of those stories that could have happened nowhere. In arranging his material Professor Matthews made no attempt to put his best foot forward. He begins with a succession of quite amateurish and colorless little tales, and only midway in the book do we find the two best things in it, "In a Hansom," which does suggest the *morale* of Manhattan even as it unwinds its panorama in the course of a drive down the length of Fifth Avenue; and "The Frog that Played the Trombone," which would have been a good story even in Philadelphia. "In the Small Hours" is an effective little study in the psychology of sleeplessness. On the other hand, there is an elaborate attempt at grisly humor in "On an Errand of Mercy," which fails in reaching the mark.

The Heart of Life. From the French of Pierre de Coulevain. By Alys Hallard. New York: E. P. Dutton & Co.

The brilliant Frenchwoman who writes under the pseudonym of "Pierre de Coulevain" has produced here a pleasantly nondescript volume made up of extracts from the diary of a novelist who is incapable of writing a diary without producing a novel. It is divided into six parts labelled "Baden," "St. Gervais," "Lausanne," and so forth.

The reflections and events chronicled are supposed to be the fruit of a sort of leisurely pilgrimage in search of rest, undertaken by the author on the conclusion of her book about England, "The Unknown Isle." She begins with a feeling of relief at the completion of a difficult task, and a general intention to amuse herself by writing a book to be called "The Heart of Life." The title had caught her fancy, and she had a conviction (justified by the event) that she should be able to write a book to fit the title. Among her friends was a young Parisian *divorcée*, Maïa Lasserre. She is a modern, young, full of revolt against the tyranny of man, and disenchanted by her own experience of marriage. As we presently discover, the Count de Couzan, from whom she has withdrawn herself (without scandal) is as charming a young person, and as irreproachable outside of matrimony, as she herself. From the outset it is the perfectly clear intention of the author to bring these two young people together again; and her pages have so far the air of fiction that it does not occur to the reader that she may fail in that amiable task. She does not; but before the misguided ones are restored to each other, they must be educated; and Pierre de Coulevain is perfectly ready to undertake the part of tutor. She gives them, by turns, certain "little lessons in Natural History," couched in terms of an appalling frankness, from the Anglo-American point of view. The upshot of it is that the root of the misunderstanding between the pair has been due to the total ignorance of "what life expects of them" with which the girl has been allowed to enter the married state.

In a sense the book is a plea for the rational preparation of girl or boy for the most important relation in life. The theory is more familiar to the English or American parent than to the French; but it is doubtful if our practice greatly differs from theirs. Apart from its element of tractarian romance, and apart from the vivacious and sweet-tempered charm of its style (perceptible through the medium of a not particularly happy translation), the book contains, or embodies, a sort of confession of faith: that nothing can be discovered by itself. "Here below, and everywhere throughout the universe, everything is linked together, everything holds together"—a creed more remarkable for the spirit and grace with which it is here enforced and illustrated, than for its novelty.

The Breaking Point. By Fred Lewis Pattee. Boston: Small, Maynard & Co.

Throwing a good parson at a bad woman sums up well enough the author's purpose in this story. The parson saw her for the first time just after midweek prayer-meeting, when she was about to fling herself under the wheels of a street-car. Coming out opportunely, he saved her life, and being young and ardent, must not stop at that. Presently he had a whole respectable church buzzing about his ears—and it appears that Mr. Pattee's opinion of respectable churches and their respectable pillars is not as high as it might be. At all events, some very ugly things are done and a sad state of morals is suggested in that prosperous New England town (not remote from Boston). There are some not uninteresting episodes, some glimpses of church meetings taken

from life, and some samples of restaurant life after 10 P. M. which lack verisimilitude. The final curtain falls on a sad, lonely saint in a Salvation Army uniform in the place of the fair and reckless creature who made all the trouble.

A Local Colorist. By Annie Trumbull Slosson. New York: Charles Scribner's Sons.

For the first of her four stories Mrs. Slosson has a rather ingenious idea. A would-be story writer searches for dialect and local color, persuaded by a friend that therein lies her best chance of success. Being of Franconia, she is herself addicted to what she calls "dialections," not knowing that she is the seeker and the sought—not even when another dialect story writer in search of material hangs upon her words. There is a bad hour for her when she abandons her ambitions because she is persuaded of the indelicacy of setting down the peculiarities of one's fellowmen; but her unconsciousness of the fact that other authors are less scrupulous saves her from irretrievable hurt. The consideration of dialect as "the other person's language" has meantime been cleverly presented in the author's familiarly humorous strain. The tourist nature student receives attention in another story, with a kindly laugh at his or her "observatory ways." Preternatural manifestations are dealt with in the remaining two, of which the better is the one that describes the return of "A Dissatisfied Soul" from purgatorial regions. The prophecies of "A Prophetic Romancer" are remarkable, but lack even the pretence of explanation necessary to illusion.

LETTER-BOOKS OF LONDON.

Calendar of Letter-Books, City of London. Letter-Book K. Temp. Henry VI. Edited by Reginald R. Sharpe. London: Guildhall.

Dr. Sharpe, Records Clerk in the office of the Town Clerk of the City of London, has here continued his excellent series of Calendars of Letter-Books preserved among the archives of the Guildhall. The original volumes, which date from 1275 and extend in a double lettered series to 1688, are of special importance to the year 1416, when the Journals of the Common Council begin. But as the latter record the proceedings both of Common Council and Court of Aldermen very roughly to 1495, at which date the proceedings of the last-named court were first entered in a separate set of volumes known as "Repertories," it has been deemed best to continue the Calendars of Letter-Books through the fifteenth century.

Letter-Book K embraces the period from 1422 to 1461. It presents a valuable record of the history of the city during these years and shows how important a place the city held in the affairs of the kingdom and how often the highest authorities, both in church and state, looked to it not only for financial help, but for moral help, too. Kings, regents, bishops, and cardinals sought its support, as did even cities in France. For the internal life of the city the record is lively and interesting. It discloses the relations of the corporation with the city churches, and its attitude towards freemen, aliens, apprentices, and bondmen. It shows also that the reign of Henry VI was remarkable for the advancement of the trade and craft guilds, many of which obtained charters of incorporation for the first time, while others had their privileges confirmed or amplified. It deals with some very modern questions, such as the relations between masters and servants, the latter of whom were setting up for themselves, establishing a brotherhood or revelling hall and a livery, and organizing to thwart the masters on every possible occasion. Dr. Sharpe remarks that these and similar attempts of the servants or journeymen of a craft "to break away from authority and to combine together for their own ends, regardless of the welfare of the community at large, find a parallel in the actions of trade unions at the present day."

Important among the entries are the records of benefactions, particularly those of Richard Whittington, carried out by his executors after his death. Whittington's estate provided for the erection of the Guildhall and the establishment of its library. One alderman paid for laying pipes to convey water from Paddington, first to Tyburn and then to Charing Cross; another erected, at his own expense, a granary for the storage of wheat against times of scarcity. A precedent for a current political issue may be found in the request of the King that a favorite mayor might be elected for a third term. As such an election was contrary to the ordinances of the city, the Council decided against the royal plea.

Sixty Years: Life and Adventure in the Far East. By John Dill Ross. New York: E. P. Dutton & Co. $7 net.

These two volumes are devoted to the biography of John Dillon Northwood and his son, the elder man being noteworthy as the pioneer of British commerce on regular lines from Singapore to the Borneo ports north of Sarawak. They are written with a keen sense of humor, and with clever delineation of even the minor characters. But the chief value of the work is the sidelight it casts upon European life and politics in the Far East. It is a matter of ceaseless wonder, not that British interests are unable to compete with German, but that they can exist at all, so slack is English business administration and so easy-going are the administrators. Nothing but stupidity and insularity forced young Northwood, after his father's death, to sell to a German firm his steamship line from Singapore to Labuan. German merchants in the Orient may not compare with the English in firm moral principles, but they adapt themselves—at least externally—far more readily to local situations, and they work unremittingly while the Englishman indulges in sports and otherwise plays the gentleman of leisure, both unwilling and unable to lay aside the traditions of his native island.

Mr. Ross (or Northwood, jr., for the two are so blended in the biography that it is impossible to distinguish the opinions of the one from those of the other) is strongly convinced of the "yellow peril," and thinks the prophecy of the drunken Kada, that "the day was coming when the despised Yellow-skins would hurl the arrogant white man into the depths of defeat and ruin," will not lack fulfilment if Japan can accomplish it. He deems the Japanese, though extremely able and brave, as a nation "cruel, vindictive, unscrupulous, and licentious, dominated by insatiable ambitions and by a pride intolerable to men of other nations"; he believes "it might have been better for the future peace of the world if Russia had not been hurried into signing the Peace of Portsmouth by the internal condition of the empire." He is also strongly opposed to what he calls the "general education" mania current in our day—the promotion of universal sciolism and the metamorphosis of decent Orientals into half-baked Babu imitations of white men, and as a contrast with that system praises the Dutch colonial administration: "They do not force an elaborate system of education on millions of natives who are not ripe for it, and then stand around in pious astonishment when discontent and sedition reward the sowers of some particularly wild oats."

He is more sympathetic in his account of the work of the Roman Catholic missionaries in Annam, not only in matters specifically religious, but also in their efforts to raise the industrial status of the Annamese, as in paddy-planting and in the cultivation and manufacture of silk. Possibly it was no idle boast of Père Dulac that "the republicans of to-day may not like to admit that France owes the possession of Indo-China and Annam solely and entirely to the efforts of the Church, but that does not in any way alter the facts of the case." The touching gratitude of the French Republic, as voiced by the Annamese collector, is that "every white missionary without excep-

tion should be expelled from Indo-China."

Other Sheep: A Missionary Companion to "Twice-Born Men." By Harold Begbie. New York: George H. Doran Co. $1.25.

It will be recalled that in "Twice-Born Men" Mr. Begbie attempted to prove by detailed reports of a series of remarkable cases that character may be instantly changed by the experience of conversion. The sub-title of "Other Sheep" is slightly misleading; the book contains several stories of wonderful conversions, but primarily it is a discussion of the general problem of Christianity in India, with special reference to the work of the Salvation Army. It shows traces of hasty composition; it is not always coherent; but it draws an exceedingly interesting picture of the religious condition of India, based largely on first-hand observation.

Mr. Begbie first describes the extraordinary man under whose guidance he saw India, and who is his chief authority—"Fakir Singh," the English ex-official who is at the head of the Indian branch of the Salvation Army. He then attempts to show by an exposition of Hindu character and religion that what India needs above everything else is Christianity. So far, he thinks, the most important results of missionary labor have been indirect. "Christianity has given India the sense of human brotherhood and the idea of social ethics . . . has begun to moralize Hinduism." Its direct results would be far greater than they are, but for three fundamental mistakes. The first is the rivalry between various denominations; the second, the fact that too much emphasis has been laid on the ritualistic side of Christianity. "A Christianity which is priestly in character and which savors in the least degree of magic cannot look for the conversion of India, where an immemorial priesthood and a thorough and explicit magic are masters of the situation." The third blunder, and the one on which Mr. Begbie lays most emphasis, is the attempt to teach too much theology. "To go as a theologian to these hungering and thirsting millions and to dogmatize about the origin of evil and the nature of Christ is but to anger and confuse them." The great merit of the Salvation Army is that it has presented Christianity free from theology and ritualism, as the simple religion of peace and joy—as the religion of optimism, in contrast with Hindu pessimism and terror of the gods.

At Benares the sights of the holy city caused Mr. Begbie to experience a curious reaction against religion in general. "Wherever Faith is ascendant over Reason," he writes, "humanity is degraded to the brute level." Yet earlier in the book he asks us to believe such stories as that of the devil-dancer who had been "sexually vile and dreadful," who had committed "excesses of indescribable horror," and yet who, after an instantaneous conversion, became not only "clean in all his habits," but "pure even in the thoughts of his heart." Inconsistent as the book is, however, it is always interesting and thought-provoking. And it contains a good many shrewd observations, such as this:

> Perhaps few people realize, from the Tory who violently supports it to the Socialist who as violently defames it, how far the Government of India has gone along the road of . . . Socialism. . . . The home Conservative defends in India what he would die to oppose in England, and the Socialist attacks in India what he so eloquently demands for England.

Colonial Society of Massachusetts Publications. Volume XIII: Transactions 1910-1911. Boston: The Society.

The Colonial Society of Massachusetts has printed, as the most important contribution of its thirteenth volume of transactions, the letters of Dennys de Berdt, agent in London of the Massachusetts House of Representatives from November, 1765, to his death in April, 1770. The letters were found a year or more ago among some old papers in the garret of a house at Great Neck, New York, copied into an ordinary quarto blank-book containing 134 pages. The history of the book is unknown. This discovery arouses the hope that other similar material may be in existence, for papers relating to the activities of the colonial agents in London are among the rarest of colonial documents.

De Berdt's name is less familiar than are those of other of Massachusetts' agents, William Bollan and Israel Mauduit, for example; but his service to the colony during a very exacting period was considerable. He received a piece of plate from the Delaware Assembly, whose agent also he was, "in grateful memory of his faithful services executed successfully" in obtaining the repeal of the Stamp Act. The Massachusetts body passed a vote of thanks and made in his behalf and for the same reason an appropriation which, as events proved, he was very slow in receiving. The chief value of the letters lies in the light which they throw upon statesmen and parties in England, and on the deliberations of the Massachusetts leaders, to whom de Berdt gave good advice. He was on the spot and wrote at times with "a friendly freedom," as he himself expressed it, though his letters are badly spelled and display as supreme a contempt for the King's English as did the actions of Massachusetts for the King's authority.

The remaining papers in the volume are of all sorts, one at least, that of Professor Kittredge on "George Shirk, Minister," being of very real value, as showing many curious details of clerical life in the struggling colony of Bermuda. It is heartily to be wished that local societies would see their way more often to the printing of matter of general interest, for some of the transactions here presented to the public seem unduly limited both in scope and importance. The announcement made by the society that money has been given for the printing of the second volume, which is to contain the royal commissions of the Massachusetts Governors and has been long delayed, is welcome, but we think that the commissions alone, without the royal instructions, will be very repetitious and of relatively little value.

Notes

An edition of the "Poetical Works of William Drummond of Hawthornden" is announced by the University Press of Manchester University. Prof. L. G. Kastner is the editor.

In "Sociological Study of the Bible," a book promised by the University of Chicago Press, Louis Wallis attempts to show how the religion of the Bible developed out of a lower form of religion.

"The Plunderer," a novel by Roy Norton, will be brought out soon by W. J. Watt & Co.

Houghton Mifflin Co. will have ready on April 27: "High Bradford," a picture of the life of an old Cape Cod seaport village fifty years ago, by Mary Rogers Bangs; "The Contest for California in 1861," by Elijah R. Kennedy, and "Kant and Spencer," by Borden Parker Bowne. The same house will bring out in the autumn the essays which John Burroughs has written during the past year.

William Rickey & Co. have in their list for early publication: "The Book of Parties and Pastimes," by Mary Dawson and Emma P. Telford; and "Downward," by Maud Churton Braby.

"A Shopping Guide to Paris and London," by Frances B. S. Waxman, is an item in McBride, Nast & Co.'s list.

Banking and the currency question in their latest aspects, discussed from American points of view, form the subject of a book, entitled "Banking Reform," which the National Citizens' League announces for immediate publication. It has been written by a group of specialists chosen by Prof. J. Laurence Laughlin of the University of Chicago, who is its editor.

Among the books which Small, Maynard & Co. will issue shortly are: "Tripoli the Mysterious," by Mabel Loomis Todd; "The Sonnets and Ballate of Guido Cavalcanti," rendered into English verse by Ezra Pound; "A Woman's Winter in South America," by Charlotte Cameron; "The Last Episode of the French Revolution," by E. Belfort Bax; "Unquenched Fire," a novel by Alice Gerstenberg; "Toby, a Novel of Kentucky," by Credo Harris; "Georgette,"

a novel by Marion Hill; "The Mysterious Card," by Cleveland Moffett; and "The Ten-Thousand-Dollar Arm," a collection of base-ball stories by Charles E. Van Loan.

Announcement has been made at the University of Chicago of a new system of retiring allowances for professors or their widows. A fund of $2,500,000 taken from the $10,000,000 Rockefeller gift of 1910 has been set aside for this purpose. This pension system will grant to men who have attained the rank of assistant professor or higher, and who have reached the age of sixty-five and have served fifteen years or more in the institution, 40 per cent. of their salary and an additional 2 per cent. for each year's service above fifteen. The plan also provides that at the age of seventy a man shall he retired unless the Board of Trustees specially continues his services. The widow of any professor entitled to the retiring allowance shall receive one-half the amount due him provided she has heen his wife for ten years.

The Annual Index to the London *Times* for 1911, which has just been received, is a large octavo volume of 1,831 pages, an increase of 332 above the previous year and 940 ahove the first issue in 1906.

The London *Daily Telegraph*, which took the matter in charge, announces that the grand total raised for the five granddaughters of Charles Dickens is £9,419 7s., and that of this amount £2,768 came from America.

The Bihliothek der Amerikanischen Kulturgeschichte, edited hy President Butler and Professor Paszkowski, is regularly imported by Lemcke & Buechner of this city. Three volumes have already appeared, as was stated in the *Nation* of March 28. The "Amerikanische Literatur," hy C. Alphonso Smith, contains the lectures given by Professor Smith in German at the University of Berlin in 1910-11.

There is a facetious, slap-dash manner about Hester E. Hosford's "Woodrow Wilson and New Jersey Made Over" (Putnam) that detracts seriously from the interest of the volume. The hook is a compound of history, hiography, and campaign document, and contains much that is not only informing, but dramatic. It reeks, however, with hero-worship, which finds expression in such language as this: "And just take notice that Woodrow Wilson has never heen jumped off the checker-board as he was ahout to enter the king-row. The psychological moment meets him more than half-way, and when Opportunity knocks at his door he is up and dressed." The Governor is quoted copiously, in hoth formal and informal utterances. A simple narrative, with these to give it illustration and point, would have been a far hetter method of treatment, and a surer means of producing the impression that the author desires.

In the educational history of the South since the Civil War, no name occupies a higher place than that of Dr. J. L. M. Curry; and the "Biography" which President Edwin A. Alderman and A. C. Gordon have prepared (Macmillan) will doubtless find a cordial welcome. Dr. Curry was a distinguished representative of the Southern leaders who, accepting to the full the results of the war, set themselves to the task of reconstructing Southern society on the hasis of the new conditions. Always deeply interested in politics, and with proved capacity as legislator and leader, Dr. Curry nevertheless chose education for his particular field; and the recent extraordinary progress of the Southern States in puhlic education, for both whites and negroes, is due to him more than to any other one man. As professor in Richmond College, agent of the Peahody and Slater Funds, memher of the Conference for Education in the South, and trustee of the General Education Board, he spoke and wrote with power, tact, and ceaseless energy on hehalf of increased appropriations for schools, longer school terms, better teachers, and industrial training; while his wide popularity as a preacher, both within and without the Baptist denomination, naturally strengthened his influence as an educator. For his advocacy, with many others, of the Blair Education bill, the *Nation* at the time expressed its entire disapproval; hut his strongest opponents did not question his sincerity or frankness, or minimize the ahility with which he pleaded his cause. He was an acceptable Minister to Spain, where his formal hut gracious manners counted much in his favor; and he found time for some worthy historical writing. The "Biography" is essentially annalistic in form, and friendly rather than critical. We note two curious misspellings—"Frizell" (page 337) and "Frizzell" (page 357)—of the name of President Frissell of Hampton Institute.

Another volume of the Centenary Edition of the writings and addresses of Theodore Parker is entitled "Saint Bernard and Other Papers" (American Unitarian Association). "My ministry," said Parker, "deals chiefly with the laws of God, little with the statutes of men. My manhood has heen passed mainly in studying absolute, universal truth, teaching it to men, and applying it to the various departments of life." It is in Parker's political utterances, nevertheless, and especially in his passionate orations on the slavery question, that the present generation takes most interest. His essay on Ralph Cudworth, the Cambridge Platonist, is discriminating, sympathetic, and distinguished hy keen analysis, which may also be said of the sketch of Bernard of Clairvaux, but the full power of the man and his contribution to American life are exhibited rather in such addresses as "The Effect of Slavery on the American People." This oration and the sermon preached in 1856 entitled "A New Lesson for the Day," will be primary documents for understanding political thought in that period when we are a little farther removed from it. One of the most interesting chapters of the present volumes is an article by F. B. Sanborn on Parker in the John Brown campaign. It demonstrates that the clergyman was entirely familiar with Brown's plans which culminated at Harper's Ferry, assisted by counsel in their preparation, contributed several hundred dollars towards the equipment of the expedition, and expected great benefit from it to the anti-slavery cause.

Of stories of bad hoys, one of the most instructive and disquieting is the autohiographic record, "My Vagahondage" (Doran), hy the English writer, J. E. Patterson. The first of the two parts is appropriately entitled The Life Rebellious, for, from his fourth to his thirteenth year the author's hand was against every one. He played truant from his teachers. He ran away from his father's home repeatedly. He actually engaged in bloody hattles with the housekeeper, who tried to comh his hair. Only two or three persons during this helligerent period were sympathetic enough to gain any influence over him. Had there been a few more such, this voracious little reader and wholesome lover of the woods and fields might have become a more useful member of society. The disquieting feature is that the narrative is all true, or nearly all. At thirteen he ran away to sea, emharking on what he terms The Life Adventurous. For fourteen years he lived afloat, until rheumatism drove him into the more discouraging adventures of a literary hagman in London. Throughout the hook the descriptions are graphic, the incidents often vividly related, and the interruptions, consisting of platitudes and generalizations from the writer's experience, particularly dolorous. The record is something less than winsome, because of the Ishmaelitish egotism displayed. But, for an idle reader in an idle hour, or for the zealous student of child psychology, it will prove an interesting human document.

"Reminiscences of General Basil W. Duke, C. S. A." (Doubleday, Page) were originally written, for the most part, for the *Home and Farm*, of Louisville, Kentucky. They are now "compiled and published in more permanent form in deference to the wishes of a number of those who read them when they originally appeared." The result is a readable volume of some 500 pages. Reminiscences is precisely the right title. There is almost nothing of political history in the volume, and, although there is a great deal ahout battles, no attempt to reconstruct the military history of the war; the General simply relates those facts and anecdotes that came his way, describes the men he knew, the scenes he witnessed, the stories he heard—he tells what he remembers, as he remembers it, for what it is worth. Much of the book is devoted to the characterization of Southern generals, and to events in which they played a part. The most valuahle chapters are those which deal with such subjects as prison life, superstitions among the soldiers, Southern hospitality during the war, and the period of reconstruction in the South. Probably the hest thing in the book is the chapter on the negro before and during the war. In discussing the questions that were at issue between the North and South, Gen. Duke is always fair-minded, in spirit serene, temperate and judicial in language; the attitude, if one may so express it, is one of genial resignation, the attitude of one who has learned "to love adopted ideas and opinions almost as well as he did his own." It is true, he cannot quite forget the folly of the reconstruction policy. But after all, who would wish him, or any one, to forget that?

Typical in many respects is "The Life and Letters of Sir John Hall" (Longmans), both because it describes the roving career of an English army surgeon during the first half of the nineteenth century and because it illustrates the almost haphazard way in which promotion was allotted. Hall at the age of twenty arrived on the field of Water-

loo in time to help care for the wounded. Then he served in Jamaica, in Ireland, at Gibraltar, and again in the West Indies. He was in South Africa in 1846-51, and then he went to Bombay. He was performing routine duties there when a telegram ordered him to report at once in the Crimea as Chief of the Medical Staff. For students of the Crimean War, the most important part of this book is the account of his work among the sick and wounded. No other modern war has been entered upon with such utter unpreparedness as the Crimean on the side of the English. When Dr. Hall reached his post, cholera was already raging. The home authorities were slow; indeed, it was only through the letters of correspondents that the English nation was roused. Even the mission of Miss Nightingale caused friction; for though Hall was nominally responsible for the health of the entire expedition, she was allowed to carry on her hospital work independently. We infer that his superiors in the Government knew him to be a conscientious, tireless, and undismayed official, who would shoulder the blame that belonged to others. At any rate, he endured to the end, and had the satisfaction of seeing the mortality from disease decrease to normal figures during the last part of the war. The total British force was 98,000; admissions to hospitals, 218,952; died of wounds or disease, 18,059; killed in action, 2,750; invalided, 11,562. Comment is superfluous. Hall received a K.C.B. ribbon from a not over-grateful country, and retired on half pay. The earlier portions of the memoir are often more interesting, if less important, than the Crimean. His descriptions of journeys in southern Spain in the late thirties, and of life in South Africa, where he saw service in Kaffir and Boer wars, are plain and unvarnished, but indubitably true. The book is written by a Hindu, S. M. Mitra.

The youthful enthusiasm over the exploits of railway builders and the deeds of daring of the locomotive engineer does not seem to disappear with age. "The Railway Conquest of the World" (Lippincott), by Frederick A. Talbot, is the most recent attempt to appeal to this feeling. It has to do solely with construction and describes in an entertaining manner, with abundance of excellent illustrations, the creation of many of the great railways of the world, those projects being selected which touch the imagination by their unique quality. It includes the White Pass and Yukon, which abolished the pack-train in Alaska and made gold-seeking easier, and the Hedjaz railway which did away with the journey on foot to Mecca. It describes the piercing of the Swiss mountain by the St. Gotthard, and the climbing of the Andes, to a height of nearly 16,000 feet in a distance of 138 miles. The Cape to Cairo, the Australasian, the Chinese, and Japanese, the Siberian, and our own transcontinental lines are presented in their more notable engineering aspects. A few slight errors have been noted in the description of American railways. The Union Pacific and Central Pacific railways have been confused, the western section being incorrectly called the Union Pacific, and the eastern the Central Pacific. The impression is left with the reader that the influence which led to the building of the Pacific lines was the desire of men like Huntington and Stanford to provide an opening for the coast traffic. Although this may have been a contributing cause, the prime motives were undoubtedly the political purpose to bind this isolated section to the rest of the country and the economic desire to open up western lands. Finally the author, who is apparently an Englishman, in describing how a train wreck was narrowly averted, remarks: "The engine-driver, unlike the majority of his ilk on an American railway, concluded that something must be amiss and applied his brakes sharply." While the character of our railway operation must unquestionably lay us open to many charges of recklessness, the insinuation of the author is altogether unwarranted.

The Oxford University Press (Frowde) has added another number to its handsome series of anthologies—"Das Oxforder Buch Deutscher Dichtung vom 12ten bis zum 20sten Jahrhundert," herausgegeben von H. G. Fiedler, Professor der deutschen Sprache und Literatur an der Universät Oxford, mit einem Geleitworte von Gerhart Hauptmann. The editor has doubtless thought it best to let these poems speak for themselves with but the briefest advocacy on his or other's part. His introduction of two or three pages deals entirely with the details of editing, and Hauptmann's short preface, touching vaguely on the color and perfume of true poetry, serves merely to associate his name and influence with the volume. In making selections, the editor has quite naturally yielded to the perspective of the present age, which remembers comparatively little German verse previous to that of the eighteenth century. Yet we doubt if the fifty-odd pages which he has devoted to those early periods are quite sufficient. Only three of Walther von der Vogelweide's poems are included, and these in a not very happy modern rendering. Beginning with the eighteenth century, the selections are full, and the end of the nineteenth and the beginning of the twentieth century receive, seemingly, almost exhaustive representation, several of the names being unknown to the present reviewer and their best achievement trivial. In the introduction the editor remarks that in his collection will be found some poems of even the older time not met with in other similar works. Perhaps his concern for novelty has been the cause of his omitting such an agreeable old stand-by as "Die Wacht am Rhein." The notes are concise and to the point, and externally (we have seen only the India-paper form) the book lives up to the beauty of this Oxford series.

Miss Clara Barton, founder of the Red Cross Society in the United States, died at her home in Glen Echo, Md., on Friday. She had reached the age of ninety on Christmas Day of last year. Miss Barton began the work with which her name will ever be associated during the Civil War, getting permission, after several vain appeals, to go out upon the battlefelds and care for the wounded. She rendered similar service in the Franco-Prussian War, and in the Spanish-American War, although almost eighty, she did personal field work. When, through her efforts, the American Association of the Red Cross was incorporated in this country in 1882, she was made its president, and served in that capacity for twenty-three years. Miss Barton was also the author of several works, among them "History of the Red Cross," "America's Relief Expedition to Asia Minor," "History of the Red Cross in Peace and War," and "Story of My Childhood."

Robbins Little, who from 1878 to 1898 was librarian of the Astor Library in New York, died on Saturday in Newport, R. I., his native town. Under his administration a new catalogue was prepared and published in four volumes. Mr. Little was born eighty years ago. He graduated from Yale in 1851, and after travel abroad studied law at Harvard. At one time he was instructor in international law at the United States Naval Academy, and afterward an examiner of claims in the War Department.

Prof. Walter Eugene Howard, the first dean of Middlebury College, Vermont, died at his home in that town last Friday, in his sixty-third year. He was professor of history and political science.

Gabriel-Jacques-Jean Monod, the noted French historian, died recently at his home in Versailles. He was born at Havre in 1844. He held several professorships, including the chair of history at the University of Paris. He was a member of innumerable historical, scientific, and archæological societies in the various European countries. M. Monod's long list of historical writings dealt particularly with the early history of his native country.

Science

Surgery and Society, a Tribute to Listerism. By C. W. Saleeby, M.D., F.R.S.E. New York: Moffat, Yard & Co. $2.50 net.

This book is a sort of penance, for the author. Some years ago, "under the stress of intense and honest conviction," he wrote harsh things about surgeons; but, recently, having been personally much helped by a surgical operation, apparently of no great severity, he has experienced a change of heart and desires to make amends by setting forth the relations of modern surgery to society. Dr. Saleeby, as he somewhat often reminds his readers, has had a medical training and was for a time in practice before he retired to devote himself to enlightening the general public, or, as he would say, to being a real doctor, a teacher. He has written several books and perhaps talked more on various topics which bear on the improvement of social conditions, and of late has been particularly active as an ardent eugenist. His best work has been as editor of the excellent New Library of Medicine, to which at his instigation a number of writers have contributed noteworthy discussions of medical questions whereon the public needs to be more fully informed. Many of the books of this library have received commendation in these columns.

In this volume Dr. Saleeby under-

takes to show the general reader how surgery has been advanced by the work of Lister, under the inspiration of Pasteur, and what benefits come from this progress to society as a whole and particularly to women in the exercise of their special function. He gives also a vague outlook into the future and an incidental, and to many superfluous, excursion into the realm of eugenics, where much good may be expected because "Listerism" makes certain forms of "negative" eugenics safely possible. All these matters, and many related things, are treated in a broad and informing manner, but with almost too much display of cleverness, a not infrequent fault of the author, and with a confusion of some essential issues which is most regrettable. The services of Lord Lister, who has just left us at a ripe old age, were of inestimable value, and there is no objection to recognizing him as the man who, taking the first step in the application to surgery of the principles established by Pasteur, began a new era and opened the door for all later progress of medicine in overcoming the harm done by micro-organisms or in forestalling them; but to lump together all such methods of modern and future medicine under the name of Listerism and to call the practice of all such arts surgery is to misuse terms and to mislead readers unskilled in making distinctions.

Our objection to this presentation of the subject is twofold. The essence of Listerism is antisepsis, while the essence of later progress is commonly held to be asepsis. The exact line between them as general methods is hard to draw, and Lister himself, open-minded though he was, has left his attitude towards this phase of progress so unclear that not a few of his warmest admirers are still uncertain as to his position. We are still very far from knowing the limits of microbic infection as the cause of disease, and cannot say with any definiteness where the utility of antibacterial methods ends. It by no means follows that all the progress yet to come must be germicidal, and it is quite possible that the fruit "whose mortal taste brought death into the world and all our woe" was altogether germ-free. Certain it is that not a few of human ills are not, so far as we can judge, even the remote effects of micro-organisms; and even if all of them should prove to have such an origin, the cure of them is by no means a merely surgical matter.

It is not to the surgeons as such that all progress "after Lister," as the phrase aptly goes, is due. It is not the surgeon as such that has worked out the methods of bacteriology and made this one of the most fruitful fields of medical endeavor, even though Lister himself was one of the first to obtain a pure culture of bacteria. Not to surgery as such do we owe our knowledge of immunity, antitoxins, serums, and vaccines, nor of those wonderful chemical compounds which just now awaken and justify the hope of great things to come. Where the future will draw the line as to how much of treatment shall be surgical and how much medical, no man can tell, but surely preventive medicine is in no proper sense of the term surgical, nor will be. Let it be granted that all this advance is in a way the outcome of Listerism, yet these things are not Listerism, nor does the credit of them belong to him, who would have been the last to make such a claim. Saleeby falls into a similar although smaller error in lauding Simpson as sharing in the foundation of modern surgery because he made operations painless by substituting chloroform for ether. The real foundation was the discovery that anæsthesia is not only possible but practicable, and this, as Lister himself in one of his addresses took pains to point out, is an American gift to humanity. The fact is that all progress in the knowledge of diseases and of their treatment is a complex matter and many have contributed to it, here a little and there a little. Pasteur's contribution was fundamental, Lister's application was fundamental, and both deserve to be remembered and revered; but let this be done without obscuring their relation to what comes after them. One plants and another waters, but the increase comes through many channels.

This confusion of surgery and medicine is most regrettable for other reasons, and herein lies our second objection. The distinction between these two things is fairly well established, although usage in Great Britain and in the army and navy tends to obscure it. Hence it is desirable that the general public should not, by a book like this, be encouraged yet more to magnify the surgeon and surgery at the expense of medicine and its practitioners who do not operate. The man in the street, or even in the club, and the woman in the sewing circle or at bridge have already a much exaggerated idea of the power and skill of the surgeon. It is quite natural that it should be so. What chance do they have to know anything about the relative merits of medicine and surgery? He knows, perchance, that he was lame and now walks, was crooked and is now straight, was blind and now sees; while she, perchance, knows that she had a tumor and has it no more; or they know that some friend has been snatched from the very bottom of the dark valley and brought back again by a timely operation. What do they know, what can they know, of the work done by the medical man in correcting a faulty heart or caring for damaged kidneys and other organs, when the injury or defect has no outward signs clearly visible to the naked eye? Here is a great field of usefulness which is tilled by men of large ability and long, hard training, but of whose labor and skill the patient can know little. Surgery leaves its mark; it is often open, and frequently brilliant; while medicine is necessarily obscure, hidden, and nearly always mysterious. It is high time that the public should be taught and insistently reminded that the pill and the hypodermic syringe, the microscope and the stethoscope, have their victories no less than the scalpel, the saw, and the splint.

"The Important Timber Trees of the United States," a forthcoming book by Simon B. Elliott, is described by his publishers, Houghton Mifflin Company, as a practical handbook of every day forestry.

The iron-ore resources of the world are described in the *Annales de Géographie* for March by L. de Launay, who combats the alarming theory of their early exhaustion. France will in the future, he maintains, on account of its lack of fuel for the treatment of the ore, become the chief source of supply for Europe. The remarkable increase of international commerce in perishable foods, such as butter, fruits, vegetables, etc., is shown by H. Hitier, who regards it as indicative both of the prosperity of the people and of the improved means of transportation. He calls attention to the fact that the use of refrigerator cars is virtually confined to the Russian Empire and the United States, where more than 60,000 are in use. Other articles are upon the geology of Morocco with a colored chart, some geologic and geographical researches in Algeria and the Sahara, and on Smyrna, its situation and importance.

In the course of his "Statistical Investigation of Cometary Orbits," recently published as Vol. LXI, pt. iii of the Annals of Harvard College Observatory, Prof. W. H. Pickering brings out many novel peculiarities of the paths of these erratic bodies. A possible origin of the asteroids and zodiacal light is suggested, and the retardation of Encke's comet discussed. His method of treating the family of comets captured by Jupiter shows how it may be possible to ascertain the elements of the orbit of a planet that has never been seen, and thereby, perchance, lead up to its discovery. Three such supposititious planets exterior to the orbit of Neptune are duly investigated, the outermost (R) being at a distance of 6,250 times that of the sun, with a corresponding year equal to 500,000 of ours. Though its mass is estimated at 10,000 times that of the earth, its stellar magnitude is so faint that no telescope or camera can ever be expected to reveal it. Nearer home and more interesting is Professor Pickering's hypothetical planet Q, double the mass of R, only 875 times the distance of the sun, and of a stellar magnitude no fainter than the photographic satellites of Saturn, which his keen eye has already added to the solar system. Q has already been photographically searched for by the Rev. Joel H. Metcalf, who has examined about 300,000 stars, but without avail.

The sound sense of Eben E. Rexford is

BURLINGAME PUBLIC LIB.

shown again in his latest book, "Amateur Gardencraft" (Lippincott). We wish that he had devoted a little space to the types of the flower that he admires so highly, the sweet pea, and that he had distinguished among the species of iris. Further, the volume stands in need of an index, always of much value in a garden handbook. But in general, the treatment is adequate, covering the grading, the planting, and the maintenance of a suburban or country place. We commend the treatment of rose culture as especially clear and concise. In spite of a chapter on carpet-bedding, given, as it were, under protest, Mr. Rexford definitely ranges himself with the best modern taste in advocating the natural planting of home grounds.

Drama

Modern Dramatists. By Ashley Dukes. Chicago: Charles H. Sergel & Co. $1.50.

This is a clever but exasperating book, written by a man with full knowledge of his subject and with uncommon powers of literary expression. The book is described as a "critical study of the modern European theatre" and is, in fact, both studious and critical, but is the work of a brilliant special pleader rather than a broad-minded, impartial judge, with a philosophic grasp of the whole subject. This character is partly the result of an attempt at the impossible, the invention of a brief specific formula by which the value of all drama may be arbitrarily determined. Mr. Dukes does not venture to put his formula into words, but apparently it includes distinction of thought, revolutionary purpose, the creation of exceptional (but still natural) representative personages and incidents, the expression of new thought and tendencies, and so forth. The test is reasonable, as far as it goes, but carries no revelation with it, and does not begin to cover all the legitimate functions and possibilities of the stage. Nor are the "advanced" dramatists the only writers who meet its requirements. But it is not necessary to argue that point. What matters is the conclusion to which the application of this imaginary formula leads him, which is that the only dramatists of modern times who really count are Ibsen, Strindberg, Hofmannsthal, Tchekhov, Hauptmann, and Shaw. Herein he betrays his limitations as a critic. Barker and Galsworthy he acknowledges, but the great bulk of English writers he contemptuously ignores. Of the Frenchmen he picks out Brieux and Capus, only to attack them. His appreciation is extended mainly to the Scandinavians, Russians, and Germans, whether they be naturalists, realists, romanticists, or mystics. For him there can be little virtue in anything that smacks of age in form or tradition.

Like most zealous advocates of the latest theatrical ideas, he enormously overestimates the genius and the influence of Ibsen. He even ventures to distinguish him as the creator of "fine men and women" and of "an intellectual aristocracy." And he maintains that his plays "make a colossal demand upon the art of the actor," which is the reverse of the actual fact. But he is right in his valuation of him as a master playwright, whose puppets are alive upon the stage and need no long explanatory prefaces to explain them, as do those of most of his disciples. Bernard Shaw he accepts entirely at his own valuation, as if he actually stood for all that he pretends to be and all his poses were rooted in philosophical convictions. But fallacious as his judgment can be, it is often acute and clear when unhampered by the restrictions of his theories, in its analysis and comparison of particular writers and plays. The distinctions between Strindberg and Ibsen are admirably drawn. Some of his swift summaries have the flash of inspiration. For instance, he writes: "In Björnson the motive is the spirit of the pastor-agitator; in Strindberg, a strange compound of intellect and prejudice; in Sudermann, empty sense of the theatre. Hauptmann is almost hypersensitive. His creative work is a history of 'influences' good and bad." And yet the same writer can say dogmatically that "Shaw is the greatest individual force in European drama since Ibsen, the strongest personality and the clearest thinker." This is absurdly uncritical. Soon afterwards Mr. Dukes admits that Shaw cannot touch the emotions, evidently not seeing that his failure in this respect is due to his insincerity, his inability in dealing with the deeper feelings either to see or think clearly.

To John Galsworthy Mr. Dukes—using his special standard for a measure—is less than just. It may or may not be true that this gifted and earnest dramatist does not reach the heights or depths of true tragedy, but he strikes richer and fuller notes of emotion than either Shaw or Barker, because of his broader human vision, his firmer grasp of actualities, his philosophic mind, and his power of creation. There is some brilliant, slashing criticism in the chapter on Brieux and Capus—here it is amusing to find Mr. Dukes flouting the opinions of Mr. Shaw—but it is not always just. Both playwrights have virtues which their critic cannot discern, or will not recognize, because they have not, in seeking modern motives, scorned all the conventions and traditions of the older stage. Some of these are not so senseless as Mr. Dukes seems to imagine. Even the soliloquy and the aside may be defended. Perhaps the best paper in the book is that on D'Annunzio, who is ranked among the most brilliant of artificers, and there is also a delicate and subtle appreciation of the early work of Maeterlinck. It is a pity that Mr. Dukes's judgment is not equal to his literary ability.

Four more volumes of the Tudor Shakespeare (Macmillan) have come to us—"Henry VIII," edited by Charles G. Dunlop; "A Midsummer Night's Dream," edited by John W. Cunliffe; "Coriolanus," edited by Stuart P. Sherman, and "Troilus and Cressida," edited by John S. P. Tatlock. The apparatus of the edition we have previously characterized as eminently careful. In only one section of the plan will the reader find opportunity for occasional dissatisfaction, that of Interpretation. So Professor Cunliffe, while stating, quite properly, that "A Midsummer Night's Dream" "fortunately affords no opportunity to the ingenious critics for fantastic theories," passes by with only the slightest mention the difficult problem of poetic atmosphere and dramatic emphasis which Shakespeare so nicely solved. Professor Tatlock, approaching "Troilus and Cressida" with perhaps too strong a bias for Chaucer's version of the story, does not, to our thinking, quite grasp the nature of the Shakespearean coquette. Professor Sherman's interpretation of Coriolanus, the man, is a masterly bit of criticism.

"Pitch and Soap" is the name of a new comedy written by Lyall Swete, which will have a first performance in London next Tuesday.

At the New Players' production, in London, of Israel Zangwill's play, "The Next Religion," Henry Ainley will play the Rev. Stephen Trame, the founder of the next religion, and Adeline Bourne will appear as Mary Trame.

Mr. Cyril Maude has acquired a new play, "Love—and What Then?" by B. Macdonald Hastings, the author of "The New Sin," which was much praised on its production at the London Royalty recently. Cyril Maude and Winifred Emery will appear in the new play.

Louis Calvert is the latest contributor to the debates on the subject of Hamlet's mental condition. In "An Actor's Hamlet" he maintains that the Prince is a soldier-courtier, man of action, until the revelations made to him by the ghost throw him off his mental balance. Then at the end of the play the physical shock of the wound in the fight with Laertes, and the mental shock of the discovery that the Queen is poisoned with the venom meant for himself, pull him up with a round turn, and he becomes once more his old self—a man of action, swift and sudden in his long-delayed vengeance.

An experimental performance of Tchekhov's "The Seagull," by the Adelphi Play Society in London, does not appear to have been an unqualified success. This result is ascribed partly to the lack of sufficient rehearsal and partly to the fact that all the actors were not of equal excellence, while all the characters are virtually of equal importance.

Shakespeare's "Troilus and Cressida" has just been produced at the Odéon, in Paris, in a new translation. A letter in a London journal says: "The Odéon audience en-

dured the play with but few 'cuts,' which, in particular, left untouched almost the whole of the buffoonery of Pandarus and of Thersites."

Music

NIKISCH AND THE LONDON SYMPHONY ORCHESTRA.

This has been a season of visiting orchestras. From near and far they have come, bringing coal to Newcastle—for New York is plentifully supplied with half-a-dozen orchestras of its own. Chief among the visitors has been the Boston Symphony Orchestra, which has given its usual ten concerts. Mr. Stock twice brought the Theodore Thomas Orchestra all the way from Chicago, once for a concert of its own, the second time to assist at the concerts of the Mendelssohn Choir of Toronto, which is not only the best-trained choral organization in America, but probably in the world, and which has set a standard that no local chorus can approach. From farther West still came the Minneapolis Orchestra, anxious for the metropolitan approval (which it cordially received) that would not fail to help it along at home.

Europe sent us not only the Russian Balalaika Band, and the King of Greece's favorite Mandolinata, but one of the leading London orchestras, under the direction of Arthur Nikisch, now generally regarded as the greatest of contemporary orchestral conductors. The London Symphony Orchestra, it must be admitted, did not make its début at home under conditions that can be commended. Many of its members some years ago seceded from Henry J. Wood's orchestra when that admirable conductor refused to allow them any longer to send substitutes to rehearsals—an amazing old custom that frustrated the very object of rehearsing, and which reminds one of the experience Heinrich Conried once had at the Metropolitan Opera House, when, after painfully training a shift of stage-hands in manipulating the "Walküre" scenery, he discovered that these eight-hours-a-day union men would not be available in the evening!

The programme for this orchestra's first concert in our Carnegie Hall had evidently been well rehearsed. It included the third "Leonora" overture of Beethoven, Brahms's first symphony, Tchaikovsky's "Francesca da Rimini," and the "Tannhäuser" overture. But the execution of Tchaikovsky's Pathetic symphony at the second concert frequently suggested the thought that these players still clung to their custom of sending substitutes to rehearsals. And as in the matter of precision and technical finish, so in that of euphony, this London orchestra is not the equal of the New York Philharmonic or the Boston Symphony. The violins (among which are some valuable old instruments) are excellent, and, better still, perhaps, are the violoncellos and the double basses. The woodwind family lacks mellowness on the whole, and the brasses are apt to be coarse and noisy where sonority only is called for. A special compliment is due the kettle-drummer. The best quality of this band is its enthusiasm. These Englishmen, surely, are not unemotional. They follow their leader with a zeal that is touching; and a highly temperamental conductor like Nikisch is not easy to follow in every one of his nuances, some of which are caprices of the moment.

One of the specialties of this leader is the last movement of Brahms's first symphony; in this he amazed musicians, years ago, by showing that Brahms, contrary to the general belief, did know how to exult. Strange to say, the sworn Brahmsites did not at first approve of his vigorous, impetuous way of hurling out these strains, but they have become used to it. His conception of the "Leonora" overture recalled the days when Anton Seidl aroused the enthusiasm of even the languid box-holders at the opera; and the same was true of the "Tannhäuser" overture, in the reading of which he introduced details which all the other great conductors of the time accepted.

It was with "Tannhäuser" that Nikisch made his début as an opera conductor, in Leipzig, thirty-two years ago, when he was only twenty-four. The members of the orchestra at first showed a disposition to mutiny on being asked to rehearse under so young a conductor; but after the overture they burst into applause. Soon he became one of the leading interpreters of the Wagner scores, aided by his Magyar temperament, for, like nearly all the great Wagner conductors, he was born in Hungary. It is needless to say, nevertheless, that while his reading of excerpts from Wagner operas at his second concert in Carnegie Hall was most enjoyable, it revealed nothing new to local music lovers who remember Seidl, Mottl, Mahler, and at present enjoy the readings of Hertz and Toscanini.

Before the end of the month Mr. Nikisch will have been heard in more than a dozen of our Eastern cities. In these cities the imperfections of the London Orchestra will be less disturbing; in fact, so far as precision is concerned, they will doubtless disappear soon, as the same pieces will be played over and over again. The fact that Nikisch conducts everything without having the score before him does not arouse so much astonishment as it would have done a generation ago. It may be doubted, however, whether even Arturo Toscanini, who conducts the Wagner operas without the score, could follow Nikisch when he sits at the piano and plays any passage asked for in any one of these operas.

The librarian of Congress is fortunate in having as chief of the Division of Music an indefatigable and circumspect expert like O. G. Sonneck. His latest compilation is entitled "Orchestral Music Catalogue" and contains, in 663 pages, the titles of scores on hand. Until about 1830 it was not customary to print the scores of orchestral music, but only the parts. In this catalogue no mention is made of these older publications, the list being confined to scores. The main entry has been made under composers, experience having shown that the interest in a particular composer is decidedly greater than that in a particular class. To the arrangement by composer and the arrangement by classes has been added an index to specific titles, such as "Tod und Verklärung." The bulk of the scores were undated, but Mr. Sonneck has spared no pains to date their publication at least approximately by a comparison of publishers' plate numbers, and by reference to various foreign catalogues. An interesting detail is the entry, under "concertos, concert pieces, etc.," of fifteen instruments for which concert solos have been written: bassoon, clarinet, clarino, flute, harp, horn, oboe, organ, piano, saxophone, trombone, trumpet, viola, violin, violoncello. Among the other entries are dances, marches, military music, overtures, serenades, string orchestra, suites, symphonies, variations, wind instruments. In the interest of much-needed variety in concert programmes, it would be well if orchestral conductors and virtuosi provided themselves with copies of this catalogue.

The Mexicans are so fond of music that they attend concerts regardless of revolutions and that sort of thing. The Hungarian pianist, Jolanda Mérö, recently returned from a tour during which she gave sixteen concerts in Mexico City alone. Some were with orchestra; others were recitals, one of these being for the Madero family and ninety members of the Administration party.

Gabriel Pierné, whose oratorio, the "Children's Crusade," is well known in this country, has completed a new choral work entitled "Les Fioretti de Saint-François." He frankly confesses that he does not expect his countrymen to pay any attention to this work, having had in mind, while composing it, countries like Germany, England, and America, which possess well-trained choirs.

The plan of performing Verdi's Egyptian opera at the foot of the pyramid of Cheops was actually carried out. The voices and the orchestra sounded well, but most notable was the procession, in which there were above a hundred gayly caparisoned camels and two hundred horses. The setting sun tinged the natural scenic background with rich colors. Never had the old and the new met as they did at this performance. Three cinematographs were kept busy in taking records, electric lights showed the way to the Sphinx, and even an aeronaut attempted to get a peep at the show, but was prevented by an accident.

The death is announced of W. S. B. Mathews, the eminent music teacher and author. He was born at London, N. H., seventy-five years ago, and had been living in Colorado for some years. Among his most important works are "One Hundred Years of Music in America," "How to Understand Music," "Outlines of Musical Form," "Masters and their Music." For a number of years he edited an excellent magazine called *Music*, to which he contributed many articles of his own.

Art

A History of Architectural Development. Vol. III. The Renaissance in Italy, France, and England. With illustrations. By F. M. Simpson, F.R.I.B.A., Professor of Architecture, University College, London. New York: Longmans, Green & Co., $6 net.

The publication of this volume completes the series which was promised when the first volume was issued in 1905.

It is a notable work, and is in the reviewer's judgment distinctly the best history of architecture that has thus far appeared in any language. Fergusson's "History of Architecture in All Lands," which was for many years the standard text-book and reference-book in its own field for all readers of English, has long been accounted out of date. The reading public, better instructed and more discriminating than that of the sixty's and seventy's, as well as the men of the profession itself, have discarded many of his critical judgments; at the same time the progress of archæology and of historical investigation has demonstrated the erroneousness of many of his statements of fact. Lübke's "Geschichte der Architektur" and Choisy's "Histoire de l'Architecture" are the only works in their respective languages which can bear any comparison with Professor Simpson's; the first named, in one ponderous volume, is extremely dry, and, like Fergusson's, now out of date; the second is entertainingly written, but does not cover the whole field and lacks the impartiality and breadth of view of this English history. The English reading public has had to wait a long time for it, but it was worth waiting for.

It is, as its title indicates, a history of architectural development, rather than of buildings; its survey is therefore less chronological and less detailed than it would have been if undertaken from another point of view. It considers the different phases of the art analytically and topically, with the result that time-relations and sequences are not always easily traced, and that many important monuments fail of notice. Thus in Volume I, after a chapter on the elements and methods of Roman architecture and construction, the Roman buildings are discussed in groups—city-plans, basilicas, temples, baths, etc. The student who desires to know what was being done under Augustus, and in what way, if at all, the architecture of the Antonines differed from that of the Flavian emperors, or how the buildings of Syria or Africa were related in style to those of Rome, looks in vain for this information. Questions of like character regarding the French cathedrals, for instance, or the Italian town-halls and *broletti*, can be answered, if at all, only by picking out from place to place in Volume II the necessary facts and assembling them in order to draw a conclusion. This deficiency is to a certain degree inherent in the plan and purpose of the work; but it might have been at least in a measure remedied by brief summaries, lists of dated monuments, and other like devices.

Apart from this, these volumes are worthy of high praise. Professor Simpson shows himself to be both a scholar and an architect, and in both capacities broad-minded and discriminating. He carries into his analyses and critical estimates none of those violent prejudices for one style and against another which have so often impaired the value of architectural discussions by men of learning and influence. Fergusson had many hard things to say about Roman architecture; Professor Moore will hardly allow to the English the credit of having produced any "real" Gothic architecture; Choisy was determined to make out that nearly every thing truly great in architecture had its origin in Persia; not a few writers have insisted that all Renaissance architecture is mere copying. Professor Simpson's work reveals no such bias. In the matter of illustrations, also, much praise is due. The drawings are always truly illustrative; plans and sections abound; the scale of these is always given, and the photographic illustrations are always and only such as are needed to give impressions, as of *ensemble*, which plans and sections can never convey.

Volume III deserves especial mention because it is the only general history of Renaissance architecture that has appeared in any language since Fergusson's, of which the first edition was published in 1873 and a revised edition in 1893. It is characterized by the same catholicity of appreciation that marks the other volumes, by the same excellences in illustration, and by a literary style even more readable and fluent than that of its predecessors. This is in part, no doubt, due to its subject, which, as Professor Simpson points out in his Preface, necessitates giving more attention to individuals than to broad developments of style. A more consecutive, chronological, and narrative treatment is thus possible, and this makes for ease and fluency of manner. The author defends the artistic character of the Renaissance in general against the slurs of the Fergussonian school, and has a good word to say even for the Seicento—the "Baroque" or "Rococo" period—pointing out in the works of that age certain qualities of scale and composition which are apt to be overlooked, and calling attention to the nobility of some of the products of men whose other works were open to serious criticism. It would, however, have been wise to couple with this praise some censure of the unhappy devices and vulgar details and shams which disfigure much of the work of this period, particularly in church interiors. The discussion of the history and design of St. Peter's at Rome could hardly be improved in any particular; it is concise, full of information, discriminating, and suggestive. An illuminating chapter follows on Renaissance domes in general. The chapters on French architecture are excellent; full justice is done to the picturesque early work, as well as to the stately palaces and churches of Louis XIII, XIV, and XV.

The section on the Renaissance in England occupies a trifle under a third of the volume, and is marked by the same judicial fairness that appears in the critical estimates of the Italian and French sections. An immense amount of detailed information is crowded into the three chapters which compose it. The plans which abound are particularly to be commended. The closing chapter on the Nineteenth Century in England hardly belongs in the plan of the book, but its brevity disarms serious objection to it.

The chief criticism that might be made of the scope and plan of this interesting volume is the fact that it omits entirely to notice the Renaissance architecture of Spain and Germany. Professor Simpson justifies this in the interest of the adequate discussion of the more important art of Italy, France, and England. It seems to the reviewer that the allowance of this plea should involve as its corollary the preparation of a fourth volume, to treat these two missing subjects and to bring the history down to the close of the nineteenth century, including in it American architecture from 1600. The series would then adequately cover the history of the main currents of what we may call Western architecture from Egyptian origins to the close of the last century. Without such a volume the series, excellent as it is, is still manifestly incomplete.

Rudolph Schwarz, an Austrian sculptor, whose work is well known in the Middle West, died in Indianapolis on Sunday. He came from Berlin several years ago to carve figures at the base of the Indiana soldiers' monument and decided to remain in that State. One of his best works is the statue of H. S. Pingree in Detroit.

Finance

THE SPIRIT OF SPECULATION.

It became rather plain during the past week that the spirit of speculation had seized on the financial public, not only in the New York Stock Exchange, but in communities widely separated from New York, both in location and in their particular interests. Our own stock market, having halted last week—ostensibly on the fear that bad crop news would be received, that the Eastern locomotive engineers would strike, and that Mr. Roosevelt would carry the Pennsylvania primaries—resumed its advance this week, although the "private crop experts" were reporting great damage to wheat, the railway engineers serving an ultimatum on the companies, and the figures from Pennsylvania showing a sweeping victory for Roosevelt.

There has been some reaction later, associated both with the Titanic disaster and with insistent reports of wheat crop damage; but while this was happening, London's Stock Exchange had similarly rushed into excited speculation, the rise converging on shares of wireless telegraph, oil, tin, and omnibus companies—some of which rose to a price five times or more as high as last year's best price. At Chicago, the highly colored "dispatches from the field," sent by crop experts employed by speculative grain houses, caused such a fury of speculation in that market that wheat rose 9 cents per bushel within a week.

So general and world-wide a movement was extremely interesting; its causes, whether economic or psychological or purely financial, will in due course be plainer than they are to-day. It will also be possible to say, later on, whether the money markets of the world, which have not shown signs of comfortable ease when this speculative outburst was beginning, are in shape to endure the inevitable demands on capital and credit. This query is not less interesting, in view of the fact that the rise in stocks is avowedly based on expectation of genuine business revival. For if expansion comes in general business also, another heavy demand on credit must be met.

What Wall Street has for some time been saying is that spring is now at hand, and that markets always rise in springtime. If this is true, it would explain things of itself, and it is certainly a long-familiar tradition of the Stock Exchange. But is it true?

The first inquiry to make would naturally be, how does the record bear out any such tradition? Last year sustained it only partially. The stock market of April was the dullest in many years, and prices on the whole were weak, notwithstanding a very large bank surplus and a 2 per cent. money market.

So, too, of 1910, when stocks broke 10 points or thereabouts in April, when an absolute deadlock in the home bond market drove the railways to Europe with an appeal for capital on any terms, when call money went to 7 per cent. and gold exports rose to $15,000,000 in two days. What followed, in that particular spring season, was the beginning of a general movement of liquidation in every speculative market of the country. To these two unfavorable instances a little reminiscence would readily add the crash in May of 1907, in April of 1906 and 1905, and the beginning, in April, 1903, of the "rich men's panic" which lasted until midsummer. Then, too, one must not overlook the "spring panics" of 1884 and 1893.

There have been exceptions to this unpleasant precedent. It was in April, 1909, that the steel trade raised its head after its chaotic break of the "open market," and that stocks rose 10 points along with the restored steel prices, with an outright Stock Exchange boom in May and June. It was in April, 1908, that the Erie was saved from bankruptcy and the great success of the Pennsylvania loan instilled new courage into financial circles. Nobody will have forgotten the "spring market" of 1901 in Wall Street, when April's Stock Exchange business was 16 per cent. above that of any other month, before or since, and when the wildest bull movement in history was under way. But all that even these agreeable precedents can be assumed to prove, so far as concerns the record, is that the theory of a rise in financial markets in the springtime, simply because it is the springtime, will not do as the basis for a financial programme.

But if it is not invariably true that the spring season is the inevitable hour for financial optimism, there are nevertheless some expectations which markets may reasonably base on the arrival of that season. One of them is, that the progress of the season will show unmistakably what the real character of the financial and industrial situation is. That should be a particularly useful contribution to general knowledge in the present year; for the main ground of skepticism over the recent remarkable advance on the Stock Exchange has been that the rise was based on prediction and not on realization.

Wall Street has assumed revival in the steel trade; but only a cautious and disappointing recovery in steel prices has as yet ensued. A "bull market" like that of the past six weeks would naturally be taken to foreshadow expansion in the country's general trade, industry, and production, and increase of railway earnings. As yet, however, even the habitually hopeful weekly mercantile reviews have had little more to say than that "better sentiment prevails" and that "settled weather helps."

But we are now entering the period of the year when tangible evidence must soon be provided as to whether the hopes of the stock market were soundly based, or not. It was April, May, and June of 1910 which showed, by the steady progress of trade reaction, what was the real meaning of the heavy break on the Stock Exchange in January and March, and it was exactly the same months in 1909 which explained the sudden Wall Street advance in the face of the steel trade's bewilderment. The reason why all this happens in the spring is that by that time business plans must get thoroughly under way, money-market arrangements be made, salesmen be got in close touch with consumers, and ideas be formulated as to the part which the harvest outlook will play in the business of the year.

Yet the spirit of speculation sometimes seems to ignore even such considerations. There was 1904, for instance, which, with its yield of wheat so meagre that our importations from Canada rose to unusual figures, and with all the philosophers explaining how our farms were already inadequate to feed our own people, was nevertheless a year of almost continuous rise on the Stock Exchange; a year, moreover, in which the rise became most vigorous after harvest probabilities were known; and also a Presidential year. What is to be said of a precedent of that sort?

Certainly not (as Wall Street used to say in 1901) that agriculture is no longer a factor in American prosperity. But possibly, that the influences making for trade revival, after a period of prolonged retrenchment and economy, were such that even a short crop of wheat could not wholly balk them. Whether the case would be the same in 1912, is another question.

MEMOIRS OF THE DUC DE LAUZUN

(*Court Series of French Memoirs.*)

A translation of the memoirs of "the brave Lauzun," reputed lover of Marie Antoinette, who, with his polished manners, easy morals and dashing gallantry, was the very incarnation of the elegant, corrupt society that circled about Louis XV and Madame de Pompadour. Covering a period from 1747-1783, this book records the author's experiences with Rochambeau in America.

12*mo. Illus.* $1.50 *net; postpaid* $1.63.

RECOLLECTIONS of AN OFFICER OF NAPOLEON'S ARMY

By CAPTAIN E. BLAZE

(*Court Series of French Memoirs.*)

The simple, straightforward narrative of the field experiences of one of Napoleon's soldiers. Supplements more pretentious memoirs of marshals and generals. Rich in racy anecdote and graphic description.

12*mo. Illus.* $1.50 *net; postpaid* $1.63.

Railway Transportation

A History of Its Economics and of the Relation to it of the State and of the Nation. Based, with the Author's Permission, upon President Hadley's "Railroad Transportation, Its History and Its Laws."

By Charles Lee Raper

Professor of Economics, Dean of the Graduate School, University of North Carolina.

Crown 8vo. $1.50 net. **By mail $1.65**

The book gives in as interesting a manner as possible the history of the laws of railway transportation from the beginning to the present. It does not trace the historical development for the sake of the antiquarian, but solely to throw light upon the present management and regulation of the railways.

"England has Florence Nightingale; America has Jane Addams, who is easily the foremost woman in America."—*Times* (London).

"One's first feeling in reading these essays is how great our wealth and benefit is in having Miss Addams."—*North-American Review.*

JUST PUBLISHED

JANE ADDAMS' *New Book*

A NEW CONSCIENCE AND AN ANCIENT EVIL

A work to be seriously pondered by every serious man and woman. Actual experiences of those who have investigated the "white-slave" traffic, and often the stories of girls who have been drawn into the net—are the things of which Miss Addams' book is made. Absolutely frank in its treatment of the social evil, startling in its revelations, judicious in its suggestions, and sympathetic in its viewpoint. *Cloth, 12mo, $1.00 net; postpaid, $1.10*

JANE ADDAMS' OTHER NOTABLE WORKS

"The Spirit of Youth and the City Streets" *New and cheaper edition .50 net; postpaid, .60.*

Jane Addams' important work on the great problem of every large city—how to keep the boys and girls off the city streets.

A protest against the practice of every large city of turning over to commercialism practically all the provisions for public recreation, leaving it possible for private greed to starve or demoralize the nature of youth.

"*The Spirit of Youth and the City Streets* shows such sanity, such breadth and tolerance of mind, and such philosophic penetration into the inner meanings of outward phenomenon as to make it a book which no one who cares seriously about this subject can afford to miss."—*New York Times.*

"The Newer Ideals of Peace" *Cloth, 12mo, $1.25 net; postpaid, $1.35.*

"The most comprehensive book on how to help humanity in America to-day."—*Collier's Weekly.*

"A clean and consistent setting forth of the utility of labor as against the waste of war, and an exposition of the alteration of standards that must ensue when labor and the spirit of militarism are relegated to their right places in the minds of men."—*Chicago Tribune.*

"Democracy and Social Ethics" *Cloth, 12mo, $1.25 net; postpaid, $1.35.*

"Startling, stimulating, and intelligent."—*Philadelphia Ledger.*

"The result of actual experience in hand-to-hand contact with social problems. . . . No more truthful description, for example, of the 'boss' as he thrives to-day in our great cities has ever been written than is contained in Miss Addams' chapter on 'Political Reform.' . . . The same thing may be said of the book in regard to the presentation of social and economic facts."—*Review of Reviews.*

"Twenty Years at Hull House" *Illustrated. Cloth, 12mo, $2.50 net; postpaid, $2.64.*

"Jane Addams of Chicago is a marvelous woman. She has made Hull House in Chicago famous the world over as a practical manifestation of the spirit of good-will on earth."—*Cleveland Leader.*

"A valuable contribution to sociological literature, coming as it does from such an authority. . . . The whole book is an extremely well balanced and judicial account of a sociological work which is undoubtedly of the greatest value."—*N. Y. Herald.*

Clark's General Science

By **Bertha M. Clark,** Ph.D., Head of Science Department, William Penn High School for Girls, Philadelphia, Pa.

80 Cents.

This course in general science, which was successfully developed by the author for use in her classes, is suited for the third or fourth year pupil in the high school. While it deals with physics, chemistry, and hygiene, the controlling idea has been to make the presentation as informal and untechnical as possible, to arouse the interest of the student, and to provide information which will broaden his horizon and be of real practical value. Each topic describes some interesting phenomenon commonly met in everyday life, and afterwards discusses in a popular style the scientific principles on which it is based.

The Students' Hymnal

Edited by CHARLES H. LEVERMORE

50 cents

The two hundred and fifty hymns in this collection are those which have been best known and beloved through many generations. They have been chosen with especial reference to their sincerity in the expression of religious experience, depth of feeling, and poetic merit; and because they possess dignity, strength, and musical beauty. The collection is rich in morning and evening songs, in processional music, and in hymns appropriate to the festivals of the Christian year.

Situation Wanted

HIGHLY EDUCATED LITERARY MAN, OF force and personality, with experience in literary and sociological work, and with widest literary tastes, seeks a position as private secretary or assistant to busy author, or with business man with public interests, or as a writer on special subjects, or with a publishing firm. Apply E. S.

JohnBrown: ABiography Fifty Years After

By OSWALD GARRISON VILLARD

SOME TRIBUTES TO THIS REMARKABLE HISTORICAL WORK.

Philadelphia PUBLIC LEDGER. "A tremendous book, more thrilling than any book of fiction, powerful in its appeal, and which, while it is written soberly, as befits history, by the very nature of the narrative often rises to the highest dramatic level."

THOMAS WENTWORTH HIGGINSON. "I can only say after reading from first to last its more than 700 pages that I have never encountered anything this side of Gibbon's 'Rome' which has made me feel more the personal power of a single work."

JOHN T. MORSE, Editor American Statesman Series, in ATLANTIC MONTHLY. "Perhaps in thus dramatically fashioning his volume, Mr. Villard obeyed an instinct rather than acted upon a preconceived plan; that is often the case with a great work, where a writer's feelings are deeply enlisted. Be this as it may, the merit and charm are none the less; he has seized well a splendid opportunity and has written one of the great biographies of our literature."

HORACE WHITE. "In my judgment a contribution to American literature to take rank with the very best historical writing of our time or any time. The only impartial history of the Kansas war."

ST. CLAIR McKELWAY in the Brooklyn EAGLE. "A biography replete with facts and marked by courage and candor, learning and justice."

PORTLAND OREGONIAN. "The most valuable and comprehensive biography issued this season, and the best and most candid estimate of John Brown."

W. E. CONNELLEY in the Topeka CAPITAL. "The unprejudiced student and seeker for truth will herald the book as a great contribution to American history."

Des Moines CAPITAL. "More powerful in its appeal, more dramatic than any book of fiction, is this wonderful biography of John Brown."

The NORTH CAROLINA REVIEW. "In this biography Mr. Villard has touched high-water mark. The book is a delight to the reader for many reasons. Full of life and movement, . . . written in an attractive and scholarly style, full of sympathy, and yet without any loss in accurate presentation, it sets a new standard for biographical efforts."

Baltimore AMERICAN. "While the book has popular features in that it is entrancingly interesting, its scholarship is of the highest order and its style reminds one a little of Anthony Froude. . . . Mr. Villard has illustrated in this book the finest ideals of literary conception and execution."

London TIMES. "It is scarcely likely that any later writer will be able even to add anything of importance to Mr. Villard's collection of material or to better his interpretation of the whole story. . . . It at once becomes the standard, and probably the final authority on its theme."

Washington (D. C.) STAR. "Mr. Villard draws a compact, vivid, historic picture of the terrible focussing of this period upon our Civil War. Straight and clear in its literary way, this biography is a marvel of research and fair-mindedness."

HENRY WATTERSON in Louisville COURIER-JOURNAL. "No fault may justly be found with Mr. Villard's telling of the story. It is minute and lucid, altogether fair and unvarnished."

Burlington (Iowa) HAWKEYE. "It is a book which will take a place in the library of every well established home in this part of the country."

Third Edition.

Fully illustrated with portraits and other illustrations. With copious notes and bibliography.

A History of French Literature

By Prof. C. H. C. Wright
Harvard University

A convenient and comprehensive history of French literature from the Middle Ages to the present day, written in English. A very complete bibliography and index conclude the work.

"Scholarly, clear, judicious, and interesting."—*Prof. C. H. Grandgent, Harvard University.*

"A very conscientious and reliable work."—*Prof. Adolphe Cohn, Columbia University.*

"Easily first among the histories of French literature in English."—*Prof. O. B. Super, Dickinson College.*

Cloth 964 Pages Postpaid, $3.00

Oxford University Press American Branch
35 West 32d Street, New York

NINETEENTH CENTURY ENGLISH CERAMIC ART

By J. F. BLACKER

Over 1,200 illustrations, 534 pages, $3.50 net.

A practical guide for collectors of old English pottery and china, combined with a history in pictures of the work of the old English master potters.

LITTLE, BROWN & CO., Publishers, Boston

THE AMERICAN GOVERNMENT

By FREDERIC J. HASKINS

O.K.'d by the President, the Cabinet, etc.

Illustrated. 12mo. Cloth. $1.00 net. Postpaid $1.15

J. B. LIPPINCOTT CO., Philadelphia

THE EDUCATIONAL NUMBER

OF

The Nation

Will be published May 9th

Among other special features there will be an article by Professor C. W. Alvord, of the University of Illinois, on "The New History."

Recent text-books will be reviewed.

4,000 extra copies will be mailed to Professors in the Universities and Colleges throughout the United States.

Usual rates for advertising.

LETTERS and RECOLLECTIONS OF MAZZINI

By MRS. HAMILTON KING. With Portrait; and a Foreword by G. M. TREVELYAN. 8vo. pp. xiv+140. $1.60 *net.*

". . . the reader who is familiar with the history of the Italian struggle for liberty will take up Mrs. King's volume with avid interest."—*Springfield Republican.*

THE STORY OF MUSIC

By W. J. HENDERSON. *Twelfth Edition, Revised, with additional matter.* Crown 8vo. Pp. xx+206. $1.00 *net, by mail,* $1.10.

THE CONSTITUTIONAL HISTORY of ENGLAND SINCE the ACCESSION of GEORGE III.

By the Right Hon. SIR THOMAS ERSKINE MAY, K.C.B., D.C.L., (Lord Farnborough). Edited and Continued to 1911 by FRANCIS HOLLAND. In Three Volumes. 8vo. Vols. I-II. 1760-1860. Pp. xxx+909. $4.50 *net.* Vol. III. 1860-1911. Pp. xviii+398, by FRANCIS HOLLAND, $3.50 *net.*

The three volumes of the former editions of Sir Erskine May's work have been compressed into two, and a third volume added, bringing down the History to the present time. This new volume follows the same plan as the older ones—each leading subject being separately treated.

"A useful continuation and re-print of a work which already had a secure reputation."—*New York Evening Post.*

THE LIFE OF JOHN HENRY CARDINAL NEWMAN

Based on His Private Journals and Correspondence.

By WILFRID WARD. With 15 Portraits and other Illustrations. In 2 volumes. 8vo. Pp. 654+627. $9.00 *net; expressage extra.*

AMERICAN REVIEWS:

"A monumental work on one of the most commanding figures of the 19th century."—*Philadelphia Public Ledger.*

"A great contribution both to religious and literary biography. . . . As a record of Newman's activities and aspirations as a member of the Roman Catholic Church the work is of supreme interest. And it is not the less attractive as a study of a man keenly interested in the deepest religious problems."—*Boston Transcript.*

"Of Mr. Ward's part no words of praise can be too great. . . . The result is a really great biography of a really great man; an adequate, admirable, fascinating record of an unforgettable past and an equally unforgettable personality."—*Philadelphia Telegraph.*

"To serious readers this life of Newman will be the most important biography of the new year. . . ."—Jeannette Gilder in the *Chicago Tribune.*

"Mr. Ward understands and therefore sympathizes with his subject . . . will rank among modern biographical master-pieces."—*Ecclesiastical Review.*

ENGLISH REVIEWS:

"A permanent contribution to history and literature."—*The Nation.*

"It is likely to take its place at once among the great biographies."—*The Times.*

"Mr. Ward has treated a great theme with magnificent ability."—*Pall Mall Gazette.*

"Will take rank with the great biographies of the language."—*Church Times.*

". . . Mr. Ward's method is, in fact, that of the biographers of Manning and Vaughan; but it is one which results in larger surprises in the Newman portraiture than in that of the others . . . Fascinating and instructive . . . are . . . these well documented volumes."—*The Tablet.*

Ready! A new volume in the popular SPELL SERIES of Travel Books *Ready!*

THE SPELL OF FRANCE

By CAROLINE ATWATER MASON

Devoted to the French themselves, their intimate life and characteristics, together with an entertaining account of the author's personal experiences while traveling in the land of the fleur-de-lis, all in all, a book that will equal, if not excel, the remarkable demand for Mrs. Mason's previous book, "The Spell of Italy."

Attractively illustrated, in a box, net, $2.50 (*postpaid,* $2.70).

THE SPELL OF ITALY

BY THE SAME WRITER

is just appearing in a handsome new edition—the fifth to appear since publication two years since. *Attractively illustrated, in a box, net,* $2.50 (*postpaid,* $2.70).

A third volume in the same successful series is

THE SPELL OF HOLLAND

By BURTON E. STEVENSON

"A book which often moves to laughter; a book brimful of anecdotes and with flash-lights of Holland in nearly all its phases."—*Travel Magazine.*

With 48 illustrations, in a box, $2.50.

The Nation

NEW YORK, THURSDAY, APRIL 25, 1912.

The Week

Up to six o'clock of Monday evening the status of he controversy between the Eastern railway managers and their locomotive engineers indicated an immediate declaration of a strike. The managers, who had previously declared it impossible to grant the request for an average increase of 18½ per cent. in wages, wrote to the Chief of the Engineers' Brotherhood that their conference had "carefully reconsidered the whole subject at issue, and regret that they see no way of modifying the conclusions previously reached." The Brotherhood then answered:

> We consider your letter terminates all negotiations, and, as previously advised, the Chairmen will leave the city at the earliest moment possible to look after our interests. You will be notified, as stated in a former letter, as to the time the engineers will withdraw from the service.

At precisely this juncture, the two official Government mediators under the Erdman Act, Chairman Knapp of the United States Court of Commerce and Commissioner of Labor Neill, wrote thus to the Chief of the Brotherhood:

> It is evident that a grave situation has arisen, which threatens most serious consequences to the public. In this emergency we are impelled by the sense of duty to tender our friendly offices to the contending parties, in the hope that some means may be found to adjust the matters in dispute without the calamity of a general strike.

Such request had not been made in the present case by either party, but the mediators entered the controversy without it, and their offer was accepted by the engineers on Monday and by the railways on Tuesday.

It needs, we think, no more than a brief survey of the steps in the negotiation to show what a monstrous thing it was with which the Brotherhood leaders were threatening the people of this country, at the moment when the Government mediators intervened. That they yielded so quickly is evidence that they knew the kind of responsibility they were assuming. But the very fact that such a threat could have been seriously made is proof that the machinery of official intervention in such matters for the protection of society must be enlarged. It is true in principle that no man can be forced to work against his will, but it is quite as true that there are certain occupations in which men have no right whatever so to quit their work as to stop the ongoing of that industry—at least until the public authorities shall have passed on the situation. Civilization has always recognized this fact in the matter of employees on ocean vessels. As matters stand, we presume that the Government mediators, if they fail to bring employers and employees to terms, will be replaced by a formal commission of inquiry under Government auspices, to review the controversy as a whole. But the law ought now to be so framed that the ordering of a railway strike, without such reference to public examination of the matters in dispute, shall be made unlawful and be visited with severe penalties.

The defeat of Senator Bourne in Oregon is the most terrible blow yet struck at the rule of the people. Direct government, with all the paraphernalia of postcard canvasses, rural free delivery of candidates' photographs, and personal letters to voters in the farthest corners of the commonwealth, had no more ardent advocate or more complete exemplar than Senator Bourne. Indeed, he was one of the creators of the system, of which in turn he became the finest product. One of his keenest delights was to point an enraptured Senate, or an awestruck after-dinner party, to that grandest spot of the American continent, where rolled the Oregon and Senator Bourne. And now he has been hoist with his own petard. The one guaranteed method of popular government has retired its guarantor from governing.

One of the objections urged against the direct primary has been the number of names among which the voter would have to choose. In Chicago, where, to be sure, the situation in this respect is worse than in any other large city, the man in the polling booth was confronted at the recent primary with long lists of candidates, from which to select nominees for about sixty positions. One result of this condition was the frequent abandonment of our prized secrecy in marking the ballot. Ballots were spread out on desks, counters, and other available surfaces, not only in full sight of bystanders, but often by two or more voters in open collaboration. As the *Daily News* points out, this absurd multiplicity of names has been not so much created as exaggerated by the direct primary. Under the convention system, the citizen was relieved of this task of choosing among aspirants for office, but who relieved him, and with what motive? In November, too, Chicagoans will have put into their hands an unwieldy ballot. This time there will be party emblems to guide them and lighten the work of indicating whom they prefer. In other words, they will vote for a President or a Governor, and take whoever else happen to be on the same ticket with him. The way of escape is not the giving up of direct primaries, but the appointment instead of the election of minor officers and a consequent short ballot.

That the appointment of a head for the newly-created Children's Bureau in the Department of Commerce and Labor was to be made upon considerations of fitness only is a thing that those interested in the efficacy of the new agency doubtless took for granted. There is no more gratifying evidence of our progress in governmental matters than that which is furnished by the practice, now become altogether habitual in the Federal Administration, of placing in charge of special undertakings persons selected without reference to any consideration other than that of qualification for the post. That in this instance the choice should have fallen upon a woman adds to the interest of the case, Miss Lathrop being the first of her sex to be appointed as head of a bureau in the United States Government. Her work in connection with problems of social improvement and with the administration of charities has been of such extent and importance as to warrant the expectation of excellent work by her in her new post of responsibility.

In all the pressure of appropriation bills and the excitement of political discussions in Congress, it is to be hoped that one non-partisan and non-conten-

tious matter of great importance will not be overlooked. We refer to the bill favoring and authorizing an international inquiry into the causes of the high cost of living. It has passed the Senate, before which it came with the unanimous recommendation of the Senate Committee on Foreign Relations. Now it is awaiting action by the House, and it is greatly to be desired that this may be favorable. Our readers are acquainted with the nature of the proposal. It is that the President shall be empowered to invite foreign Governments to join in the plans for a world-wide and exhaustive investigation, by disinterested experts, of the rise in price of the necessaries of life. A remarkable body of economic opinion, in this country and abroad, has pronounced itself in favor of the undertaking. So far as sounded on the subject, the authorities in foreign lands are well disposed to the measure.

The action of a large Western manufacturing establishment in widening the plan of arbitration already existing between the firm and its employees is a characteristic incident of our time. This concern has been working for a year under an arrangement in accordance with which disagreements were taken before two arbitrators, representing the two interested parties. Now a trade board is to be organized. Five members will represent the employees, and five the firm. These ten will choose one more, who will be the chairman, and will vote only in case of a tie. The significant provision is that no question shall be submitted to this board until its merits have been considered by two deputies, one for each of the contestants. If they disagree, or if either the firm or the employees desire to appeal from their decision, then the question comes before the board.

The New York *Medical Journal* is exercised over the fact that, in a country where there is otherwise so much "spread-eagleism," the achievements of certain public servants are not heralded as American triumphs. Some notice, to be sure, was taken of the reduction of the death rate among the employees in the Canal Zone from 41.73 per thousand in 1906 to 10.89 in the first six months of 1911; but it was not till after the deaths of Walter Reed and Carroll that any appreciation was given to the commission which in Cuba accomplished "the swiftest, most brilliant, and triumphant conquest over disease which this world has seen." The eradication of smallpox in the Philippines and Porto Rico was taken as a matter of course, and hardly any attention has been paid to the remarkable achievements of Ashford, King, and Gutierrez in their campaign against the hookworm disease in Porto Rico. In 1898 this disease was more fatal in that island, where it constituted more than 22 per cent. of the total mortality, than tuberculosis is in temperate zones. Six years later the matter was taken up by the Legislature, and in 1907 there were thirty-five dispensaries on the island. A single dose of thymol cured 41.8 per cent. of all cases, while 93.4 per cent. of the remainder were cured by doses continued for two months. One-third of the whole population was treated.

Mr. Isidor Straus will long be remembered as one of Grover Cleveland's stanchest friends and supporters. Just as his brother Oscar is one of the few remaining men of distinction who are strong advocates of Mr. Roosevelt's re-election, Mr. Straus never abated one iota of his admiration of Mr. Cleveland, he being as intense a Democrat as his brother is a Republican. But Isidor Straus was never a Bryan man, his labors for the sound-money cause being one of his best public services. For William L. Wilson, too, Mr. Straus had a warm and generous affection growing out of their association and coöperation during the days of the Wilson Tariff bill and Mr. Straus's worthy but too brief service as a Congressman. That so useful and public-spirited a career should have been terminated by such a heart-rending tragedy as marked his end and his devoted wife's death on the Titanic, is a cruel blow of fate. Yet the story of the heroic self-sacrifice of Mrs. Straus will carry its own lesson and inspiration to thousands upon thousands in whose memory it will always linger as a perfect picture of marital devotion.

Pity the poor religionist! By any other name he may prove acceptable, but never by a title savoring of the churchly occupation. Mr. C. S. Cooper, in the concluding chapter of his studies in undergraduate life in the *Century*, finds the need for a new type of official in our universities:

> He should be a close student of college affairs, sympathetic with students, human, high-minded, natural, and keenly alive to humor and social interests. In some institutions this man might hold the leadership in philanthropic, religious, and social-service interests. It might be his privilege to arrange lectures by leading men of the country who were filled with zeal for their callings. The man who could make possible the endowment of such a chair in a great university would be doing a great work for his country.

But such a position, Mr. Cooper warns us, must not go to the college pastor, who is looked upon "as a professional religionist, and therefore shunned by many students who need him most." Be a spiritual leader, a moralist, a philanthropic teacher, an endowed guide for the young, but, for heaven's sake, don't drag in the name of religion; it's fatal.

It is not upon the basis of the fluctuating daily reports from Mexico that the attitude of this Government towards Madero can be determined. Every day the telegraph wire brings news of entire States "overrun" by rebels, or "reconquered" by Federals. Now the Zapatistas have been curbed in Puebla, and now they are in complete possession. Now Morelos has been completely "pacified," and the next day it is once more "ablaze" with revolution. Our State Department cannot base its policy on the petty results of a guerrilla warfare carried on for the greater part with no other end in view than the opportunity for loot. We must weigh Madero's ultimate chances against the only enemy that seriously threatens his position, namely, the rebel army of the north under Gen. Orozco. And in weighing the relative chances of Federalists and revolutionists in Chihuahua, it behooves us to consider to what extent the hope of procuring American intervention has been responsible in keeping up the revolutionary ardor.

Cuba, too, is in the preliminary excitement of a Presidential campaign, and is having her troubles incident to it. The Conservatives have nominated Gen. Menocal, and are well united in his support. On the Liberal side there have been bitter quarrels. The two leading Liberal candidates are Dr. Alfredo Zayas and Gov. Asbert. In the background has been all along President Gomez, about whose intentions a great

deal of uncertainty has existed. Whom he favored as a successor, and whether he might not seek the office again himself, have been questions frequently asked but never satisfactorily answered. As between Asbert and Zayas there appears to be little doubt that Gomez inclines to support the former. But Zayas has a majority of the Congressional Liberals on his side, and has, in fact, been formally put in nomination by them. The party, however, remains seriously divided. According to the Havana *Discusión*, it is despondent and without any fixed policy.

The financial issues bound up with Home Rule for Ireland continue to absorb the attention of parliamentarians and pamphleteers. And presumably a parliamentarian or a pamphleteer is right in laying stress on questions of pounds and pence. Yet it seems absurd, in any broader view, that a question of such historic importance as the solution of Ireland's ancient claims should be brought into juxtaposition with a surplus of £1,500,000 or a deficit of £2,000,000. Even the hard-headed parliamentarian knows that the difference between a contented people and a discontented people, between an Ireland hating Great Britain and an Ireland reunited to Great Britain, is bound to bear results in shillings and pence that his puny calculations cannot foresee. A thriving agriculture, an expanding national industry, a régime that will not drive the best blood of the peasantry across the seas—who can foresee what the effects will be on Irish budgets ten or twenty years from now? But somehow the pamphleteer cannot get away from his financial details.

One of the provisions of the Irish Home Rule bill promises to make an innovation in British constitutional law. This is the proposal to leave it to the courts, or to the Judicial Committee of the Privy Council, to decide whether a given act passed by the new Irish Parliament is within its powers. As Prime Minister Asquith explained in his speech introducing the bill for the government of Ireland, such judicial oversight of Irish legislation was felt to be a desirable and even necessary safeguard. In addition to the list of subjects about which the Irish Parliament is specifically forbidden to pass laws, there is given a right of appeal as to the "validity" of any laws that it may enact. This appeal lies, first, to the Irish Court of Appeal, and thence, if the matter be highly important, to the Judicial Committee of the Privy Council. Moreover, it is provided in the Home Rule bill itself that any legislation in Ireland which is "repugnant" to the terms of the bill, "shall be null and void." It will readily be seen that this opens a new field in English jurisprudence. The doctrine of the omnipotence of Parliament has never been questioned by English judges. It is true that Colonial legislation has sometimes been disallowed by the Privy Council, but this has not been in the regular course of judicial appeal and constitutional decision, such as is now proposed for Ireland. We seem to have here a distinct borrowing from the American system.

The arrival of the Prince of Wales in Paris, where he is to remain for six months in order to perfect himself in the French language, is everywhere interpreted as a plain notice that the Anglo-French friendship is stronger than ever. When the late difficulties between France and the German Empire over Morocco were brought to an end, largely through the intervention of Great Britain, there was plenty of criticism on both sides of the Channel with regard to the utility of the *entente cordiale*. The discontented faction in London was sure that Great Britain had been brought to the edge of war for the sake of France. The discontented faction in Paris was sure that France once more had been made the catspaw for England. But the great mass of public opinion in both countries has been heartily in favor of the unofficial alliance between the two countries, and the sojourn of the heir to the British throne in France has been welcomed even by those Frenchmen to whom the British alliance does not commend itself. The Gallic *amour-propre* has been pleasantly tickled at the fact that the Prince should have been detailed to pursue his studies at the Collège de France and the Sorbonne prior to matriculating at Oxford.

The bombardment of the Dardanelles fortifications by an Italian fleet may have been intended to lend driving force to the peace proposals that are being put forward by the Powers at Constantinople; or the aim may have been to accelerate the pace at which the Powers have been proceeding in the work of mediation. In either case, whether the warning is directed towards the Government at Constantinople or to the European chancelleries, it is plain that the war has entered upon a critical phase. If the reports from Constantinople are true, stating that the Italians were repulsed with loss, there can be little doubt that Italy will proceed to cast aside all her self-imposed limitations and inaugurate a war *à outrance*. In such a struggle, the risk to the nations of Europe would be greater than to Italy herself. Her own prestige has been suffering badly as a result of the protracted struggle in Tripoli and the disquieting rumors of defeat that continue to filter out from that region. If the Italian Government should decide to carry the war into the heart of the enemy's country, it is doubtful whether any of the European Powers would be willing to go to extremes for the sake of Turkey.

Coincident with the news of the bombardment of the Dardanelles comes the report that the elections to the Turkish Parliament have resulted in an overwhelming triumph for the Young Turk party as represented by the Committee of Union and Progress. A war election, as a rule, will turn out in favor of the party in power. Patriotic sentiment reinforces the argument against swapping horses in the middle of the stream. But the situation was not so favorable with regard to the Committee of Union and Progress. Its influence had been steadily declining. The Committee's dictatorship, as it has been described, was resented by many partisans of constitutional government. Personal and factional intrigue was rife, and seemed to be the forewarning of final dissolution. The Young Turks were accused of having neglected the defences of the Empire, with Tripoli as a result. But in the last resort the fact remained that if the Young Turks were to be driven from power there was no one to take their place. A return to the old Hamidian régime was inconceivable. And no Moderate party had arisen to assume charge of the terribly difficult business of transforming a despotism into a constitutional government.

THE TRAGEDY REVEALED.

Contradictory as are the narratives of the survivors of the Titanic in many details, the essential facts stand out clearly enough. There was no panic; the crew as a whole behaved admirably, although but recently brought together. The passengers were unusually self-possessed, owing to the belief, at first held, that the taking to the boats was merely a precaution. The proportion of women saved is notably high, only about 13 in the first cabin and 25 in the second having been lost. Many of those in the steerage were also rescued, as well as 20 stewardesses. Had the boats been fully laden there would have been room for all the women and more men than were rescued. As in many another wreck, these victims of criminal neglect and carelessness paid the forfeit of their lives bravely enough. If there were exceptions, they merely proved the rule.

Beyond this, however, two terrible, damning facts stand out—the first, that the ship was speeding through an ice-field of the presence of which its officers were fully aware; the second is that every life could readily have been saved had there been boats and rafts enough to keep people afloat in a clear, starry night on an exceptionally smooth Atlantic sea. Both of these facts are indisputable. Whether the ship was making eighteen or twenty or twenty-one knots, or more, may never be known precisely; but the exact figure is of no importance. Everybody thus far reported testifies that there was no decrease noticeable in the vibration of the engines as the ship surged ahead. Every seaman knows that at night an iceberg takes the color of the ocean; but that made no difference. Whether it was the desire to make a record on the maiden voyage, or whatever the motive may have been, the ship drove on. A smaller ship might perhaps have turned quickly enough as soon as the berg was sighted, but the Titanic changed her course only so as to inflict a fatal wound; a head-on collision would probably have been less disastrous. As it was, the ship tore her bottom out, and the rest is known. The captain was not on the bridge when she struck, although less than three hours before the accident the Titanic acknowledged with thanks the warning of the Mesaba that, dead ahead, were "much heavy packed ice and great numbers of bergs." For this recklessness Capt. Smith paid not only with his life, but, alas! with those of at least 1,500 others; the responsibility for being so far north is of course not his.

As for the lifeboats—these expensive affairs that cost the large sum of $425 apiece—there were but twenty of them in addition to a few rafts. Only fourteen of these were large boats, two were smaller, and four of the collapsible type. These were all that the Board of Trade certificate called for, and far be it from the White Star Line to spend $425 in providing one more than the law required. Its officials were aware that fully half of their own steamer Republic's passengers would have been lost had there been no rescuing Baltic at hand. They knew, too, that ships are sometimes sunk on their maiden voyages, for their own big freighter the Naronic was never heard of after leaving New York on her first return trip. They were—so the excuse now runs—so deluded by the naval constructors' theory that the Titanic was "practically unsinkable" as not to think about this matter of lifeboats at all. The absurdity of this attempt to avoid the terrible guilt charged upon them is perfectly apparent if one but considers that the Majestic, Teutonic, and other ships of the line not pronounced the "last word in marine construction" are inadequately equipped—precisely like virtually every other liner, American or foreign, that leaves this harbor.

Fortunately, the time-worn falsehood that there was not room enough for more lifeboats has been abandoned for once. That the Titanic, a sea-monster 882 feet long and 92 feet broad, could not carry more boats than did this same line's Britannic in the late seventies is preposterous. If one-third of the souls on board the Titanic were saved by less than twenty boats, for some are supposed to have sunk and one is known to have turned over, it would only have taken sixty boats to accommodate all. As if an eleven-deck liner could not find room for sixty boats! As for these little craft, they appear to have been lowered by block and fall precisely as was done nearly 200 years ago; there was no motor in any one of them. Nor was one of them, we venture to say, of the self-righting type, now in use by the Lighthouse Service. Naturally, there was no water on board of them, much less provisions; had their passengers been compelled to float about for a day or two instead of from five to six hours, additional tortures must have been added to this most distressing of tragedies, and the roll of deaths would have been further increased.

We are glad to note that the Hamburg-American Line promised immediately that henceforth there should be a seat in a lifeboat to every passenger. Moreover, its agent, Mr. Boas, is asking the President to call an international conference to try to bring about uniformity in the matter of boiler inspection and the question of life-saving devices. We congratulate the line upon this action, which is being followed by other companies.

Meanwhile, before this session of Congress adjourns, without waiting for international agreements, or referring the matter to The Hague, Congress should give notice of its intention to insist that every ship entering American waters shall provide a seat in a lifeboat for every living being carried by it. This is a simple proposal, requiring the plainest of statutes, and only honest inspection by the Government official charged with that duty. Besides, there must be prompt orders to take less dangerous routes, at the dangerous season of the year.

FACERS FOR ROOSEVELT.

Col. Roosevelt declined Congressman Gardner's challenge to meet him in joint debate in Massachusetts this week. Possibly he was moved by the need of preserving his dignity, though it may be that he had an inkling of the sort of questions which the Congressman would plump at him. But the Colonel's refusal to encounter Mr. Gardner has not saved him from having the disagreeable queries put straight at him, or from having the short and ugly word applied to him by a man who has seen the documentary evidence. Congressman Gardner is evidently loaded for big game; and the fact that it is a former champion of Mr. Roosevelt's, and no less a man than the son-in-law of Senator Lodge, who now hurls these damaging charges at the head of the ex-President, shows that he is not a person to be whistled down the wind as one who is necessarily a crook because he is against Roosevelt. The charges are too specific as well as too damning for the Colonel to ignore. He

must make an answer or lose all reputation for being an honest man.

Congressman Gardner accuses Col. Roosevelt to his face of most dishonorable conduct towards President Taft. This is not on general principles. It is not the question whether he ought to have continued friendly to Mr. Taft and supported him for renomination. The matter is much more serious than that. It strikes at the good faith and the honor of Mr. Roosevelt. First there was the Lorimer case. Col. Roosevelt has gone up and down the land seeking votes, especially in Illinois, with the assertion on his lips, or the covert insinuation in his speeches, that President Taft was tied up with Senator Lorimer. Now, on this point, Congressman Gardner expresses himself with direct vigor. He says to Col. Roosevelt:

> I charge you with knowing this is not the fact. I assert that the best evidence to the contrary is contained in the correspondence between you and the President at the time of the first agitation of the subject. A mistaken sense of delicacy, as I am told, prevents President Taft from publishing the correspondence. I know that this correspondence exists, and in behalf of square dealing I call on you and President Taft to produce it.

This is both too precise and too harmful for Col. Roosevelt to overlook. If there is such a correspondence in existence, then it reduces Roosevelt to the moral level of a man who fights with poisoned bullets. If he dares not ask it, the public will demand that the letters be published. Everybody knows what *he* would have done long ago with private letters, if his position and Taft's had been reversed.

Another accusation made by Congressman Gardner throws a ray of illumination upon Col. Roosevelt's assumption that he has all along been with the Progressives. The beginning of their fight in Congress was, as everybody recalls, against Speaker Cannon. To unhorse him was their great aim. And no charge has been more frequently brought forward against President Taft than that he was neutral in the great struggle against Cannon, or positively sided with the veteran of the machine. But now Mr. Gardner alleges that, at the very time he and the other Progressive Republicans were in the thick of that contest, Mr. Roosevelt was "engaged in advising President Taft to get together with Uncle Joe Cannon." "I have *seen the original correspondence*," affirms the Congressman. What has Mr. Roosevelt to say to this? If it is not true, he has beeu grossly calumniated; but if it is true, he has been detected in a piece of moral imposture. Either way, he and his friends cannot afford to lose a day in replying to the questions sharply asked by Congressman Gardner.

On another point the Massachusetts Representative is also effective. He challenges Mr. Roosevelt in the matter of subserviency to great financial interests. Charging that Mr. Roosevelt, when President, made "exceptions for [his] favorites," in the enforcement of the Anti-Trust law, Mr. Gardner calls upon him to produce the suppressed report of his own Commissioner of Corporations on the Harvester Trust. In this matter it has been the common belief in Washington that a great scandal has been hidden. It has been asserted that a prosecution of the Harvester Trust was urged by both the Commissioner and the Attorney-General, but that it was prevented by Mr. Roosevelt's orders. This is what Congressman Gardner refers to, no doubt, when he demands that the "suppressed papers" be given out by the Department of Justice. The thing would be done if Roosevelt asked for it. But can he afford not to ask for it? Can he rest silent under this direct imputation not only upon his honor as an individual, but his integrity as President?

We take it that from now on the Taft managers will move in force upon Roosevelt. They undoubtedly have it in their power to show up his insincerity and his hypocrisy in deadly fashion? Well, he has left them free to do it. If there was any obligation on the President's part to spare the man who had done so much for him, he is certainly released from it now. We hope that he will make no bones of the matter when he speaks in Massachusetts this week, and will not only charge Roosevelt with duplicity, but produce the evidence to prove it.

THE "NEW" HEALTH PROBLEMS.

The new meaning of public health, says Mr. Robert W. Bruère in *Harper's*, is economic and social. The modern public health officer takes an "essentially religious attitude toward life. The peculiar character of his responsibilities compels him to visualize the community as a whole, to concern himself not so much with individual cases, or indeed ultimately with disease at all, as with the economic and social conditions that are at the foundation of public health." There is really nothing new in this point of view. Social workers and doctors have been preaching it for years. The ordinary laymau, however, is but dimly conscious of its truth, and of the hopelessness of campaigns against disease in which this department of the attacking army, which might be likened to the commissariat, is not carefully organized. Mr. Bruère's effective restatement of the situation is, therefore, welcome.

Of the two aspects of public health, by far the more difficult is the economic. The doctor can and does devise methods of treatment and cure for the specific physical ailments he meets. He draws up sanitary rules and modes of community life with the purpose of preventing disease, and where these can be applied his efforts are fairly successful. But no preventive has been found of poverty, or shiftlessness, or the bad heredity which fastens a handicap on the individual before he is born. The health officer meets these conditions at every turn. They do not prevent him from pressing on, but they do grievously hamper his work, and bring much of it to naught. The private physician is continually running into medical stone walls like this: A widowed mother with four small children, living in one room of a dirty tenement, is found to have tuberculosis of the lungs. In these surroundings she is certainly doomed to death. The children are in imminent danger of infection through ignorance and the impossibility of maintaining even decent conditions (to say nothing of sanitary ones) in such a place. The physician thinks she might have a chance if she could go to the country, take a long rest, and eat plenty of good, nourishing food. Obviously, this is not a medical problem. It is almost wholly economic and social. The cure is a question of money, not medicine. The ultimate problem, that of preventing the conditions leading up to such hopeless and barbarous situations, is also economic. When discovered (after most of the harm is done, be it noted) the worst of these cases are taken in hand by public or private philanthropy and a belated effort made to help them.

As an illustration of what can be done by the combination of scientific medicine and public financial resources, Mr. Bruère gives a page or two from the recent history of Pennsylvania. Before 1905 diphtheria in that State was very fatal. Between 40 and 50 per cent. of the cases died. This enormous rate was due to the terrible mortality among the poor. The State Health Department promptly inaugurated a campaign against diphtheria. Up to December 31, 1910, it had treated 27,000 poor patients, furnishing antitoxin and physicians free. During this period the mortality from the disease was 8½ per cent. Above 20,000 exposed persons were immunized. Of these but 2 per cent. developed diphtheria, and among the immunized the death rate was less than one-ninth of one per cent. The result of this campaign translated into human beings was a saving of something between two thousand and three thousand lives each year, at a cost of about $7 each.

Yet such campaigns against infectious disease are but the beginnings of the fight. They are the easiest to wage; success is immediate and striking, and there is no organized opposition, unless the inertia of the public can be called organized. In the case of heart disease, affections of the kidneys, insanity (all of which are on the increase), hygienic ignorance (still unduly common in high places), unsanitary tenements, overcrowded, ill-ventilated factories, and the various "don'ts" which the eugenists declare must be enforced before a really robust and sane and healthy civilization can be attained, there are a vast number of difficulties. These range from a modification of habits of living, through interference with profitable manslaughter (in the case of foul tenements and factories), to attacks upon long-established social tradition and custom, and interference in personal affairs of the most private character. Plainly, therefore, the weapons needed are educational and economic rather than medical. The two essentials to success are an intelligent public opinion and plenty of money. Indubitably, the primary necessity is public opinion, for, given that, the money follows.

Needless to say, Mr. Bruère is an advocate of a Federal Department of Health. He thinks the Washington statesmen are in need of a confrère, a Secretary of Health, with the position and the right effectively to urge the importance of "the newer social and economic questions" upon their attention. A Government machine that spends more than five hundred and nine millions of a total annual budget of six hundred and fifty millions (these are the figures for 1910) on preparations for war and military pensions, and nothing or next to nothing in lowering the criminally high infant mortality, the deadly child labor, the sweatshop work of women, is as much out of joint with the times socially as is politically the Czar's bureaucracy.

THE REAL UNITED STATES.

When Arnold Bennett, having left New York, arrived in Washington, he says in the second instalment of his impressions in the May *Harper's*, he was congratulated on having quitted the false America for the real. When he got to Boston, he received the general sympathy for having been put off so long with spurious imitations of the country he had come to see. Upon reaching Chicago, he was informed that at last he was at the gate of the United States, only to discover, when he entered Indianapolis, that any such pretension was grotesque, the authentic centre of the nation obviously being the spot which he had finally been so fortunate as to behold. But he is not confused by this conflict of claims. With the happy detachment of the foreigner he sees something genuinely American in every American community. What is more, the boldness that is inspired, or at least sustained, by distance, enables him to declare that the streets of every American city that he saw reminded him rather strongly of the streets of all the others. In a word, we gather that to Mr. Bennett America seems full of Americanism. If such a view of us is a little disturbing to the local pride of Philadelphia, St. Louis, and Seattle, it will surely be pardoned as soon as its subtle flattery is realized. For it is as if our visitor had approached each successive stopping-point with an open mind, ready at the first opportunity to paraphrase the convenient formula of Phillips Brooks, when confronted by a mother presenting an infant for his praises, by exclaiming, "This *is* America!"

Not that our late observer gives the same valuation to all of our achievements. The circumstanco that they are all truly American naturally means less as a final measure of their worth to him than to us. Nor are the differences merely matters of good, better, and best. He is frankly disconcerted by our "sublime, romantic contempt for law and for human life." And he will not allow us to call Tammany, for instance, a blot on the social system of this city. He insists that it is a part of the social system, just as much a part of it, and just as expressive of the national character, as our fine schools, our fine hospitals, our superlative business organizations, and—our theatres. A civilization, he holds, is indivisibly responsible for itself, and cannct extenuate its faults by denominating them "blots" dropped upon it from without. Evidently, Mr. Bennett did not propose to be limited to the "show-places" to which we should prefer our alien guests to confine their admiring attention. Having graciously accepted our word for it when we modestly pointed to the features of our civilization that we thought he would like, and termed them American, he confutes us with our own logic by extending the name to the spots which we do indeed suffer among us, but which we had convinced ourselves were no real part of America.

It is easier to forgive Mr. Bennett his disappointment in not finding the "American rush." That he looked for it carefully and in the right places, is undeniable. Yet he can only recommend earnest students of "hustle" not to waste their time on New York or Chicago, but to visit Paris or Milan. The truth is that we are not more than half to blame for the legend of our haste. It has for a long period been one of the phenomena which visibly impressed foreigners, and as we could see nothing disgraceful in it, and it is agreeable to make an impression, we, of course, encouraged the idea. Now that its hollowness has been publicly exposed, and we are developing other impressive possibilities, we shall not make a fight over its retention in the catalogue of Americana. To this we are the more disposed by the satisfying extent to which our observer discovers the poetic spirit among us. We have been so uniformly characterized as materialistic that perhaps we have taken extra pains to show the curious foreigner just how sordid we can be when we try. One is always tempted to grat-

ify one's instinct for making a stranger open his eyes, and when he clearly expects to be astonished by seeing some particular thing, we should be far less good-natured than the most hostile of our critics has credited us with being if we did not stretch a point to save him from disappointment.

Mr. Bennett places us under no such necessity. Europeans, he observes disinterestedly, are apt to assume that to tack numbers instead of names on to the thoroughfares of a city is to impair their identities and individualities. "Not a bit!" he exclaims. Such is the mysterious poetic force of the human mind that "the numbers grow into names." And so it comes about that Fifth Avenue and Fourteenth Street are as well distinguished by their numerical designations as if they had been more pictorially christened. Do not even the Parisians speak of the "Boulevard des Italiens" without a thought of the literal meaning of the words? Or will any one propose a better name for the Ninth Symphony? It is decidedly pleasant to be defended in this way, so pleasant that one may scent a danger in it. It makes it fatally easy to excuse anything for which we are condemned by representing it as poetry in the making. If American street-numbering can be made to show a touch of imagination, why not our stockyards and our Trusts and our stage and our slums and our literature and our politics? One contingency may operate to restrain us from such a surrender to the glorification of America as it is. Mr. Bennett, with his awkward habit of looking at our civilization on both sides, may reasonably be expected to return some day for a second inspection and estimate of it.

EXPERIMENTS IN EDUCATION.

The attention aroused by the reforms connected with the name of Signora Montessori, brings forward once more the widely divergent views on popular education that find expression in the periodical press. On the one hand we read most enthusiastic accounts of what has been accomplished by Signora Montessori by methods which we may call, in a broad sense, Froebelian. The theory that the unfolding of the child's mind shall be carried on in complete harmony with the physical and mental nature of the child, that learning shall be made to coincide as much as possible with instinctive action, and work with play, needs no elucidation here. It has entered into the very fundamentals of modern pedagogy. And yet there is no lack of evidence that all is not well with the system in its practical results. It is not the hard-headed citizen alone who has his distrust of "fads and fancies" in the schools. No less an authority than Superintendent Maxwell of New York was recently quoted as saying that he had his serious doubts with regard to the efficacy of the kindergarten work in the public schools.

The difficulty is apparently this: The demands upon the public schools in a democracy like ours, with a rapidly growing population, are increasing in number and variety. The thesis that it is the duty of the State to educate its members for the citizenship is altogether too narrow, unless we give to the word "citizenship" and to the word "educate" a constantly broadening connotation. The schools to-day must not only teach the three R's, nor yet teach science only, nor yet the foreign languages, nor yet the manual arts—they must do something else besides teach altogether. They must watch over the physical health of the child and its moral welfare, and thus assume functions which hitherto have been regarded as belonging entirely to the home. School hygiene no longer means the proper ventilation of schoolrooms. It means medical examination of children for eyesight, hearing, breathing, sitting, and walking. It concerns itself with the entire subject of nutrition. The school thus reaches outside of school bounds and watches over the child at his breakfast in the home and at his play in the street or in tne public playground. It is beginning to give concern to the child's vocational future—to the business of preparing him for the walk in life for which he is presumably best fitted. In other words, the burden thrown upon our public schools is enormous. The demand is constantly for results and results. But when the schools brace themselves to the tremendous task of extracting results by methods adapted to a swarming democracy, the complaint is not slow in coming: "Machine methods! The school-system is a grind! It only stifles the young soul in our children!"

We may turn to an interesting example of school methods that are not mechanical and that do not crush out the individuality of the infant soul. There was founded in this city recently the "Ferrer Modern School," based on the teachings of the anarchist philosopher and educational reformer whom the Spanish Government judicially murdered not so very long ago. An account of the methods of the Ferrer "libertarian education," as it is carried on in this city, was given the other day in the *Call* by one of the teachers connected with the school. The elementary class now consists of nine children in regular attendance, ranging in age from four to ten years. Regular attendance in the "libertarian" sense means that the children do not assemble at a given hour; "they come when they wish to come, and go when they wish to go." Thus it appears that on a certain Monday, little Gorky came at 7:30, Stuart at 8, Oscar at 9, Rion at 9:30, Amour at 9:45, Magda and Sophie at 10, and Ruth and Revolte at 11. That day, however, was exceptional in its demonstration of the "liberty of assemblage"; most days, the class is in full session before ten o'clock.

And now as to methods:

> Each of the pupils has his or her blank book, in which the arithmetic, the writing, and the occasional drawing are done. In these blank books every morning I write certain examples and problems. Whether they are done or not; whether they are done in the morning or in the afternoon, is left to the choice of the pupil. Strange to say, the pupils—with occasional exceptions, of course—not only do the examples, but often ask for more. The teaching, necessarily, is individual; and especially so in reading. Where new arithmetical processes are taught, it often enough happens that more than one pupil wishes to attend; but to ask the other pupils to attend when one pupil is reading is to ask that which you will never get, even by compulsion. My experience in the public schools has convinced me that, when you think the class is attending to a reader, it is really attending to the story, or to something else; the great majority of the pupils are reading ahead, for the obvious reason that he who reads aloud must read more slowly than he who reads to himself.

And we learn that every other subject is taught in the same individualistic manner. History is mastered by making the children assume the rôle of a certain historic character and act it out. Thus a boy is John Smith and a girl is Pocahontas, and visitors on entering the classroom have been asked, "Are you an Indian or a white man?"

There is no intention, of course, to suggest that this picture of pedagogical chaos would exactly describe the Mon-

tessori method or any of our established pedagogical systems. It may even be an unfair picture of the Ferrer method as it obtains in Spain, where it is reported to have won excellent results. But it nevertheless remains true that most of these pedagogical methods which arise in protest against the "maiming of the child's soul," merely foster a spirit of lawlessness and leave the child in the end a prey to his undisciplined impulses. A vine that is not pruned and trained bears but little fruit, and that of a degenerate quality. Fortunately, these schemes in their extreme form are not widely practicable: they presuppose a degree of leisure, of patience, and of material resources which may be forthcoming among a selected class, but which can hardly be expected in a community that has three-quarters of a million children to take care of in its schools.

ATHLETICS ABROAD.

While in this country there is increasing discussion concerning the exaggerated cult of the body as it is practiced in the colleges, the athletic spirit is reported to be making conquests among the European youth. The peoples of the Continent, it is to be noted, have never been so averse to the pursuit of physical exercise as in our contempt we are often driven to imagine. Taking athletics in its very broadest sense as the appreciation and pursuit of the open air, we find that in Germany, for instance, the love of the open is probably as widely prevalent as in England or this country. Only with the Germans as with the rest of the Continentals in minor degree, the passion manifests itself in a diffused and well regulated manner. It is less a matter of games and contests and more of pastime and recreation. The German pedestrian in his plumed hat, and knapsack on back, is an historical figure that still lives. Student and college professor, clerk and professional man, still spend their annual vacation fortnight on the roads of the Black Forest, in the Thuringian hills, or across the frontier in the Bernese Oberland and Tyrol. The workingman to whom a prolonged vacation is denied has his May-walks, his week-end camping-out parties, his open-air gymnastic drills. The consumption of food is not usually recognized as a branch of athletics, but even the pleasant German habit of dining by the thousands out-of-doors is a manifestation of the same fundamental love for the open sky and the green earth.

But now the strenuous American idea of physical culture is winning its way against the older and quicter methods. German moralists of the new school of efficiency who have learned to cite America as the great exemplar of success, are uttering their dissatisfaction with the flabby athletic ideas of the university student as expressed in the ceremonious sword-contests of the *Mensur* and elaborate beer-drinking competitions. Nor is there about gymnastic drill and the pleasant game of ninepins that aspect of the heroic which inheres in the manly exercise of running, jumping, and hurling ponderous weights to great distances. In part it has been the influence of America, but in greater measure it has been the influence of the Olympic Games, for the latest renewal of which at Stockholm in June the most elaborate preparations are making. The remarkable series of victories won at preceding Olympic festivals by the representatives of America has stimulated competition. There is no likelihood that our primacy in this respect is as yet endangered. We have too long a start and our resources are quite out of proportion to those any other nation can bring into the field. Nevertheless, in various branches of sport the Continental nations have been developing serious contenders. They have done very well in the recreative sports—such as golf, tennis, swimming, and rowing; and they are now turning their attention to the more specialized events—such as jumping and the sprints. Admirable features of the Olympic programme are the prizes for all-round ability. At Stockholm the established pentathlonic contest is to be supplemented by a "decathlon."

In France we have, in rather amusing and exaggerated form, a manifestation of the same return of the age-weary and over-cultured nations of Europe to primitive tastes and occupations. French sport has gone quite mad over pugilism. In the person of Georges Carpentier the country has developed a champion of international calibre, whose praises are hymned with a fine Gallic *élan* by statesmen, poets, and members of the Academy. The press teems with accounts of the triumphal progress of *la boxe*, and the man in the boulevard must be very well up by this time in the intricacies of *le round*, *le knockout*, and *le count*. That most estimable of family journals, *Les Annales*, features in one of its recent numbers a philosophical prose poem in praise of the squared ring, by Maurice Maeterlinck, supplemented by articles on *la boxe* in America by Paul Bourget, and on the hygiene of boxing by Carpentier, and illustrated with the familiar physical presentments of Jack Johnson and Jim Jeffries. Maeterlinck's essay is in his manner of gentle mysticism. The author of the "Treasure of the Humble" compares the extraordinary physical debility of the human animal for purposes of offence and defence, with the amazing resources displayed by the lower creatures. Man has neither the ant's tremendous lifting strength, nor the turtle's protective carapace, nor the almost impregnable ambulatory fortifications of the snail. But he does have his two fists and the skill of directing them towards vital spots, and of pouring into them the entire physical and nervous energy of his body. Maeterlinck then goes on to repeat the argument familiar to Anglo-Saxon ears, that skill with one's fists conduces to self-control and fair play, and saves a man from the extremes of cowardly fear and that un easy self-assertion which is the product of fear.

About all this there is an air that is not altogether primitive and of the flesh. M. Maeterlinck's passion for the fine brutal impact of the clenched fist is largely cerebral. We detect the touch of the man whose interest is in the inner meaning of things; and what inner meaning can there be to so obviously external a fact as *le upper-cut* or *le knockout?* But if M. Maeterlinck's enthusiasm is largely poetic frenzy, it is safe to infer that on the part of the ordinary Frenchman this newly awakened fondness for fisticuffs belongs to the present renaissance of the French spirit, away from feminine decadencies and self-scarifications and lotus-cating, towards masculine self-confidence and the reassertion of those simple, healthy, primitive appetites which help a nation to make a firm stand when some other nation wants to deprive it of Morocco.

NEWS FOR BIBLIOPHILES.

In view of the fact that but few details of Henry Fielding's life in the period immediately following 1740 are to be had, it is unfortunate that writers generally have failed to observe that the personal remarks of Fielding in his Preface to the "Miscellanies" of 1743 concern two winters, not one winter. Lawrence ("Life," page 172), Keightley (*Fraser's Magazine*, January, 1858), Dobson ("Fielding," edit. 1905, page 107), Gerould ("Selected Essays of Fielding," page xx), and the Dictionary of National Biography apply the remarks to the one winter of 1742-3. Only Miss Godden ("Henry Fielding, A Memoir," pages 134-6), who does not call attention to the slips of other writers in the matter, who herself a little later slips like the rest, and who does not show the evidence in the case, seems to recognize that his words show that the winter of 1741-2, as well as that of 1742-3, was a hard one for Fielding. The winter of 1741-2 Fielding refers to as "last Winter," that of 1742-3 as "this Winter." The following assists to make this evident.

A part of Fielding's notice concerning the "Miscellanies," in the *Daily Post* of June 5, 1742, quoted by Miss Godden (page 173), reads: "The Publication of these Volumes hath been hitherto retarded by the Author's Indisposition last Winter, and a Train of Melancholy Accidents scarce to be parallel'd." This refers to the sickness and the distresses indicated in the following often-quoted passage in the Preface (1743 edit., third page from end; pages xxxiii-xxxvii are incorrectly numbered) to the "Miscellanies":

> While I was last Winter laid up in the Gout, with a favourite Child dying in one Bed, and my Wife in a Condition very little better, on another, attended with other Circumstances, which served as very proper Decorations to such a Scene, I received a Letter from a Friend, desiring me to vindicate myself from two very opposite Reflections, which two opposite Parties thought fit to cast on me, *viz.*, the one of writing in the *Champion*, (tho' I had not then writ in it for upwards of half a Year) the other, of writing in the *Gazetteer*, in which I never had the Honour of inserting a single Word.

The expression here is "last Winter." The burial of a "Charlott Fielding" (possibly the child spoken of) in February, 1742, is recorded in the Registers of St. Martin's in the Fields (Godden, page 136). On the fourth page from the end of the Preface, in the edition of 1743, Fielding stated that he had "long since (as long as from *June* 1741) desisted from writing one Syllable in the *Champion*, or any other public Paper." The passage referring to "last Winter" evidently, then (as will be seen farther), concerns the winter of 1741-2, and not as Lawrence, Keightley, Dobson, Gerould, and the Dictionary of National Biography interpret it, the winter of 1742-3.

In dealing with the incidents that led to the production of "The Wedding Day," which was played February, 1743, Fielding says in the Preface (page viii) to the "Miscellanies" that the play lay by him "neglected and unthought of, 'till this Winter." He then tells of Garrick's appeal for a play, of his writing of "The Good-Natured Man," then of the revamping and substituting of "The Wedding Day." He states (page xiii) that, while he was working on the play, "unfortunately, the extreme Danger of Life into which a Person, very dear to me, was reduced, rendered me incapable of executing my Task." Later on (sixth page from end) he apologizes "for the Delay in publishing these Volumes, the real Reason of which was, the dangerous Illness of one from whom I draw all the solid Comfort of my Life, during the greatest Part of this Winter." In these last passages, the phrase "this Winter" evidently is used of the winter of 1742-3. In the passage mentioning the gout, and the sickness of his wife and child, where he says he "had not then writ" in the *Champion* "for upwards of half a Year," the phrase "last Winter" evidently refers, as I have said, to the winter of 1741-2. This is supported by the fact that just after he has apologized for delay in publishing because of "the dangerous Illness of one," etc., and before he speaks of the gout and the illness of his wife and child, his expression shows that Fielding turned in mind to time considerably past; for he says, "Indeed when I look a Year or two backwards, and survey the Accidents which have befallen me, and the Distresses I have waded through whilst I have been engaged in these Works." . . . (fifth page from end of 1743 Preface).

JOHN EDWIN WELLS.

Correspondence

TO AMEND THE FEDERAL JUDICIAL CODE.

To the Editor of The Nation:

Sir: In your issue of April 4, Prof. W. J. Shepard calls attention to the desirability of so amending the Federal Judicial Code as to permit appeals to the Supreme Court of the United States, from State decisions based on the Federal Constitution, where a State court declares a State law violative of Federal constitutional rights. Such a change in the Federal law is well worth while, but Professor Shepard is in error when he says that attention has not been called to this matter before. Nearly a year ago I succeeded in getting some members of Congress interested in the proposed amendment of the Judicial Code, and prepared a memorandum upon the subject, which was published in the *Illinois Law Review* for December, 1911. Prof. F. J. Goodnow has also considered the matter in his "Social Reform and the Constitution," and bills are now pending in the Senate and House of Representatives for the amendment of section 237 of the Federal Judicial Code. Hearings upon these bills have been held by both Senate and House Committees, and the hearings before the House Committee on the Judiciary have recently been printed. The American Bar Association, at its meeting in August, 1911, unanimously approved a recommendation that such legislation should be enacted.

Professor Shepard appears also to be in error as to the effect of such proposed legislation. If the Federal Judicial Code is amended in accordance with the suggestion referred to above, it will then be possible to appeal to the United States Supreme Court from State decisions declaring State statutes invalid, as violating the Federal Constitution. But most State decisions, or, at least, the most illiberal State decisions, are not based on the Federal Constitution alone. If a State court declares a State law invalid as violative either (1) of the State Constitution *alone*, or (2), *both* State and Federal Constitutions, the proposed amendment of the Federal Judicial Code would accomplish nothing, for the decisions in these cases would be sustainable without raising a Federal constitutional question. Now, it is precisely the cases not covered by this proposed legislation which make the most difficulty. Mr. Roosevelt's proposal for the "recall of judicial decisions" is, in reality, directed, not so much to the overcoming of State decisions based on the Federal Constitution (as to which the proposal itself would be unconstitutional), but aims primarily at the difficulty occasioned by illiberal State decisions based on State constitutional grounds. It may be well to call attention to the fact that a plan in many respects similar to Mr. Roosevelt's has been in operation in many States, and that State constitutional amendments have, in effect, in a number of cases, reversed State judicial decisions.

Mr. Roosevelt's proposal seeks to accomplish an end which cannot be effected by Federal legislation, and the purpose sought to be accomplished is in no sense revolutionary. The people of New York cannot be said to be revolutionary when they seek to overcome by constitutional amendment the decision of the New York Court of Appeals in Ives vs. South Buffalo Railway Company, in so far as it is based on the New York Constitution. For here it should be suggested that the New York Court expressly said that it should interpret the "due process of law" clause of the State Constitution so as to annul the compulsory workmen's compensation law, even if the identical clause in the Federal Constitution were interpreted by the United States Supreme Court so as to sustain such legislation.

The end which Mr. Roosevelt seeks to accomplish is a desirable one, and the end to be accomplished by the proposed amendment of the Federal Judicial Code is also desirable; but the relation between the two is not so close as Mr. Shepard seems to think. My own view is, however, that, if the Federal Judicial Code be amended, the States will be enabled to control their own courts by a method which appears less radical than that of Mr. Roosevelt. If the Federal Judicial Code were amended so as to allow appeals to the United States Supreme Court from all State decisions on Federal Constitutional questions; and, if the States removed from their Constitutions the "due process of law" clauses, "due process" decisions of State courts would then have to be based on the Fourteenth Amendment, and such decisions would be reviewable by the Supreme Court of the United States. And in this manner would be accomplished the purpose aimed at of restraining illiberal and often irresponsible declarations by State courts that State laws are invalid as depriving of "due process of law" under the State Constitutions. These suggestions were embodied in an article in the *Michigan Law Review* for December, 1911, before Mr. Roosevelt's declaration in favor of the "recall of judicial decisions." Any one who has studied the subject carefully will probably agree that Mr. Roosevelt's aim is not so radical as it has been made to appear.

Whether the purpose aimed at shall be accomplished in part by Federal legislation and in part by State Constitutional amendment, or by the "recall of judicial decisions" (which, in Mr. Roosevelt's plan, is in effect but an easier method of amending State Constitutions), is a question upon which there may be a good deal of difference of opinion. W. F. DODD.

University of Illinois, April 17.

FRANCIS DAVIS MILLET.

To the Editor of The Nation:

Sir: A well-known gentleman who fortunately saved his life by keeping up in the sea and being picked up in time by one of the boats, has told us that he saw our friend, Frank Millet, very shortly before the Titanic went down, standing quietly on the deck while he waited placidly for the ship's inevitable sinking. He tells us that the smile that always played over his face had not altogether left him, and we know that he met his end like the brave man he was, no doubt regretting while he thought of his wife and children, that he was powerless in that hour of calamity to save others as well as himself. For it was one of Millet's fine qualities that no matter how much he might be beset with the troubles and difficulties that were a part of the never-ending activity of his life, he always somehow found time to give effective help to others. He did this, too, very often without being asked, for to his sympathetic nature was joined the quality of divination in such cases, his intuition being keen and his impulse to act a habit. I have often heard him say: "When you have a good idea, put it into execution at once"; and this was a rule of his own life, as well as his advice to others. If it had not been so, he could not have accomplished so much as he did in his useful and brilliant career, nor would a score of undertakings which came to success through his efforts, have remained to testify, as they do to-day, to his fine executive ability, his tact, and his knowledge of men and how to bring definite results out of suggestions, tentative plans, and, very often, complications of authority.

While Millet's mural decorations, which were his chief occupation as a painter in late years, are more in mind at the present moment than his easel pictures, it is worth while to speak particularly of his work as a painter of English *genre*. Born in Massachusetts of English stock, he remained absolutely American in his English surroundings in Worcestershire, but in his art he entered into the spirit of the Elizabethan age as completely, for instance, as did Abbey. At Broadway he bought an ancient ruined abbey which stood on ground adjoining Russell House, his residence in that now celebrated village, and at a time when I visited him there, early in 1895, he was restoring the building, both with stone and timber. One of his London friends, an architect, came there for a day or two at the same time, and he told me that though he thought his own knowledge in restoration was pretty thorough, he found Millet had made no mistakes whatever, and had, by his study at odd times, made himself perfectly competent to carry out the restoration unaided by professional counsel. It was in one of the ground-floor rooms of this old abbey that Millet posed his models and painted such pictures as Rook and Pigeon, The Black Hat, Between Two Fires, and others equally well known. This series of pictures, which must comprise as many as two score that may be called "important compositions," are of excellent technical quality. Pushed to a marked degree of finish, they recall in a way the work of the Dutch and Flemish masters, but they are quite different in their color schemes and lighting. All, or nearly all, of them are painted in a high key of light. Millet studied in Antwerp, but the style and conception of his work are distinctly his own. He could never have been satisfied with anything but painstaking endeavor, though he had a fine sense of ensemble and achieved that quality in his pictures.

His occupations and the missions he undertook for various public enterprises, not all of them connected with art, but at times more or less allied with it, took Millet pretty much all over the world. His life began early, first as a drummer-boy with a Massachusetts regiment in the Civil War, and he was correspondent for a great London newspaper in the Russian-Turkish war no more than eight years after he graduated at Harvard. His acquaintance was very wide and embraced many prominent men in official life, both at home and abroad. He was American, however, wherever he went, and preserved his American speech. It was indeed remarkable that he did so during his long residence with his family in England, participating intimately as they did in the life of the county people. He rarely made use of a foreign word or phrase in conversation, though he spoke at least two European languages besides his English, and could make himself perfectly well understood in several others. The clean, straightforward style of his English is shown in his literary work, most of which was ephemeral.

Coming to town from the country a few days ago, I have heard Millet's name on every lip, even before I could myself speak of him, asking information, and I am sure that no man on the Titanic is more keenly regretted than he. This regret and sense of loss is not at all confined to friends in what we call "the art world," whether we mean it here in New York or in London or Paris. His friends were legion in many spheres, and wherever he was known he was as much esteemed as he was loved. His place cannot really be filled by any one man that we can think of, for he was capable of filling a number of responsible positions at the same time, and filling them all rather better than anybody else could do.

WILLIAM A. COFFIN.

COLLEGE SLANG.

To the Editor of The Nation:

Sir: Your comment, March 28, upon the reported movement in the English department of the University of Kansas for the abolition of slang, moves me to subjoin a few headlines from "the official paper of the University of Kansas," the *University Daily Kansan*, for March 25, 26, and 27:

The Toot Manifesto is Effective To-day. (That is, the new regulation for signal-whistles goes into effect.)

Earth Cut Corner, but Kansas Didn't Hold Tight, and Slipped Up North a Ways. (Referring to the cold weather following the equinox.)

N. G. Sign Hung on Old Superstitions—Storms Give Traditions the Go-by.

Juniors Need Not Lure of the Prom.—"Shorty" Would Fain Have Them Achieve Their Tickets—Are the Third Year Men Slow Sports?

They Won't Kick Susie and Jennie Aroun' Now.

He Sir Walter Raleighs and Gets Box of Fudge.

What's Wrong with Orthographicals?

Would Not Tax Dad's Check.

THE INDIANA STATE LIBRARY.

To the Editor of The Nation:

Sir: With reference to your editorial of April 18 regarding a State Library in Indiana, permit me to say that the agitation for such a building has been going on for years, centring largely in this office. The General Assembly of 1911 approved a bill appointing a Centennial Commission, of which the undersigned is secretary, whose duty it is to procure a site and approve plans for a State Educational Building in which shall be placed the State Library, State Museum, and Educational offices. This building will be dedicated as a Centennial Memorial in 1916.

DEMARCHUS C. BROWN,
Librarian.

Indianapolis, April 20.

A VEGETARIAN TO THE RESCUE.

To the Editor of The Nation:

Sir: You ask what possible explanation can be offered by the devotees of a vegetable diet for the failure of the vegetarian rats to equal the exploits of the meat-eaters. I have no explanation to offer, until I learn the conditions of the experiment. I presume they made the foolish creatures run round in squirrel cages. I cannot think of any other way. If so, the solution is plain. The stupid meat-eater, like other carnivorous creatures, had the brute energy to keep going without sense enough to realize the futility and folly of the performance. The vegetarian may have had quite as much energy as his meat-eating competitor, but he had not addled his little brain with beefsteak, and had sense enough in his little head to leave off when he had got enough exercise to put his muscles in proper trim. There is nothing discouraging to the vegetarian, and the results of the experiment are as little disconcerting as the one that Herbert Spencer records in his autobiography, where he says that he found it necessary to rewrite the flabby paragraphs composed on a fortnight's experiment with vegetable diet. Doubtless the philosopher's stomach was upset with the abrupt change of habit. He should

have persisted longer before drawing his conclusions. B. R.

Halifax, N. S., April 17.

"WHITE."

To the Editor of The Nation:

Sir: To find how long a white man has meant a good man, B. S. M. will have to go back further than Layamon's "Brut." He might take a look at Horace, Sat. I, v, 40-42:

Plotius et Varius Sinuessæ Vergiliusque
Occurrunt, animæ quales neque candidiores
Terra tulit neque quis me sit devinctior alter.

Or, for the other side of the case, Sat. I, iv, 85:

Hic niger est, hunc tu, Romane, caveto.

Literature

SOCIALISM AND DEMOCRACY.

Essentials of Socialism. By Ira B. Cross, Ph.D. New York: The Macmillan Co. $1.

Elements of Socialism. By John Spargo and George Louis Arner, Ph.D. New York: The Macmillan Co. $1.50.

Pay-Day. By C. Hanford Henderson. Boston: Houghton Mifflin Co. $1.50 net.

Democratic England. By Percy Alden, M.P. With an Introduction by Charles F. G. Masterman. New York: The Macmillan Co. $1.50.

Syndicalism and Labor. By Sir Arthur Clay, Bart. New York: E. P. Dutton & Co. $2.25.

The New Democracy. By Walter E. Weyl, Ph.D. New York: The Macmillan Co. $2.

The Cult of Incompetence. By Emile Faguet, of the Académie Française. Translated by Beatrice Barstow. New York: E. P. Dutton & Co. $1.50.

Socialism and Character. By Vida D. Scudder. Boston: Houghton Mifflin Co. $1.50.

Dr. Cross has produced in "The Essentials of Socialism" a compact and readable summary of the Socialist theory and teachings which is well adapted to the end for which the author designed it, namely, as a "handbook for the busy reader or as a textbook for the classroom." The matter is arranged in orderly fashion and the bibliographical references at the end of each chapter are a valuable feature of the work. So also is the bibliography at the end of the book, which, although not intended to be complete, yet contains most of the really important works available, at all events in English. In view of the open antagonism between the Roman Catholic Church and Socialism, the author would do well to include in this bibliography the writings of Bishop Stang, Father Ming, S. J., Lorenzo Dardano, Charles S. Devas, and Father Rickaby, S.J.

John Spargo has long been known as one of the more popular Socialist writers, and now in collaboration with Dr. George Louis Arner, late of Dartmouth College, he has published a new textbook of the Socialist case. It is a frankly partisan presentation, made, however, in good orderly fashion, with a convenient summary and a few bibliographical references at the end of each chapter. Presumably, it is intended for use in Socialist circles: it could hardly claim to be a textbook for general or educational use, for it is in essence an argument rather than an investigation. There is nothing new in the matter presented, and the criticism may fairly be passed on the authors that they do not seem to appreciate sufficiently the ravages that time and experience (together with the Revisionists) have wrought in the gospel and prophecies according to Marx and Engels. There is in the presentation of the Socialist case a good deal of what may be called dry scholasticism, especially in the consideration of objections. The bibliographical references do not seem to include the names of anti-Socialist writers.

C. Hanford Henderson's book is a disappointment. The thesis of his earlier chapters is that education and industry should be brought into a new partnership in place of their mutually exclusive attitude of to-day, as a result of which the "formal process of culture" is confined virtually to those who can look forward to economic leisure, while those destined to work are debarred from it. For the "line of functional cleavage between individuals in the same society" Mr. Henderson wishes to substitute a similar line "between the passing years of the same individual." He would have come to every man in his day "a time for formal education, for industry, for pleasure, for research, for wise counsels, for exercise, for loving, for begetting children, for folding the hands in the presence of death." Only in this way can the complete man—or as he quite unnecessarily terms him, the "Beyond-Man"—be fashioned. The idea is attractive. The disappointment comes when we learn the means whereby the Utopian idea is to be realized. Although to the best of the reviewer's recollection neither Marx nor Socialism is mentioned by Mr. Henderson, all the old familiar faces appear before the curtain. Mr. Henderson at the close of his book sums up his argument (in his own italics) by saying that "*Social regeneration can only be brought about through the elimination of profit.*" He may therefore be classed with certainty as a thoroughly orthodox Socialist. For his book it may be said that it ought to be welcome to those Socialists who are weary of the rigid scholasticism of the Socialist fathers and the stereotyped perfervid rhetoric of the modern propagandists. It certainly is written in better style and with more persuasiveness than most of the missionary works in use by the party to-day, but it adds nothing whatever to the sum of knowledge in other respects. And why does not Mr. Henderson make open acknowledgement of his indebtedness to Karl Marx and Friedrich Engels?

As an exhibition of what has been actually attempted in England by way of social reform, Mr. Alden's book is very interesting. It is curious that in a country where theoretical Socialism has never formally taken hold of more than a small part of the community, so many ideas which are part and parcel of the Socialists' demands by way of immediate reforms should have received actual application on a large scale. Mr. Alden does not appear to have been consciously indoctrinated with orthodox Socialism to any appreciable extent, but the chapters on The Child and the State, The Problem of the Unemployed, Housing the Poor, and Municipal Ownership, show the influence of the Socialistic leaven upon modern English thought.

Sir Arthur Clay's account of "Syndicalism" in Europe is readable and, so far as the reviewer has been able to discover, as accurate as is possible considering that the author is bitterly opposed to the movement. His book is designed as an alarm-call to his countrymen. He believes that the Socialists have captured the trade unions in England, and he regards it as "of importance that the community should realize the fact that the control of the formidable voting power of organized labor has now passed from the hands of those who used it to further the legitimate aims of trade unionism into the hands of a party who are using it to destroy the existing economical organization based upon private ownership and individual enterprise, with the object of establishing Collectivism in its place." Read in connection with Mr. Alden's book, this statement seems extreme; it is rather the *ad viaticum* measures of the Socialists that are backed by the trade unions and not their main end, the Coöperative Commonwealth. The fact that Sir Arthur Clay writes as an adherent of the Manchester school warrants one in discounting somewhat the gloom of his views on this point. In Chapter vi there is a shrewd characterization of the "class-conscience" that has grown up in the economically dominant class, on which Benjamin Kidd in England and Friedrich Wilhelm Förster in Germany have laid so much stress. Sir Arthur points out that, conscience being a function of the intellect and not an emotion, popular understanding of social problems has lagged behind in growth as compared with the generous emotions, so that many good people are

voting for Socialism without knowing just what they are voting for—which is probably true the world over.

"The New Democracy" is a noteworthy contribution to the literature of "social unrest," or, rather, half of the book is. The reader will do well either to take for granted or to hurry through as fast and forget as soon as possible Mr. Weyl's first ten dithyrambic chapters on "The Evolution of the Plutocracy"; he should begin at page 156 the series of chapters which deal with "the beginnings of a democracy." Mr. Weyl's thesis is, he says, in part borrowed from Simon Patten's theory of an "Economy of Pleasure" as contrasted with the old "Economy of Pain," but he has made it his own by the attractive originality of his treatment. He sees that both the Manchester school and Marxian Socialism—its antithesis—are dead, the one killed by socialization of production and the other by the appearance of a "social surplus" which, for the first time in history, makes democracy possible. But it is a complete democracy which he envisages, one which concerns itself with the economic liberties of humanity without which its political liberties are worthless. "To-day the chief restrictions upon liberty are economic, not legal, and the chief prerogatives desired are economic not political" (p. 164). Now to create this democracy—which is only made possible, not assured, by the existence of a "social surplus"—the people must rise above certain minimum economic, intellectual, and political levels. The minimum economic level is above the "poverty line" and the minimum intellectual level is above the mere "literacy line"; so also the minimum political level is above the mere "suffrage line." These conditions are substantially satisfied in America and Mr. Weyl sees in the present "social unrest" the evolution of his new democracy. His chapter xv, describing the composition and alignment of the multifarious forces coöperating in this evolution, is admirably done; so also is chapter xvi on the tactics of the democracy. Both show the fruits of keen observation and sound common sense

The three aims of the "New Democracy" are socialization of industry, democratization of government, and civilization of the citizen by "democratization of the advantages and opportunities of life." The first is to be attained through (partial) "government ownership of industry; through government regulation; through tax reform; through a moral realization and reorganization of business in the interest of the industrially weak." Efficiency will determine the question as between government operation and government regulation and he looks for a great increase in the extent of regulation (p. 291), but also has hope from publicity. Through taxation a means will be found for restricting "anti-social" accumulations of wealth and for "socializing" wealth. Democratization of government, the second aim of the democracy, will proceed by increased control of parties, elections, and elected representatives, and by direct legislation by the people, of course including the initiative, referendum, and recall. Mr. Weyl is at some pains to make clear that he favors these measures less because of a belief in the advantages of direct over representative government than because "the fundamental issue in America is in reality . . . between a *misrepresentative* plutocratic government and a democratic government, whether representative, direct, or mixed" (p. 308). The third aim of the democracy, the civilization of the citizen, is to be attained "through conservation of life and health, through a democratization of education, a socialization of consumption, a raising of the lowest elements of the population to the levels of the mass" (p. 321). This includes compulsory insurance of all kinds, rectification or destruction of parasitic trades, and a system of education that will "exalt social obligations above mere competitive egoisms."

The main fault to be found with Mr. Weyl is that he has allowed himself to become too much obsessed by the spectre of a highly organized, class-conscious, malignant plutocracy poisoning the wells of law and government. This spectre has at times beclouded and hampered the operations of what on the whole must be regarded as a keen intellect actuated by a transparently honest desire to find out and state the truth. It is perhaps characteristic of the times that, while his index contains nineteen references under the word "education," neither "ethics" nor "religion" is to be found therein.

Emile Faguet's "Cult of Incompetence" is a mordant and timely criticism of pure democracy which fits with most uncomfortable closeness the tendencies perhaps best represented by Mr. Roosevelt's candidacy to-day. Written mainly, if not entirely, of conditions existing in France, it is nevertheless of universal application. His contention is that pure democracy means incompetent and inefficient government, because it is opposed to nature. Nature does her work by means of highly specialized organs, whereas Democracy (pure) wants to perform as far as possible all functions itself and instinctively shrinks from entrusting such functions to specially trained or specially qualified representatives. It wants to make laws itself, enforce them itself, interpret them itself, although utterly unfitted for the purpose, and, not being able to do this directly, it chooses as its agents those who are most like itself, preventing them from becoming efficient as specialists by exercising over them continuous control of the most jealous kind. "This is why Demos hates a permanent civil service. An irremovable magistrate or functionary is a man whom the Constitution sets free from the grip of the populace" (p. 56). But perhaps the most searching criticism of democracy is to be found in his consideration of law as opposed to the "emergency decree," which latter, he insists, is the inevitable form of legislation in direct democracy. "Law is an aristocratic thing; only the emergency law, the decree, is democratic" (p. 89). And he says:

> The law, therefore, to a certain extent should correct national tendencies, it should be loved a little, because it is felt to be just, feared a little, because it is severe, hated a little because it is to a certain degree out of sympathy with the prevalent temper of the day, and respected because it is felt to be necessary. (P. 69.)

How, he asks, can such laws be expected from a democracy making fresh decrees every day? Chapter v on this point is one of the strongest and most convincing in the book.

His thesis is mainly negative, but his positive beliefs may be gleaned from his closing chapter, where there are the following remarks:

> It is clear that the passion for sovereignty, for equality, for incompetence, is not sufficient to give to a government a life which is at once complete and strong. It is necessary to give competence its part—or, rather, it is necessary to give competence one part, for I do not wish to argue that there is any question of right involved; I only affirm that it is a social necessity. It is necessary that competence, technical, intellectual, moral competence, should be assigned its part to play, even though the sovereignty of the people should be limited and the principle of equality should be somewhat abridged thereby. A democratic element is essentially necessary to a people, an aristocratic element is also necessary to a people. (Pp. 227-8.)

It is not necessary to follow M. Faguet in his conclusions at all times, for his satire has frequently led him to over-statement for the sake of an epigram, but the biting truth of most of his pages cannot be denied, and they are so full of brilliant characterizations as to make the temptation to quote almost irresistible. Vigorous repudiation of the postulate of *equality* (in all things), which postulate he regards as the foundation of democracy, is apparently the keynote of his work. Whatever else be skipped in reading the book, page 190 to the end of chaper xi should by no means be slighted, but it will not be found easy to skip anything.

In "Socialism and Character" Miss Vida D. Scudder has attempted what, in her preface, she terms a "reconciliation" of the "categories" of "conservative Christian and revolutionary Socialist" thought. In such reconciliation she sees "the only hope for democracy." Writing as a convinced Socialist, view-

ing mankind inevitably and irresistibly marching to the Coöperative Commonwealth, she sees in this Commonwealth the potentiality of something like the kingdom of God upon earth. It looms out from her pages as a city built indeed upon the earth, but with its ramparts and minarets reaching into the heavens suffused with the unearthly light of a new and reborn "Christianity." She draws her picture in apocalyptic fashion and with evident sincerity.

The book has much in it to stimulate thought and evoke emotion, yet the reader lays it down with the feeling that it misses its mark, and that neither thoroughgoing Socialist nor thoroughgoing Christian will accept the eirenicon that Miss Scudder offers.

Let us take the case of the Socialist. The Socialism that she offers is in a sense that of the "scientific school," but she has so softened its harsh features and illumined them with the roseate light of the most idealistic Utopians that much of the likeness has gone. In a sense, the teachings are those of Marx and Engel, but the voice is that of Mazzini or Ruskin. And in the effort to idealize the crude materialism of the early Socialistic patrology and infuse new life into the latter-day Socialist scholastics, she has gravely imperilled the dogmatic system of the scientific faith at important points. In several passages she pins her faith in the ultimate triumph of Socialism to ideas which not merely form no part of the Marxian deposit of faith, but are opposed to its entire spirit. To choose but one instance: "The truth is that we are forced to agree with our tedious friends who insist that we must alter human nature if Socialism is to be a success" (p. 188). Compare this with the concluding sentence in Spargo and Arner's work noticed above: "So far from admitting that Socialism depends upon change in human nature, the Socialist contends that Socialism must come unless the fundamental passions which we call human nature are changed" ("Elements of Socialism," p. 368). The latter view is the "orthodox" one beyond question. It would be easy to multiply examples of similar divergences, and the anti-Socialist reader will find many passages in Miss Scudder's book that will help to fortify his convictions.

As for the "conservative Christian" reader, his view of the argument will depend very much upon the kind of "Christianity" that he holds. Throughout her book, and especially in the chapter on Socialism and Christianity (despite a certain irritating vagueness of phraseology), Miss Scudder makes it clear that her appeal is to a "Christianity" which has forgotten original sin, teaches that faith is little and works are much, and bids us look on its Founder as the greatest moral teacher the world has known—and no more. In this system Francis of Assisi is more than Augustine, and much more than Thomas of Aquin, if indeed there be room for Thomas at all. Doubtless there are many such "Christians," but the quarrel between Socialism and Christianity is not of their making. It is with that body of Christian thought the oldest and still the most numerous of all existing Christian bodies whose opposition to Socialism has been and still is continuous, ubiquitous, and uncompromising that a treaty must be struck if there is to be peace, and the terms that Miss Scudder proposes will not be acceptable to that body. How deeply she has misapprehended its position is apparent from many passages in her book. It is hardly too much to say that it is to the "Modernists" she looks for the soul of the Catholic Church. Now, whatever may be the rights and wrongs of the case, it is a clear fact that "Modernist" and "Catholic" are mutually exclusive terms, nor is the Catholic Church likely to accept William James on the Trinity (p. 351) any more readily than Miss Scudder's own view of the Atonement (p. 365). It is not necessary to insist upon these matters at length; the point is that the Catholic Church as it exists to-day will assuredly be no party to Miss Scudder's peace proposals. This may or may not be important from the Socialistic point of view, but it is important that there should be no confusion of thought upon the matter—and in Miss Scudder's book there *is* confusion.

CURRENT FICTION.

Julia France and Her Times. By Gertrude Atherton. New York: The Macmillan Co.

Mrs. Atherton is never without something to say, but her voice grows a trifle strident as time passes. Julia France is the modern woman, and her times are the present—or, it may be, a few years in the future; for it is given us to understand that under Julia's leadership, the cause of suffrage is virtually won in England. Born and brought up in St. Kitts, she is married at eighteen to a dissolute British naval officer. Her mother is a dabbler in the occult, has cast her daughter's horoscope, and firmly believes that she is destined to be a great lady in England. The naval officer arrives at the predicted time, and as he is the heir-presumptive of a ducal title, the mother, though warned of his character, gives her daughter to him without hesitation. Young Julia, thanks to her innocence, merely dislikes instead of loathing him, and sets forth cheerfully enough for England, on her way to being a duchess. There she presently discovers the wickedness of the world in general and her husband in particular. When she finally makes her escape from him (not legally), it is to ally herself with the suffrage movement, and eventually to become its leader.

But with all her ardor of service for the new womanhood, she remains at heart in the bondage of her sex. In the end an American, a hustling Californian, is too much for her with his masculine claims, and, after due struggle, she abandons her great work to become a mere partner in his. Mrs. Atherton apparently thinks this a sad come-down, a typical instance of that instability which blocks the path of woman. "It is," she says, "a far cry from the primigenious female, or even the Sabines, to the women that compose the advance guard of their sex to-day." But there is still a great deal of inherited weakness for them to contend with, however strongly they may wish for independence, and however firmly that wish may be intrenched in reason. The book, nevertheless, is not unhopeful: already there are a goodly number of "women that are approaching closer and closer to that exact balance of masculine and feminine attributes which, when attained, will give them the one perfect happiness, setting them free, as it must, from the present curse of the race, the longing for completion." Julia France is not a willing victim. She succumbs to love as "a splendid disease induced by Nature to further her one end; accompanied by moments of humiliation called happiness, but which in the last analysis are but the prelude to a lifetime of every variety of sorrow and disillusion." She looks back with chagrin to her loss of comradeship with the women of a stronger type, "the women that steered safely clear of the smiling island with a thousand jagged teeth beneath the rippling waters, and elected to stand alone, were free to accept the other great gifts of life, to attain to a form of serenity and content beside which love and its delusions were the earthly hell."

This is all very interesting no doubt, but the fact remains that the one thing which makes Julia France worth while, from our gross point of view as novel-readers, is that she does give in, that we know from the outset she is going to give in, to the baleful dictates of nature. The superwoman is not yet an accredited heroine.

The Garden of Indra. By Michael White. New York: Duffield & Co.

To say that these stories could not be what they are if Kipling had never written the "Plain Tales from the Hills" is to range them with nearly all recent fiction dealing with India. As they were written for the American "Associated Sunday Magazines," it is safe to guess that their source, or model, may not have been suspected by the audience

at which they were aimed. And it is chiefly on the surface that the resemblance exists. Words like yogi, memsahib, rani, and chuprassy (it seems almost irreverent in Mr. White to spell it with a *y*) sprinklo the pages; and the style has that air of brisk omniscience which attached the undergraduate to the Kipling of twenty years ago. There is strong similiarity in the treatment of the nativo character. One tale, "His Caste," might really almost have been written by Kipling himself. But there is a striking and rather amusing difference between master and pupil. Kipling's stories are told from the point of view of tho Anglo-Indian, and his heroes are the gentry of the British Imperial service, civil or military. The hero of these tales, on the other hand—or of a large proportion of them—is the American tourist or business man. Now he is a physician from San Francisco—now a motor-car agent from New York, now a civil engineer. His occupation does not matter; he is young, conquering, the undying hero of romance—and an American into the bargain. His adventures are chronicled not without skill, but they are, as a whole, adventures of a trumped-up sort, mere ingenious inventions on the part of the author. The complaisance with which happy-ever-after matches are arranged between young America and the native princess or heiress would make Kipling turn in his grave, if fortune had as yet given him one.

It, and Other Stories. By Gouverneur Morris. New York: Charles Scribner's Sons.

Mr. Morris pursues so even a path in the production of short stories that he leaves the critic little to say when a new volume appears. The title story of the collection now published seems to one reader at least by no means in the author's best vein. The grewsomeness of the adventure somehow fails to impress. In such tales as that of the consumptive poet and the rich girl, or of the young couple who take their honeymoon on a vessel carrying wild animals and are wrecked on a small desert island with their variegated cargo, Mr. Morris is in his true vein. He can tweak the nose of the goddess Probability and come off with high-handed victory. He can do something more difficult artistically than that: he can write slang like a gentleman.

Naomi of the Island. By Lucy Thurston Abbott. Boston: L. C. Page & Co.

Here is a variation on the old story of the foundling and her locket. It was a good story in the beginning and its possibilities are not even now to be scoffed at. Moreover, the author in this case has been somewhat ingenious in her variations. The difficulty is, she was not able, apparently, to resist the temptation to load upon her tale all the odds and ends of local color collected from a visit to, say, Nantucket, and another to Porto Rico; while, to make matters worse, she has piled on also the impedimenta of a private fancy for dabbling in fascinating Oriental cults.

The foundling begins in tragic circumstances by being a very appealing and attractive little girl; she keeps on being attractive as a household drudge, as a laundry worker, as a rich young woman's governess, as a rich old woman's companion. She is not wholly bad (though the author is a little ill at ease with her there), as a beautiful lady receiving the devotion of a handsome gentleman and being rescued by him from a watery grave. But why should she be made to preach a funeral sermon?

A Man and his Money. By Frederic S. Isham. Indianapolis: The Bobbs-Merrill Company.

Written in patent emulation of the "best sellers," Mr. Isham's latest novel reveals the skill of a practiced hand. The reader's curiosity is aroused by the opening episode on Fourteenth Street, New York. He is kept in suspense until the final scene in a Moscow café. He is thrilled by a succession of breathless pursuits, hair-breadth escapes, fierce midnight encounters, and the other familiar devices for stimulating the appetite of a jaded public. Of course, it is entirely unnecessary to add that the book contains not a single character. The hero is a bankrupt young millionaire, devoted and submissive. The heroine is a sylph-like heiress, cold and scornful. The villain is Boris Strogaroff, for the part nowadays almost has to be a Russian prince with a powerful steam yacht. The villain's assistant must, every one knows, be named Sonia.

PLURALISM AND THEISM.

The Realm of Ends, or Pluralism and Theism. By James Ward. New York: G. P. Putnam's Sons. $3.25 net.

In his former series of Gifford Lectures, which make up the much discussed and twice reprinted volumes entitled "Naturalism and Agnosticism" (1899), Professor Ward addressed himself chiefly to the relatively easy task of exhibiting the incoherencies or the inconclusiveness of the two philosophies from which the book took its name. In the present series he assumes the more arduous responsibilities of the system-maker. In his case those responsibilities are further complicated by the special difficulties which confront the maker of philosophical compromises, the mediator between extreme views. For the nature of his undertaking is indicated rather by the subsidiary than by the principal title of the book. He has essayed a reconciliation and synthesis of a fairly radical and new-fashioned "pluralism" with a rather conservative and old-fashioned theism. In broad outline, the volume consists of an exposition and defence of pluralistic idealism; of a presentation of reasons why mere pluralism should be regarded as unsatisfactory, and theism be added thereto; and of an examination, on the one hand, into the "modifications" which such theism must demand of pluralism, and, on the other hand, into the degree in which the retention of a measure of pluralism must clip the wings of theism.

Few words ending in *-ism*, unfortunately, are of unequivocal meaning. Certainly neither "theism" nor "pluralism" is such a word. The latter, even if qualified by "idealistic," has (among others) two senses which are worth distinguishing, if only for the sake of making it clear that Professor Ward sets out to be a pluralist in both of those senses. He adheres, first of all, to the kind of pluralism that is peculiarly associated with the name of Leibniz, the kind that has recently been represented among us by the late Thomas Davidson (whose cosmic republic could "in its Constitution acknowledge no God"), by Professor Howison (who is at least no theist in Ward's sense), and by F. C. S. Schiller, whose newly reprinted "Riddles of the Sphinx" presents a combination of pluralism with theism partially analogous to Ward's. In other words, Professor Ward rejects both the premises and the conclusions of "absolute" or monistic idealism, for which he proposes the more expressive name of "singularism." There exist, he maintains, many distinct and independent selves which are contained in no single unity of experience, a multiplicity of free spirits, each unique, each possessing some unsharable inner life of its own external to the being of any other self, even though that other be called the Absolute. But the pluralism of "The Realm of Ends" does not stop with the setting up of a monadology; it goes on to the outlining of "a pluralistic universe" in something approaching William James's sense of that phrase. Two essential traits of such a universe are that it is irreducibly temporal, that in it, as James put it, "time is as real as anything, and nothing is great or static or eternal enough not to have some history"; and that the temporal process which characterizes it is a process of true becoming, in which "spontaneous" new beginnings occur, and thus a genuine, unpredictable creation of fresh reality takes place. In the earlier part of his book Professor Ward explicitly enough adopts this kind of pluralism as well as the other. Tho world is for him essentially an "historical" world; and its history is that of a truly "creative" evolution. In words

which recall Bergson he writes: "Evolution for the pluralist is always synthesis, and all real synthesis is creative synthesis." Even "natural laws" themselves are contingent products of evolution; they relate to that portion of the primal cosmic spontaneity which has (like Bergson's "matter") grown tame and domesticated, and settled down into regular habits.

Now, at just this time, there could scarcely be a graver or more opportune theme for the philosopher's consideration than the question whether, or in what sense, these two sorts of pluralism are reconcilable with a belief in God. The "singularism" of most of the absolute idealists—of Green, of the Cairds, of Royce—has been a theistic philosophy, at least by profession. Though it has been only through a cloudy and misleading use of language that that metaphysical doctrine has been made to seem consoling and edifying and inspiring, it has none the less, as a matter of fact, given philosophical form to the theistic beliefs of many thoughtful and religiously-minded persons. But singularism shows conspicuous signs of decline. Pluralism, in more senses than two, promises to be the dominant tendency in the reflective thought of the immediate future. But both of the kinds of pluralism mentioned have seemed to some of their most conspicuous representatives inconsistent with the sort of theism which has provided the framework of the usual religious conception of the universe. For example, Professor Howison's "multipersonal idealism," while, unlike Davidson's "religion of democracy," it finds room for a God (of a sort), finds no room for a Creator; if finite selves derived their being from another, their freedom, it declares, would become inconceivable—and their sin and suffering would be imputable only to the God that made them and enmeshed them with predestined evil round. James, again, finds in his pluralistic universe, "the strongest reasons for admitting the possibility," and even the probability, of "a superhuman co-consciousness." But this consciousness, "however vast it be, has itself an external environment, and consequently is finite." It is not complete, but is a being still struggling to fulfil its will; greater than we, it is not omnipotent. And, "though *primus inter pares*, in the midst of all the shapers of the great world's fate," even God cannot "absolutely guarantee the world's salvation." Bergson's *élan vital* seems still more remote from both the God of religious tradition and the Absolute of idealistic theology.

With only so much of a theism Professor Ward is not content; to so drastic an "either-or" he cannot reconcile himself. His God still keeps most of what James used to call "the monistic perfections." Thus, though temporal and progressive, "God's life is always perfect. Unchangeableness can be attributed to God as it can to none else beside." Again, God is *not* merely *primus inter pares;* the relation of God to other spirits "is not comparable to the interaction of one finite subject with another." He is transcendent, and yet, in some mystical and ineffable manner, immanent. And though finite selves are free, they owe their being and (presumably) their fundamental natures to a continuous divine act of creation.

To analyze and criticise Professor Ward's manner of achieving this ambitious synthesis is impossible within the limits of a review. That, in intellectual seriousness and philosophical and scientific learning, he rises to the height of the great argument, his readers cannot doubt. That he brings to it also entire logical intrepidity and a keen sense of consistency is not so clear. To many it must seem that his theism recants a great part of all that his pluralism affirmed—or *vice versa.* Certainly, he often appears oblivious of the presuppositions of his pluralism, in his theistic arguments. For the second sort of pluralism implies the abandonment of "the principle of sufficient reason" as a philosophical axiom. It involves the admission of a non-rational (though not necessarily irrational) element in reality, the possibility of disconnected "brute facts" which have no reason of conceptual necessity behind them. But for one who has apparently accepted this "radical empiricism," with its recognition of an indeterminate amount of contingency and logical discontinuity in things, Professor Ward in his later chapters makes an extraordinarily free use of the "principle of continuity," and of a form of the old cosmological argument *a contingentia mundi*, as premises of his reasoning.

The Connexion between Ancient and Modern Romance. By W. J. Courthope. (From the Proceedings of the British Academy, Vol. V.) New York: Henry Frowde.

The present Warton Lecture corrects the views of Thomas Warton regarding mediæval romance. This was not always purely fictitious, as Warton believed, but was in origin professedly historical, dealing, in some *langue romane*, with the matter of France, of Britain, or of Rome the Great. Thus it was not imported into Europe by the Arabians; nor was it free of influence from Greek and Roman literature. On the contrary, the change from its earlier historic and ethnic interests to its later interest in the fictitious love-adventures of individuals was due not only to the Celtic revolt from "the despotism of fact," but also, and largely, to the example of Greek fiction. Such, in outline, is the connection between ancient and mediæval romance.

Though these views are not wholly novel, it would be interesting to know whether Mr. Courthope has found any direct external evidence of the influence of Greek romance upon mediæval. There is enough indirect evidence, certainly, to raise such a presumption. The crusaders were in contact with Byzantine civilization, which had preserved the earlier Greek romances and was producing new ones as late as the twelfth century. The change from quasi-historical to fictitious and amatory plots was consummated by Chrétien de Troyes while in known contact with a crusading society. Specific internal evidence is furnished by similarity in themes—the theme, for example, found in "Cligés," and derived by Mr. Courthope from Xenophon of Ephesus, of the heroine who, by simulating death, escapes an odious marriage. But specific transmissions like this are doubtful. This theme may perfectly well have reached "Cligés," not by way of Xenophon's "Ephesiaca," but by way of popular story, which often did come from the Arabs, and another mark of whose popular origin is that it issued in ballads and fabliaux. In fact, the theme in question occurs in the "Arabian Nights" (Story of Ganem Ben Ayoub), in the ballad of "The Gay Goshawk" (Child, No. 96), and in Sermini's *novella* about the bourgeois, "Vannino e la Montanina." Despite, however, the uncertainty of any one case, or of any number of single cases, the bulk of such evidence of Greek influence—extending even to Saints' Legends, *e. g.*, that of St. Ursula—is so large that we may well retain the positive presumption while waiting for further research. Some knowledge of the distribution of the MSS. of Greek romances during the Middle Ages, some acknowledgment by mediæval writers of indebtedness to Greek fiction—of this kind are the *desiderata.*

Mr. Courthope's connection of ancient and mediæval romance with the romance of the sixteenth and seventeenth centuries is less sure of hand. He omits all mention of Boccaccio, the prime transmitter of romance material from the Middle Ages to the Renaissance. This function Boccaccio performed both in his romance "Filocolo," which relates anew the tale of Flore and Blanchefleur, and, in *novella* form, in numerous tales of the "Decameron." To English fiction of the Renaissance, more particularly, Boccaccio thus made very generous contributions from his own store of Greek and mediæval romance. Again, Mr. Courthope is definitely in error in asserting (pp. 3, 13) that the Greek novels and Sidney's "Arcadia" are little or not at all dependent upon supernatural machinery. Indeed, the elaborate structure of these romances, and of

much related literature (*e. g.*, the "Pastor Fido"), is essentially due to the employment of the epic-tragic legacy of oracles and dreams. These invert and complicate the plot, give it irony, suspense, and amplitude, and serve as an organic frame for its reverses and recognitions. Moreover, these same organic complications, originally involved in the use of "machinery," survive in modern story, still often built upon the epic convention *in medias res*.

Excellent once more are Mr. Courthope's remarks on modern fiction. He sees very truly that our realism is the reverse of a shield that is blazoned with the "cloudy symbols of a high romance." The filiation of the "realist" Richardson runs, not to the *picaro*, but to Sir Philip Sidney; and Mr. Courthope does not hesitate to speak of Richardson's romanticism (p. 14). The "romantic" Scott, on the other hand, presents a quasi-historical or ethnic background, involves in it the fictitious and personal love-affairs of a chivalrous hero, and, by way of humbler personages and incidents, adds the tang of realism. So that he is well said to have united "the principle of the *roman* with that of the *fabliau*."

The Eve of Catholic Emancipation. By the Right Rev. Monsignor Bernard Ward. In three volumes. Vols. I-II. New York: Longmans, Green & Co. $6 net.

Son of that friend of Newman famous in the Oxford Movement as "Ideal" Ward, brother of Wilfrid Ward, and brother-in-law of the brilliant authoress of "Out of Due Time," Canon Ward belongs to a notable Catholic family in England. He is one of those intellectual English Catholics, who, believing with Fogazzaro that "la modernità è buona ma l'eterno è migliore," just avoid condemnation as Modernists. His volumes bear the *Imprimatur*. He wastes no words in vain declamation against the iniquitous oppression of Protestants in the past; for he is a modest, temperate, and well-trained historical scholar, proud of his membership in the Royal Historical Society. Though busy as president of St. Edmund's College, he is finding time to write a history of English Catholics since 1781. His earlier work, "The Dawn of the Catholic Revival in England," told the story up to 1803. The two volumes before us, when completed by a third to be published shortly, will continue the story down to the Emancipation Act of 1829. His material is drawn largely from manuscripts in the Catholic Westminster Archives.

Catholic Emancipation, as the author correctly insists, was primarily an Irish, not an English, question. In Ireland it affected some five million persons, in England not more than two hundred thousand. But in spite of this fact, the chief steps to obtain it during the years covered by these two volumes (1803-20) were taken by Englishmen, partly because the English Catholics were on the spot and partly because they included men of Parliamentary influence. The English Catholics were willing to allow the king a "veto" on the appointment of Catholic bishops—and there were many good precedents for such a negative control by the state over the church. But the Irish, who had more reason for fearing and hating Protestant control, vehemently objected to giving the King any such chance of interfering with the Catholic hierarchy. They agitated for "unconditional emancipation," and their policy was the one which triumphed in the end. When the English Catholics had failed year after year to get through both houses of Parliament an act of "emancipation with securities," it was left for the growing force of Daniel O'Connell and Irish agitation to obtain the unconditional act of 1829.

The greater part of these volumes, however, and the most valuable part, is not devoted to this often-told story, but to the less known activities of the English Catholics in their general work—their organization, colleges, Bible society, writings, and the dissensions within the Catholic fold. These dissensions, as the author frankly admits, were frequent and due in part to the domineering character and harsh language of Dr. Milner. This prelate, who began his career as Apostolic Vicar of the Midland Division, tried to supplant Dr. Poynter in the succession to the Southern Division which had its headquarters in London. When this intrigue failed, he got himself appointed agent in England of the bishops in Ireland, and as such found excuse for spending much of his time in London, where he came into frequent conflict with Dr. Poynter.

When Dr. Poynter and others in England founded a Catholic Bible Society and proposed to adopt the Protestant practice of distributing to the laity inexpensive Bibles in the vernacular (based, of course, on the Vulgate and provided with a proper preface and notes to guard the ignorant from error), Milner strenuously opposed the "Bibliomaniacs." Fortunately for his side of the case, the Pope just at this time condemned a somewhat similar Bible Society in Poland as "a most crafty device, by which the very foundations of religion are undermined." The Papal pronouncement led Dr. Poynter to change the name and modify the plans of the English Society, but not to cease altogether in the distribution of inexpensive Bibles. It is an important chapter in an age-long controversy.

Not least interesting are the pages dealing with the faithful Catholics who fled to England during the French Revolution. After the Concordat had been established in France, the Pope called upon all these former priests and bishops to resign the offices which they had once held in France. Fourteen of the bishops and many of the lower clergy in England refused to do so. They were supported by the active pen of Abbé Blanchard. Thus arose the new and troublesome schism of Blanchardism. Dr. Milner fulminated against the schismatics. One of their sympathizers tried to frighten him into silence by pretending to have authority from the Pope to summon him to Rome; but Dr. Milner neatly called his bluff by threatening him in turn with the penalties of *Præmunire*, for asserting in England a summons from a foreign potentate; the Blanchardite sympathizer promptly took to his heels and disappeared from the kingdom.

In the closing chapters on the literary activities of the English Catholics Mr. Ward has some interesting things to say about the author of the great Catholic history of England, Dr. Lingard. Lingard told a friend that he hoped to write a history which should be read by Protestants, for the more his work was read the less would that of Hume be in vogue. Dr. Milner harshly criticised Lingard's impartial and unimpassioned style, declaring that Lingard had failed to "display the beauty of holiness irradiating the doctrine and the heroes of Catholicity," and in so far had betrayed a golden opportunity for enforcing the Roman Catholic aspect of English history. The judgment of time has justified Lingard's, not Milner's, conception of history.

Explorations in the Island of Mochlos. By Richard B. Seager. Boston: American School of Classical Studies at Athens. $6.

Excavations in Crete have given the world many surprises. For archæologists who were accustomed to regard the civilization of classical Greece as the only period of true culture in Hellenic lands, it was an unexpected revelation to find that long before that time Crete was inhabited by a people of a highly artistic nature, surrounded by comforts and even luxuries, possessing a written language, and in active communication with the outside world. Gradually we have become accustomed to the fact that the Cretans had reached a high level of civilization as far back even as the end of the third millennium B. C. But before that time, *i. e.*, in the so-called Early Minoan period, we have hitherto supposed the Cretans to have been in an elementary stage. This supposition was chiefly based on the fact that the pottery of the period, was simple in character, being chiefly decorated with painted geometric designs such as we are accustomed to find with most primitive people.

The excavations at Mochlos, a small island off the coast of Eastern Crete, conducted by Mr. Seager in the spring and summer of 1908, shed new light on this question and make us revise our theories. A cemetery belonging chiefly to the Early Minoan period on that site yielded objects which were astonishingly advanced both in technique and artistic feeling. Foremost among these is a rich harvest of stone vases carved with wonderful accuracy out of hard materials, such as veined marble, breccia, steatite, and limestone. "At first glance," Mr. Seager writes, "one would suppose that these vases were the work of a skilled lapidary, but on examination it appears that they were not turned on a wheel, but were roughly shaped into the required form and then ground down by hand. How such a task was accomplished is, in these days of machinery, difficult to conceive, as each vase must represent weeks of patient labor." A curious feature about the vases is that they come to light as finished products, without apparently any previous stage of development, such as we should expect in so difficult a process. This circumstance the author explains by the theory that Minoan sailors had communications with Egypt, where they saw similar stone vases, and brought the technique into their own country. But that the Cretan vases are not merely imported from Egypt, but actually made in Crete, is shown by their shapes, the majority of which are essentially non-Egyptian. When compared with their Egyptian models they are perhaps not as accurately cut, but are more beautiful in shape and coloring.

Besides the stone vases, nearly one hundred and fifty gold ornaments were found, some of extremely delicate workmanship, which again show a surprising state of prosperity at this early period. The love of naturalism, which was to become such a dominant feature in Late Minoan art, already made its appearance, for there are hairpins in the shape of daisies and crocuses.

The Early Minoan pottery which was brought to light in this cemetery is of the primitive kind already familiar at other sites, so that we must deduce that, while the stone-cutter and goldsmith had made great advance in their arts, the pottery had not. In addition to Early Minoan material, the cemetery at Mochlos yielded some fine examples of Middle Minoan and Late Minoan I pottery. But foremost among these later finds must be mentioned a gold signet ring from a Late Minoan I burial, perhaps the most important object turned up by Mr. Seager's excavations. Its significance is due to the scene engraved on the bezel, which appears to represent the advent of the Mother Goddess to the land of Crete. This ring has gained further notoriety through its mysterious disappearance from the Candia Museum, where it had been placed with the other Mochlos finds. It has not yet been traced, and it is fortunate that a careful drawing of it had been made previous to its loss.

The book is an excellent record of these excavations, for not only are the finds carefully described and illustrated, partly in good color plates, but the conditions in which they were discovered are conscientiously set forth in every case. In fact, as we read between the lines which describe these ancient tombs, often washed away by rains or disturbed by pillagers in later ages, we realize that the work of excavation is one requiring extensive knowledge and infinite patience, one that can safely be entrusted only to carefully trained and experienced workers. We may congratulate ourselves that Mr. Seager is an excavator of that type and that therefore the excavation at Mochlos has been conducted and the material from it published in a manner to yield most to scientific research. There is one adverse comment to make on the arrangement of the illustrations. Though the objects from each tomb are all described together, they are depicted often on different plates according to their periods and materials. This arrangement necessitates a continuous turning of pages which becomes distinctly burdensome. Moreover, owing to the entire absence of descriptive titles accompanying the illustrations, it is impossible to get a clear idea of the material found without in each case consulting the text, which is sometimes 20 or 30 pages away from the picture.

Notes

Thomas Medwin's "Life of Shelley," originally published in 1847, will be issued by Frowde in a new and revised edition. Buxton Forman, who has been at great pains to decipher and arrange Medwin's manuscript alterations and corrections, has long been engaged upon the work.

Among the books promised for this month by Sturgis & Walton Co. are "My Memoirs," by Madame Steinheil, and "The Genetic Philosophy of Education," by G. E. Partridge, with an introduction by G. Stanley Hall.

Moffat, Yard & Co. announce a new series for children entitled When Mother Lets Us Travel, the first volume of which —"When Mother Lets Us Travel in Italy," by Mrs. Charlotte M. Martin—will be out this spring.

The Century Company has in press "The Citadel," a new novel by Samuel Merwin.

Books which will be issued shortly by Putnam include: "Pitching in a Pinch, and Other Stories of the Big League," by Christy Mathewson; "The Devil's Wind," by Patricia Wentworth; "My Friendship with Prince Hohenlohe," by Baroness von Hedemann; "Personal Recollections of the War of the Rebellion: Addresses Delivered before the Commandery of the State of New York, Military Order of the Loyal Legion of the United States," edited by A. Noel Blakeman, Vol. IV; "Edward Fitzgerald Beale: A Pioneer in the Path of Empire, 1822—1903," by Stephen Bonsal; "The Historic Jesus," by Charles Stanley Lester, and "The Promise of the Christ Age in Recent Literature," by William Eugene Mosher.

The same house, as representatives of the Cambridge University Press, announces: "The Ballad in Literature," by T. F. Henderson; "Cæsar in Britain and Belgium," simplified text, with introduction, notes, exercises, and vocabulary, by J. H. Sleeman; "A First-Year Latin Book," by John Thompson, and "A Revised English Grammar," being a new edition of "The Elements of English Grammar," by Alfred S. West.

Recent and forthcoming books in the list of Fleming H. Revell Co. include: "American-Japanese Relations," by Kiyoshi K. Kawakami; "The Chinese at Home," by J. Dyer Ball; "The Battle of Principles," by Newell Dwight Hillis; "Towards a Perfect Man," by Henry W. Clark; "The Call of the Christ," by Herbert L. Willett; "The Cross: The Report of a Misgiving," by G. A. Johnston Ross; "How the Cross Saves," by Robert F. Horton; "The Owl's Nest: A Vacation among 'Isms,'" by Anne Gilbert; "In Bethany House," by Mary Elizabeth Smith; "Jonah of Gath-Hepher," by Rev. Edward A. Marshall; "Sunrise: Behold He Cometh," by G. Campbell Morgan; "The Land of Your Sojournings," by Rev. Wilfred S. Hackett; "Twice-Born Men," by Harold Begbie; "The Personal Touch," by J. Wilbur Chapman; "The Church and Her Children," by Henry W. Hulbert; "Spiritual Culture and Social Service," by Charles S. MacFarland; "The Law of the Tithe," by Arthur V. Babbs; "Christian and Mohammedan," by George F. Herrick; "Character Building in China," by Robert McCheyne Mateer, and "A Glimpse of the Heart of China," by Edward C. Perkins.

Dodd, Mead & Co. bring out this week George Barr McCutcheon's novel, "Her Weight in Gold," and "Midnight at Mears House," a detective story by Harrison Jewell Holt.

A. A. Jack's "Poetry and Prose," which came to us from London, and was reviewed at considerable length, November 16, 1911, is now regularly issued in this country under the imprint of E. P. Dutton & Co.

In the introduction of a new edition of David Pryde's "What Books to Read and How to Read" (Funk & Wagnalls), Francis W. Halsey gives interesting figures concerning the annual output of books in several countries. About ten years ago the number of books published annually in the United States reached 5,000, in Great Britain 7,000; the estimate for the present year will probably be close to 10,000 for each country. Of this 20,000, an allowance of 5,000 may be made for books counted twice, that is, those which are issued both here and in England. Ten years ago, in Italy, the total was 9,500; in France, 13,000; in Germany, 23,000, and the grand

total for the whole world at that time was estimated by *Le Droit d'Auteur* to be 70,500. The magnitude of the increase can be known from the fact that Germany's present annual output has been placed at 30,000. The contrast between the present and the century or two subsequent to the invention of printing, as to the number of books in existence, is, of course, tremendous:

In 1650, at one of the book fairs which it was then the custom to hold every twenty-five years in Germany, the books shown numbered only 950, and no marked increase occurred thereafter for seventy-five or a hundred years. In 1725 the total shown at the fair was only 1,032, and in 1750 only 1,290. With the opening of the next century came the great increase, the number shown in 1800 being 4,012, while fifty years later (1846) its number was 10,536. In the United States for a period of 136 years (1640-1776) the total output, including almanacs, sermons, and law books, was only 8,000. . . . In 1900 "The American Catalog" was able to record, as then in print in the United States, 170,000 books.

There must be much of omission or compression, or both, in a small book of recollections of eighty active years. Both of these qualities mark the "Reminiscences" of James Burrill Angell (Longmans); moreover, the 258 pages are oddly proportioned, little more than one-seventh of them being devoted to President Angell's thirty-eight years as head of the University of Michigan. More strangely still, the section given over to this period of his career is the most colorless part of the volume, consisting merely of a series of characterizations of "the more prominent of the professors who are no longer living," and of a rapid survey of the history of the University. The best portion of the book is its first two chapters, in which Dr. Angell gives some account of life in New England two generations ago, and a narrative of a journey through the South just ten years before the war. The writer is naturally interested in changes in educational methods, and the description of his early school days, in which he studied English by parsing Pope's "Essay on Man" and "that dolorous book," Pollock's "Course of Time," is both entertaining and informing. It seems almost incredible that there should be living a man who went to Brown University when the faculty numbered seven. The chapter on the Southern Journey is a vivid picture of what Angell and a companion encountered on a horseback, train, coach, and steamer tour. They arrived at Columbia in time to attend commencement at the University of South Carolina in the autumn of 1850. The president's address to the students "was solely an appeal to them to abide by the State in the dissolution of the Union which he regarded as inevitable." The accounts of President Angell's diplomatic missions to China and Turkey contain pictures of Li Hung-Chang and Abdul Hamid. Elsewhere there are glimpses of Robert Browning, Matthew Arnold, Grover Cleveland, and others. In these pages especially, but throughout the book in only less degree, there is a naïveté that is unusual in one who has so long been a public figure.

William H. Rideing, who publishes his reminiscences as "Many Celebrities and a Few Others" (Doubleday, Page), passed his boyhood in Liverpool, where "those staggering voyages to Boston and New York" brought the Civil War so near, it "might have been at our doors and the Mersey running red with the carnage." His literary ambitions, when "all light literature had a Dickens flavor," brought him to New York in the early seventies and apprenticed him, at the age of seventeen, to Samuel Bowles of the Springfield *Republican*. Later he served on the New York *Tribune* during the exposure and defeat of the Tweed Ring and the Liberal Republican nomination of Horace Greeley for the Presidency. The story of his early years and his memories of Bohemian life in New York, which mingle living names with names now half forgotten, gain color and interest from the personal point of view. But when the author becomes an editor of the *Youth's Companion* and the *North American Review*, he discreetly retires, and the rest of the book contains unrelated chapters on celebrated writers, actors, statesmen, and men of affairs with whom the editor has had professional and social relations.

Mr. Rideing shows considerable power of characterization, and many of his portraits —Aldrich, Stedman, Hardy, Harold Frederic, John Watson, Archibald Forbes, Lady St. Helier, Sir Henry Lucy, H. G. Wells, R. D. Blackmore, Gladstone—are drawn with a happy and pregnant pen. The anecdotes vary in merit; some are told with verve, others come more lamely off. John Watson, we are told, "milked the cow of human kindness until it tottered." A visit to Moor Park calls forth half a page of Macaulay's account of Swift and Stella. "If you had remained in England," Aldrich tells our author, "you would never have learned to write such good English." And thus certain grave questions of usage—the split infinitive, "I would like," "as mention of themselves go," "unworth his notice," "vividity," the meaning of *Qui* [sic] *bono?*—become matters of international importance. Two prophecies, one political, one literary, in which Mr. Rideing indulges, are not without interest. Howells's "An Ambitious Woman," now neglected, "may turn up in the time to come when revolution has thrown this republic into the hands of a dictator, and the excesses of the dictator have led to a constitutional monarchy." "I admire Mr. Wells for both the trenchant simplicity of his style, its ease and grace, its honesty, its unlabored and tranquil movement—'Strong without rage; without o'erflowing full'—and for the profundity of his insight into human nature, and I predict that his works will long outlast those of most of his contemporaries in fiction."

"Roughing It in Southern India," by Mrs. M. A. Handley (Longmans), embodies the unusual experiences of the wife of a British forest officer, whose duties take him from the ordinary stations at any time into dense jungles, along the margins of malarial swamps, and past villages decimated by smallpox or cholera. The life had its fascinations, as these pages amply testify. It would be difficult to find elsewhere so graphic an account of the sports peculiar to the region, and, viewed merely as a contribution to the chapter of animal intelligence, the author's observations of the behavior of tigers, elephants, bisons, and snakes were well worth communicating. She more than confirms all that other travellers have told us about the skill of the elephant in a timber-yard and as a feller of trees, and says much that is pertinent as to the futile measures of the British Government for the capture of the man-eating tiger. The gradual increase of the reward for the slaying of a particularly vicious monster has, it seems, only the effect of making the natives postpone their efforts at capture until the highest offer has been reached. In her opinion, the danger to Europeans from snake-bites has been much exaggerated. "In all the years I spent in India," she says, "never, to my remembrance, did I hear of an authenticated case of death from snake-bite among Europeans." Good judgment and a little skill easily avert danger. Among the weirdest experiences is the hair-breadth escape of the population of an entire district from inoculation, owing to the mistake of an official, with lymph taken from the most leprous village in southern India. A messenger arrived in breathless haste just as Mrs. Handley and her husband were preparing for the operation. Of the more peaceful aspects of a forest officer's life in India, less is told than would have been useful, considering that his duties include the planting of new tracts, the conserving of forests, the supplying of timber for the trades, and the collecting of spices, silk, cotton, turpentine, etc.; nor are the cities visited—Calicut, Coimbatore, and others—more than mentioned. True to its title, the book is concerned mainly with adventures, and supplies them in abundant measure and with considerable literary skill.

The Minnesota Historical Society has always been greatly interested in the archæology and ethnology of the State. This has been largely due to the prominence in its councils of three men, Alfred J. Hill, T. H. Lewis and J. V. Brower. These three men collected, during the course of many years, material for a survey of the Indian remains of the region. They themselves never published a complete account of their researches, but their results are now published by the Historical Society in a volume entitled, "The Aborigines of Minnesota," which is edited by N. H. Winchell. The volume is illustrated with thirty-six half-tone page prints, innumerable folded maps, and figures inserted in the text. Its 761 pages are replete with information upon the natives of Minnesota, and contain without doubt the most exhaustive study that has ever been made of the Dakota and Ojibwa Indians. Here are found elaborate accounts and maps of the various Indian mounds, and a full discussion of Indian life with illustrations of the implements and utensils. The volume sets a high standard in this line of investigation for other Western societies.

"Social Historians" (Badger), by Harry A. Toulmin, jr., is an enthusiastic consideration of the Southern novelists, Page, Cable, Craddock, Allen, and Harris. Why the word social is used in the title doth not appear from the treatment. No analysis of the society depicted in the fiction of those writers gives the book unity. No divination of the distinctive qualities of Southern civilization or of its "historians" disturbs the eclectic process of the author's thought. Nor does any fastidious regard for logic preside over the elaboration of his phrases or his choice of figures of speech.

The publication of "The Classical Pa-

pers of Mortimer Lamson Earle" (Columbia University Press) reminds us of the loss to the cause of classical learning in this country when Professor Earle died in 1905 at the age of forty. His scholarship was of a type that has always been rare in America. Though his first love was archæology, and he seemed always most at home in Greece, his chief work was done in textual criticism and the interpretation of obscure words and phrases, and, as those who knew him will remember, his mind was usually intent on some question of this sort, as a mathematician's is absorbed by some delicate problem. He would probably have found an English University, where such questions are constantly under discussion, more congenial than our academic atmosphere where the science of emendation has been rather neglected; and if one were to look for his like in our day, one would find him most akin to an English scholar, the late Walter Headlam of Cambridge. Euripides was his favorite, and one of the best of these studies is devoted to tracing echoes of the "Medea" in the "Trachiniæ" of Sophocles. His editions of the "Alcestis" and "Medea" are admirable pieces of work. Some of these papers are written in Latin, which Mr. Earle preferred to English in the discussions in his Seminar at Columbia, and always recommended for dissertations. He made no concessions to the modern tendency to take the drudgery of the classics for granted as having been done for us, or as being done, by the Germans, leaving us free to discuss what is "literary" and "interesting." For him the study of the classics was an exact science, and he neglected no branch of philology or archæology that might contribute to his equipment. The papers before us range over a wide field and are a lasting monument of which any scholar might be proud. The Introduction, by the late Professor Ashmore, is a well-written appreciation of Mr. Earle's personality and scholarship. The frontispiece is an excellent portrait of Mr. Earle, and there is a good reproduction of the statue, probably of Dionysus, which he discovered at Sicyon when he was only twenty-five. In an Appendix is a bibliography of Mr. Earle's editions and contributions to the classical journals and a few original poems and translations. The marginal notes in his books were usually written in modern Greek, and a specimen is given here of his Greek script, which has been justly called "more beautiful than Porson's." The whole volume will be read with the mixture of admiration and regret with which one contemplates the too brief career of one who is best described in the old-fashioned phrase "scholar and gentleman."

For many years the late Philip Schaff's "Creeds of Christendom," in three volumes, has been a standard work. The Rev. Dr. William A. Curtis of the University of Aberdeen is the author of "A History of Creeds and Confessions of Faith" (Scribner), which, in one volume, supplies the text of the ancient ecumenical symbols, summarizes the teaching of the later and less important creeds, and recites the history and fortunes of all official statements of doctrinal belief. The volume is comprehensive, including the articles of religion of the Mormons, the Salvation Army, and the Christian Scientists, with a chapter on religious formulas of non-Christian bodies. Such a work demands painstaking scholarship, in which Dr. Curtis is not lacking. He is judicial and fair, and in philosophic insight excels his predecessor, Dr. Schaff. It may be said that disproportionate space is allowed to the dogmas of the smaller and less significant religious bodies, but, on the other hand, one valuable feature of the volume is the ready information it offers regarding the beliefs of religious organizations whose authoritative utterances are not usually accessible. The concluding chapter, on Subscription and Its Ethics, is written with generous appreciation, both of the right of a church to maintain a creed, and the difficult duty of the individual to be loyal at the same time to the institution he has pledged to serve, and to his reverence for truth in a progressive age. One lays down a survey of the creeds of the Christian centuries with a feeling of regret at their necessity, like that ascribed to Hilary of Poitiers:

> Faithful souls would be contented with the word of God, which bids us "Go, teach all nations, baptizing them in the name of the Father, and of the Son, and of the Holy Ghost." But also we are drawn by the faults of our heretical opponents to do things unlawful, to scale heights inaccessible, to speak out what is unspeakable, to presume where we ought not.

The Insel-Verlag of Leipzig has just issued what will be recognized by scholars as the definitive edition of the famous correspondence between Schiller and Goethe ("Der Briefwechsel zwischen Schiller und Goethe," 3 vols.). The first two volumes contain the text of the letters, published from the original manuscripts, so far as these were accessible, most of them being in the Goethe and Schiller Archives in Weimar. The revision of the text is the work of Prof. Hans Gerhard Gräf, whose careful comparison of the original letters with the printed editions resulted in the discovery of a large number of incorrect readings in the latter. To be sure, the new readings are not of far-reaching significance, but it was hardly to be expected that at this late date an editor would find his predecessors guilty of so many small oversights. Most of the errors were discovered in the printed text of Schiller's letters. The third volume, the work of Prof. Albert Leitzmann of the University of Jena, is devoted to a full commentary and a comprehensive index. Leitzmann's notes, embodying, as they do, a large number of gleanings from his own researches, together with the results of other scholars' investigations, make this annotated edition by far the most useful on the market. Now that the Weimar edition of Goethe is virtually completed, we may expect new and better editions of the other important Goethe correspondences.

A History of Inland Transport and Communication in England (Kegan Paul, Trench, Trübner & Co.), by Edwin A. Pratt, is the introductory volume in a series of books on the national industries of England. It is a detailed story of the development of transportation in its relation to industrial life and progress. No phase of the subject is neglected. Consideration is given to roads, rivers, canals, turnpikes, railways, tramways, and railless electric traction. Facilities for communication include pack-horses, wagons, stage-coaches, "flying" and mail-coaches, private carriages, posting, hackney coaches, cabs, omnibuses, cycles, motors, motor buses, and aeroplanes. The story is elaborately and at the same time entertainingly told. Mr. Pratt finds that, as in the United States, the turnpike system was defective, badly administered, and burdensome to the taxpayers, and yet that it brought about some improvement in the roads. The last of the turnpikes on public roads disappeared in England in 1896. With reference to the resuscitation of the English canals, the author takes the sound view that it would be an unprofitable expenditure of public funds which might better be used in lightening the burden of taxation on the railways and permitting them the more efficiently to serve the public. There is no defence for the policy, advocated in this country as well as in England, of constructing waterways that have little prospect of becoming highways of traffic, merely for the purpose of keeping railway rates down. Regulation can be accomplished in other ways more economically. Railway rates are high in England, but when the necessary investment is considered—the enormous cost of rights of way, which must be procured by private purchase, with no eminent domain privileges, the Parliamentary costs of procuring charters, and other expenses incidental to construction—the wonder from Mr. Pratt's point of view is that they are as low as they are. While in the future there will be developments in all rival methods of transportation, the author expects no formidable rivalry for the railway from either waterways, motor transport, or aerial locomotion. Electricity as a motive power may supersede steam to a considerable extent, especially for suburban traffic, but the railway will remain.

The death is reported from Santa Barbara, Cal., of Robert Cameron Rogers, at the age of fifty-two. He graduated from Yale in 1883, and was the author of "Wind in the Clearing, and Other Poems," "Will o' the Wasp," "Old Dorset," "Chronicles of a New York Country Side," "For the King, and Other Poems," and "The Rosary, and Other Poems."

Among those who perished in the wreck of the Titanic was William Thomas Stead, who is, perhaps, best known as the editor of the London *Review of Reviews*, and as the founder of an American journal of that name. He was born in 1849, and received only a rudimentary schooling. Mr. Stead was long active in the cause of peace. He founded and edited the weekly *War Against War*, attended the Hague Conference, and strongly opposed the war with the Transvaal. He was also the author of a long list of books, among them "Maiden Tribute of Modern Babylon," "The Truth About Russia," "If Christ Came to Chicago," "The Labour War in the United States," "A Study of Despairing Democracy," "The United States of Europe," "The Americanisation of the World," "and "The Last Will and Testament of Cecil John Rhodes."

Another victim of the Titanic disaster was Jacques Futrelle, whose life was cut off at the age of thirty-seven. After a brief education in the schools of Georgia, where he was born, he engaged in newspaper work, and, for a time, was a theatrical manager. Among the stories which bear his name are "The Chase of the Golden Plate," "The Thinking Machine," "The Simple Case of

Susan," "Elusive Isabel," and "The Diamond-Master."

Dr. Yung Wing, scholar, statesman, and a pioneer in the movement which has resulted in a new China, is dead in Hartford, Conn. He was born in 1828 and graduated from Yale in 1854. In 1872-4 he brought 120 Chinese youths to the United States to be educated. In the *coup d'état* of 1898, by which the Empress Dowager got control of the Government, Yung Wing became allied with the reform party. Yale bestowed upon him in 1876 the degree of doctor of laws.

Bram (Abraham) Stoker, whose death is reported from London, was born in Dublin in 1858. He followed his father into civil service in Ireland, serving meanwhile as literary, art, and dramatic critic on several daily newspapers. In 1878 he became the business adviser of Henry Irving, when the latter took over the Lyceum Theatre, and enjoyed a close friendship with him for many years. Later he joined the literary staff of the London *Daily Telegraph*. He was a medallist of the Royal Humane Society. Besides "The Duties of Clerks of Petty Sessions in Ireland" and "Personal Reminiscences of Henry Irving," he wrote a number of novels which had a considerable vogue, among them "Under the Sunset," "The Snakes' Pass," "The Watter's Mou'," "Dracula," and "The Jewel of Seven Stars."

Science

THE NATIONAL ACADEMY OF SCIENCES.

WASHINGTON, April 18.

The annual spring meeting of the Academy was held at the National Museum on April 16, 17, and 18. The meeting, though well attended, showed an unusual dearth of papers by members of the Academy, only three being read out of six announced. This was compensated by a remarkably successful innovation: three addresses of about an hour each were delivered in Wednesday's public session by non-members, at the invitation of the Council.

In Tuesday's session, Prof. George E. Hale, director of the Mount Wilson Solar Observatory, described the new tower telescope of that observatory. The usual types of telescopes have been the refractor, consisting of a lens set in a tube mounted equatorially, that is, carried upon an axis parallel to that of the earth, and forming an image of the heavenly body that moves about, as the earth revolves, and, secondly, of a reflecting concave mirror similarly mounted, and forming likewise a moving image. In recent years fixed telescopes have been used, into which the light of the heavenly body is thrown by one or two mirrors, constituting a siderostat or coelostat, the latter of which is so ingeniously arranged that the image of the heavens not only stands still, but does not revolve as the earth turns. Of this sort is the horizontal telescope at Mount Wilson. There are also occasionally used fixed telescopes, by means of which a very brief event, like a solar eclipse, may be observed without disturbance due to the earth's rotation. But in order to do away with difficulties due to the rising of currents of heated air, the most satisfactory form of telescope is that designed by Mr. Hale, and consisting of a vertical tower, upon the top of which is carried the coelostat and the object lens, while the image is formed at the bottom near the ground, the rays travelling vertically downwards.

The new tower telescope, the second one built, is on a steel tower 165 feet high, of openwork construction, so devised that there is an inner tower which carries the optical parts, and is itself protected from the wind and heat and cold by an outer tower, carried on a totally independent foundation. Although the wind can blow through the whole structure, the telescope is remarkably steady. But the tower is not the only novelty. The work of the Solar Observatory is indicated by Mr. Hale's half-serious definition of a telescope as an instrument for forming an image of the sun or a star on the slit of a spectroscope. In other words, it is the latter instrument which gives the chief information regarding the structure of the heavenly body. In the present case the spectroscope is in a deep well below the tower, at the bottom of which is placed the grating for forming the spectrum, while the photographic plate upon which it is fixed is again at the surface of the ground. With this apparatus sun-spots may be as well photographed on any ordinary day as might have been done formerly during a solar eclipse, a rare and eagerly awaited event. Thus the remarkable magnetic effect of the solar vortices discovered by Mr. Hale, as well as the many characteristic features of the sun's surface, may be studied in great perfection.

California is a favored region for astronomy. While the Mount Wilson Observatory is chiefly interested in a particular star of the greatest importance, namely, our sun, the Lick Observatory has dealt with large numbers of other stars, and its director, W. W. Campbell, presented the results of his investigations of many years under the three titles: Radial velocities of 213 brighter Class A stars, radial velocities of 190 brighter Class F stars, and Some characteristics of stellar motions. By radial velocity is meant motion towards or away from us, and this well illustrates the difference between the old astronomy of position and the new astro-physics: the old astronomy cannot detect radial motion, as a star coming directly towards us does not seem to change its position in the heavens, and the telescope shows it as fixed. What the telescope can detect is the so-called proper motion, sidewise or up and down, that is, the relative motions of the stars with respect to one another. All that we can find in this way is the angular velocity of a star, as its actual velocity through space would depend on its distance away, which is unknown to us. The radial velocity is determined by the spectroscope, by means of the principle of Doppler, that a luminous body approaching us has the lines of its spectra displaced towards the blue, while one receding has them oppositely displaced towards the red. So great is the possible accuracy of measurement of the spectrum lines that the velocity of the star may be ascertained to one part in one hundred and fifty thousand. One of the most beautiful applications of this method is the determination of the orbits of stars that the spectroscope shows to be double, moving about their common centre of gravity, the motions being indicated by the periodic displacement of the spectral lines. Previous to 1900 only one in thirty-six of all catalogued stars was known to be double, but now by the aid of the spectroscope we know that one in every four is double. Professor Campbell shows how the radial velocities vary with the stage of evolution of the stars, and concludes that as the stars grow older their velocity increases, at first slowly, and later rapidly. He also believes that he has confirmed the theories of Poincaré and George Darwin on the generation of double stars by fission and subsequent separation.

W. J. Humphreys of the United States Weather Bureau presented a paper on the timely subject of "Holes in the Air," a term introduced by the aviator, who sometimes falls into them with disastrous results. These he classified as aerial fountains, or uprushes of air above a heated hill, like the hot air rising from a chimney; aerial cataracts or cascades, where the air, blowing against a mountain flows over it and falls rapidly on the farther side; aerial strata, with billows at the surface of discontinuity in the current, and aerial torrents of cold air flowing down valleys. Inasmuch as the support of an aeroplane depends solely on the relative velocity of the plane and the air, an aviator flying in a certain stratum may descend into one where the motion of the air is the same as his own motion, he thus loses his means of sustention and falls. In the other forms described he may be upset.

On Wednesday the members of the Academy and the public were entertained and instructed by three discourses of some length by non-members invited by the Council. Dr. Harvey Cushing of the Johns Hopkins Hospital presented in a most lucid manner some observations on the functions of the pituitary body. This is a small gland of about the size of a pea, situated in almost the centre of the head, just behind the

nasal cavity, and very difficult of access. It may be seen on X-ray photographs, and some idea obtained of whether or not it is of the proper size. Dr. Cushing has shown that this, like other ductless glands of the body (that is, glands discharging not externally, but into the circulation), produces chemical results that affect the general organization, so that no one of them can be removed without upsetting the whole chemical balance. If the secretion of this gland is insufficient, or if it is removed, the subject shows loss of temperature, slow pulse, and a state of almost coma. He refuses to develop, and remains infantile, while nourished to a state of obesity. At the same time the field of vision is greatly narrowed, owing to pressure exerted on the optic nerve. In the case of glandular overactivity, the opposite symptoms are found, namely, overgrowth, so that a state of gigantism, which may be found in a whole family, may supervene. All these facts were demonstrated by many most interesting and hideous lantern-slides. Dr. Cushing's remarkable clinical and experimental skill was highly complimented.

Dr. J. A. Holmes of the United States Bureau of Mines read a paper on "The National Phases of the Mining Industry," in which he pointed out the tardy action of the States, and showed the peril which we risk of the exhaustion of our coal.

Dr. C. G. Abbot, director of the Astrophysical Observatory of the Smithsonian Institution, delivered a most interesting lecture on the "Solar Radiation," describing the work of that Observatory, first under Langley and then under himself, in determining the value of the solar constant, that is, the amount of heat received by us from the sun. This involves a study of the distribution of heat in the different parts of the spectrum, by means of Langley's wonderfully sensitive bolometer, an electric thermometer which is passed successively through the spectrum. As an important by-product of this investigation we find how nearly the sun acts like a hot *black* body, that is, one that radiates all colors equally well, and also find the temperature of the sun to be about 6,000 degrees centigrade. The main part of the work, however, consists in measuring the heat that falls on a given area of surface by means of the pyrheliometer, which in Abbot's form consists of a disk of silver of the size of a dollar, suitably screened, and containing a thermometer, whose rate of rise measures the heat received. This must be done not only at sea-level, but at various altitudes, and has been carried out on the summit of Mount Whitney, three miles high, the highest point in the United States; on the top of Mount Wilson, one mile high, and finally in Algeria. All this is necessary in order to find out how much heat is absorbed by the atmosphere before reaching us. The most remarkable result of the observations, which have occupied above ten years, is that the heat received from the sun is not constant, but varies from year to year or from month to month; in other words, the sun is a variable star. Abbot's result is that we receive per minute enough heat to warm two grammes of water one degree centigrade on each square centimetre of area. For these researches Abbot last year was awarded the Barnard medal.

At the business session on Thursday the following were elected members of the Academy: Robert Williams Wood, professor of physics, Johns Hopkins; Roland Thaxter, professor of botany, Harvard; Charles Benedict Davenport, director of the Station for Experimental Evolution, Cold Spring Harbor, N. Y.; William Morton Wheeler, professor of entomology, Harvard; Samuel James Meltzer, physiologist, Rockefeller Institute for Medical Research, New York; Harry Fielding Reid, professor of geophysics, Johns Hopkins; David White, palæobotanist, United States Geological Survey; John Jacob Abel, professor of pharmacology, Johns Hopkins.

The Academy now consists of 124 members, including these.

ARTHUR GORDON WEBSTER.

Science books in Putnam's list include: "The Fine Points of Auction Bridge, together with an Exposition of the New Count," by Florence Irwin; "Astronomy in a Nutshell," by Garrett P. Serviss; in the Cambridge County Geographies series, "West London," "Oxfordshire," and "Breconshire'; "A Beginner's Star-Book," by Kelvin McKready; "Microbes and Toxins," by Dr. Etienne Burnet of the Pasteur Institute, with an introduction by Elie Metchnikoff, and the following volumes of the Cambridge University Press: "Principia Mathematica," by Alfred North Whitehead. Vol. II; "Differential Geometry of Curves and Surfaces," by A. R. Forsyth, and "Physical Geogaphy for South Africa," by Alexander L. Du Toit.

In "A Practical Handbook of Trees, Shrubs, Vines, and Herbaceous Perennials" (Ballard Co.), by John Kirkgaard, more than 100 pages of the 400 are given to fine illustrations of selected plants and to sketches of plans for planting. These are excellent both in artistic effect and in mechanical execution. The last fifty pages contain sensible directions in regard to the management of garden plants and their defence from insect pests. The entire body of the book between these two valuable parts is given up to a catalogue of plants adapted to our northern conditions. The nomenclature is correct and the information, such as it is, is trustworthy, but we fail to see what advantage this section of the volume possesses over any of the first-class catalogues which now flood the market. In fact, some of the catalogues give more detailed and more specific instructions regarding the cultivation of the different species. Therefore our commendation of this book must be confined to the pictures and the elementary hints. The improved photographic processes for engraving have revolutionized horticultural illustrations, and charming plates now replace everywhere the crude and yet costly wood-engravings of a few years ago. Some of the engravings in this volume are among the most effective which we have yet seen.

A vivid idea of the mental and physical energy which is expended in the preparation of cinematographic films is given by Frederick A. Talbot in "Moving Pictures, How They Are Made and Worked" (Lippincott). Every side of life is graphically caught and no one in a public place can be sure that later he will not see himself thrown upon the screen as a part of a plot designed by some enterprising picture man. The most interesting part of the book explains the devices by which moving pictures produce illusion. That dummies are freely used is, of course, well known, yet even so, there is need of the utmost ingenuity. A man is run over by a taxicab—apparently—has both his legs cut off, and in a moment is seen to hop to his feet as sound as ever; a woman swims like a true mermaid below the surface of the sea among the fishes; a ski runner flies through the air, collides with and demolishes a chimney, and proceeds unruffled; the spirit of nicotine jumps out a tobacco jar in the form of tiny fairy, etc. To produce all these effects, not only dummies are necessary, but often double exposure of the film, mirrors, and ingenious tricks in focussing. Many extraordinary pictures are worked out in theatres, specially constructed, but when possible, scenes from real life are preferred, and as a result, machines have been set up in every corner of the globe. While a lion charges or a sandstorm comes in from the desert, the operator is supposed to turn the crank unmoved. By means of the microscope or the X-ray, often both, in conjunction with the camera, pictures have been obtained of the digestive processes in human beings, of the habits of insects, besides a great variety of seeming magic. Precisely what will be limits of the moving picture show, as time goes on, Mr. Talbot does not venture to state, but the reader gathers that its tremendous vogue just now, together with the enormous amount of thought devoted to it by experts the world over, may lead to as yet unimaginable achievements. Its inroads into the popularity of ordinary drama, the author believes, can be demonstrated, and he cites the fact that many former playwrights have taken to furnishing plots exclusively to picture-show managers.

Felix Benedict Herzog, inventor and artist, died on Sunday in New York at the age of fifty-two. For his inventions, among which were improvements in telephone switchboards and police and fire calls, he received medals at several international expositions. His work as a painter was not so well known.

Dr. Paul Caspar Freer, director of the United States Government Scientific Bureau in the Philippines, died in Beguio, P. I., a week ago. He was born in Chicago in 1862, and after graduating from Rush Medical College of that city, he studied in Germany and England; later he taught general chemistry at Tufts College and the University of Michigan. He

received an appointment to the Philippines in 1901, and assumed his latest position in 1905. He was the author of two books and many treatises on chemistry.

Drama

Three Comedies. By Ludvig Holberg. Translated from the Danish by Lieut.-Col. H. W. L. Hime. New York: Longmans, Green & Co. $1.25 net.

In these three comedies, Col. Hime gives us the first approach to respectable English versions of any of Holberg's plays. In view of recent English and American interest in modern Scandinavian literature, the complete neglect of the most popular of Danish writers is a bit extraordinary. He has doubtless seemed hitherto too distinctively national to deserve translation. Yet Germany adopted his comedies early in the eighteenth century, and to-day he remains one of the lesser German classics. Modern readers of English ought to enjoy no less his hearty wholesome humor.

Col. Hime's work, unhappily, is not in all particulars a thoroughly good introduction to Holberg. His selection of plays is unfortunate. As he hints in his preface, he has not chosen to translate three of Holberg's best. "Captain Bombastes Thunderton" ("Diderich Menschenskraek") is one of his least original comedies, being a rather faithful copy of the Latin play "Pseudolus." It contains, therefore, little of Holberg's comic invention. "Henry and Pernilla" ("Henrich og Pernille") gives only a little better idea of his peculiar comic skill. It is a conscious imitation of French comedies of intrigue and is definitely related to Le Grand's "L'Epreuve réciproque." The third play, "Scatterbrains"—an unhappy translation of the title, "Den Stundeslöse"—represents Holberg's work best. It is at least a comedy of character, the form in which he achieved his greatest success. But even it gives few of those realistic pictures of Danish peasant and bourgeois life which make "Jeppe of the Hill" ("Jeppe paa Bjerget"), "Erasmus Montanus," and "The Political Tinker" ("Den Politiske Kandestöber"), acknowledged as Holberg's best plays.

Furthermore, the translator's misconception of certain of the characters leads him badly astray. Of the petulant perfunctory anger of Leonora, Holberg's colorless equivalent of the Amorosa of the Commedia dell' Arte, Col. Hime says (p. 37, note), "The spirit of the heroines of the Völsunga Saga breathes in these lines." A more completely misleading critical remark could hardly have been made. He might with more truth have called Congreve's Millamants and Fainalls strayed Valkyrie. Because of the same failure to comprehend the comic values of characters, he makes many unsuccessful translations. Arv, who is nothing but Pierrot turned Danish chore boy and barnyard lout, is made to talk as follows, "I knew not that you were other than honest" (p. 5). Pernille, the saucy maid servant, who says in Danish, "Mit Hierte staar i min Hals," says in English, "The beating of my heart forbids me to say more" (p. 16). Translations of this sort occur frequently. The characters all talk in the translator's dignified English idiom. In this way, they lose their native individuality; and the comedies themselves are deprived of half of their point and fun. For these reasons, it is unfortunate that Holberg's plays could not have been introduced to English readers by a more competent critic and a more skilful literary artist.

The delegates of the Clarendon Press have done good service to the cause of Shakespearean studies in authorizing the preparation and issue of "The Oxford Shakespeare Glossary" (Frowde), by C. T. Onions. The work is based primarily on the materials for the study of the poet's language which are offered by the "Oxford English Dictionary," now approaching completion, but the author has been on the editorial staff of that great enterprise for fifteen years, so that the Glossary is not a mere compilation as it might otherwise have been. Besides, he has, of course, availed himself of all outside aids. The result is the best Shakespeare glossary of moderate compass, we believe, now on the market. One may observe especially the careful noting of meanings of words that are peculiar to Shakespeare, as compared with his contemporaries, as also of those that are first exemplified in his writings or the Elizabethans generally, and the attention which the author gives to the question of the relation of Shakespeare's vocabulary to the dialects, especially the dialect of Warwickshire, the poet's native country—still further, the inclusion of obsolete or technical terms that occur only in stage directions. A considerable number of the articles constitute new contributions of value to Shakespearean interpretation. Altogether, Mr. Onions's book is full of instruction, not only for the general reader, but for the professional scholar.

"The Heralds of the Dawn" (Lane), a play in eight scenes, by William Watson, is a charming bit of dramatic fancy, although unfortunately it is not well suited to actual stage representation. Ascribed to "the morrow of antiquity," it is a poetic romance with modern applications. The King of Ideonia, fearful for his dynasty, is anxiously awaiting the return of his General Volmar, who has been warring against a neighboring monarch, Othgar. His subjects burdened by taxation are stirring in revolt. Presently Volmar appears in triumph, laden with spoils, and it is announced that the most grievous taxes will be remitted. But the victorious Volmar is assassinated by a stranger, Abbo, on the palace steps, and all public rejoicings are forbidden. Again discontent prevails, and Brasidas, the leader of the mob, is meditating an attack upon the prison, when he is warned by a sceress, Zoraya, to wait. "Let time work," she says, "slowly the spirit of the world itself is bringing to the birth all thou didst dream, and with thee or without thee shall thy cause prevail." Then Abbo is brought to trial, and is defended by the King's son, Hesperus, who argues that the prisoner, a subject of Othgar, was justified in killing Volmar, who had violated his daughter, as peace had not been formally declared between the two nations. But neither the judge nor the King will admit the validity of the plea, the latter invoking the curse of the gods upon himself if he should pardon the man. Then Hesperus tells how Abbo had saved his life long ago, and he had pledged his honor to serve him in his need. Here Zoraya calls upon the King to abdicate and make way for a successor, "who hath not yet pledged him to cast out mercy." Thereupon the conscience-stricken King swallows poison, and Hesperus succeeding sets the prisoner free. The tale is naught, the telling everything. Mr. Watson's blank verse is exquisite. Occasionally it is finely pictorial, as in the King's description of a coming storm, but the distinctive character is the compact smoothness of its pregnant phrasing. His prose has the robust Elizabethan quality with point and humor. The relation is rapid, the personages vital, and such political references as bear a present moral are charged with the spirit of broad and enlightened humanity.

Marie Tempest has begun her season at the London Prince of Wales's in "At the Barn," a sentimental comedy by Anthony P. Wharton. She also has a new four-act play by Jerome K. Jerome, a comedy by Harold Chapin, a play by Mrs. George Norman, and a light comedy by Eilie Norwood.

"Improper Peter" is the title of a new three-act comedy by Monckton Hoffe, which Arthur Bourchier has just produced in London. It is intimated that the character of the play is not to be judged hastily by the title.

The Association of Spanish Dramatists, which includes also composers, makes public the royalties received by its various members. It is shown that in 1911 the amount received by the twenty-eight most popular dramatists and composers in Spain ranged from 8,000 to 116,000 pesetas ($3,240 to $20,880), and that the aggregate received by these twenty-eight was 1,081,000 pesetas ($194,580). Taking into consideration the small royalties paid and the relatively small number of theatres in Spain as compared with the United States, the popularity of some of the pieces that brought their authors more than $20,000 a year may be estimated.

It is the setting, rather than the acting, according to a London journal, which renders Sir Herbert Tree's revival of "Othello" memorable:

> The fifteenth-century costumes, fabrics, and armor; the glimpses of Venetian waterways; the effects of a storm and sunshine at sea in the first Cyprus scene; the gleam of stars as they show through the entrance of Desdemona's bedroom—these impress the spectator with a sense of their beauty and fitness. But his feelings are not harrowed to the extent they should be by the tragedy he witnesses.

Sir Herbert Tree, it appears, has taken his usual liberties with the text, curtailing and transposing at will.

Music

Organ Playing: Its Technique and Expression. By A. Eaglefield Hull. Boston Music Co. $2 net.

The Organ Accompaniment of the Church Services. By H. W. Richards. Boston Music Co. $1.50.

Sound in Its Relation to Music. By Clarence G. Hamilton. Boston: Oliver Ditson Co. $1.25.

Is the organ a relic of mediævalism, or is it destined in the future to play as important a part as it did before the last century? That it lost ground during that century is not to be denied; that this decadence, however, cannot but be transient is the firm opinion of A. Eaglefield Hull. He is an Oxford doctor of music, and, judged by his book, one of the most expert and best-informed organists in England. Already, he declares, the tide has turned; we are on the eve of a great renaissance, which has been heralded by many delightful modern works in England as well as on the Continent. His book is a trumpet call to organists the world over to gird up their loins and recover lost ground. It is very much more than that, too; a book like this, which deals briefly and yet thoroughly, with the principal technical as well as æsthetic problems of organ playing, has long been a desideratum. A glance at the past and at the probable future is followed by chapters on the construction of the organ, on touch, on fingering, pedalling, phrasing, tone-color, application of tone-color, ornaments, style, methods in study—all of which cannot be commended too highly to organists, be they professional or amateur, beginners or veterans. Nothing, apparently, has escaped the author's eye; there are more than 180 musical illustrations, from the works of the earliest composers for the organ through Bach, Mendelssohn, Schumann, Guilmant, Widor, Smart, Stainer, to Max Reger, Karg-Elert, Paul Ertel, Joseph Bonnet, and some English composers of the day who are presenting entirely new phases of organ music. Points of rest for the reader are provided by a number of full-page pictures of famous English organs.

Brilliant executants and charming colorists are plentiful among organists of our time, but the number is not so large of those who have acquired the art of appealing to the understanding and feelings at the same time by means of intelligent and artistic phrasing. A great deal of damage has been done to the organ by those who persist in regarding the "treacly" style as the *haute école* of playing, a style which brings it dangerously near that of the barrel-organ grinder. These musicians are largely responsible for the decadence referred to, for their method produces "dead-level" tones which soon pall on the ear, as does the performance of an actor or orator who pays no heed to sense, stops, or scansion. Of particular value are the author's remarks on what is the greatest difficulty the organist has to contend with—that of attaining rhythmic incisiveness. He also grapples successfully with the problem of coloring, incidentally cautioning players against the common mistake of applying modern color to antique scores. On rubato he discourses sensibly, but ends with a false note by repeating the absurd old maxim that "any accelerando must be followed in its proper place by a slight retardation." In discussing touch he does not share the opinion of those who hold that organists should avoid the piano. On the contrary, he thinks that the greater part of an organist's keyboard technique should be acquired at the pianoforte. "All the finest organists, both of the past and present times, have been and are almost equally good as pianists."

One of the most valuable features of the book is a classified list of pieces, from the easiest to the most difficult; another, a collection of recital programmes. One is glad to see the names of two Americans in the list of composers from whom illustrations are borrowed—Buck, who is represented by a sonata, and MacDowell, by Humiston's effective arrangement of the dirge from the Indian Suite. Lizst, also, has at last been discovered in England! Dr. Hull cites several of his works for organ, which he calls "important" and commends for the allurements of their improvisational form, which does not prevent them from being "thoroughly consistent."

In Dr. Richards's volume on "The Organ Accompaniment of the Church Services," the diverse accomplishments required of an organist are described in turn—such as Reading at Sight, Score-Reading, Reading from a Figured Bass, and Transposition. The rest of the book is concerned with rules for the accompanying of hymns, psalms, responses, oratorios, etc. Of particular value is an appendix containing a short analysis of the psalms, with hints as to the sentiments the player should contrast. Another appendix is concerned with marriage, funeral, and other services. The author has great faith in the educational efficacy of an organist who knows how to accompany properly: "A carefully trained choir, with a sympathetic accompanist, will have a wonderful influence on a mass of people. They will soon learn to sing, the choir leading, and in course of time will even pay regard to pace and expression." He recommends "dogged persistence" to the organist in case of misunderstandings between him and the singers, who, in the end, "will generally give way."

In view of the great vogue music has always enjoyed in religious as well as secular life, it is strange that the men of science were so slow in explaining the phenomena of hearing. It was not till 1862 that Helmholtz published his "Sensations of Tone." Much has been done since, and there was need of a text-book summing up the results achieved to the present day. Such a book has been provided by Prof. Clarence G. Hamilton of Wellesley College. Its title indicates that the properties of sound are considered in it chiefly in their relation to music, and that it therefore appeals to organists, pianists, and other musicians who realize that they cannot be complete masters of their art unless they know something about fundamentals. The author has shown remarkable skill in condensing the main facts into 150 pages; and his style is so clear, his illustrations, both literary and pictorial, so well chosen, that nothing remains obscure. Among the topics discussed are the origin and transmission of sound; velocity, reflection, refraction, and diffraction; pitch, loudness, interference, and resultant tones; quality; resonance; scales, intervals, and chords; the ear and the voice; musical instruments. Among the many things explained are the echo, the phonograph, the telephone, the anatomy and physiology of the ear. Particular attention must be called to pages 104-105, on which Professor Hamilton makes some remarks on the adequacy of equal temperament which it would be well for those to ponder who would place mathematics above both æsthetics and convenience in the practice of music:

> Unquestionably the opening of the door to unrestricted shifting of tonality has been the cause of the wonderful advance in musical expression during the past two centuries; and in view of this development the slight deviation, scarcely perceptible even to expert ears, of the equally tempered scale from the theoretical tones seems almost negligible.

A book of interest to all music students has just been issued by Arthur P. Schmidt; it contains the lectures delivered by America's foremost composer, Edward MacDowell, at Columbia University, and appears under the title "Critical and Historical Essays."

In response to inquiries and requests from cities throughout the country, the Russell Sage Foundation of New York is now giving out a pamphlet containing practical suggestions for formulating celebrations. This brochure, "Suggestions for Celebrations of the Fourth of July by Means of Pageantry," has been written and prepared by William Chauncey Langdon of the Sage Foundation, who composed and directed the Thetford (Vt.) pageant last summer. Mr. Langdon has covered as thoroughly as possible the pageantry and dramatic ideas, and has formulated two ideas for celebrations, a "ceremony" and a pageant. He has laid strong emphasis on

music, and at his request Arthur Farwell has contributed an article on the musical possibilities of the celebrations. This book will go out very broadly to mayors of cities, Fourth of July committees, clubs, and all who are interested.

Now that Gustav Mahler is dead, the Germans are beginning to play his symphonies. One can hardly pick up a musical journal without noting a performance of one of them somewhere. While these symphonies are not as inspired as those of Tchaikovsky and Dvorák, they are quite as good as the oft-heard works of Brahms and Richard Strauss. Mahler's songs also are coming into vogue. Edyth Walker, for instance, sang at a recent recital in Berlin Mahler's "Ich atmete einen Linden Duft," "Ich bin der Welt," "Liebst auch um Schönheit," "Wer hat dies Liedlein erdacht." The Gustav Mahler Endowment Fund for Needy Musicians has already reached the sum of 60,000 kronen. The widow of the composer, Dr. Richard Strauss, and Ferruccio Busoni, belong to the Board of Trustees. In a Frankfurt performance of Mahler's Eighth Symphony, 2,000 persons will participate.

The London Opera House will open its doors for a twelve weeks' summer season on April 22. The operas announced for the first week are "Romeo et Juliette," "La Favorita," and "Mignon." Other operas to be produced are Massenet's "Don Quichotte," "The Merry Wives of Windsor," by Nicolai, and Joseph Holbrook's "Children of Don." Among the additional artists engaged are: Jeanne Kerlor, soprano, from the Biarritz Opera; Augusta Doria, contralto, from the Paris Grand Opera; Jean Buyson, tenor, form the Moscow Imperial Opera; Jeanette Cornelli, soprano, and M. La Font, baritone. Felice Lyne and Orville Harold will be heard in the opening performance of "Romeo et Juliette." As chief conductor, Oscar Hammerstein has engaged Signor Ernaldi.

Henry Trotter (or Trotère), whose death is reported from England, was the composer of the songs, "The Deathless Army," "Asthore," and "Love Can Wait."

Art

Wood Sculpture. By Alfred Maskell, F.S.A. New York: G. P. Putnam's Sons. $7.50 net.

The bigness of this book, its letterpress containing more than 400 pages, should daunt neither the general reader nor the craftsman. It is stimulating reading. The scope is wide enough to give a conspectus of European art during three centuries of intense artistic activity. Though limiting himself to the single craft of carving the human figure in wood, Mr. Maskell has traced connections and relationships so broadly as to bring out the unity of all the arts of design in the Middle Ages and early Renaissance. Specialization had not gone far. The wood carver was also painter, engraver, or metal worker. The master builder was competent with mallet and chisel to show his head sculptor how a figure of Christ should be executed in oak or walnut. The painter followed the statue maker closely, coloring or tinting each piece to suit the conditions of an interior where, as M. Conrajod has said, the paintings were often painted sculpture, the sculptures sculptured paintings. That the results of this unification were almost supremely good is, of course, a convention of the history of fine arts. Mr. Maskell quotes Ruskin, in a recently published letter as saying: "Neither Gilbert Scott nor anybody else can build Gothic or Italian. All real work in these styles depends primarily on mastery of figure sculpture." He also approves Rodin's dictum: "The aim of the Gothic artist was to fashion something that should have its full meaning and produce its full effect only in the place where it was to stand. They carved for the architecture, not for themselves." The reason for the author's own Gothic enthusiasm is expressed in such sentiments as this: "It is impossible to imagine that mediæval artists could tolerate the white marble statuary which forms such glaring contrasts with its surroundings in the Abbey Church of Westminster, or the chill regularity of the Madeleine in Paris."

Starting from this interest in Gothic polychrome statuary—a characteristic material of which was wood, though stone, ivory, and bronze were also used—Mr. Maskell tells a good story of the growth of the wood sculptor's art. It is mainly desirable that both sides of disputed questions shall be carefully summarized; this Mr. Maskell has done. In some instances he challenges all existing attributions. A particularly interesting case is that of two busts of Adam and Eve in the Victoria and Albert Museum, which half a century ago were attributed to Albert Dürer (who may or may not have been a wood sculptor), and which later scholarship has assigned to Tilman Riemenschneider, despite the fact that pear wood was not used in any work definitely known to be by this artist. Mr. Maskell accepts neither of these theories, contending that the busts "belong to a different age; to a movement, at least, with which there is no evidence to show that Riemenschneider was connected or even sympathetic." His instinct in general is unlike that of Dr. Bode, who unhesitatingly connects names and works of art.

The least satisfactory part of Mr. Maskell's book is the concluding chapter in which he tries to cover briefly and suggestively other developments of wood sculpture than those occurring in the three centuries which he has specifically investigated. Here was a chance to focus the reader's attention upon the very significant problem of the present relationship of wood-carving to architecture, at a time when a few craftsmen, trained mostly after German traditions, are filling churches and private houses with sculpture that technically, and to a certain extent in spirit, bears comparison with the average best workmanship of Nürcmberg and Würzburg. This modern wood sculpture is necessarily eclectic. If patron and architect order Veit Stoss, the sculptor must be prepared to follow the methods of the carver of the vast retable at Cracow; if the Chicago millionaire admires Grinling Gibbons, the obedient craftsman studies plates and photographs of English work whose sculptural merits Mr. Maskell has rather inadequately characterized. During the present vogue of Japanese wood-carving, enthusiasm has grown among connoisseurs for the kind of carving, ancient or modern, in which an artist has consciously sought to retain the qualities of the wood itself, repudiating the former practice of painting and gilding every surface within reach of a brush. The difference between these two fundamental conceptions of wood sculpture Mr. Maskell indicates casually here and there; it has perhaps not impressed him as vital.

Esther Singleton will publish shortly, through Dodd, Mead & Co., "How to Visit the English Cathedrals."

Paul Elder & Co. have in the press "The Heritage of Hiroshige, a Glimpse at Japanese Landscape Art," by Dora Amsden in collaboration with John Stewart Happer.

"Les Artistes Lyonnais des origines jusqu' à nos jours," with 200 illustrations (Lyons: H. Lardanchet, 30 fr.), by Alphonse Germain, is limited to the city of Lyons, the second in France, not only in point of population, but in point of literary and artistic importance. Here art had already reached a high point in the eighteenth century; throughout the nineteenth its traditions were kept up, and nothing indicates that the twentieth will see a decline. The author, a Lyonese himself, has a first-hand knowledge of his subject. The moderation of his views and the numerous specimens adduced to support his comments seem sufficient evidence of his impartiality where living artists are concerned. All the names quoted are of artists formed at Lyons and impregnated with the local atmosphere and traditions. In many respects the work will be a revelation to art students. For if it is true that the fame of the sculptor Chinard, dear to Napoleon the First, has of late gained a new lustre; that the painter Ravier has come to his own by being admitted to the Louvre; that Carrand and Vernay are becoming familiar names to frequenters of exhibitions, as is also Francis Guiguet, recently added to a New York Collection, still, few people outside of Lyons are acquainted with Berjon, Grobon, Ponthus-Cinier or Dufraine, while Guichard, de Janmot, and Pézieux, all of whom are represented in some great Paris collections, have been virtually forgotten. Yet all of these artists have talent of a superior order, and some even a strongly pronounced individuality. Germain comments on their art with taste, knowledge, and an abundant documentation, drawn from the best sources.

His clear, vivid style makes the reading of this book a delight even to the uninitiated. The numerous plates, some never published before, are executed with extreme care.

We are glad to print under Correspondence an appreciation by William A. Coffin of the artist, Francis Davis Millet, who died in the wreck of the Titanic. Mr. Millet was born in Mattapoisett, Mass., in 1846. After serving as a drummer and as an assistant contract surgeon in the Civil War, he entered Harvard and took his B.A. degree in 1869. He studied painting abroad and meanwhile served as correspondent for several newspapers, foreign as well as American. At one time or another he was secretary of the American Academy at Rome, of the American Federation of Arts, and Commissioner-General to the Tokio Exposition. He also received decorations from several countries. As an author he is remembered for three books: "Capillary Crime and Other Stories," "The Danube," and "Expedition to the Philippines."

Finance

A MEMORABLE WEEK.

Among all the varying aspects of last week's memorable ocean tragedy, not the least impressive and unusual incident connected with it was the virtual suspension of business, in a great part of the community, during the week when the details of the news were slowly coming in. There are calamities (such, for instance, as the San Francisco earthquake) which of themselves excite the Stock Exchange into great activity; but the unusual fact about the Titanic disaster, so far as regards the markets, was that it so completely concentrated all attention on one topic that it was impossible for the community even to give its attention to the ordinary routine of business.

To all practical intents, the Stock Exchange might have closed on Monday, April 15, and not have reopened until the present week. Before the information of that Monday morning was received, there had been two predictions on the Stock Exchange—one, that the exciting rise in prices would be promptly resumed, and the other, that the break of the preceding week would be continued. But the response of the market to the wireless messages was to stop in its tracks and give up its mind to news which had nothing to do with markets, but which so far superseded financial considerations as to make them repulsive even to the men in the customers' chairs of Wall Street commission houses. The same story came from all parts of the country; no one had heart, last week, to engage in his ordinary business activities. It was a not unimpressive illustration of the truth, frequently overlooked, that the making of money is sometimes not only the smallest of all considerations, but painfully out of touch with the real things of life, and of the further fact that there are some events which a stock market, the traditional mirror of a community's feelings and emotions, cannot pretend to reflect.

This instinctive and spontaneous attitude of the business community was possibly the most convincing witness of all to the magnitude of last week's calamity. It is often hard to judge events of this sort properly at close range, or to realize that the action which each of us, as a part of the community, pursues as a matter of course, is destined to be part of the history of the period. Nothing quite like the mood of the country and the mood of Wall Street, during the three days when the Carpathia was hurrying to New York, when the first false news that the Titanic was safe had circulated for one full day, when, after that had been denied, no definite information could be elicited by the wireless, and when the wildest rumors circulated from no determinable source—to be supplemented by the series of mad inventions which were sent out from responsible news agencies on Thursday night, in the two hours after the Carpathia had docked—has ever been witnessed in New York. It was altogether natural that the business world and the Stock Exchange should have ceased to concern themselves over what was happening in the affairs which ordinarily interest them. In doing so, they embodied the feeling of the community at large. They could not have done this in any other way.

This part of the episode will be remembered, like last week's calamity itself, as a distinctive chapter in the history of the period. It is more tnan half a century since such a response has been possible to the news of the day. Ocean tragedies have been numerous and sensational in the intervening decades, but the news of them has come almost invariably in one startling and comprehensive announcement, which became the talk of a day and was then laid aside for something else.

To parallel last week's story of four successive days when the atmosphere of dismay, suspense, uncertainty, and deepening horror hung over the entire business community, with all other news of the day forgotten in ordinary conversation and ignored even on the Stock Exchange, one would have to go back to the story of the ill-fated Arctic in 1854—an episode in which the final authentic news was received in New York city, fifteen days after the disaster, not only by half-masted flags and buildings draped in crape, but by the adjournment of courts and legislative bodies, the closing of the exchanges, the thronging of the people to the churches, and the general suspension of business. "The astounding calamity," wrote the newspapers of the day, "absorbed attention to the exclusion of every other consideration; business was neglected; the whole town bore on its outward features the evidence of mourning."

The Arctic, like the Titanic, was the newest ship of the translatlanic fleet. The Collins Line, to which the White Star subsequently succeeded, had already broken the ocean speed record, and the Arctic was bent on cutting it down still further. She sailed from Liverpool for New York on September 20, 1854, with 226 passengers on board, including on her list a host of names well known in the circles of New York and Europe—merchants, financiers, distinguished lawyers, and foreign diplomats. On September 27, off Cape Race, running at high speed in a fog, she struck an outbound vessel, and in four and a half hours went down. Of the passengers, only twenty-two were saved.

As in the episode of last week, the consternation of the New York community was heightened, not only by the magnitude of the disaster, nor even by the harrowing circumstances which turned out to have surrounded it, but by the slowness with which its full details came to public knowledge, the long uncertainty as to whether the last survivor had been heard from, the reassuring reports which presently proved to be unfounded, and the final discovery that the worst that had been rumored was true. In all these respects, nothing has happened on the sea in the fifty-eight ensuing years to match the tragedy of the Arctic or its effects on the people of New York, until last week.

So profound a stirring of the emotions of the public is never possible without some real and useful results. The loss of the Arctic, which, as the New York *Times* of 1854 declared, "has created a deeper sensation throughout the country than has ever before been witnessed," led the way to some necessary reforms. The newspapers and the public Legislatures drew their morals, then as now. One was "the necessity of better crews and more rigid discipline on board our ocean steamers," and that has certainly been attained since 1854. Another was that "this disaster comes from bullying fogs and waves for the pastime of seeing a steamer arrive in 9 days 37 minutes and 23 seconds from Liverpool." The Titanic has proved that this lesson, if it was a lesson of the Arctic disaster, has not yet been learned.

In that earlier calamity, the question of 50,000-ton ships, cabin lists of 2,000, and insufficient lifeboats had not yet been raised; and no one had been so bold as to assert the existence of "nonsinkable ships." The sequel was less far-reaching, therefore, in its effect on marine architecture, ocean steamship company management, and the whole problem of navigation under the auspices of immensely capitalized corporations, than it is certain to be in sequence to the story of the Titanic.

BEYOND WAR

By the author of "Darwinism To-day," etc. $1.00 *net.*

This "Chapter in the Natural History of Man" makes, without debating the virtues or evils of war, a strong biological plea for peace. *The New York Sun* calls it "A brilliant essay, written with the lucidity and close reasoning that makes the reading of his books a pleasure. . . . He goes over the whole ground of primitive anthropology in a manner so clear and interesting that it should make his little book the regular introduction to the science. . . . His evolutionary plea is well worth considering. . . . A remarkable book."

MEMOIRS OF THE DUC DE LAUZUN
(*Court Series of French Memoirs.*)

A translation of the memoirs of "the brave Lauzun," reputed lover of Marie Antoinette, who, with his polished manners, easy morals and dashing gallantry, was the very incarnation of the elegant, corrupt society that circled about Louis XV and Madame de Pompadour. Covering a period from 1747-1783, this book records the author's experiences with Rochambeau in America.

12*mo. Illus.* $1.50 *net; postpaid* $1.63.

RECOLLECTIONS of AN OFFICER OF NAPOLEON'S ARMY
By CAPTAIN E. BLAZE
(*Court Series of French Memoirs.*)

The simple, straightforward narrative of the field experiences of one of Napoleon's soldiers. Supplements more pretentious memoirs of marshals and generals. Rich in racy anecdote and graphic description.

12*mo. Illus.* $1.50 *net; postpaid* $1.63.

STURGIS & WALTON CO.

Criminal Responsibility and Social Constraint

By Ray Madding McConnell, Ph.D.

Late Instructor in Social Ethics, Harvard University.

A thorough and penetrating study of the question of crime in all its legal and social aspects—a subject which has lately taken on a popular interest approximating its great importance to society, especially in this country.

$1.75 *net; postpaid* $1.88.

Suggestion and Psychotherapy

By Dr. George W. Jacoby, M.D.

The power of hypnotism, the existence of dual personalities, the curative faculty of the mind—these and related matters are fascinating mysteries to most laymen; they are also of tremendous social importance. The noted New York neurologist here popularizes a subject about which there is such dangerous ignorance by a clear exposition and analysis of scientific facts.

$1.50 *net; postpaid* $1.65.

The Sources of Religious Insight

By Josiah Royce

Professor of Philosophy, Harvard University.

The distinguished author reasons for belief in a divine scheme of the universe that includes the salvation of man. His method is such as to render his argument valuable to every thoughtful person irrespective of the particular form of his faith or scepticism; for he relies not at all on theological doctrines or religious creeds, but purely upon the experiences of human life.

$1.25 *net; postpaid* $1.35.

The Christian Hope

A Study in the Doctrine of Immortality.

By Wm. Adams Brown, D.D., Ph.D.

Gives in clear and simple language an account of the rise, history and present status of the Christian's hope of a future life.

Wisconsin: An Experiment in Democracy

By Frederic C. Howe

Author of "Privilege and Democracy in America," etc.

A pointed account of the processes of political regeneration in Wisconsin, setting forth the uses and results there of the direct primary with second choice, a presidential preference measure, a corrupt practices act, commission control of public service corporations, etc.

$1.25 *net; postpaid* $1.33.

The Abolition Crusade and Its Consequences

By Hilary A. Herbert, LL.D.

Colonel in the Confederate Army, former Congressman, and Secretary of the Navy under President Cleveland.

With a Preface by JAMES FORD RHODES.

He believes, and attempts to show, that a wide-spread sentiment in the South against slavery was working toward some peaceful form of emancipation, when Southern sentiment was changed by the rise of Garrisonian abolitionism, and was fanned into a warlike spirit by its violence. $1.00 *net; postpaid* $1.10.

The Initiative, Referendum, and Recall in America

By Ellis Paxson Oberholtzer, Ph.D.

"An indispensable book for the student of public affairs and a volume to be read by every citizen who cares to take forethought with respect to the governmental problems of the day."—*New York Evening Sun.* $2.25 *net.*

Why Should We Change Our Form of Government?

STUDIES IN PRACTICAL POLITICS

By Nicholas Murray Butler

President of Columbia University.

The Initiative, Referendum, Recall; the Sherman Anti-Trust Law; governmental control of corporations—subjects every American must decide upon, some of them to be the critical issues of a critical Presidential campaign, thoroughly analyzed in a practical way by a recognized authority. 75c. *net; postpaid* 83c.

4,000 extra copies will be mailed to Professors in the Universities and Colleges throughout the United States.

Usual rates for advertising.

NEW MACMILLAN NOVELS

The Goodly Fellowship
By Rachel Capen Schauffler

A love story of missionary life which for sheer human interest it is hard to surpass.

Cloth, 12mo, $1.25 net; postpaid, $1.37.

White Ashes
By Kennedy-Noble

"Altogether, a clever book, readable throughout, and unvaryingly attractive. The reader chuckles over it with delight."—*New York Tribune.*

Decorated covers, $1.25 net; postpaid, $1.37.

Julia France and Her Times
By Gertrude Atherton

"A brilliant story of modern society . . . The best suffrage book up-to-date."—*New York Times.* Surpasses this versatile author's "The Conqueror," "Tower of Ivory," etc.

Cloth, $1.35 net; postpaid, $1.48.

Almayer's Folly
By Joseph Conrad

A reissue of this famous novel which the versatile sailor-author has admitted his favorite story.

Cloth, $1.25 net; postpaid, $1.37.

NEW MACMILLAN BOOKS OF POETRY

The Everlasting Mercy
By John Masefield

"Daring, realistic, narrative verse . . . gripping in its story as a novel . . . thrillingly exciting."—*New York Globe.*

Cloth, $1.50 net; postpaid, $1.60.

Womenkind
By Wilfrid Wilson Gibson

"A striking, sympathetic, appeal for unfortunate women." *Decorated cloth, $1.00 net; postpaid, $1.04.*

By the Same Author

Daily Bread

"The book of the year."—*Rabbi Stephen S. Wise.*

"Dramatic poems, vividly presenting under-currents of lives merely earning daily bread."

Cloth, $1.25 net; postpaid, $1.35.

The Hill of Vision
By James Stephens

Original poems. Striking, picturesque, witty, and humorous as this author's previous work "Insurrections." *Cloth, $1.25 net; postpaid, $1.35.*

The War God
A Tragedy in Five Acts
By Israel Zangwill

"A compelling plea for humanity . . . the most powerful dramatic work of the season."—*Pall Mall Gazette* (London).

Decorated cloth, 12mo, $1.25 net; postpaid, $1.34.

OTHER IMPORTANT NEW MACMILLAN BOOKS

A New Conscience and an Ancient Evil **By Jane Addams**

A work to be seriously pondered by every serious man and woman. Actual experiences of those who have investigated the "white-slave" traffic, and often stories of girls who have been drawn into the net—are the things of which Miss Addams's book is made. Absolutely frank in its treatment of the social evil, startling in its revelations, judicious in its suggestions, and sympathetic in its viewpoint.

Cloth, 12mo, $1.00 net; postpaid, $1.10.

Old Age Dependency in the United States **By Lee W. Squier**

A concise and complete survey of the pension movement in America. Throws new and unexpected light on one of the greatest of national problems. *Cloth, $1.50 net; postpaid, $1.62.*

The Wisconsin Idea **By Charles McCarthy**

Professor of Political Science in the University of Wisconsin. *Cloth, $1.50 net; postpaid, $1.62.*

Discusses State regulation of railroads, public utilities, the referendum, the recall, primaries, etc., as identified with the "Wisconsin" development of these great questions of the day.

The New Democracy **By Walter E. Weyl**

Political, Social and Economic Tendencies in the United States. *Cloth, 12mo, $1.25 net; postpaid, $1.35.*

"Blazes the pioneer's path for the rapidly approaching order of humane government—a socialized democracy."

"A masterly, scathing, and absolutely fearless arraignment of the whole subject."—*Boston Journal.*

Marcus Alonzo Hanna. His Life and Work **By Herbert Croly**

Author of "The Promise of American Life."

Mr. Croly tells the complete story of Hanna's Life, and analyzes the conditions which made possible the exercise of his tremendous power. *Illustrated. Cloth, gilt top, $2.50 net; postpaid, $2.70.*

Democratic England **By Percy Alden, M.P.** *Cloth, $1.50 net; postpaid, $1.62.*

A brilliant study of the humanistic movement and the important social problems which have partly bridged the gulf between British political parties and classes to the advantage of the entire community.

Socialism As It Is **By William English Walling**

A survey of the world-wide revolutionary movement. *Cloth, $2.00 net; postpaid, $2.13.*

All the Children of All the People **By W. H. Smith,** *Author of "The Evolution of Dodd."*

"A book to set one thinking—that rare thing, a book that is really alive."

Analyzes the national attempt to educate "all the children of all the people," and describes the present status of the complex problem. *Cloth, 12mo, $1.50 net; postpaid, $1.61.*

Published by THE MACMILLAN COMPANY 64-66 Fifth Ave. N. Y.

The Nation

NEW YORK, THURSDAY, MAY 2, 1912.

The Week

Tuesday's struggle in Massachusetts ended in very much of a drawn battle. The result will be nearly an equal division of the State's thirty-six delegates between Taft and Roosevelt. On the preference vote, pure and simple, Taft has a clear plurality over Roosevelt of about 4,000 votes. Owing to a confusion about the form of the ballot, however, which led to large numbers of Taft votes for delegates-at-large being invalidated as having been cast for nine delegates when only eight should have been marked on the ballot, it appears that Roosevelt gets all eight. Describing the outcome of the contest as a drawn battle is yet to describe it as a serious setback for President Taft. It is not so severe a blow to his prestige as that dealt in Illinois and Pennsylvania, but it is sufficiently damaging. That he could hold only half of the chief Republican State in New England, and that only after a tremendous fight, shows how slight is his hold upon the affection and confidence of his party, how widespread is the belief that he cannot be reëlected even if he is nominated, and also how much hard work is before his managers if they are to compass his nomination. The scene of the fighting will now be transferred to Maryland, where it will be as bitter and personal as it was in Massachusetts. Afterwards New Jersey will be hotly contested, and the final result may hinge on Ohio, where there is every reason to think that Mr. Roosevelt will fight the President ruthlessly, regardless of the fact that it is Taft's own State.

Mr. Taft dwelt little on questions of public policy, in his speech in Boston last Thursday night, but made a terrific exposure of Roosevelt's personal character. The story which he recited was one long account of insincerity and actual falsity. The meanest of Roosevelt's misrepresentations are those which he has made about Mr. Taft's relations to Lorimer. Not only in Illinois, but again and again in his speeches throughout the country, he has pictured the President as in alliance with Lorimer, as wanting to have the government in the hands of such men as he, and all the rest of it. This was a wicked thing to do without any evidence to go upon, but how shall the act be characterized when Roosevelt had in his own hands all the time overwhelming evidence to the contrary of what he alleged? President Taft had written him personally that the testimony in the Lorimer case showed that his election to the Senate was attained by "a mess and mass of corruption," and that everything possible ought to be done to remove the taint from the Senate.

So it was another "memory illusion," if we may use the scientific term employed by Professor Münsterberg to describe the Colonel's weakness in the matter of dates and facts. When Mr. Roosevelt recalled the highly pertinent circumstance that it was Secretary Taft himself who in the summer of 1907 at a full Cabinet meeting advocated the suspension of hostilities against the Harvester Trust, he overlooked the other highly pertinent circumstance that from June to December, 1907, Mr. Taft spent one day at Oyster Bay and four days in Washington, and the rest of the time in Canada, the Western States, and Japan. And it is on record that there were no Cabinet meetings at Oyster Bay on that one day in the second half of 1907 when Mr. Taft and Mr. Roosevelt met. Even before reading the President's reply people must have wondered why it should have been the Secretary of War that brought forward a motion dealing with a question concerning the Department of Commerce and Labor and the Department of Justice. But such is the habit of memory illusions.

Amid the political excitements of the past week, but little attention was paid to an event in Congress of real importance. This was the announcement that the House and the Senate had come to an agreement on the form of the Constitutional amendment providing for the direct election of United States Senators. The question has been long in conference. As the bill passed the Senate, it gave a certain amount of Federal control over the new way of electing Senators, such as now exists in connection with the election of Representatives. That is to say, it reserved to Congress the right to inquire whether elections had been held in compliance with the law, whether any class of citizens had been disfranchised, etc. Against all this, it will be remembered, some of the Southern Senators protested strongly, alleging the fear of a new Force Bill, or something of the kind. This position was also taken, substantially, by the majority in the House. But Representative Rucker announced last week that the committee of conference, of which he is a member, had decided to recede from the House view, and to accept the bill as it passed the Senate. It is expected that the formal report will be made this week and final action taken. There thus appears to be no doubt that the new Constitutional amendment will soon be submitted to the States for ratification, and that, in due time, we shall have the direct election of Senators established as the law of the land.

Publicity in the matter of campaign contributions is coming all along the line. The law now makes it necessary to file an itemized account of gifts and of expenses in carrying elections, and soon will require the same thing as affects the winning of nominations. The bill which the House has passed, and which is now pending in the Senate, is thoroughgoing. It embraces specifically the contests for Presidential and Vice-Presidential nominations, and requires the officials in charge of any bureau or headquarters to file with the Secretary of the Senate a complete list of subscribers to campaign funds in sums greater than $100. The first filing must be within thirty days after fixing the date of a National Convention or primary elections, and a similar itemized account must also be filed every fifteen days until the nomination is made. Any one violating the act "shall, upon conviction, be fined not more than $5,000, or imprisoned not more than three years, or both." The chief interest in the enactment of this measure was displayed by Democrats, who did not conceal their curiosity to know how Mr. Roosevelt's campaign accounts would look in print. But it will be necessary for

Democratic candidates to take a dose of the same medicine.

The effort to obtain a retrial for the four West Point cadets who were dismissed last year for hazing and maltreating some of their fellows is creditable to nobody, least of all those members of Congress who have yielded to persuasion and voted for the special bill of relief. This bill, which has passed the House, has been favorably reported by the Senate Committee on Military Affairs. If it passes, the President alone will stand between discipline and an attack upon it that, if successful, will be a great encouragement to the continuance of a most demoralizing custom. What kind of training in obeying orders is it that is held up before the eyes of future officers by these appeals over the head of the Superintendent to the political arm of the Government?

Advocates of reform in judicial procedure will find a crumb of comfort in one bill that passed the New York Legisure, and is now Chapter 380 of the Laws of 1912. It amends the code of civil procedure in relation to appeals, introducing important improvements. Much broader powers are conferred upon the Appellate Division. It may, for example, instead of being compelled as now simply to affirm or set aside the judgment of the lower court, or to order a new trial, itself render "final judgment upon the right of any or all of the parties, or judgment of modification." Further, we have the new provision that, "after hearing the appeal, the Court must give judgment without regard to technical errors or defects or to exceptions which do not affect the substantial rights of the parties." This is the new doctrine—or, rather, the restoration of the ancient rule that harmless error is no ground of appeal—which is making headway in State after State. When it is everywhere fully accepted and acted upon, appeals to higher courts will look more like an effort to get at the merits of the case, and less than they do now like a trial of wits or a game which consists in setting legal traps for the unwary.

That we have displayed more zeal than knowledge in the erection of memorials in this country, and nowhere more glaringly than at Washington, is becoming so generally recognized as to give ground for hope of a change of policy. Mr. Gutzon Borglum told the House Committee on Foreign Affairs the other day, in advocating the resolution providing for a celebration of the signing of the Treaty of Ghent, that he hoped that any monument built in commemoration of the victims of the Titanic would be artistic. He might have gone further. Any memorial hereafter erected by this nation, or by any official body in it, that does not satisfy good æsthetic taste, as well as patriotic feeling or the emotion of sympathy or of gratitude or of admiration, will not rightly honor the dead. It is not always possible to find such fitness of commemoration as Lincoln's words at the field of Gettysburg, but it is possible to do without a material expression of the local or the national sentiment until one is found that is not discreditable. Haste is the last element of a thing of this kind. Not, how long was this memorial in building? but, what a noble monument! is the utterance of the visitor who looks upon the Washington obelisk.

The old idea that a university president could take the place of any member of his faculty in the lecture-room at a moment's notice has been in danger of being supplanted by the notion that in mere knowledge a bright sophomore could put him to shame, owing to the modern president's immersion in questions of endowment and material equipment and administration. It is somewhat reassuring, therefore, to learn that President Lowell is throwing himself into the breach created by the temporary absence of the professor of government at Harvard, and will actually deliver lectures to the classes threatened with a fortnight's unexpected vacation. President Harper of the University of Chicago always insisted upon being provided with a class or two in a favorite subject, no matter how busy he might be in the work of building up a great institution; and many college presidents follow the same course. But the emphasis laid upon the executive side of men in this position tends to obscure the fact that increase of learning rather than of resources is the real aim of their work. For one of them to leave his office and mount the platform must be a powerful reminder of this aim to his audience as well as to himself.

Mr. Balfour's speech against the Irish Home Rule bill had the intellectual distinction which marks all his public utterances, and it was dialectically adroit. He could see nothing but lions in the path. With a great array of logical dilemmas, he undertook to show that the plan of government for Ireland could never be made to work. His predictions of disaster, both to the Irish people and the British Empire, if the proposals of the Government were carried out, lacked nothing in solemn emphasis. Their force, however, was somewhat broken by the reply of a Minister who showed that Mr. Balfour had made the same dire prophecies when it was proposed to grant self-government and a Constitution to South Africa. One of the most effective and witty speeches on the first reading of the bill was made by Mr. Birrell, Chief Secretary for Ireland. Often interrupted and baited by the Unionists, he kept his poise and his temper admirably. His calm good humor was most happily displayed towards the end of his speech, when he referred to Capt. Craig, a Unionist swashbuckler from County Down, as "the honorable and gallant gentleman for whom I have a great personal respect." Capt. Craig at once jumped up and shouted: "I do not want it!" But Mr. Birrell instantly resumed: "The honorable and gallant gentleman cannot help it; I do respect him."

Anarchists usually have been classifiable into philosophical anarchists and anarchists who believe in "propaganda by deed." But of late years there has been a development within the ranks of the anarchist movement, especially in France, which makes this classification partly obsolete. The philosophical anarchists are still philosophical, but the men of action who formerly advocated dynamite against heads of government and parliaments have for the most part gone over to less irregular modes of warfare. In France the anarchists have in large measure entered the labor movement, a form of action which they formerly despised. They have influence in the Confederation General of Labor, and their ideas have helped to shape the new proletarian movement that goes by the name of Syndicalism. Isolated instances of the old-fashioned outrage, like the recent attempt on the life of the King of Italy, will, of course, recur, but

the main trend of anarchist propaganda is away from individual warfare towards class warfare against society. To speak of the automobile bandits at Paris as anarchists, in spite of their own claims, is, of course, true in neither sense of the term.

The uproar in the Reichstag over the Prussian War Minister's defence of the duel in which his own nephew was killed is not an isolated instance of protest against this barbarous practice. Its unusual warmth shows, however, how the feeling against the whole military code of "honor" is growing. Usually the opposition to duelling has come from Radicals and Social-Democrats. This time it was the Catholic Centre which took the lead in criticising both the army and the Kaiser. At this instance of lèse-majesté the War Minister was, of course, horrified. But the German public will not be. It knows that the military code of honor is an anomaly from Frederick the Great's time, that almost presupposes looseness of living among subalterns, and has on occasion justified officers in shooting or stabbing civilians for fancied insults to the service. Duelling is, of course, contrary to the German law. Hence the officers who connive at it and defend it are in much the same position as our navy officers who encourage prize-fighting on their ships. Even more significant than the Reichstag's protests was the defeat of the Government on a subsidiary issue of the new defence bills and the fifty Socialist meetings in Berlin to demand that "no more millions be poured into the insatiable maw of the Moloch of militarism."

The dedication of the new Campanile of St. Mark's at Venice is undeniably an act which the eyes of the outside world will observe with more full-hearted sympathy than has attended the campaign in Tripoli. To the outside world Italy is still the land of visible beauty, an historic ground on which the drama of the ancient world attained its climax and the spirit of the modern world was reborn. The new generation in Italy is rather impatient of this classic tradition. It resents the conception of the native land as an archæological burrowing ground and a museum. It takes pride in Italy's material growth, in her swelling manufactures, in the extraordinary skill with which her engineers have harnessed the waterpower of the Apennines to the needs of modern industry, in Milan's sanitation, and Rome's trolley cars. A commendable attitude enough, and one that the world will sympathize with because the older spirit has not yet died out in Italy. So far it is the Futurists alone who have advocated pitching all the palaces and art works of Venice's past into the sea. The erection of a new and useless Campanile is a sufficient reply to their manifesto.

The recent rapid fall in the price of French Government 3 per cents, to the lowest price in more than twenty years, attracted attention again to certain economic influences bearing adversely on the market for high-grade securities the world over. In France, however, as had previously been the case in England, it also started active discussion as to what measures should be taken to avert such continuous decline. In England, where the prolonged fall in consols had awakened uneasiness, numerous expedients were suggested, such as selling Government "bearer securities" in small denominations so as to widen the market for them. It was recognized, however, that aside from the broader economic causes, the price of consols was prejudiced, first by the uncertainty as to the British Government's redemption of its debt through the sinking fund, and, secondly, by the increasing income tax rate, which is applied invariably to the interest yield on consols. The English authorities got nowhere in the discussion; the Ministry has even suspended sinking-fund purchases in its recent budget. But the French, through the medium of a legislative commission, have at once proposed that, in the income tax law now pending in that country, income from "French rentes" shall be expressly exempted.

This proposal, which seems likely to be adopted, calls up an interesting controversy. In the United States, government bonds are by law exempt from tax, on the old and familiar ground that for a State to deduct by legislation any part of the annual interest pledged to the public creditor is an indirect form of confiscation. This is not only applied in the matter of Federal taxation, but national bonds are exempt by law from State and municipal taxation, and, under the Supreme Court decision of 1895, State and municipal bonds are exempt from a Federal tax. The British Exchequer, on the contrary, deducts the income tax before sending out the interest remittances on British consols, and it deducts it, moreover, from payments to foreign as well as to domestic holders. There can be no doubt that this drastic policy has had a hand in the depression of British consols; it was at any rate bound to prevent support from investors of other countries. If the French, who are very practical financiers and who rarely allow the general principles of economics and finance to interfere with a policy of manifest expediency, decide to follow the American practice, it will be interesting to see how English discussion will be affected.

The first message of the first President of China has a double interest for the non-Chinese world. It is of a sort to confirm the confidence that has been generally reposed in Yuan Shih-Kai, and in particular it reverses the traditional attitude of the Chinese Government towards foreigners. It is for the Chinese, says their President, to learn to understand foreigners, and to treat them with candor. He might with justification have presented the other side of the matter, and called upon the Powers to make an effort to understand the Chinese, and to treat them with the fairness which the Powers exact from one another. The burden of the message, however, is not political, but economic. This accounts for its Western tone. Customs duties, export taxes, railway loans, Government bonds, currency, weights and measures, mining laws: what is there essentially Oriental about these? Nevertheless, it is only our sudden devotion to scientific management that makes President Yuan's recommendation for the employment of financial experts seem like a leaf out of our own book. For China such a thing is but the application of age-long tradition. And what must the European Powers think of the instruction to the Ministry of War to reduce the number of troops in China? Here, at least, is an unmistakably Oriental touch. Every Westerner knows that the first thing for an infant nation to do is to pass a comprehensive conscription law, and borrow money to the hilt for a first-class army and navy.

"THE NEW STYLE."

Political controversy in England, too, has been taking on an unaccustomed tone of personal bitterness and even brutality. In a speech in Belfast, not long ago, the Leader of the Opposition declared that the Prime Minister was selling his convictions, in the matter of Irish Home Rule. Mr. Asquith took the matter up in the House of Commons. He called upon Mr. Bonar Law to say there whether he really believed that the Premier was capable of selling his convictions. "You haven't any to sell," was Bonar Law's rough rejoinder. Mr. Asquith did not lose his temper. He merely said with biting emphasis: "This is the new style. We are getting on."

Americans have been having a taste of the new style, and we are very sure that the great majority of them do not like it. The spectacle of an ex-President of the United States engaging in a rough-and-tumble fight with the President, is certainly not one in which we have any reason to take national pride. It has some amusing aspects, undoubtedly, and it may appeal temporarily to the sporting instinct. The yelling crowd cries out delightedly: "Hit him again, Teddy," or, "Soak him one more, Bill"; but that is simply a passing humor, even with the multitude. The great mass of sober and self-respecting Americans feel humiliated by such an undignified controversy. It was bad enough when only the Taft chairman was hurling billingsgate at the Roosevelt managers, and Senator Dixon was calling the President a receiver of stolen goods. The general opinion of this was well expressed by the *Outlook*, when it rebuked Dixon, and said that the President of the United States ought to be treated with respect. But what has the *Outlook* to say of Roosevelt for his railing at the President on Friday night? Nothing of the kind has ever been known in this country. Blaine fought Harrison's renomination, but neither of them descended to the language or the attitude of the prize-ring. Angry words and stinging epithets have been common in American politics from the beginning; but they usually come from minor actors, and not till now have we seen the protagonists falling foul of each other as Roosevelt and Taft are doing.

If President Taft is to be blamed, as some are blaming him, for setting about the exposure of Roosevelt's dishonesty, it is not on the score of lack of provocation. Roosevelt had gone on from bad to worse. In the first of his speeches, he did not refer to Mr. Taft by name. His Carnegie Hall address contained, as printed, many direct allusions to the President which he thought it wise to omit in the delivery. But as the campaign went on, he became more and more violent, and more and more insulting in his remarks about the President. He was as one feeling his ground, and apparently, after he had persuaded himself that the President would make no personal reply, he was emboldened to go all lengths. Then, when he had finally goaded Mr. Taft into coming out to defend himself, and to show up the insincerity and fraud on the public of which Roosevelt had been guilty, the latter had no recourse except the flood of abuse which he poured out in Worcester. The President's main charges he did not meet at all. He could not. There were the letters. All that Roosevelt could say was that it was "unpardonable" to publish private letters without permission—this from the man who has himself printed more private letters than any one ever in public life in this country! In one case, he even published a private letter from a woman.

It is perfectly obvious where this new and disgusting style of political controversy came from. We are all now shocked at its latest developments, but its beginnings were stealing upon us, unperceived by many, during the years of Mr. Roosevelt's Presidency. For anybody who looks back at it can see how often the note of brutal unfairness and even of ferocity in dispute was struck by him. The most unscrupulous antagonist that ever lived, he hesitated at the use of no weapon, availed himself of a thousand tricks and devices against his opponents, and, as he became more and more drunk with power, acquired an arrogance of manner and a ruthlessness of expression that had never been known in a high official in America. For him to come out on the steps of the White House and call a man a liar became almost a daily event. Public man after public man he denounced in the language of the pot-house. People had partly forgotten all this, in the period of Roosevelt's comparative silence from March 4, 1909, up to the summer of 1910, but then he burst forth with more vehemence and more disregard of the proprieties than ever before.

Whether the final collision with Mr. Taft was avoidable or not, whether the President should have gone on permitting Roosevelt to lie about him, without a retort, or should have delegated somebody else to present the evidence which covered Roosevelt with confusion, are questions which it is now, of course, idle to discuss. The thing has happened. We are in the thick of the new style. Two former friends, two men who have had the highest honors which the people can bestow, have engaged in a public quarrel and are using about each other the strongest words at their command. Politics aside, party consequences out of it, the common feeling of intelligent Americans is that this is a most disheartening event. In a large public way, it carries a sense of disgrace for the nation.

REFORM BY STEADY LABOR.

That the Titanic disaster is certain to be followed by radical changes in the equipment of ships and procedure at sea, is now plain. Much good of a far-reaching kind may confidently be counted upon from the international conferences already planned. Safer routes and better systems of communication are assured. Just as in the case of the Slocum disaster and the fire in the Triangle Company's quarters, important reforms have been purchased at a frightful cost in human lives. It is the American way, people are saying, for much of the blame for the Titanic disaster rests on our own Government, despite the nationality of the ship and the international agreement to accept the British Board of Trade's ruling as to the number of lifeboats needed. But there is already the danger that, as some betterments are assured, the public will speedily lose interest in the whole subject, and that half-way reforms will result. This was the case after the Slocum horror. There was then an overhauling of the steamboat inspection service, and, therefore, the public assumed that all was well with all ships. The pleadings of the newspapers that the question of the lifeboat equipment should be taken up were ignored by the public, the shipowners, and Congress alike. Even our army transports have regularly gone to sea with a shocking lack of equipment.

What was needed then, precisely as it is needed to-day, is a steady, continuous effort until conditions are entirely satisfactory. Spasmodic progress, following a disaster, is in the long run a poor way to do away with abuses either on land or on sea. That there are many fields in which there can be no sudden catastrophe to horrify the nation or the world is perfectly obvious. Thus Richard Watson Gilder's tenement-house committee, which did such great work for this city, was not due to some terrible conflagration or costly epidemic. It did its work quietly without the slightest public excitement, and its achievements rank high in the list of patriotic civil services. Not that this work was final. Many eager workers have to devote themselves more or less to safeguarding what has been won, to preventing reactionary legislation, and to seeing that the needed remodelling of the old tenements is properly done. It seems as if in this field there would never be a time when it would not be necessary to oppose human greed and avarice by the vigilance of unselfish volunteer workers.

The wrong way to progress has recently been clearly illustrated in Nebraska. There, five murders in the State Penitentiary and three killings by a sheriff's posse within forty-eight days have furnished the sensation needed to centre public attention upon the horrible conditions in this prison. Fortunately, a former judge, Mr. Lincoln Frost, had been quietly investigating conditions in the penitentiary and was able to set forth his discoveries in the middle of the tragedies which aroused the State. According to the *Survey*, Mr. Frost's report "furnishes conclusive evidence of the grossest corruption and the most extraordinary lack of discipline, notwithstanding that some of the worst allegations were not included, but were reserved for later use if denials force further publicity." In brief, it is the same old story: drunkenness and profanity among the guards, a well-established trade in drugs, liquor, and food, excessive punishments, permitting the "trusties" to abuse other prisoners, and gross immorality. Mr. Frost himself saw an ex-convict deliver a bottle of morphine to a "trusty" and receive prison articles in return. The prison pharmacy was actually given over to the care of a life prisoner, sentenced for killing his wife by administering poison of his own compounding. Three escaping convicts on March 14 "shot and blew their way out of the prison with four revolvers and nitro-glycerine caps" obtained with the connivance of some of the guards.

Now all of this is not wholly new to the State where there have been occasional sensational exposures with promise of reforms, "but," says the *Survey*, "the spasmodic agitations which have sprung up and died away with but little to show in achievements are now likely to take more permanently organized form and pursue more progressive plans." Plainly, persistent, continuous reform efforts are what will count. In New York State, Mr. William Church Osborn's commission has reported grave prison abuses of all kinds, despite the fact that we have had a Prison Association that has long done good work within the limits of its means. Moreover, if we are correctly informed, Mr. Osborn's report, valuable as it is, has left a number of points uncovered, notably such matters as the use of morphine in the jails. In recent issues of the *American Magazine*, Mr. Julian Leavitt has published articles about "The Man in the Cage" that are sickening reading, and make it plain that conditions in Nebraska are by no means exceptional. To wait for newspaper revelations of the sensational variety before acting would obviously be folly. The price of decency and progress in this matter and in so many others is eternal vigilance, sturdy labor, and the finding of some way to fix public attention upon the need.

STRANGLING THE MAGAZINES.

The fact, of course, is established. We have known for some time that Wall Street has laid its fell clutch on the windpipe of public opinion, and the people is being deprived of its monthly budget of truth. Just how the thing is done has not been quite determined. Sometimes we are told that the Interests have muzzled the magazines by buying up control of the corporate stock. Sometimes the iron hand works in a paper glove—the White Paper Trust, namely. Sometimes it is through the banks, which refuse loans to harassed publishers. Sometimes it is through indirect pressure, the Money Power squeezing the banker, who squeezes the merchant and manufacturer, who then squeezes the advertising columns. All but the first view commend themselves to George French, who has made a study of the Masters of the Magazine for the *Twentieth Century*. The Interests do not need to own a controlling share in the stock of any magazine to be its master:

> The owners of the popular magazines have ceased to be the masters of them in the wholesome sense that they were their masters a few years ago. To-day it is the paper-maker that is the master of this magazine, the big advertisers of that one, a financial house of the others, and in the last analysis this control comes down to a control in the interests of money, whether the root of the matter is a big unpaid paper bill, an "accommodation note" at some bank, or a veiled subscription to stock or bond issue.

The upshot of it all is that the Money Power "affects" the policy of the magazine, though the latter may not be "entangled" with that power in any direct way.

And now for just a glance at the dire effects of Money Power control upon free speech in the magazines. You first pick up one of the more staid and circumspect magazines, one which has always been moderately conservative, and is now, of course, headed under full sail for reaction. You open the pages to an article entitled "The Worldwide Sweep of Socialism," and you read:

> Socialism is a ferment that is slowly but surely disintegrating the three hierarchies upon which the present-day European civilization rests, the hierarchy of privileged government, the hierarchy of standing armies, and the hierarchy of private property.

The hierarchy of private property disintegrating? Who was the wicked financier who paid for the insertion of such a reactionary sentiment in the magazine? You throw down this mercenary publication and pick up another. This magazine calls attention to an article on the Lawrence strike by means of a poster which represents a pathetic horde of workingmen held in defiance by a giant in policeman's uniform denominated "Law and Order." Behind the giant's left leg skulks Capitalism in a silk hat, and underneath is this sentiment:

> The movement in Lawrence was a singing movement. The strikers wrote their own songs and sang them with something of the grim menace of the French Revolution.

Rockefeller paid for *that* article, obviously, and you turn, sick at heart, to a leading article in a leading magazine

describing the forces that are behind Mr. Taft's campaign for renomination:

> Smoot, as the representative of the Mormon Church; Penrose, the representative of the powerful Corporation control of Pennsylvania; and Crane, the sagacious and restless representative of the Corporation interests of New England, are all actually, openly at work for Mr. Taft.

Evidently a statement forced upon the editors of this magazine by the Steel Trust and Wool Trust. You turn, as a last resort, to the magazine that was the pioneer in the good old days when the magazines did speak out against the Money Power, and you find that clarion voice of the people reduced to this mild and traitorous piping:

> Read "Big Business and the Bench." . . . Here, presented in the simplest way in the world, is a most tremendous indictment levelled against our business methods as applied to our judiciary.

Et tu, Lawson! Thou, too, brutally bought up by the Interests? Then die free speech!

There must be in this country, however, a small minority, composed of fossilized reactionaries no doubt, to whom the clamor of the magazines against the Wall Street highwaymen is not utterly convincing. In the first place, they catch little difference in volume between the free utterance of 1906 against the System and the stifled utterance of 1912 against the Money Power; between the widely advertised Shame of the Senate and the suppressed Shame of the Bench; between the iniquity of Aldrich ten years ago and the iniquity of Aldrich's man, Taft, to-day. The magazines are as vocal in the defence of the people to-day as they were five years ago, and if in the interval there was a time when the voice from the tribunes subsided somewhat and advertisements fell off, it was probably because the people turned and not the Money Devil. Also the mathematical law that 2 and 2 make 4 and that you can't take away something from nothing seems to have come into play.

On this point Mr. George French's aforementioned article is highly instructive:

> Inimical forces, more potent than the displeasure of the people or parties touched, were at work [against the freedom of the magazines]. The cost of getting subscribers for the new magazines proved to be very great. They were compelled to pay half, three-quarters of the subscription price. . . . The net profit on circulation receipts dwindled as the lists mounted; and the subscribers had to be won anew every year. . . . The problem of maintaining the advertising patronage also became more and more acute, and more and more costly, involving large forces of solicitors and corps of artists and advertisement writers. . . . When to it was added the great expense of getting and keeping readers, and the very lavish expense of the editorial departments, a condition was created which meant to some of the magazines that their struggle was turned into a fight for financial independence, or even existence.

In other words, there were flush times when money went like water, and the flush times came to an end. Then the Money Devil did what he always does, he got the business man who doesn't watch out. Now that the magazines have learned the lesson of thrift and commonsense, there are really signs that the Money Devil is relaxing his hold. He has no false sensitiveness, the Money Devil. Pay him his interest on the mortgage and you may call him what you please.

HARNESSING OUR WATER POWERS.

If the day ever comes in which this generation is accused of lacking imagination, some refutation of the charge will be found in our response to so prosaic a battle-cry as "Conservation." A more colorless watchword it would be difficult to choose. "Free silver" and "gold standard," "protection" and "free trade," all have an appeal of themselves, apart from the things for which they stand. But who would have believed that we could be made to care anything about a term that sounds like a piece of scientific nomenclature—that we should have elevated an abstraction into a political issue? Yet this is just what we have done. Stirred by a vision of untouched but menaced natural wealth of unknown extent, we have taken the word that happened to be near, and, regardless of its poverty of suggestion, have made it a touchstone of statesmanship. It is still a lumbering polysyllable, but woe to the man in public life who presumes to trifle with it. Ungainly it undoubtedly is, but there is lightning in it.

Our attention, however, has been so occupied with the political aspects of our new interest that its industrial features have received less than their due. And yet it is these that are really of primary importance. This fact gives especial value to the series of articles on "Water and Power in Industry," in *Scribner's*. While all the argument has been going on about it, there has been in quiet process of development a multitude of water-power systems the country over. The need of such enterprises is indicated by David B. Rushmore's statements concerning the tremendous increase in the consumption of coal. Prefacing his figures with the remarks that we are rapidly passing from an agricultural country to an industrial one, and that this transition is accompanied by a large growth in the use of power and consequently by an enormous drain on our fuel resources, he points out the startling circumstance that the amount of coal mined in the United States went up from 270,000,000 tons in 1900 to 500,000,000 tons in 1910, an increase of 85 per cent. The population during the same period increased but 20 per cent. At this rate the end of our coal deposits is in sight. Here is the significance in the possibilities of our water-power. With suitable storage facilities, the minimum available flow of 36,000,000 horsepower can be increased five or six times. The hugeness of these figures is realized when we read the estimate of the Commissioner of Corporations that the total development of waterpower in this country for electrical and other industrial purposes is only about 6,000,000 horsepower.

It was the harnessing, however partial, of Niagara that focussed the thought of the nation upon what might be done in the way of utilizing waste power. That event was dramatic. But the region that looks towards the Golden Gate really carried these developments farthest. The high cost of fuel was responsible for their beginnings in that part of the country, and for a long time "the history of electric power transmission in the United States was largely made up of that of the companies centring around San Francisco." The water storage of the plants of a single great company for both power and irrigation would be sufficient to supply that city with water for two years. Yet California is not alone in this. The dimensions of "the deepest siphon tunnel in the world" and of the vast reservoir which it will fill, are such as to satisfy the pride of the proudest citizen of the Empire State. The siphon, dipping under the Hudson at Storm King Mountain to the depth of a quarter of a mile, and emerging in the shadow of Breakneck opposite, is capable of belching forth in one day a stream sufficient to

fill two and a third million miles of one-inch hose, while the Ashokan reservoir will hold 130,000,000,000 gallons, enough, it is stated, to flood the entire area of Manhattan Island to the upper window-sills of a three-story flat.

Not the least interesting feature of the tale that is unfolded by the development of waterpower is its emphasis upon our closeness to the ancients. Their use of it was one of the first steps in civilization, and we, marching in the foremost files of time, have not outgrown it. The differences are merely those of method. Theirs were crude and for a day; ours are as highly wrought as we can make them, and for generations. And yet, even with reference to these aspects, the boast is checked upon our lips at the memory of the Roman art that also built aqueducts for the ages. It is difficult for us to dream of an epoch when strange peoples will wander with curious eyes over the remains of our civilization. But one cannot avoid the reflection that if such a time should come, we should in no small measure be judged by just such mighty works as those we have been considering.

KINDNESS TO PARENTS.

A tradition has been growing up that the rising generation is pretty hard on the one that lags superfluous. We long since, of course, got away from the command to children to obey their parents. No fathers and mothers, except those moving about in a world half realized, any longer expect that. But there have been many rumors of darker things. It is said that the young of to-day are not kind to the old. The suggestion has even been made that there is need of a Society for the Prevention of Cruelty to Parents. Such is the result of the changed attitude into which we moderns have fallen. The posture which most parents assume towards their children is now distinctly apologetic. "Be as patient as you can with us, for we are doing our best." The old patriarchal spirit is gone, and if anything is inconceivable to our youth it is a religion founded on the worship of ancestors.

While in all this there is a measure of truth, we are convinced that the charge of deliberate unkindness cannot fairly be brought against the young in relation to their elders. Boys and girls pity their fathers and mothers, but are not cruel to them. They are often frank and even critical with them; that is their duty; but they are not unnecessarily severe. They make earnest efforts to understand them, to get their strange point of view, and never withhold sympathy when they find a parent hopelessly struggling with obsolete ideas. There is much evidence, we believe, that the young are really sorry for the old. As they know that to comprehend is the first step towards pardoning, they give a great deal of thought to the task of "making out" their parents. The latter naturally suffer in the process. An English mother recently told about her daughter of sixteen bringing home a school friend. After a few days of trying to get on well with the two girls, the lady was surprised to have her daughter say one morning: "Dorothy has been telling me she can't make you out. She doesn't somehow get any further with you. And she doesn't know whether it is that she can't get at you or whether there's nothing to get at. I tell her there really isn't much to get at. What do you think?"

Such experiences are inevitably disconcerting to parents, but they do not argue unkindness on the part of children. They show, rather, how sincerely the young folks endeavor to understand what their parents really think and what is their attitude towards a world which is rapidly slipping away from them. This kind of friendly interest and surveillance is frequently displayed in regard to the reading and literary preferences of parents. Their children do not, of course, read the same books. That would be asking too much. But they strive honestly to put themselves in touch with the queer parental taste. They cannot share it; they are secretly astonished at it; but they do not openly rail at it. "You used to like Browning? How strange and far away that seems! You thought him obscure? How funny! Clear enough, but hardly worth while, I should say."

If careless parents are tempted to resent this kind of cross-examination by their children, they should stop to think what it means. But for the thoughtfulness of our children in enlightening us, we should scarcely know what ideas in literature and standards in art and forces in society and in government are regnant to-day. When the young respectfully differ with us, it is their forbearing way of helping us to understand the new age. Did we use to be emotional in our youth? Well, we ought to know that that has gone out. The thing to-day is to be passionate—to have great fervors and burning determinations. What about? Why, that is the very point; it doesn't much matter what about. Only, do not expect the young to warm over old enthusiasms. They must strike out for themselves. And it is the duty of the aging to understand—their children are all the time striving to make them—that writers once famous must not be prescribed to youth to-day. "Ah!" cried a French student the other day, "how that *faux bonhomme Renan* bores us."

A French review recently published the results of an *enquête* concerning the ideas and tendencies of young men and women A great variety of them were reported, mostly notable for their audacity in straining to be different from what had gone before in literature, in art, in life. But the permanent significance of such opinions may be doubted. For youth, too, has to face the oncoming years and fated change. Thirty-five does not always think as it did at twenty; and that is one reason why you cannot tell exactly what is going to happen fifteen years from now by asking twenty what it would like to have happen. It has been justly said that if you want to know what the *jeunesse* of 1912 is really going to signify in the world's history, you cannot form a sound judgment until about 1930. And then there will be another *jeunesse* coming along, seeking to be kind to the one that will by that time have passed into sedate parenthood.

THE VULGATE REVISION.

ROME, April 17.

The nomination by Pius X, in May, 1907, of a commission for the revision of the Latin Vulgate, with Abbot Gasquet at its head, was announced in the *Nation*, June 6, 1907. This is, as was said at that time, the most important result as yet of the Biblical Commission which was appointed towards the end of the Pontificate of Leo XIII. The learned world has been informed from time to time of the substantial progress that has been made, especially in two reports that have been printed in the Latin and two or three modern languages, the first in 1909 and the second towards the end of 1911.

To refresh the recollections of those interested in this great work, I begin with a brief statement of the exact end the Vulgate Commission has in view, and of the means by which it proposes to attain this end. The text of the Vulgate now authorized by the Roman Church is the recension of Clement VIII which dates back to the year 1592; and although it was a good piece of work for the time, its mere antiquity is sufficient proof to any one familiar with literary and textual criticism that it ought to be revised in the light of present knowledge.

It is important to emphasize the fact that the Commission has no intention of criticising the work of St. Jerome himself, who in the last decades of the fourth century, under the authority of Pope Damasus, constituted on the basis of his own researches a text which took the place of the many others then extant. Not only is it universally recognized that his qualifications for this great task, in the way of learning and ability, were preëminent, but he had manuscripts in the Greek and other languages, and other sources of information, that have for centuries been lost. There is no question, for example, that the manuscript traditions accessible to him antedated any of our Greek manuscripts, none of which are older than the middle of the third century. Therefore, I repeat, the present Commission's sole object is to reconstruct as far as possible Jerome's own text. No doubt others will afterwards take it upon themselves critically to examine this version itself.

In fact, Professor Rahlfs of Göttingen, in his "Septuaginta-Studien," Vol. II, pp. 111-122 and 128-132, shows conclusively that Jerome's text, even after the best possible restoration and in spite of the manuscripts and authorities to which he had access, is in great need of emendation, and even goes so far as to accuse him of levity and carelessness.

The Commission at its first sitting decided to establish its headquarters in Rome at the great monastery of St. Anselm on the Aventine, which was founded and endowed by Leo XIII. Here they are assembling all the collations that have been made or procured by their members. To facilitate the preparation of a complete collation the full Clementine text has been printed in large folio volumes, without capital letters, paragraphing, or word divisions, so that, resembling a manuscript as nearly as a printed text can, it may the more easily be compared by revisers with actual manuscripts, and two-thirds of every page have been left blank to be filled in with variants and annotations. As Jerome made three versions of the Psalms at different times, two on the basis of the old Latin translation called the Itala, which he corrected with the help of the Septuagint, and the third translated directly from the Hebrew, a special plan has been adopted in printing the Psalms in the folio volumes aforesaid. The text common to the two former is printed in the middle of the page, the variant readings to the right and left with a vertical line between. The third version has been printed separately.

One of the Commission's first labors has been to prepare a catalogue of all the Latin manuscripts of the Bible now extant in the libraries of Europe, which will be of the greatest utility, not only to the present revisers, but to all scholars at work on the sacred texts. Many libraries have already been searched for their biblical codices, and the contents of these described or collated. About fifteen collaborators in various parts of Europe are now busy with the manuscripts and other documents that are of service in the constitution of an authentic text. For determining the provenance of some codices and the influences to which they were subjected, the importance of the Capitulæ, or tables of contents, is now generally conceded. Notable progress has been made in collecting and comparing these Capitulæ, and for the basis of a collation an exemplar has been compiled that comprises their most noteworthy and typical specimens.

The significance of this revision for the criticism of the New Testament, and also of the Old Testament in both Greek and Hebrew, especially the Psalter, is quite obvious. The Psalter from the first has been the most used and therefore the most frequently published, both before and after the invention of printing, of all the books of the Bible. More than a hundred manuscripts of it were used by Holmes and Parsons for their great Oxford edition of the Septuagint (1795-1823), and now several hundred in all are known. It is interesting to observe that in manuscript form the Psalter usually appears alone, being found with the whole Bible or with the New Testament in relatively few instances. And as it is generally agreed that the translations are of the greatest utility in the criticism of the Septuagint as a whole, some of them being older than the oldest Greek manuscripts and the place of their origin being nearly always ascertainable, this is all the more true of the Septuagint Psalter on account of the aforesaid large number of manuscripts. In Latin it is only of the Psalms that we have a considerable series of pre-Hieronyman or non-Hieronyman texts, but Jerome's own version is very important for the text of the Septuagint, since, according to his own statement, his version was only a hasty revision on the basis of the Septuagint of the Latin translation already in general use.

It only remains to remark that the Revision of the Vulgate, as is usually true of such enterprises, is proving to be much more expensive than was expected, and that funds are urgently needed. H. E.

NEWS FOR BIBLIOPHILES.

A most intimate and most interesting Hawthorne Association item, heretofore unknown, and inaccessible, apparently, to any of his editors, has recently been acquired by S. H. Wakeman. This is Hawthorne's private and personal pocket diary kept by him through the year 1859. It is a small French diary, size of leaf 4¾x2⅞ inches, two days to a page, bound in brown roan and with printed tables and lists at the end. It contains an entry for every day, without a single exception, for the entire year. These entries generally fill the greater part of the space (a half-page) allotted for each day's record. In a very few cases, towards the end of the year, the entries occupy three or four lines only.

At this time Hawthorne and his family had spent nearly a year in Italy. They had been in Rome during the first months of 1858 and had returned there in October, intending to spend a few weeks, then to return early in 1859 to the United States. The serious and protracted illness of Una, Hawthorne's elder daughter, detained them in Rome until May 28, 1859. When this record begins, January, 1859, Una was still suffering from Roman fever and receiving daily visits from Dr. Franco, and the state of her health is the subject of a line or two of each entry for the first part of the year. In the printed "French and Italian Note-Books," extracts from Hawthorne's Journals selected by Mrs. Hawthorne, there are no entries from November 2, 1858, to February 27, 1859, but instead there is this note by the editor: "During four months of the illness of his daughter, Mr. Hawthorne wrote no word of journal." Nevertheless, he kept up his daily entries in his pocket diary, as this little volume shows.

They finally left Rome on May 28. At the top of the page containing the entry for May 29, Hawthorne has written boldly "France." He had already written "Rome" at the top of the first page. "Switzerland" is written over June 10, "France" again over June 16, and "England" over June 24. After a short stay in London, on July 22 the family removed to Redcar, on the east coast of England. On October 5 they removed to Leamington, and this diary for 1859 closes with the Hawthornes still there and the father and Julian taking almost daily walks.

While the first line of each of the 365 entries mentioned the state of the weather, there is something of interest in almost every one. He tells of his walks and visits to museums and galleries of friends upon whom he called or who called upon him (and among these during the Roman stay were Browning, Motley, Story, ex-President Pierce, C. P. Cranch, and others), of letters received, of the health of himself and family, etc.

The first rough draft of "The Marble Faun" was written in Italy, mainly at the Villa Monaüto, near Florence. It was finished in Rome, the author's intention being to revise and rewrite it after his return to Concord. A part of the entry for January 30 in this little diary is: "I finished today the rough draft of my Romance intend-

ing to write it over after getting back to the Wayside."

The manuscript seems to have remained undisturbed until July 24, two days after the Hawthornes were settled in their lodgings in Redcar. In the entry for that date we read: "To-day I looked at the rough draft of the Romance, and prepared for the writing of it." The next day, July 25: "Prepared to begin writing my Romance all the morning." And the next, July 26: "At about 10 o'clock, began the Romance in very earnest, and wrote till 3." The story was finished on November 8, under which date Hawthorne records: "Wrote till 5 minutes of 12 & finished the last page of my Romance. 508 manuscript pages."

Between these two dates, July 24 and November 8, he wrote regularly; there are entries referring to his writing on every day, excepting only August 2 and 16, September 6, October 5, 6, 7, and 8 (when he was moving and getting settled at Leamington), and October 23.

Many of these entries are short, as: "Wrote till 3 o'clock." "Wrote till nearly 3." "Wrote from 9 o'clock till 3." "Wrote till after 2."

Others are more interesting, as: "Scribbled till 2, with many idle pauses & no good result." "I began to write soon after 9, but made slow & poor progress." "Wrote till 3 with middling success." "Wrote till dinner, at 2, & again about an hour, after dinner." "Wrote till 3, a little more satisfactorily than heretofore." "Wrote till after 3, no great progress, but more interested as I get on." "Tried to write but could write out nothing; discouraged and depressed & not very well." "Wrote till 3. Gave Mamma the finished portion (rather more than half, I should think) of my Romance to read." "Wrote till 3. . . . Sent Messrs. Smith, Elder & Co. the manuscript of my Romance as far as page 429, by express; also letter by post."

In all, the writing of the Romance is referred to in 110 entries. Several of the later entries refer to proof-sheets. On November 11, he records "A letter from Smith, Elder & Co., dissenting from the title of my book," and, two days later: "Wrote a Note to Smith, Elder & Co. suggesting various Titles for the Romance." Again, on December 12, "Wrote to Smith, Elder & Co. proposing 'Marble Faun' as a title."

Throughout this period, from Hawthorne's arrival in England until the completion of the novel, there are no entries whatever in the published "Note-Books." Instead, there is a note by the editor, in part as follows: "More than four months were now taken up in writing 'The Marble Faun' in great part at the seaside town of Redcar, Yorkshire, Mr. Hawthorne having concluded to remain another year in England, chiefly to accomplish that romance. In Redcar, where he remained till September or October, he wrote no journal only the book." Five days after the completion of the novel we find recorded in the little diary, "Wrote in my Journal." This entry of November 14 is the only English entry of 1859 in the "Note-Books." In fact, the total number of entries in the printed "Note-Books" for the year 1859 is only twenty, while in our little pocket-diary there are 365, as stated.

Did Hawthorne keep day-by-day records in this form for other years than 1859? If so they seem to have been lost or destroyed. The longer and more elaborate "Journals," giving fuller accounts of his movements, his impressions of people he met and things he saw, were written out leisurely at home, in small quarto blank books, too large for the pocket. The autograph manuscripts of these journals, so far as they have been preserved, are in Mr. Morgan's library. They contain much unprinted matter and form the largest body of Hawthorne manuscript extant.

Correspondence

THE EXORBITANT PRICE OF BOOKS.

To the Editor of The Nation:

Sir: Your editorial in a December issue on "Forming Private Libraries" recalls a topic already discussed in your columns, and one which will presently call for some action on the part of writers and teachers in this country, if not also in England. You mention the moderate price of the modern reprints of the standard literary works, and this is indeed a gratifying fact. But a great deterrent to the formation of private libraries remains in the further fact that such reprints of somewhat seasoned classics and semi-classics are the only serious books which are at all cheap. Books of a more strictly contemporaneous interest, and this is a matter of moment in works which are remotely of a scientific nature, are now habitually published at an unduly high price, a price which for many persons prohibits the formation of anything that could be called a library. As a consequence, college students of moderate means (the wealthier students, of course, read not at all) at once give up the idea of owning, aside from the few prescribed textbooks, those volumes from which their minds are most largely stored.

Nothing could be said against this if the prices at which modern serious works are issued were based on their necessary cost of production. But any one who has got out a book knows that this is not the case. Regarding anything but a prospective "best seller" or a school textbook, the publisher argues that not more than, say, three thousand copies would be sold, however low the price, whereas there are at least eight hundred municipal and collegiate libraries which "must have" a copy at whatsoever price; and it will be better business, in his opinion, to sell eight hundred copies at five dollars each, than three thousand copies at the still very profitable price of one dollar and a quarter. And then, Presto! the size of type, page, and margins, the thickness of paper, the binding, and so forth, are fixed such that the book shall look to the public like a book that is worth five dollars. For, be it known, fifteen or twenty cents added to the cost of a volume which could profitably be sold for a dollar will give it the pleasing disguise of a "five-dollar book, net." In this way the publishers are deliberately "holding up" all the university and city libraries, discouraging the formation of small private libraries, circumventing the aims of education, and (short-sightedly enough) destroying the general market for books of a serious nature.

The German publishers, who in their sophistication are even more benighted, carry this game still further. They require the author to sign an agreement to provide a "revised edition" whenever *in the opinion of the publisher* such an edition is called for. The institutional libraries think it necessary to add each such "neue sorgfältig durchgearbeitete sehr vermehrte und verbesserte Auflage" to their earlier and now (by decree of publisher) superannuated editions. Such revisions are often issued without a shadow of legitimate excuse; and an amusing consequence of this practice may be seen by inspecting any German catalogue of second-hand books. It is fair to both sides to say that the German author is sometimes not altogether innocent of collusion with the publisher. But for publisher and author alike this form of guile is gradually killing the golden goose, and it is only a question of time when, in Germany, England, and America, the institutional libraries themselves will have to turn on their persecutors. I believe that this short-sighted policy dictates the price of virtually all new serious works other than textbooks. Nor is the wealthy amateur who is "completing" his collection on a certain topic, forgotten in the publisher's calculation of what and how to publish.

Now, it would be idle to call attention to this situation, were the remedy not at hand. An author who wishes to have his work bought by the public as well as by libraries can publish at his own expense and determine his own retail price; and this, unless his book is a downright failure, with as gratifying financial returns, if not with very much larger returns, than he would get from his publisher-entrepreneur's magnificent allowance of 10 or possibly 15 per cent. And if his book is a failure, he can scarcely wish that he had got a publisher to bear the losses. If, now, the author will put up with linotype work, a printer-publisher who has his fame yet to establish, and certain other frugalities—all abhorrent to the elegant taste of the "trade," but in no wise repugnant to the earnest aims of science and education—he can, I am credibly informed, have printed for four hundred dollars the first thousand copies of a book which the sophisticated trade, with eyes asquint at the ever-absorbent libraries, would rig up into a three-dollar or four-dollar volume. Each subsequent thousand will cost some seventy or eighty dollars, and the retail price, with due allowance for the expense of judicious advertising, could clearly be set at less than one dollar. Of course, this plan is not for those who believe that a cheap price makes a cheap book. But with Plutarch, Bacon, and Darwin selling for thirty-five cents, I should personally feel no shame if my work were knocked down to sixty-nine and a half cents, or so. And as for the trade's standard of taste in the get-up of a book, it is as germane to the matter as the undertaker's discriminating eye in "caskets."

THE HONOR SYSTEM.

To the Editor of The Nation:

Sir: In view of the quite opposite views of the so-called honor system in examinations, which have been in the past expressed in your columns, it should seem of interest to make known the results of an

investigation into the actual extent and working of this system in the colleges of the United States. A *questionnaire* was addressed to the president or dean of each of 350 colleges and universities. I wish to give briefly the information gleaned from the 280 replies received, and the deductions to be derived therefrom.

The investigation as regards extent showed that 29 per cent. of American colleges use some sort of honor system, that is, some system which dispenses with invigilation or supervision, and relies on the honesty of the students, whether they have bound themselves by pledge or not. Of these honor-system colleges, 44 per cent. are situated east of the Mississippi and south of the Mason and Dixon line, and only 11 per cent. are in New England. Further, 66 per cent. of these honor-system colleges are exclusively for men, only 17 per cent. exclusively for women, and only 17 per cent. co-educational. The conditions which give birth to the honor system, and which support it, are thus sharply defined as regards geographical position and sex, and the reasons are obvious. The system began at the University of Virginia and spread from there, and its success depends upon the closeness of touch between the student committee who have it in charge and the actual conditions in the examination room. Such a condition as the last cannot exist in a co-educational college in the same degree as it does at Princeton and Williams.

The investigation as to the working of five years ago, Prof. E. S. Joynes states that merely in practice, but in the conception of its foundation. In some colleges—roughly speaking, about one-third of the colleges which have adopted this plan—the very idea of requiring a student to bind himself to a certain line of moral conduct by means of a pledge is repugnant. In a second third—the best example is Princeton—the very foundation of the honor system is a pledge signed by each student at the end of every examination book, to the effect that he has neither given nor received assistance. Lastly, in the colleges which make up the final third the principle is carried still further, and the student must sign a pledge guaranteeing not only that he will be honest himself, but also that he will report any dishonesty that he sees. The report is made sometimes directly to the President, sometimes to the faculty, but more frequently to a committee of students.

In a letter to the *Nation*, written some five years ago, Prof. E. S. Joynes states that "no college (North or South) has ever tried this system in good faith without satisfaction with the results." What ground there was for making this statement without exhaustive inquiry, is not clear. Four colleges have tried the honor system and discontinued it in favor of the supervision system; and in regard to those colleges which pledge their students, there has been a marked reluctance in recent years to bind a man both to be honest himself and to report dishonesty in others. For such a pledge says in effect, "We expect *you* to be honest, but watch that man on your left!" This requirement to report, which seems to strike at the first and finest instinct of the schoolboy—loyalty to his fellows—was what stuck in the throats of Yale men. The president of a New York college writes, "To report dishonesty in others staggers up-State New York. The State regents require the pledge of honesty, but do not require the pledge to report." Presidents of other colleges characterize it as "abhorrent to high principle," and "un-American"; but the chief reason for its abandonment has been the practical one "that students will not report their fellows." If this be true, then the conclusion is inevitable that unreported dishonesty exists at those colleges which have abandoned the second pledge because they found it could not be enforced. But the enormous differences made by local conditions is shown by reports from Southern colleges, to the effect that student invigilation and reporting have worked well for years. One such report states that a system has worked successfully which requires students to report to the faculty "all acts of dishonor on the athletic field, in the examination room, and in the recitation room as well."

The general conclusions arrived at in the course of this investigation may now be stated.

In the first place, honesty in examinations is not dependent on any system, but on the morale of the institution. This truism is constantly obscured. It is often said—and Professor Joynes accepts the sentiment as a personal one—that a student will regard cheating as a venial offence when such means as invigilation are taken to prevent it. This calumny on college men cannot stand for a moment in the face of the unanimous evidence of all the great universities of England and Scotland, where the strictest supervision prevails, that dishonesty is universally regarded as base and ungentlemanly.

In the second place, the danger, often pointed out, that the honor system may tend to a distortion and confusion of moral values, seems to be a real one. It is hard to teach in a school or college that cheating is always and everywhere wrong, if the practice of the school or college teaches by implication that the wrongdoing is inherent in the breaking of a signed pledge. The typical result in the case of weak students is the not infrequent practice of signing the pledge "with a mental reservation," or of signing it *before* the examination is written. And the grotesque reply to such manœuvring of easy consciences has been, in the case of one college at least, the exaction of still another pledge, which requires the student to declare that what he has already declared about the honesty of his examination work is the truth.

In the third place, the worst system is the lack of system. In those cases in which the honor system had broken down, it has failed because the student sentiment upon which it must always rely, was unsystematized and unstable. On the other hand, the greatest and most flagrant dishonesty has probably existed at those institutions which had a supervision system, but no effective supervision.

WASHINGTON AND THE CHERRY TREE.

TO THE EDITOR OF THE NATION:

SIR: The suggestion made by Mr. Joseph de Perott in your issue of March 21, that the legend of Washington and the cherry tree had its ultimate origin in "The Seven Sages of Rome"—in the story known as "Tentamina"—seems to me to be extremely improbable. It is not very likely that "Parson Weems" ever saw a copy of "The Seven Sages"—although a chap-book edition of it appeared at Boston as late as 1794. Nor is it likely that he knew the story "Tentamina" in any derivative version, either oral or literary; for the story, though it must have flourished as oral tradition in the time of Chaucer, can scarcely have lived on in that form past the time of Shakespeare; and the number of literary derivatives known to students of "The Seven Sages" is very small—not above half a dozen at most, none of which is in English.

My chief reason, however, for doubting the theory proposed by Mr. de Perott is found in the content and purport of the stories themselves. In *motif* and in upshot the two stories differ radically. The wife in "Tentamina" cuts down her husband's favorite tree, not in order to try out a new hatchet, but with a view to testing the patience of her husband. When overtaken in her fault, she does indeed confess to having cut down the tree, but at the same time she urges in defence of her course a fictitious plea, and one that her husband recognizes as fictitious; namely, that she needed fuel wherewith to warm his "old bones" on his return from the hunt. Finally, the husband in "Tentamina" does not forgive his wife (Mr. de Perott's summary is in error at this point), but visits upon her a severe and most effective punishment.

Literature

THE CAMBRIDGE MEDIÆVAL HISTORY.

The Cambridge Mediæval History. Planned by J. B. Bury, M.A., Regius Professor of Modern History. Edited by H. M. Gwatkin, M.A., J. P. Whitney, B.D. Volume I: The Christian Roman Empire and the Foundation of the Teutonic Kingdoms. New York: The Macmillan Co. $5 net.

That a systematic history of the Middle Ages on a great scale should appear after a similar history of the modern world on an even greater scale had been completed, may at first seem surprising. Why not have begun at the beginning of the Middle Ages and worked down the stream of time, letting each century lead on to and into the next in natural chronological order? The explanation is, however, very simple. The idea of having a large-scale mediæval history published under the auspices of the University of Cambridge is due to the success of the Cambridge "Modern History," and that the scheme did not begin with the earlier period, as the French "Histoire Universelle" of Lavisse and Rambaud, and the various German Weltgeschichten have done, may be ascribed to the fact that the original designer of the Cambridge "Modern His-

tory," the late Lord Acton, was much more familiar with and much more interested in the history of the last four centuries than in that of earlier times. Without his vast erudition and capacious mind it is probable that so great an undertaking as the "Modern History" would not have been attempted in our time. The present book, a continuation backwards, so to speak, of Lord Acton's scheme, is fortunate in having found its planning mind in his successor in the Regius professorship of modern history at Cambridge, England. Professor Bury is well known to all students not only as an accomplished classical scholar, but as a learned and judicious historian, imbued with the true scientific spirit. The names of those to whom the general editorship and composition of the chapters of this first volume have been entrusted are less familiar, but among them we find some known on both sides of the Atlantic, such as those of Professors Gwatkin and Reid of Cambridge University, Professors Haverfield and Vinogradoff of Oxford University, Principal Lindsay of Glasgow, and Dom Butler, Abbott of Downside Abbey.

To fix the point at which ancient history passes into mediæval history is even less easy than to determine that at which mediæval history passes into modern. In the latter case the fact that four such great events as the capture of Constantinople by the Turks, the discovery of America, the opening up of a sea route round Africa to India and the Further East, and the beginning of the great religious revolt against Papal power, all fall within sixty-seven years —years which also saw the invention of printing and the diffusion of a knowledge of Greek—this fact marks an epoch of general change in which a new phase of the human mind may be said to begin. But in the transition from the world of Trajan and Marcus Aurelius to the world of Charlemagne and Alcuin there is no point and no generation which can be said to be critical. If any one event were to be selected as most evidently marking the entrance of a new factor, it would be the rise of Islam, but in Western Europe the ancient order of things had largely perished before A. D. 622. For the purposes of the volume now before us the era of Constantine has been selected. It is recommended not only as being that of the recognition of Christianity by the state, but also by the facts that Constantinople was then made the capital for the eastern half of the Roman Empire, and that a momentous change was passing in the character of that imperial government itself. We find no fault with the selection, because, although there are persons such as Boethius and Justinian, living a century and a half after Constantine, who are far more ancient than modern, still it is much better to begin too early than too late. As the Christian church was the dominant factor in European affairs all through the Middle Ages, it is indispensable to a comprehension of their character that her growth in organization and discipline should be traced (at least in outline) back to its origin. That origin belongs to the first post-apostolic age, and the ecclesiastical part of the story has to be carried back to days certainly not later than those of Constantine.

The process by which the ancient world was changed into the mediæval world was, first and foremost, the substitution of the church, and in particular of the Roman Church, for the Empire as a ruling power. The second step in the process was the creation of new nations by the mixture of Teutonic barbarians with the civilized subjects of Rome. The third step was the localization of authority in a large number of landowners who were, for a long time, virtually independent of the sovereigns within whose kingdoms they lived. The fourth was the diffusion over Western Asia and North Africa of a conquering religion. As the first of these four steps had begun to be taken even before Constantine's recognition of ecclesiastical jurisdiction, and as the second begins not later than the crossing of the Goths into the Roman Empire in A. D. 376, these considerations also show that no date subsequent to Constantine's reign could safely be taken.

This volume contains twenty-one chapters, which are the work of twenty writers, some of whom have, however, contributed half-chapters only. Among these writers there are four Germans and two Frenchmen, the rest British. Six of the chapters are devoted to the Church, being the following: The Triumph of Christianity; Arianism; The Organization of the Church; Religious Disunion in the Fifth Century; Monasticism; Early Christian Art, while another, entitled Thoughts and Ideas of the Period, is virtually a comparison of Neo-Platonism and Christian doctrines. This is no undue amount of space to devote to ecclesiastical matters, and it is a convenience to those historical students who do not possess a complete set of works on ecclesiastical history to have in these chapters a concise and careful summary of the process by which the hierarchical system was developed down to and in the fifth century.

Another feature in the planning of this volume deserves to be commended. It is the effort made to present a view of the peoples who lay outside the Roman Empire and who were to become factors in the history of the centuries that followed its first break-up in the fifth century. This is done with much erudition and in an interesting way by Dr. Peisker of Gratz, in a chapter entitled The Asiatic Background. He describes briefly, but with Teutonic thoroughness, the soil and climate of Central Asia, and the life and customs of the nomads that have inhabited it since the beginnings of history, and he examines their ethnographic affinities and their religion. His interesting account would have been still more complete if he had brought into it some of the Greek accounts of the nomad tribes of the north, beginning with the well-known passage in the sixteenth book of the Iliad, and including the remarkable description in the fourth book of Herodotus of the various tribes in Scythia.

The same excellent idea which has treated the northeast Asiatic background and which has given us a chapter on the early history of the Teutonic tribes might profitably be applied on a smaller scale to three other backgrounds also, the West African in Numidia and Mauretania, the northwest European in Caledonia and Hibernia, and the Arabian to the east of Egypt and to the south of Mesopotamia. It may be that such a treatment of the environing non-Romanized peoples has been reserved for the next volume, in which we shall doubtless find an account of a still more important neighboring region, the empire of the Sassanid kings of Persia, whose strife with Rome was to be so potent a factor during the sixth century.

Turning from the plan of the work to its execution, it is a satisfaction to find that this volume is in point of literary quality fully equal to the average of the twelve volumes of the "Cambridge Modern History." In the first few volumes of that great work there were some chapters which reached exceptional excellence. In this mediæval volume the workmanship is good throughout, and if none of it is so good as the very best chapters of the "Modern History," none of it is so flat and tame as were some parts of that book. The general tone and quality are much the same. The writers know their business. They set forth the facts in a plain, clear way, with no ornament, and little indication of any moral or political judgment. This is the now accepted way of composing history, and it is better, take it all in all, than the eighteenth-century way, in which the personality of the historian, with his own views and predilections, was too frequently present, and in which the desire to produce an animated or picturesque narrative often raised suspicions as to the exactness of the statements made. However, among the present writers there are, of course, certain differences. Some hardly try to work up their matter into a connected narrative or systematic description. Mr. Lethaby, for instance, in his useful chapter on Early Christian Art, gives us what is little more than the contents of a carefully compiled notebook of facts, quite serviceable, but not very readable. It is rather an encyclo-

pædia article than part of a history. Professor Gwatkin, on the other hand, welds his material together into a story which sometimes becomes almost dramatic, and makes us follow the career of Constantine with a personal interest. The same praise may be given to Principal Lindsay's chapter, to Mr. Bayne's portrait of the Emperor Julian, to Ernest Barker's excellent account of the later phases of the collapse of the Empire in the West from the death of Alaric to the deposition of Romulus Augustulus by Odovacar, and to Miss Alice Gardner's lucid treatment of a difficult theme in the chapter entitled Religious Disunion in the Fifth Century, which traces the tangled history of the controversies that centred in three great councils, those which we call the First of Constantinople, Ephesus, and Chalcedon. Professor Haverfield's description of Roman Britain has less human interest, but it is a model summary, clear and concise, giving in the briefest form the facts most necessary to be known.

The method of writing history by allotting different topics to different writers and piecing their work together into a connected whole, which is followed here as it was in the Cambridge "Modern History," has two conspicuous advantages, balanced by two corresponding demerits. The first advantage is that of assigning a particular topic to a man of special attainments in that particular line of learning. This has become far more needful now than it was fifty years ago, owing not only to the immense growth of literature dealing with historical subjects, but also to the higher standard of accuracy we have become accustomed to expect. The other advantage is that a more complete view of any age or epoch, its events, its prominent personages, its leading and determinative tendencies, can be presented to the student if it is approached by a number of different writers from different points of view. Although there has been allotted to each of such writers what has been deemed a separate department of the phenomena which belong to the epoch, still, as all the phenomena of a time are organically related to one another, the knowledge and thoughts of the different writers converging on the epoch throw upon it a fuller light than could be expected from any one mind. Each sees some things more clearly or in greater detail than others do, and thus each contributes to a better comprehension of the whole. This is eminently true of the reciprocal bearings on one another of secular and ecclesiastical history. One gets in this volume a view of their relations all the more complete because some of the authors see the secular events from the ecclesiastical side, and others see the ecclesiastical events from the secular side.

The two corresponding demerits are the following: In the first place it may happen that the spheres assigned to two writers overlap; so that the same topic is dealt with twice over by different minds, whose views of it may not coincide. An instance may be seen in the present volume, where the years and events covered by the concluding part of Ernest Barker's article (chapter xiv) on Italy and the West are dealt with afresh in Maurice Dumoulin's article (chapter xv) entitled The Kingdom of Italy under Odovacar and Theodoric. Such overlappings, however, may be avoided by careful editing. In the case we have mentioned, no harm is done, and it is better that there should be a little redundancy or repetition than that any material fact or aspect should be omitted.

The other demerit or drawback to this scheme of a mosaic history is that it may fail to furnish a broad general view of an epoch, as a whole, of the general trend of events in it, of its dominant tendencies, of the leading figures as embodiments of those tendencies. This defect was occasionally visible in the Cambridge "Modern History." It arises naturally from a scheme which has to regard the parts rather than the whole; and it can hardly help arising even under the best editing because no one of the chapters, taken by itself, may be the proper place for setting forth such a general view as we are contemplating, not to add that the several writers may not agree in their conception of what such a general view ought to be. In the present volume what seems needed, and what is not altogether supplied by the several chapters, all taken together, is a view of the relations of paganism to Christianity in all their aspects and also of the changes which were passing on the Christian Church. On both subjects a great deal is to be found in the book, and what we do find is extremely valuable, whether we agree or disagree with it. But there seems to be still room for such a general chapter of the kind we have sought to indicate.

The maps at the end of the volume will be found, despite their necessarily small scale, very helpful to an elucidation of the narrative. The Chronological Table of leading events might with advantage be somewhat fuller, especially as comparatively few dates and no marginal headings are given in the text of the chapters. The Bibliographies are well done, but would be still more useful to the student if notes were occasionally added briefly indicating the respective values of the authorities mentioned, or giving some such hints regarding them as the student who is not a specialist requires. A few such are given (*e. g.*, Bibliographies of chapter xii B and chapter xiii B); and more notes of the like character would have their value.

CURRENT FICTION.

Zuleika Dobson, or an Oxford Love Story. By Max Beerbohm. New York: John Lane Co.

Mr. Beerbohm's first novel (not his first book) few will relish chiefly for its story. Yet the plot goes not one, but two, better than the most romantic of modern romances. The hero, the undisputed aristocrat among Oxford undergraduates, the inheritor of fabulous estates, not only is a paragon of perfection in all accomplishments, but has on one occasion, after sauntering into the House of Lords by mere accident, delivered a speech against a socialistic Liberal measure, in which so utterly destructive was his criticism, "so lofty and so irresistible the flights of his eloquence, that, when he resumed his seat, there was only one course left to the leader of the House. He rose and, in a few husky phrases, moved that the bill 'be read this day six months.'" The hero, however, "did not reappear in the Upper Chamber, and was heard to speak in slighting terms of its architecture as well as of its upholstery."

This admirable Crichton, the Duke of Dorset, falls in love, for the first time in his life, of course. The object of his sudden but undying passion is Zuleika Dobson, an English virgin, who has fascinated two continents as a conjurer on the vaudeville stage. On returning from an engagement at Hammerstein's Victoria Theatre, New York City, she spends a few days at Oxford before entering upon her season at the Folies Bergère, Paris. She falls in love with the duke—falls in love twice in as many days—but repents as capriciously on divining that the passion is mutual. What else can a heroine do who knows the best traditions of her rôle? But this is no ordinary heroine. So potent is the fascination she exercises that every undergraduate in Oxford drowns himself for love of her. Intoxicating bliss for the heroine except for a single flaw. The aura that surrounds her person by reason of this romantic homage is wellnigh dissipated by the duke's malevolently confiding to a servant girl that he is not perishing for Zuleika. There is only one thing left to do. She packs up for Cambridge.

Obviously it is not the lure of coming events that draws the reader forward from page to page. It is Mr. Beerbohm's keen and subtle *flair* for the incongruous, which endows even the openly burlesque passages with a delicate humor. The duke once murmurs to Zuleika, "Your way of speech has what is called 'the literary flavor.'" She replies, "Ah, that is an unfortunate trick

which I caught from a writer, a Mr. Beerbohm, who once sat next me at dinner." The literary flavor, indeed, permeates the book, even when a Rhodes scholar is supposed to indulge in American slang. Appropriately enough for an Oxford story, there are quotations from the Greek, the Roman emperors occupy a grotesque position, "the cold classicism" of the Duke's face is at one moment "routed by the new romantic movement which had swept over his soul," and recent literary motives and mannerisms are parodied in a variety of amusing forms.

Yet clever, and even brilliant at times, as are the irony and burlesque, the novel lacks something of richness. The caricature and exaggeration want the whimsical appeal of Mr. Locke. They are amusing largely because they contain some remote or obvious satire of literary foibles and fashions.

The Night of Fires. By Anatole le Braz. Put into English by Frances M. Gostling. New York: Longmans, Green & Co.

Some books are so full of the nature and feeling of a place that they seem to have been written by its very *genius.* Such is this little volume of Breton studies; each one might be called a fragment of the autobiography of Brittany. The author is himself a Breton of the Bretons. Occasionally in these stories there is a slightly jarring note of the enthusiasm of the folk-lore seeker; but in the main M. le Braz has reproduced with wonderful success the grave charm, the "veiled and exquisite sobriety," the "adorable delicacy, as Renan has called it, of the Breton spirit.

Only one of the five narratives is a story in the usual sense of the word. The others are rather studies of religious customs, especially those that concern the dead. The preoccupation of the Breton imagination with death is not morbid; it is quiet, natural, matter-of-course; it is an attitude of reverent familiarity. As midnight approaches, the watchers at the Feast of the Dead draw away from the fire, to make room for the spirits.

> "Come!" sighed a peasant, "we have used the fire long enough. Now let us make way for our ancestors. You know the saying, 'Death is cold! and the Dead are cold!'" As she rose and arranged her skirts Nann added, "May the warmth of the hearth be pleasant to them!" and each one answered, "So be it!" as at the end of a prayer.

"The Night of the Dead" is the richest in folk-lore, as it is perhaps the most impressive, of the five studies. The most delicate and finished is "The Child of the Yeun," a Christmas tale quaintly summarized in the Breton proverb which is its motto: "Between the old man and the child there is only life; and life is so little." For simplicity, pathos, and delicate reserve of style it would not be easy to match this little story. Throughout the volume the translator has done her work with exceptional skill; the English is idiomatic, yet has the flavor of strangeness which is appropriate to the subject-matter. The book is illustrated by a number of photographs.

The Mystery of the Second Shot. By Rufus Gillmore. New York: D. Appleton & Co.

A ruffianly promoter and banker of Boston takes a method of revenge so strange that the mystery of his own death is not solved until the end of the book. The dramatic interest of the solution is enhanced by the fact that the detective is a reporter in rivalry not only with the stupid police force—that device begins to pall—but also with the star reporter of his own paper. Mr. Gillmore handles his plot well, but somehow for part of the book fails to excite the reader; perhaps through lack of imaginative power to visualize the scenes of horror and suspicion. The end in the courtroom is well told, and the climax comes naturally and powerfully, with no trailing descent after it.

In Search of Arcady. By Nina Wilcox Putnam. New York: Doubleday, Page & Co.

We have lately noticed that a new hybrid is being put on the literary market by the enterprising horticulturists of fiction. It has not been formally christened, but it might appropriately be called in florist's jargon the Fancy Idyl Decorative-Paradoxical. Stories of this type owe a good deal to the novels of W. J. Locke; they differ from Mr. Locke's books in containing a much larger proportion of the decorative and sentimental elements, and a *reductio ad absurdum* of his clever waywardness. They entirely discard possibility, with reference to both characters and action.

"In Search of Arcady" has for idyllic setting the Berkshire countryside. In it the adventurous reader may meet an impecunious English lord in search of a rich American wife, whom he finds by falling in love with a gypsy and posing first as an actor, then as a chair-peddler; a Rhodes scholar turned Socialist; a gypsy villain seven feet tall; an English suffragette of high rank and American birth; a pair of retired vaudeville actors living in an Arcadian cottage; a rich society girl who has a habit of running away from New York and in gypsy disguise peddling millinery in the Berkshire hills. If novelty of incident is desired, it is not every hero of a novel who gets his first glimpse of the heroine by playing Actæon and beholding her beside a sylvan lake, "her beautiful nude body silhouetted against the dark bank behind her"; nor who finally wins her by literally "following the Romany patteran" through night and forests; nor who, after twice thrashing the gigantic villain, discovers that the said villain is her father. All these absurdities are presented in a mellifluous Arcadian style, as if the author were telling a tale of Daphnis and Chloe. The combination is at least momentarily amusing.

MARITIME STRATEGY.

Some Principles of Maritime Strategy. By Julian S. Corbett, LL.M. New York: Longmans, Green & Co.

Naval Strategy. By Capt. A. T. Mahan, D.C.L., LL.D. Boston: Little, Brown & Co. $3.50 net.

It is the contention of these authors—the two leading naval historians and critics in the two great Anglo-Saxon countries—that the study of naval theory can have very real practical value in assisting a capable commander to acquire a broad outlook, whereby he may be sure that his plans will cover all the ground, and whereby he may with greater rapidity and certainty seize upon all the factors of a sudden situation. Theory, and study of the experience of the past, may at least save an officer from great blunders if it cannot assure him certain success in actual battle. If Rozhestvensky, for instance, had had any clear conception of the theory of war and of the essential importance of exclusiveness of purpose, he would not so incons'derately have stuffed his vessels with coal on the coast of China before his final run to Vladivostok; by so doing he increased his danger from fire, submerged his armor-belts (already too low), lessened his potential speed, which was all-important under the circumstances, and hampered his power to manœuvre in an almost certain battle. Naval theory has also another use, not often thought of, but of undeniable value. It helps those who command and those who execute to see eye to eye. "How often," exclaims Corbett, who writes from an unrivalled knowledge of English naval history:

> How often have officers dumbly acquiesced in ill-advised operations simply from lack of the mental power and verbal apparatus to convince an impatient Minister where the errors of his plan lay? How often, moreover, have statesmen and officers, even in the most harmonious conference, been unable to decide on a coherent plan of war from inability to analyze scientifically the situation which they had to face, and to recognize the general character of the struggle in which they were about to engage?

Admitting the usefulness of naval theory, whence are we to deduce it? From two sources, answer both these authors. There is, first, of course, the experience of history and the correspondence of naval officers and admiralty

boards; such material is abundant, but it is raw material, undigested, which needs working up, and until logically and systematically put together, it no more constitutes an art of war than any number of bricks constitute a house. A second source is found in the transference to warfare on the sea of so much of the general theory of warfare on land as is applicable. Mr. Corbett, for instance, devotes the first third of his volume to an admirable exposition of the general theory of war as worked out by the greatest of all military theorists—Clausewitz. This we commend especially to readers in America, where military conceptions are generally so crude. Capt. Mahan ignores Clausewitz, but seeks in Jomini's "Art of War" and in the Archduke Charles's work on campaigns on the Danube, proper analogies for naval warfare. As an example of the applicability of military theory to naval conditions he aptly relates an anecdote of Gen. Sherman. After months of time, millions of dollars, and hundreds of lives had been uselessly wasted by the navy in a frontal attack on Charleston, Gen. Sherman, in the pleasant style of banter with which he was accustomed to talk to naval officers, said to Admiral Luce: "You navy fellows have been hammering away at Charleston for the past three years, but just wait till I get into South Carolina; I will cut her communications, and Charleston will fall into your hands like a ripe pear." And that is just what actually came to pass. Here was a fundamental military principle which the navy had failed to recognize.

Of the two volumes before us that of Mr. Corbett is more clear and concise, and more logically developed in a formal way. After his exposition of Clausewitz's theory of war in general, he analyzes in detail the three-fold aim of naval strategy: the obtaining, the disputing, and the exercising of the command over the sea. He gives but few illustrative examples and demands close attention from his reader; but close attention is well rewarded. We regret that space forbids a discussion of his many interesting contentions—that it was not Napoleon, but Cromwell and Blake, who first illustrated the importance of "concentration"; that Tourville's famous fifty-day cruise in the Channel in the summer of 1691 has been greatly overrated; that the maxim, "The first duty of the fleet is to seek out the enemy's fleet and destroy it," has had so strong a hold upon the English imagination as to have left little consideration for the possible advantages obtainable by "a fleet in being," that is, by a fleet which is inferior in numbers to that of the enemy and cannot therefore destroy it, but which is nevertheless strong enough to maintain itself in being as a means of naval defence or as a means of assisting commerce and supporting other military movements. Capt. Mahan, on the contrary, looking at the very different course of American naval history, quite naturally thinks that Americans, in the past and even at present, have too often regarded the fleet primarily as a "fleet in being," have undervalued the importance of coast fortifications, and have not sufficiently adopted the English maxim of seeking out and destroying the enemy's fleet.

Capt. Mahan, whose able advocacy of the importance of sea-power makes him a bugbear of promoters of peace, has adopted a form of presentation less formal and orderly than that of Mr. Corbett, but enriched with a greater wealth of historical examples. In an introductory chapter he explains how his volume grew out of lectures which he has been giving at the Naval War College at Newport since 1887, and how, within a quarter of a century, great changes have taken place in the conditions of naval warfare. In succeeding chapters he deals with the writings of Jomini and the Archduke Charles, in the manner referred to above; here his examples are taken largely from the naval history of the seventeenth century, and more specifically from Corbett's excellent volumes on "England in the Mediterranean." Then he discusses general "Foundations and Principles" and applies them to conditions in the Gulf of Mexico and the Caribbean Sea. He closes with a couple of interesting but somewhat repetitious chapters on the naval lessons of the Russo-Japanese war and a chapter on coast fortifications and their relation to naval strategy.

From the foregoing it will be seen that these two volumes, though similar in general plan, do not at all duplicate each other. They are complementary. Mr. Corbett's logically developed theory finds illustration in Capt. Mahan's wealth of practical examples. Mr. Corbett's point of view is English, while Capt. Mahan never forgets that the potential Nelsons and Farraguts on the benches before him at the Naval College are to be instructed in those points which are of especial value for American citizens. He continually reiterates, for example, that the United States must not make the mistake of dividing her fleet between the Atlantic and the Pacific; she must have some adequate fortifications on both coasts, and then maintain a strong united fleet which, by enjoying a central or "interior" position near Panama, may be able to strike a superior blow in either the Atlantic or the Pacific, or even in both successively though not simultaneously.

Irish Recollections. By Justin McCarthy. George H. Doran Co. $3 net.

It is difficult to review a book of reminiscences from the pen of one known and loved, at a moment when the wires have scarcely ceased vibrating after the record of his death; especially when the book is so instinct with the gentle geniality which was characteristic of the living man that each page and sentence is in itself a poignant memory. Yet the fact that these recollections of the historian of "Our Own Times," written in extreme old age, deal with events which occurred before the birth of the majority of his readers, helps one to realize that his passing could not in the natural order of things be long delayed, and that he has gone to his death as full of years and honor as those who loved him best could have desired.

Truth to tell, these reminiscences of early life in Ireland are more valuable in their personal than in their historical or literary aspect, and as such it is doubtful whether they can appeal as forcibly to the general reader as to one who, like the present reviewer, feels towards the writer a debt of personal gratitude and affection. On the other hand, few in reading them could be altogether blind to their self-revelation of lovableness. Showing much of the discursiveness that comes with old age, the volume is composed of almost casual memories. They deal alike with public and private affairs, with incidents of family life, and considerations of *Weltpolitik*, with the literary aspirations of ambitious young Irishmen and the probable destinies of the British Empire.

Throughout they are instinct with the individual charm which shows itself in all McCarthy's writings, historical, political, or romantic. Thus he endows with real tragedy the sad story of Dash, the spaniel, a trusted childhood's friend, who disappeared mysteriously, never to be seen again. Equally convincing—and alive—are the sketches of society and life in Victorian Cork, giving, it must be admitted, a somewhat unexpected picture of a rather prim, puritanical community—almost suggesting a small New England town. There was nothing of the Leveresque, hard-drinking, quick-tempered convention we might have expected: the good folk of Cork were, on the contrary, eminently "respectable," greatly addicted to self-improvement, slaves to Shakespeare and the musical glasses. Also they kept very sharp eyes upon their neighbors' morals.

As was to be expected, many good stories are sprinkled about the volume, like that of the tailor who, having obtained the entrée to a Dublin castle levée, found himself confronted by a gorgeous official demanding what name he should announce. To whom the Knight of the Scissors, much abashed, replied confusedly: "Don't you know me, sir? I made your riding breeches," and was at once announced, in stentorian tones, as "Major Rideing Bridges"! Another story, dating from an earlier period, of the forcible abduc-

tion of a Quaker heiress by a hard-living baronet, shows that not all of Lever's characters were as remote from real life as Mr. McCarthy elsewhere suggests.

In other chapters, of graver cast, the historian deals with questions of especial interest in view of the present juncture in Irish affairs, with absenteeism, secret societies, and especially the general attitude of the Irish people towards the "predominant partner." Had a youthful scheme which he details of laying the cause of Ireland before the British people by a personal rather than a political propaganda, come to fruition, much of the history of our own times might have been written differently. As it is, it is pleasant to remember that the patriot-historian lived to see the dawn of brighter days for the country he loved and served so well.

The Fair Land of Central America. By Maurice de Waleffe. Translated by Violette M. Montagu, with a preface by Sir A. Conan Doyle. London: John Long.

"The United States have made up their mind to conquer South America, Washington aspires to become the capital of an enormous empire, comprising, with the exception of Canada, the whole of the New World" (p. 13). With this startling pronunciamento, M. de Waleffe opens his book. Like a "monologue artist" on the vaudeville stage, he seizes the attention of his audience by an unexpected shot at the beginning and holds it throughout by his daring cleverness. He is not in the least convincing—few mountebanks are. The pity is that in English travel literature we are not accustomed to make allowances for effervescent exaggeration; and some readers may be inclined to take seriously such outbursts as the following: "Central Americans never talk of anything but politics" (p. 85). "The Yankee politician's electoral device is: 'Cheat, but don't break each other's heads!'" (p. 91). Although at first the constant exaggeration and slashing criticism are rather startling, they soon become highly diverting. "If the Japanese navy ever beats the American navy, the United States will fall to pieces" (p. 197). "The American States' absolute indifference to one another will ruin any attempt at Pan-Iberianism, which Latin America might otherwise have found a powerful weapon against the masses of Anglo-Saxons from the United States" (p. 255). At Panama "the American engineers' wives and families have a hard life of it, for they are scorched by the sun, soaked by diluvial rains, stung by mosquitoes, and obliged to live on tinned food. . . . They live very lonely lives, eat salted food, drink lukewarm water, and yawn all day long" (p. 110). It seems almost incredible that any one who has actually been on the Isthmus should propound such nonsense, unless he is simply striving to amuse his audience without any thought of the consequences.

When the French original was published three years ago it attracted no little attention abroad, not only on account of its rabid anti-Americanism, but also because it was extremely clever. Of necessity much of the charm has been lost in the rather clumsy translation. Nevertheless there is not a dull page in the volume. The title, "The Fair Land of Central America," is misleading. Central America proper is only represented by a single chapter on Costa Rica, less than one-sixth of the book. Trinidad, Jamaica, Cuba, Panama, and Mexico take up the rest. The chapter on Costa Rica has a few passing references to the other four Central American republics, but it is a distinct disappointment to find that the author did not attempt to visit them. He did wish to see Yucatan, but admits he was frightened away by the stories of tropical insects. He was equally ready to be frightened off from the Sonora mining districts by stories of bears and highwaymen! The book is thoroughly and delightfully French, although one would hardly recommend it to the serious student, or the intending traveller.

Notes

Professor Lounsbury's anthology, "The Yale Book of American Verse," is promised by the Yale University Press in the autumn.

Hodder & Stoughton are bringing out for the Eighty Club "The New Irish Constitution: An Exposition and Some Arguments." The book is edited by Professor Morgan.

William Miller Collier, late Minister to Spain, is publishing, through A. C. McClurg & Co., a volume of reminiscences, entitled "At the Court of His Catholic Majesty."

Among the books to be brought out by Putnam this month is "The Latin Works and the Correspondence of Huldreich Zwingli," together with selections from his German works in English translation, by Henry Preble, Walter Lichtenstein, Lawrence A. McLouth, and George W. Gilmore, edited by Samuel Macauley Jackson.

Henry Holt & Co. announce a reëditing by Prof. Martin W. Sampson, for young readers, of his volume, "Lyric and Dramatic Poems of Milton," and "Phoebe, Ernest, and Cupid," by Inez Haynes Gillmore.

Sixth in succession to Francis Jeffrey, Harold Cox has just assumed the editorship of the *Edinburgh Review*.

The annual meeting of the American Philological Association will be held in Washington, D. C., next December 30 and 31, and January 1. The meetings of the Archæological Institute will begin December 27 in the same place. As each organization will thus have about two days for its own sessions alone, it is hoped that all unfortunate conflicts of programme will be avoided, while two days in common will preserve the obvious benefits of meeting together, as in the past.

Henry Frowde has lately added to the cloth-bound Oxford edition of Standard Authors Scott's "Anne of Geierstein, or The Maiden of the Mist," "The Betrothed," and "The Highland Widow."

The wonderful ruins of Angkor, the ancient capital of Cambodia in French Indo-China, are described by Jacob E. Conner in the *National Geographic Magazine* for March. The sixty-three illustrations show the amazing number and variety of the decorative designs carved in stone. Some of the work is as delicate and graceful as fine embroidery. At the seventh annual banquet of the National Geographic Society, the president, Dr. Henry Gannett, made the surprising announcement that it has 107,000 members. Dr. Alexander G. Bell, one of its founders, gave a sketch of its history, while the British Ambassador, Mr. Bryce, especially commended the work done by our Agricultural Department, and Miss Mabel Boardman told of the world work of the Red Cross Society. Major-Gen. Greely shows very convincingly that the true discovery of the Antarctic continent was made in 1821, by Capt. N. B. Palmer of Connecticut, and he also emphasizes the great importance of the exploration work done by Commodore Wilkes in 1840, both of which facts are generally ignored by English writers on the subject.

If there are still any of the old-fashioned Kiplingites, such as swore by their master some fifteen or twenty years ago, they will receive with extravagant joy the "Dictionary of the Characters and Scenes in the Stories and Poems of Rudyard Kipling, 1886-1911," compiled by W. Arthur Young. The book is published by Dutton in style uniform with the Dickens, Thackeray, Scott, Meredith, and Hardy Dictionaries, which have already been noticed in these columns.

A useful manual for librarians and bibliophiles has been prepared by Frank Keller Walter, and published by the Boston Book Company. Its title, "Abbreviations and Technical Terms Used in Book Catalogues and in Bibliographies," tells pretty well its design. These alphabetical lists, in English, French, German, Danish-Norwegian, Dutch, Italian, Latin, Spanish, and Swedish, are followed by a glossary of Honorary Titles and a list of Places of Publication.

The Right Hon. George W. E. Russell is perhaps more amusing when he is collecting and recollecting the witty sayings of others than when he is writing his own memoirs. Nevertheless, his "One Look Back" (Doubleday, Page) is full of entertainment. The portrait of his ancestor, John Russell, first Earl of Bedford and Knight of the Garter, furnishes the frontispiece, and the first page of the book gives the precise number of generations between the writer and William Lord Russell, the martyr of 1683. These facts are not superfluous. Mr. Russell was brought up in the society and traditions of the great Whig families, and the chief value of the book, apart from its gentlemanlike ease of writing, is the picture it gives of such a life. The story opens in the home at Woburn, in a house on the estate of the Duke of Bedford, the

writer's grandfather. It passes to Harrow, then to Oxford, then to London, and journalism and Parliament. At Harrow the young Duke of Genoa, nephew of Victor Emmanuel, and at that time destined to be King of Spain, was living with Mr. and Mrs. Matthew Arnold. "He was quite a popular boy, and no one had the slightest grudge against him; but, for all that, every one made a point of kicking him, in the hope of being able to say in after-life that they had kicked the King of Spain." It is a bit hard that the youth should have got this good British treatment without ever getting the crown. At Oxford the religious interest enters, the tone being of a kind which might be described as a high ritualism engrafted on a radical evangelicalism. Mr. Russell gives as the "Secret" of Oxford the words of Burke, who was not, but ought to have been, an Oxonian:

> It is our business . . . to bring the dispositions that are lovely in private life into the service and conduct of the commonwealth; so to be patriots as not to forget we are gentlemen; to cultivate friendships and to incur enmities; to have both strong, but both selected—in the one to be placable, in the other immovable.

Mr. Russell's serious consideration of politics is not the most interesting part of his book, and the introduction bodily of his long speech on "The Irish Murders" is likely to be resented or skipped, if not both, by most readers. There are in this part of the book, however, a few good anecdotes and sketches, notably this portrait of Parnell, quoted from the letter of a lady:

> I cannot exaggerate the impression he made on me. I never before felt such power and magnetic force in any man. As for his eyes, if he looks at you, you can't look away, and, if he doesn't, you are wondering how soon he will look at you again. I'm afraid I have very little trust in his goodness—I should think it a very minus quantity; but I believe absolutely in his strength and his power of influence. I should be sorry if he were my enemy, for I think he would stop at nothing.

Prof. Emerson D. Fite has followed up his recent book on "The North During the Civil War" by another on "The Presidential Campaign of 1860" (Macmillan). The particular contribution of the work is mainly its intelligent use of the newspapers of the period, and of the Congressional debates, the other literature of the subject being scantily noticed. Of the eight narrative chapters, four are given to the John Brown raid, Helper's "Impending Crisis" and the Speakership contest, anti-slavery in the House and Senate, and the popular discussion of slavery. The chapter on John Brown needs revision: the story of the kissing of a negro child by Brown on his way to the scaffold is pure fiction, and the "thousands" of soldiers on guard must be reduced to fifteen hundred (p. 5). The account of the attempted arrest of Frank Sanborn (p. 53) will be news to that veteran reformer. On the other hand, the effect of the raid and the trial on public opinion is well brought out, as is the reception of Helper's book in the South, and the persecution of individuals who were found to possess copies or were thought to sympathize with its sentiments. The most valuable chapter is the one which summarizes the arguments of the campaign. Appendices, comprising about one-third of the volume, give the party platforms and speeches by Carl Schurz, Douglas, Yancey, and "Parson" Brownlow in support of the Republican, Democratic, and Constitutional Union candidates, respectively.

There seems to be a revival of interest in Talleyrand, which it is difficult to explain, except on the basis that his extraordinary career, so interwoven with the destinies of France and of Europe for half a century, gives his biographer an unrivalled opportunity to tell once more the whole history of those exciting times. We reviewed at some length in these columns (October 12, 1911), a translation of Bernard de Lacombe's "Talleyrand the Man." That work dealt only with certain detached phases of the subject, in especial with the much mooted question of Talleyrand's conversion, which the author attempted to settle, once and for all, on the authority of the Abbé Dupanloup. The present work, "Prince Talleyrand and His Times," by Frederic Loliée, which has just come to us in an English translation by Bryan O'Donnell (Brentano's), is of altogether different scope and aim, since it proposes to give an "ensemble picture, representing him [Talleyrand] both in his individual and multiple capacities, as he witnessed and took part in the various social transformations that occurred during his long life." M. Loliée quotes Bulwer-Lytton, to the effect that "it is not articles that should be written about Talleyrand, but a whole book, a weighty volume." But even a whole volume, running to four hundred pages, does not suffice for his needs, so that he has been obliged to treat his subject in two parts, the first only of which, carrying the story of Talleyrand down to the fall of the Empire, is here presented. There is, however, nothing in M. Loliée's biographical method which would seem to justify this lengthy exposition. Those episodes where he traverses the more scholarly work of M. Lacombe, he does not cover with anything like the latter's logical clarity or fulness of detail.

The bulk of M. Loliée's volume on Talleyrand is due almost entirely to the elaborate attempt to paint a picture of society successively under the monarchy, the Directoire, the Consulate, and the Empire. The assiduous chronicler of frivolities under the Second Empire doubtless felt himself especially drawn to this phase of his subject, but, in truth, he has acquitted himself but ill of the task. For, although he has collected stores of sprightly gossip and spicy scandal, he has not the skill to group his material coherently, or with the cumulative effect required to evoke the spirit of a period from the sum of its personalities. He is particularly deficient in the art of portraiture, and there is not a single figure among those whom he has essayed to sketch in these pages that stands forth with saliency and relief—least of whom Talleyrand himself, who, whatever else he may have been, was too brilliant a creature to be "cribbed, cabined, and confined" in M. Loliée's commonplace conceptions and appraisals of his character and conduct. The author's lack of order, his repetitions and long-winded commentaries, make the book dull reading, in spite of its fascinating theme. But it is a little difficult to judge the author's work fairly on the literary side, in view of the shocking translation in which it is presented to English readers. Mr. Bryan O'Donnell winds a tortuous way amid the idiosyncrasies of French idiom, and succeeds in almost never finding a proper English equivalent. His gross disregard for the elements of syntax and diction is almost incredible. The proof-reader has done his best to aid and abet this *traducteur* in his nefarious labor, and the pages are sprinkled with the most palpable errors. Neither, however, is responsible for the reference to Louis XVI as the grandson of Louis XIV.
